DEAR SIR: It was with a great deal of dismay that I read your editorial in the New York Times of the above date. Most postal employees were ready to take the President's veto unemotionally, since we have experienced three other vetoes in the last 6 years. I am almost certain that, were I to look at your editorials on those occasions, strong praise would be expressed for the very same Congressmen who, at that time, voted to sustain the veto. In the heat of his excitement, your editorialist labeled, by implacation, as dishonorable, those U.S. Senators who backed up the justifiable and long overdue raise given to postal and classified Federal employees. This is certainly indefensible by any light. Your further implication that all the candidates of one party voted to override, while the other party did not, is also open to criticism. The other political party has only one candidate, and as the Presiding Officer of the Senate, is constitutionally unable to express himself, except in case of a tie.

It is also necessary to point out to your readers and your very righteous editorial writer that, since 1925, this is the second raise approved during a presidential election year. The implication put forth—that a "high pressure lobby" and nothing else—gave us this raise, is open to serious questioning. Where is this "lobby's" strength in restoring to us the rights that every citizen has: Political action without fear of reprisal (Hatch Act); being able to share in the great prosperity of the sixties as outlined in the President's state-of-the Union message; being given the right to have collective bargaining with agency officials? Every one of the organizations which operates in the postal service affirms in its constitution that our means of redressing grievances and legislative needs is through Congress and not any other way.

A great deal has been said about expected reports that are to be issued in January. Since a new President will be inaugurated on January 20, 1961, such a finding would not be binding on him. Furthermore, the Cordiner reports of 1958 and the O'Connell report, submitted to Mr. Eisenhower at his request, to give data on civil service salaries and subsequently disregarded, stated "salaries fixed by statutes have not been adjusted in a timely and adequate manner in response to general changes in non-Federal salary levels."

The word "inequity" appears in several vital points of the editorial. The so-called inequities in the postal pay scales were all supposedly remedied when the Postal Reclassification Act was rammed down the throats of Congress in 1955. This act was hailed as a milestone by the agency head and the President in signing the Reclassification Act. The copious tears that are shed about the poor downtrodden GSF-18 employees, who are receiving a $1,000 raise (5.9 percent) against the "highly overpaid" level 4 postal employees (clerks and carriers), receiving $310-$430 raises (7.2 to 8.9 percent) is indeed ludicrous. We still pay our bills with an amount of money and not the amount of percentage increase.

If your readers are still curious as to the reason for the overwhelming vote of confidence given to postal people by the Congress of the United States, it is due to one factor—the justifiable arguments presented by the union leadership, acting under legal procedures, outlined in the Lloyd-La Follette Act of 1912. This law permits all Federal employees to petition Congress for redress of their wrongs.

May we also nominate our candidate for honors—Senator O'MAHONEY, not a candidate for reelection in 1960, who entered the Senate Chamber in a wheelchair, to cast a vote for Federal employees who cannot wait for a raise until 1961, but need a salary increase now.

Yours truly,

ALWYN J. AARON,
Legislative Director,
Brooklyn Postal Clerks Union.

Happy Birthday, Bernard M. Baruch

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

which appeared in the East Side News, a publication with wide circulation in the 19th Congressional District of New York which I have the honor to represent, on the occasion of the 90th birthday of that great American, Bernard M. Baruch:

HAPPY BIRTHDAY, BERNARD M. BARUCH

(By Harry H. Schlacht)

(Baruch means "blessed" in Hebrew.)

Today the Nation salutes the 90th birthday of Bernard M. Baruch. With deep appreciation for all that he means to America, we hail this radiant friend in whose heart there is malice toward none and charity for all, and who, in the course of his years, has learned "to love his fellow men sincerely and trust in God securely." We pray to God that he will be spared to us for many more years of useful and honorable service.

If we were asked to name the man who has contributed most to America's greatness in the last half century, we should place Bernard M. Baruch at the top. He is a monarch of the mind, a giant of the American spirit. He has crowded into his life the achievements of a veritable host of men. His gifts are varied and his pursuits many.

Mr. Baruch has been for America first and always above all the rest of the world. His is a virile Americanism. It is the philosophy of his life, the touchstone of his thoughts, the mentor of his actions.

He is giving himself to his country and his country's cause, justifying the application of Paul's tribute to the Macedonian church: "They first gave themselves." Mr. Baruch is known as a President-maker, a Presidential adviser, a park-bench statesman. He has never held public office, but he has been the head coach of his country.

His towering integrity, his mighty heart, and his greatness of soul exercise far-reaching influence on world events. He is among the foremost leaders of the common good of our generation. He is a genius as a leader of men.

His deep sympathy and sincere interest in all phases of human activity have attracted the admiration and confidence of the people of our Nation. A fidelity of purpose and a profundity of moral rectitude guide him in his public and private life.

His splendid optimism, his lofty patriotism, and his unbounded faith in humanity never desert him. A magnificent individuality coupled with a magnetic personality endears him to all.

His superb courage is neither halted by the magnitude of the task before him nor by the criticisms of those who differ with him.

Bernard Baruch is the apostle of peace. His is the authentic voice of our country. In Europe kings, presidents, and premiers have honored his name and heard his voice. He speaks in denunciation of duplicity, cruelty, bigotry and hate. He speaks in the name of standards unsullied and ideals sublime.

In every act, and in every utterance, his only motive is "My country." His generosity knows no bounds. His life is an answer to that noble sentiment voiced by the poet S. W. Foss:

"Bring me men to match my plans,
Men with empires in their purpose,
And new eras in their brains.
Pioneers to cleanse thought's marshlands,
and to cleanse old error's fen;
Bring me men to match my mountains—
bring me men!"

Loyalty and duty and reverence urge us to write, while memory is clean and events are fresh, what we know of him upon whom his fellow men place such great faith. Let us propose a universal toast to the health of Bernard M. Baruch. Let us resolve to do our full duty in the pursuit of his high ideals and concepts.

Let us give thanks to Almighty God for him.

Financing Health Care for the Aged

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DERWINSKI. Mr. Speaker, one of the truly important legislative issues facing us is the question of how to properly and equitably solve the problem of financing health care for our older citizens. Recently, the Blue Island Sun-Standard, a community newspaper in my district, discussed this matter in a most enlightening manner:

FINANCING HEALTH CARE FOR THE AGED

The matter of financing health care for the aged—the 15,500,000 Americans who are now 65 or older—has become a major issue in this country. Like all such issues, it has political, economic, and social overtones. It is possible, even likely, that Congress will pass some kind of a bill this year, during its postconventions session. Failing that, action next year is almost inevitable. Then, whether Congress acts or not in the immediate future, the issue will be extensively debated, and additional legislation will be pushed.

No one denies that there is a genuine problem here. The controversy lies in just how extensive the problem is—and just how it should be met.

The proposed solutions run a wide gamut. On the one hand, there is what is known as Forand-type legislation. This would bring all recipients of social security payments into a system of Government-paid medical, hospital, and nursing home benefits. The initial cost is estimated at something like $2 billion a year; thereafter, as more and more people joined the social security rolls, the cost would steadily rise. Some think the ultimate annual bill might be as much as $6 billion.

Another approach, proposed by the administration, would substitute voluntary for compulsory action. However, this approach is also based on the premise, as the Forand-type approach, that almost everyone who is ever 65 is in need of health care but cannot afford it.

Finally, there is a third approach. It is found in a bill developed by Chairman MILLS of the House Ways and Means Committee, which was passed by an overwhalming margin by the House shortly before it recessed for the conventions. It is distinct from the other proposals in certain highly important ways. It provided for a voluntary plan. It is designed to help the actual needy, not just everyone who has reached a given age. And, of great significance, it lays heavy stress on State, rather than only Federal, authority and responsibility.

This measure has been given the endorsement of the American Medical Association. The president of the AMA recently went into some detail as to what he and his organization believes sound health care for the aged should do, and described the principles it should be based on. One basic principle is that needs of this nature are best served by agencies situated as close as possible to the individual. Situations and problems may vary widely from place to place, and local agencies can respond more precisely and promptly to local requirements.

Another principle emphasized by the AMA is that help should be provided only when help is needed. Great numbers of individuals who have passed 65 are perfectly able to meet their own health needs. Surveys indicate that this is true of a heavy majority. The AMA's house of delegates, in a formal resolution, said last June: "Personal medical care is primarily the responsibility of the individual. When he is unable to provide this care for himself, the responsibility should properly pass to his family, the community, the county, the State and, only when all of these fail, to the Federal Government, and then only in conjunction with the other levels of government, in the above order. * * * The principle of freedom of choice should be preserved."

It should be noted that a great many commentators, both within and without the medical profession, fear that compulsory Federal financing of health care for the aged, whether accomplished under social security or in any other way, would be an entering wedge of Federal domination of all medical care and, perhaps, to ultimate socialization of medicine. The Mills bill, they believe, would do the job that is needed without running this danger.

Problems of African Economic Development

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. REUSS. Mr. Speaker, we have suddenly awakened to the staggering problem of the economic development of Africa. A most perceptive analysis of the problem appears in the current issue of Orbis, a quarterly journal of world affairs published by the Foreign Policy Research Institute of the University of Pennsylvania. The author, F. Taylor Ostrander, is presently assistant to the chairman of the American Metal Climax, Inc., of New York. He is one of the relatively few Americans who are thoroughly knowledgeable in the field of African economic development. Another is Arnold Rivkin, director of the African study project conducted by the Massachusetts Institute of Technology, whose contribution is mentioned in Mr. Ostrander's article. Both Mr. Ostrander and Mr. Rivkin have had extensive experience in African development since their joint participation more than 10 years ago as Marshall plan administrators. There follows Mr. Ostrander's article:

PROBLEMS OF AFRICAN ECONOMIC DEVELOPMENT

(By F. Taylor Ostrander)

Economic development is a far more stubborn problem than political development. The African territories can be given their independence whether it is premature or overdue, but they cannot be given economic development. No matter how much money

and technology may flow in from abroad, and no matter how crucial that flow may be for development, it will nearly always be marginal in the total effort. A major part of the development effort will have to be made by the Africans themselves—an effectively organized effort spanning an extended period of years.

Africa is poor in nearly every respect. Its climate is hostile. There are sharply contrasting areas of too much rain or of brackish aridity. The soil is peculiarly barren and deficient in mineral and chemical nutrients. In addition to the protein and vitamin shortages which humans experience in this geographical environment, Africa has one of the worst health problems to be found anywhere in the world, with many dread diseases prevalent—malaria, sleeping sickness, bilharziasis, yaws, leprosy. Inadequate and unbalanced diets and disease impose their toll on human beings and on their domestic animals.

Overlying this poverty in climate, soil, health, and diet is the poverty of knowledge. The knowledge and skills with which to participate in the life, health, work, and culture of the twentieth century are nearly nonexistent in much of Africa. There is only one way in which the peoples of Africa will achieve economic advancement, no matter what the stage of their political development: they must become proficient in the technology of the modern world; they must learn modern health, modern agriculture, modern transportation, modern industries, and the intricacies of a modern monetary system. The colossal ignorance of all these fields in Africa today will not be eliminated within decades, and Africa's economic development will still be a basic problem to Africa, as well as to the West, at the end of this century.

AFRICA'S MINERAL WEALTH

Why stress Africa's poverty when it is so customary to refer to Africa's vast mineral resources? The answer is that mineral wealth has to be exploitable commercially or it is not wealth at all. For example, according to the Paley Commission Report of 1952, the potentially recoverable copper in world reserves would double if the average "cut-off" grade were lowered from 1 percent to one-half of 1 percent of copper—from 20 to 10 pounds of copper per 2,000 pounds of ore. However, under present prices and costs for copper, and any cost-price relationship that may be foreseen for the next decade at least, many of those potential reserves in the range from 10 to 20 pounds of copper per ton could not be mined at a profit. Therefore, they do not now constitute wealth in any meaningful sense. Much of the so-called mineral wealth of Africa falls into this category of currently uncommercial ore.

Another part of Africa's misnamed "mineral wealth" consists of deposits not yet discovered, although they may well exist in abundance somewhere below the surface in the earth's crust. They may never be discovered.

There are also mineral deposits which, while they have been disclosed and have a grade of ore and type of metallurgy that would make them good mining propositions in other parts of the world, are at present inaccessible to the market. This may be because they lie far removed from any likely or economical means of transport, or because the cost of reaching them is as yet far beyond the capacity of anyone to raise the requisite money. In other cases this may be because they are located in a political and economic environment which effectively excludes the possibility of raising money for their development.

The length of time that may elapse between discovery of mineral deposits and their effective contribution to economic development is often not well understood. To take an example, a report not long ago in the Times of London described "one of the biggest and most dramatic schemes of development yet undertaken in West Africa" at Fort Gouraud, in the Islamic Republic of Mauritania of the French Community. There, on the fringe of the Sahara, are huge deposits of iron ore comparable in quality with some of the best Swedish iron ore. Negotiations are now well underway for the development of these deposits by Miferma, a consortium of French, British, Italian, German firms which has just received a loan of $65 million from the World Bank. It will require about $200 million in all to open this mineral wealth. They will have to build 400 miles of railroad leading from the coast to the mines at 2,000 feet elevation, an entirely new harbor and loading facilities, new towns at each terminal of the railroad, and install mining equipment capable of moving out 4 to 6 million tons of ore per year—to say nothing of finding and training the labor requirements of all these installations.

The significant fact about the Miferma project for this discussion is the time interval between discovery and development. One would expect that a deposit of this size and richness would be opened within a relatively short time of its discovery. Yet these ore bodies were brought to light by a French geological survey in 1934–35. For 25 years, this mineral wealth was open knowledge, but nevertheless undeveloped. One reason for this paradox was the absence of markets. Consumers of iron ore had no need of the rich Fort Gouraud deposits when they were discovered. No matter how much the French administration or the natives of Mauritania might have wished to build their country's economic development on these known mineral deposits during the past 25 years, they could not have found buyers for the ore before our Minnesota deposits were largely depleted and before Europe's consumption of steel reached present levels.

To summarize: In the free world today there are very few known mineral deposits of economic grade ore—that is, ore which is profitable to mine under present costs and prices with an assured market in today's raw-material-hungry world—which are not already in production or for which production is not already planned. If known mineral deposits are not attractive enough to have induced capital to come to them by now, then the markets for them do not exist or the difficulties of distance, grade, mining problems, or economic and political climate are overwhelming in their impact on costs or risks. Such deposits do not today constitute mineral wealth. Some areas in Africa, therefore, will not have the good fortune to have raw materials which can attract Western capital and know-how. This is a severe handicap—one which is not well understood in Africa.

Extensive parts of Africa will have to face the intractable problem of trying to lift themselves to a higher economic plane without the nearly automatic stimulus of valuable raw material resources. In these areas, development is bound to be slower. Hence the improvement of agricultural methods—the most important general problem of economic development everywhere in Africa—may well be almost the only trigger to the development spiral. Neither agriculture nor health lend themselves easily to the large-scale project attack, however. What outside capital can be found to be put to improvement in agriculture and health must be applied in small and unspectacular doses—to villages and single plots of land, to families and individual human beings.

It is clear that the possession of abundant natural resources is one of the easiest and quickest means of achieving economic advance in any undeveloped area. Where countries are favored by having such resources, Western capital—whether private, governmental, intergovernmental or a mixture of these types—can usually be found willing to face the enormous uncertainties, to meet the enormous costs and to wait out the long period of preparation necessary to bring these natural resources into production. Fortunate is the nation which possesses such natural resources that can be financed by outside capital and marketed in the industrialized nations.

THE COPPER BELT EXPERIENCE

The experience of the copper mines in northern Rhodesia illustrates the changes that a single industry can bring in a single generation. In 30 years a thriving industrial area has arisen where before there had been nothing but the African bush. Today its mines produce 450,000 short tons of copper a year, nearly 15 percent of free world output. In the area of the Copper Belt, only 100 miles by 35 miles, is an urbanized population today of about 400,000 persons, of whom nearly 150,000 are mine workers and their dependents, and the rest are workers in supporting occupations in the towns and areas near the mines, and their dependents. The mining companies had to carve out these communities from the wilderness, clearing out malaria, building towns, building powerplants, and creating recreational facilities and in some cases schools. They had to attract labor to work in the mines—African and white labor. Other developments followed the mining of copper—coal mining, a modern railroad system, food supply, and secondary businesses.

The founding of this industry in Rhodesia was solely the result of private investment. Private companies discovered these copper deposits in the twenties. Private companies then found the capital and took the risks, waited many years for their returns, and regularly reinvested a portion of their earnings. Regardless of the original primacy of the profit motive in their venture, however, the copper companies soon found themselves facing social and political problems, chief among them race relations, and the companies' activities began to have significant social and political consequences. This situation continues to this day.

In the context of contemporary discussion of the role of private capital in backward lands, it may be useful to underline the absence of any political objective in the minds of these private investors who opened up the Copper Belt. They did not intend to help create modern political institutions; they did not intend to provide the revenue basis for great waterpower plants and large-scale expenditure on education and social services; they were not even concerned with the secondary economic effects of their own investments. They did not risk their money in answer to pleas by the British Government that its backward African colonial provinces be developed or to pleas by the American Government that American private capital play a responsible role in developing backward areas. This was a case of private investment in its classic sense—in search of profit, nothing more.

I emphasize this because there are those in government and academic circles today who have fallen into wishful thinking as to the role of private business and private investment. It is not a proper business activity to inaugurate projects that are uneconomic or to make investments because of benevolent or patriotic intentions or international good will, or in order to compensate for timid, unimaginative, and inadequate action on the part of government.

It is a proper function of private business, however, in its pursuit of profits to consider the secondary consequences of its activities, to be a good citizen in its environment, and

to be conscious of its role as ambassador for our Western free enterprise system. A good part of American and other Western business has learned this lesson. As the honorary chairman of American Metals Climax, Inc., stated in a speech at the Harvard Business School conference in 1959:

"If most representatives of business sent from the United States and other investing countries between, say, 1890 and 1940 to work in far regions had known more about those regions and their peoples many of the later troubles there might have been avoided. Today there are heartening signs on this horizon. Here and in other Western countries more and more companies are coming to want their managers and chief technicians to have had some knowledge of the language, history and culture of the countries where they are to live. Profitability is still the fundamental criterion for private capital attracted abroad, but among the essential safeguards are vision, tact and courage on the part of its representatives in dealing with problems arising from the racial and national sensibilities they will encounter."

THE POLITICAL CLIMATE FOR DEVELOPMENT

One obvious problem which will condition all economic development in Africa is the degree of political stability of emerging nations and the sympathetic understanding by the new African statesmen of the conditions necessary to attract the capital they so urgently need. Recent developments in Cuba are illustrative of the policies that new nations must avoid if they are to progress. Cuba is an emergent nation, too—emerging from a repressive dictatorship—but her economic attitudes and her highhanded actions against American capital are tragically unnecessary to—in fact, destructive of—the potentialities of her liberation. If African nations follow in the footsteps of Cuban "mobocracy," an era of riot and anarchy would close the door to the outside capital essential to all their plans—except possibly Soviet capital.

The Soviets are watching intently to take advantage of any outbreak of violence or any condition of rapidly disintegrating law and order. Indeed, their agents may well be behind some of the outbreaks that do occur. But it is unlikely that even Soviet economic assistance would flow in large amounts to countries where law and order have broken down completely; rather, the Soviets would first establish their own version of law and order. Yet, long before the Soviets have a chance to transform some of the new states of Africa south of the Sahara into satellites, we could expect our Government, the governments of our allies and those African governments who really want to preserve their independence to devise some means—perhaps a form of the Monroe Doctrine—to prevent Soviet takeovers in Africa, whether outright or by subversion.

It is a primary responsibility of Western governments to see that Africa does not fall to the Soviets. It is for the new African nationalist leaders to insure that their policies do not frighten away the capital that they so urgently need. It is for the international investors to show courage and political imagination in approaching the investment opoprtunities in these countries. Especially, it is essential that the international investor not mistake that turmoil which is a mere expression of political change for a more deeply rooted disorder. Only capital that has the courage to live with the problems of rapid political and economic transition will have any hope of success in taking advantage of the investment opportunities that the new Africa offers.

THE U.S. ROLE IN AFRICAN ECONOMIC DEVELOPMENT

What is the United States doing today in pursuit of our basic national interest that the independent states of Africa remain part of the free world? Thus far, technical assistance, covering a few small-scale programs of education, technical training, and advice in agriculture and health, has been nearly the only form of regular U.S. Government aid to Africa. All the technical assistance projects for all the countries of tropical Africa in 1960 total about $15 million of American aid. The list is: $5 million for Ethiopia; $3 million for the Sudan; $2,500,000 for Liberia; $1,500,000 for Nigeria; $1 million each for Somalia, Ghana, and Guinea; $500,000 for Kenya, and $200,000 for the Rhodesian Federation. In addition, a few special assistance projects to the Sudan, Somalia, Liberia, and Ethiopia amount to nearly another $15 million in 1960. In the past 3 years the Development Loan Fund—with authorized funds of $1.5 billion—has made loans of $20 million for projects in three African countries.

This volume of aid is insignificant when compared to the amounts which European countries have been putting into their dependent territories of Africa. In 1959 European support to African major developmental projects exceeded $500 million, of which the greatest portion, about $400 million, is said to have been put by France into the Republics of the French Community comprising the former colonies of French West and Equatorial Africa. The United Kingdom sent about $80 million to her African territories, and Belgium will give the Congo about $60 million for its first year of nationhood. The six European Common Market nations have established a $300 million fund with which to back development in those parts of Africa included in associate membership in the European Common Market. (The Soviets have promised $100 million to Ethiopia and $35 million to Guinea.)

The largest Western investor in Africa is the World Bank, which has loaned over $500 million to countries south of the Sahara. Money in such proportions can begin to have an impact on African economic development. It is true, of course, that the United States makes the largest contribution to the World Bank's capital. However, in other key areas receiving World Bank assistance, as for example India, this multilateral aid supplements direct U.S. grants and loans of substantial proportions.

How does our Government propose to deal with the problem? In the New York Times for February 2, 1960, a Washington official was quoted as follows: "The United States expects Europe to carry the main burden of assisting the economic development of the newly independent African nations." It was reported that the State Department hoped to avoid large programs of U.S. grants and loans for capital investment in Africa, and expected the larger investments to continue to be made by European countries and by international institutions.

Perhaps this is part of a basic policy line followed in some Washington quarters today—a policy that sees the United States withdrawing from heavy oversea commitments in order to solve her own problems, such as the much publicized balance of payments deficit. The European nations, relatively affluent now, are to be asked to take up a larger share of the programs of aid to underdeveloped countries. It is perfectly obvious that Western European nations should assume a considerable share of the total burden of Western aid to underdeveloped nations. We have seen, however, that the scale of assistance by European countries to Africa already exceeds substantially that of America.

What would be a just distribution of the European and American effort in Africa? A number of prominent men of the West have made proposals bearing on this question. One of them is Sir Oliver Franks, chairman of Lloyds Bank, Ltd., a former British Ambassador to the United States, and former chairman of the committee in Paris that, in 1947, performed the basic preparatory work for the European recovery program. Sir Oliver's recent proposals were first stated in a speech in November 1959 before the Committee for Economic Development in New York City. In a statement that may become almost as famous as General Marshall's speech at Harvard in June 1947, Sir Oliver analyzed the vicious circle which prevents underdeveloped countries from breaking out of their poverty. He forecast that the problems and efforts of the 1960's would shift from the old East-West dimension to a new North-South dimension: The relationship of the industrialized northern nations to the underdeveloped nations in the Southern Hemisphere. Sir Oliver proposed that the affluent nations of the north find some informal means by which they can begin now to "argue these things out and harmonize our approach to the new jobs we have to do in the world."

In a Christmas Eve 1959 speech at the White House in Washington, on the day of his return from his successful tour of a number of underdeveloped countries, President Eisenhower stressed that hopes for peace depend upon our persuading "all other free nations to join us * * * in a long term program dependable in its term and its duration." And early this year, one of the outstanding leaders of the West, Sir Anthony Eden, in concluding his memoirs, suggested a Marshall plan for Africa and stated: "Few things are more important now than Western policy towards Africa."

If we were not in the midst of an election year, perhaps we would be moving more rapidly toward joint action in accordance with these parallel views of our responsibilities. But official American policy today apparently finds it difficult to go beyond the concept that the other affluent capital-exporting nations of the North will somehow assume part of our present burden. This concept not only is unfeasible, but undesirable as well. The United States, in the coming decade, will be called upon for vastly increased amounts, by loan and grant, by government and private means, to support the common aspirations of the free world. It is essential, of course, that the other nations of the North join us and do their full share in a much greater measure than in the past. But let us have no illusions that the American effort will not also be greater than any we are now undertaking.

The United States cannot embark upon the decade of the 1960's enjoying a gross national product exceeding $500 billion and expect to shift any part of its present scale of aid to any other shoulders. Despite a temporary problem in our balance of payments, we are not poor. We are, indeed, a rich nation—as prosperous as our campaigning politicians suggest. And our affluence vis-a-vis most of the rest of the world will necessarily impose increasingly heavy demands upon our efforts and on our Treasury in the decade to come.

There are some encouraging signs of progress in the American position. Under Secretary of State Dillon took a major step forward last January with his proposal for the reorganization of the OEEC and his initiative in inviting eight capital-exporting nations to meet in Washington. This has now resulted in recommendations for a new Organization for Economic Cooperation and Development in which the United States and Canada would participate as full members, and which would consider the needs of the world's underdeveloped areas. The capital-exporting nations have now organized the Development Assistance Group to coordinate their national and international investments in underdeveloped areas, including Africa. As yet, however, dollar signs are conspicuously absent from these new organizational efforts.

In February, President Eisenhower's special message on foreign aid proposed to Congress a new special assistance appropriation of $20 million for Africa. This sum is in place of the $15 million of special asistance granted to four African countries this year. It is in addition to the continuing regular technical assistance programs which in the current year total about $15 million and which are included at a slightly increased sum of $20 million in the aid proposal for the 1961 fiscal year. Therefore, in place of this year's total of $30 million for both technical assistance and special assistance projects in Africa, the President has proposed a $40 million total program for Africa, similarly divided half to regular technical assistance and half to special assistance.

This is aid for Africa on a very small scale. Nevertheless, the signs of a new U.S. approach to aid for Africa are implicit in the President's statement of the purposes of the new $20 million fund for Africa and in his belief that this initial effort "must grow significantly in the immediate years ahead." If the present sum is inadequate and disappointing—and it has not yet been adopted by Congress—at least the statement on Africa in the President's message offers some promise for the future:

"Of inescapable interest to the United States in the world today is the increasing assumption of self-government by the peoples of the great continent of Africa, especially in the area south of the Sahara. This vast area deserves and commands the full attention and assistance of the free world if it is to develop its institutions and its economy under freedom. While the needs of Africa south of the Sahara for development capital are real and can be expected to grow, there is an imperative and immediate requirement for increased education and training.

"The request for appropriations for special assistance includes an amount of $20 million for a special program to be instituted for the improvement of education and training in Africa south of the Sahara, with particular emphasis to be given to the meeting of needs which are common to all the countries of the area. It is my belief that this initial effort must grow significantly in the immediate years ahead and complement similar efforts on the part of other free world nations so that the capacity of the new and other developing nations in Africa to manage and direct their development can be strengthened and increased rapidly and effectively. Without such strengthening and development of education and training, the preconditions of vigorous economic growth cannot be established."

THE RIVKIN PROPOSAL: A MULTILATERAL AID ORGANIZATION FOR AFRICA

In a series of articles in the past 2 years, Arnold Rivkin, head of the African study project conducted by the Massachusetts Institute of Technology, has proposed the establishment of a "flexible multilateral organization for economic and technical assistance to Africa," which would include (1) the Western European countries that are members of the Organization for European Economic Cooperation, (2) the associate members of the OEEC, the United States and Canada, (3) other free world countries likely to be interested in African economic development—e.g., India, Israel, and Japan, (4) the growing number of independent African States, and (5) in a relationship to be worked out with the metropolitan countries, the African territories that are still dependent.

The essence of Rivkin's proposal is that the recipient nations should participate with the grantor nations in an analysis of their problems and of the respective roles to be played by their own resources and efforts and by the amounts of outside aid which they may receive. It would be possible, for example, for aid to flow through such an organization directly from the United States to one of the African nations, but with the stigma of bilateral aid removed. Other aid measures could be worked out within the framework of this multilateral organization including different groups of nations for different projects.

The proposed structure would make it possible for the former colonies to continue to receive assistance from the former mother countries or from other Western countries without appearing to compromise their newly found independence or without exposing themselves to the charge of seeming to exchange one colonial overlord for another. One of the most important tasks such an organization could assume would be the recruitment of technicians and administators for an international career service to work for the new nations.

Rivkin's proposal is both practical and promising. So long as only capital-exporting nations consult on development plans, there is the tendency for their discussions to fall into "burden-sharing" arguments without coming to grips with concrete problems of economic development in the needy nations. Furthermore, one of the best ways to introduce African statesmen to the realities of economic development is for them to participate in mutual discussions of their problems and needs. The O.E.E.C. nations have had long and fruitful experience in this kind of common approach, and can make this experience available to Africa.

Ultimately, after the usual laborious efforts and after the usual detours, the governments of the West are bound to accept some program of action like Sir Oliver Franks' and some multilateral aid organization such as that proposed by Arnold Rivkin.

A formidable challenge confronts the West in Africa. Let us hope that our statesmen and leaders will become more keenly aware of this challenge, and that their steps will become increasingly less hesitant in turning to meet it.

Wheat-for-Sugar Exchange Proposed

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous approval of the House I am including a copy of a newspaper release by the Honorable Clifford R. Hope, former Member of Congress, wherein he proposes a wheat and sugar exchange with South American countries. Mr. Hope is president of the Great Plains Wheat Market Development Association, Inc.:

WHEAT-FOR-SUGAR EXCHANGE PROPOSED

GARDEN CITY, KANS.—A wheat-for-sugar exchange with South American countries was suggested today by an official of the Great Plains Wheat Market Development Association.

"The curb on imports of sugar from Cuba offers an opportunity for the United States to shift its trade to traditionally friendly countries in South America," said Clifford R. Hope, the association's president. Hope based the suggestion on estimates reported by the association's representative, Jack L. Smith, at Lima, Peru.

Brazil, with a productive capacity of about 3 million tons of sugar a year, is eager to carve out a share of the rich U.S. market. So is Peru.

Brazil would be a dependable source of U.S. sugar imports for its annual production is about half of Cuba's 6 million tons. While Cuba is, at present, the world's largest producer of sugar, Brazil could easily boost its production—possibly enough to equal the Cuban total.

"Since the United States is producing more wheat than the domestic market will absorb, this raises the possibility of an exchange which would benefit both the United States and the South American countries," according to Hope.

"At no time in history has the balance of United States-South American relationship been so critical," Hope said. "We should carefully consider any proposal which will allow these countries to stand on their own feet through their productive abilities."

One way to accomplish this is to redistribute Cuba's former share of the U.S. market to countries such as Brazil and Peru, he continued. The exchange thus generated could be used to buy U.S. surplus farm products.

The official said that Latin America is today one of the major markets for U.S. wheat. There is a demand for much more wheat, but these countries must obtain the necessary exchange to finance increased purchases.

"Commercial exchanges with South American countries would help create an atmosphere for continued and increased sales of U.S. products. A sugar-for-wheat trade would be a step in the right direction," Hope concluded.

In anticipation of such possibilities, Smith held a series of conferences with government, milling, baking and agricultural officials of Brazil and Peru. The meetings, conducted over a period of several months, convinced Smith that such an exchange would benefit everyone concerned.

Smith directs the wheat market development office in South America under a program organized by Great Plains wheatgrowers. The program is supported by wheat commissions and wheatgrower associations in Kansas, Colorado, Nebraska, and North Dakota.

The market-expansion projects are conducted in cooperation with the Foreign Agricultural Service of the U.S. Department of Agriculture.

War Talk in a Political Year

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DERWINSKI. Mr. Speaker, it has been my contention that this reconvened session of Congress will be so completely political that little practical legislative progress can be made. It was gratifying for me to note that an outstanding community paper in my district clarified for its readers one of the issues now facing us:

[From the Chicago Heights Star, Aug. 11, 1960]

AS WE SEE IT—WAR TALK IN A POLITICAL YEAR

This is an election year and the peril of war stalks the world. Under the circumstances, it is small wonder that some sources would have us believe the United States is equipped with slingshots as opposed to the nuclear weapons of its foes.

A stock Democratic contention is that President Eisenhower, one of history's great generals, has permitted the Nation to fall far behind in the arms race.

The prophets of gloom and doom vigorously assert their right to downgrade what is currently known as our country's defense posture, even though their words might tend to alienate our allies and encourage our enemies—to the point of risking a move to heat up the cold war.

Their right to speak up on U.S. deficiencies cannot indeed be questioned if their information is accurate and their motives lofty. But the administration, which unquestionably has greater access to accurate information, is joined by many nonpartisan experts on the subject in taking views somewhat opposed to those of the self-appointed prophets.

And even the unfortunate U–2 incident seems to strengthen the suggestion that many critics don't know precisely what they are talking about. If they had knowledge that we were able to fly a plane high over Russia for a number of years, their remarks following the incident didn't show it.

We don't presume to know just what our position is with relation to that of the opposition.

It would be easier to measure the sincerity of the critics, however, if we could dredge up any remarks they might have made about our defense posture before our entry into World War II, a rather well-advertised event. How did they feel about the efficacy of the World War I Springfield rifle in the bazooka age?

We don't question the politicians' right to comment on our military bearing in an hour of peril, but their remarks must be confined to subjects on which there can be no doubt of the facts.

Protestant Council of Churches of Pittsburgh Area Denounces Circulation of Bogus Oath, Slanderous to Knights of Columbus

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. FULTON. Mr. Speaker, the Council of Churches of the Pittsburgh, Pa., area deserves hearty congratulations on their outstanding statement of August 11, 1960.

The council deplores and roundly condemns the continued circulation of the thoroughly discredited "oath" purported to be sworn to by the candidates of the fourth degree, Knights of Columbus, labeling it "vicious slander * * * most alien and unworthy of any person or group claiming to be followers of Christ."

Congress and the American people should note such fairmindedness and the call for religious people of good faith and high mind to close ranks in the face of implacable forces which would divide and destroy our every right as freemen.

This statement has been warmly welcomed by the office of the Catholic diocese of Pittsburgh, which goes far to carry on the era of good feeling among churches and church members in our great community of western Pennsylvania.

The Pittsburgh Catholic, official publication of the diocese of Pittsburgh, under the leadership of the Most Reverend John J. Wright, bishop of the diocese of Pittsburgh, and president, Pittsburgh Catholic Publishing Associates, in its issue of August 18, 1960, states in an editorial on the actions of people who circulate such slanderous and false material as fomentors of discord and bigotry: "The recognition that anti-Catholicism, like anti-Semitism or any form of group hatred, simply will not be tolerated by the American people, Catholic or otherwise."

The statement of the Council of Churches of the Pittsburgh area of August 11, 1960, follows:

As an organization composed of Christian churches dedicated to the important ministry of reconciliation, and believing most sincerely in the Christ-taught doctrine of the brotherhood of all mankind, the Council of Churches of the Pittsburgh area deplores and roundly condemns the continued circulation of the thoroughly discredited "oath" purported to be sworn to by the candidates of the fourth degree, Knights of Columbus. To aid in the spread of this type of vicious slander is most alien and unworthy of any person or group claiming to be followers of Christ.

The following is an extract from an editorial which appeared in the March 1960 issue of the Council News, the official publication of the council, and referring to this bogus Knights of Columbus oath:

"This long discredited document should be thoroughly denounced by all fairminded persons, especially those claiming to be Christians. To bear this type of false witness, to aid in the distribution of such scurrilous matter, is most unworthy of any decent, fairminded, and responsible person. To do so is to deny the love, mercy, and justice of Christ, who has commanded us to love all men as brothers, regardless of their attitude toward us."

The Council of Churches is not attempting to defend the Knights of Columbus or its activities which do not need our defense, but rather denouncing the half-truths, indiscriminate charges, and slander directed toward all faiths and races, which are spreading across our land in a clandestine fashion during a period in which all men, regardless of race, color, or creed should maintain closed ranks in the face of those implacable forces which would divide us and destroy our every right as freemen.

The council urges its member churches and their congregations to take no part in the circulation of this slanderous material, and make every effort to act, as we know the intelligent and mature Christian will, in accepting their responsibility before God and their fellow men.

Higher Northeast Oil Prices Feared

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on the residual oil price increase in New England, which appeared in the Christian Science Monitor on August 17, 1960:

HIGHER NORTHEAST OIL PRICES FEARED
(By George B. Merry)

Already slapped with one residual oil price increase—a 15-cent-a-barrel boost last month—New England industrial leaders are increasingly concerned that further price jumps may soon come.

Only this week the Federal Government established a new residual oil import quota for the six-State region during the last quarter of 1960. The new quota is 5 percent below the quota during the corresponding period last year.

Officials of utility companies and other industries throughout the region who are large consumers of this type of heavy oil, are concerned that the new 415,000-barrel-a-day quota between October 1 and the end of December 31, may not be enough to keep pace with their needs.

With reserve supplies on hand already dwindling, further price boosts on the heavy-duty fuel oil imports is viewed as a distinct possibly especially if weather conditions are severe.

IMPACT ON HOUSEHOLDER

Although not used for ordinary household heating, any residual oil price increase would ultimately affect most householders in other ways.

Large quantities of this type of fuel are used to generate electricity by major utility companies. Price boosts can be turned over to the customers in the form of higher electric bills.

The July residual oil price increase is expected to cost the Boston Edison Co. about $900,000 a year. This utility firm used 6 million barrels of this fuel last year.

Gardner A. Caverly, executive vice president of the New England Council, which has consistently opposed the oil-import restrictions, said today that the July price hike caused by the low quota system will cost industries throughout the region an estimated $10 million in additional fuel oil prices this year.

PRESSURE REPORTED

Mr. Caverly and other New England business leaders have made several trips to Washington in an effort to persuade Government officials to raise rather than lower the import quotas.

He said heavy pressure exerted from coal producers have forced the import limitation.

The NEC had sought a quota of 560,000 barrels of imported residual oil per day, instead of the 415,000-barrel figure established by the Interior Department for the last quarter of this year.

Members of the NEC's Committee on Fuel and Energy are meeting today in Boston in an effort to map future strategy in their battle to raise the import quotas.

IMPORTS FOR VENEZUELA

Domestic residual oil which is not restricted is in short supply, and most of the heavy-duty fuel oil used by New England utility companies and other industries has to be imported. These imports come largely from Venezuela.

The current price to customers is $2.79 cents a barrel in Boston, one petroleum industry spokesman reported.

Until March 1959 when the oil import quota system was set up by President Eisenhower, there was no restriction on oil imports in New England.

QUOTA FLUCTUATION

The quotas have fluctuated somewhat depending on the season and available supplies. During the last 6 months of 1959 the residual oil import quota was 363,000 barrels per day.

The federally imposed limitation for the current 3-month period, ending September 30, is 250,000 barrels a day.

One oil industry official said today that unless the import quota for the final quarter of 1960 is raised New England industry will receive about 5,500,000 barrels less during the last 6 months of 1960 than in the corresponding period last year. This is bound to gnaw heavily into reserve supplies, he emphasized.

Besides utility companies and other industrial firms, apartment houses, hotels, and the metropolitan authority are major consumers of imported residual oil.

Congo Atrocities

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under permission to extend my remarks, I insert in the RECORD the column by David Lawrence entitled "Why Governmental, Liberal Silence on Congo Atrocities?" I feel we should all be aware of this situation and the article is as follows:

[From the Houston Chronicle, Aug. 5, 1960]

WHY GOVERNMENTAL, LIBERAL SILENCE ON CONGO ATROCITIES?

(By David Lawrence)

Something terrible has been happening in the Congo these last few weeks, but, for some unexplained reason, the voices of the so-called liberals and their organizations are strangely silent, not only here but in Europe. Just a few months ago, they cried out indignantly because a few Bantus were killed when thousands of them surrounded and threatened a handful of panic-stricken police in a South African village, who then fired in self-defense.

The parliaments of Europe discussed that issue, and even the United Nations was drawn into the debate, but why, when white women are attacked and a shameful orgy is perpetrated in the Congo, is nothing being said officially and publicly by any government in denunciation of such conduct?

ODD SILENCE

Not even the leaders of the British Parliament, which had an extensive debate on the South African episode, have put themselves on record with any declaration on the subject.

The Prime Minister of the Congo, who recently visited here, calls it all a lot of fabrications in the foreign press. Yet the facts have been reported officially.

David Reed, a member of the Washington staff of U.S. News & World Report, who has been in the Congo for several weeks, cabled a full report, published recently, which said in part:

"The full horror of the mutiny of black troops in the Congolese Army is only now coming to light. * * *

"A Belgian doctor and his wife, who is also a doctor, report that they gave injections of penicillin to between 350 and 450 white women who had been raped by soldiers and who feared they might have contracted syphilis. The two doctors say they treated so many rape victims that they lost count of the total. Among their emergency patients were a mother and her two daughters, one 11 and the other 8 years old. All three had been raped repeatedly during a period of 24 hours.

"A French doctor said he examined two Belgian women, wives of Belgian officials. Both of the women had been raped by 12 soldiers in the town of Kisantu.

"Among other victims were two American women at a Baptist mission. One was the wife of the missionary and the other an unmarried nurse.

"It is entirely likely that no one will ever know how many white women were violated by the troops, as the turmoil was so great. Belgians and other whites were pouring out of the Congo by the thousands."

STRANGE TIMES

There was a time in American history when, if American citizens were maltreated, sharp measures of reprisal would have been undertaken promptly by the Government of the United States. But these are strange times. The demands for recognition of nationalist causes and the insistence that independence be granted to uncivilized peoples seem to take precedence over all else.

Make no mistake, white survival is indivisible, and by this I mean the permanent assets and values of Western civilization and democracy, poised as they now are against the overpowering might of communism and Asian and African nationalism.

Emory University Survey of Older Americans—Comments of Participating Sociologists

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 24, 1960

Mr. McNAMARA. Mr. President, following up on the reactions of the so-called participating sociologists in the now discredited AMA-publicized Emory University survey of older Americans, I ask unanimous consent to place in the RECORD letters from three more of these sociologists, criticizing the study and its exploitation by the doctors' lobby.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DEAR SENATOR: I heartily agree with Dr. Gist's remarks. I never would have participated in the study if I had known the AMA was going to distort our findings in such a way. I am in favor of outlawing the AMA and all such misleading organizations. I agree with Drs. Streib and Thompson's interpretation of our study.

Sincerely,

T. EARL SULLENGER,
Chairman, Department of Sociology, University of Omaha.
OMAHA, NEBR.

LEWISTON, MAINE,
August 22, 1960.

HAROLD L. SHEPPARD,
Senate Office Building, Washington, D.C.

DEAR MR. SHEPPARD: In regard to the Emory University study of the aging, may I say that I simply acted as supervisor in having the sample for the State of Maine (58 schedules) filled out. I agreed to do this before seeing the schedule, on the strength of the information that a foundation was supporting the study. There was no mention at any time of the American Medical Association.

In my judgment the schedule was not up to the standard ordinarily expected and found in sociological studies. Among other things, it was very heavily loaded by the sampling method in favor of the upper and middle classes. Any and all persons receiving public relief of any kind were excluded.

I had nothing to do with the tabulation, analysis, and the drawing of any conclusions from this study. My name should therefore not be used in such a way as to imply that I support any conclusions drawn from the same.

Sincerely yours,

ANDERS M. MYHRMAN.

PENNSYLVANIA STATE UNIVERSITY,
University Park, Pa., August 23, 1960.

DR. HAROLD SHEPPARD,
Research Director, Subcommittee on Problems of the Aged and Aging, Senate Office Building, Washington, D.C.

DEAR DR. SHEPPARD: In regards to your letter of the 19th and the news release of the American Medical Association concerning the study of the aged in which I participated, please note:

My degree of participation was basically the same as that described by Professor Gist in his letter. Like Professor Gist, I had nothing to do with the tabulations and analysis of the data gathered, nor did I see any of the data other than that which was gathered under my supervision here in central Pennsylvania.

I cannot support any conclusions drawn by the American Medical Association since I have not seen a final report of the study. Nor did I authorize the use of my name in connection with the news release which appeared in the local newspaper here in State College.

Being personally acquainted with both Professor Wiggins and Professor Shoeck for some years now, I would be inclined to feel that their findings represent careful academic work. Conclusions drawn from their findings and wild generalizations that the study "emphatically proves * * *" are quite without justification, of course.

I am unable to comment upon the statement of Profs. Gordon Streib and Wayne Thompson since, as I have said, I have yet to see a final report of the study conducted by Professors Wiggins and Shoeck.

Sincerely yours,

JOSEPH E. FAULKNER,
Instructor.

Ukrainian American Congress

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my message on the 20th anniversary of the founding of the Ukrainian Congress Committee of America:

THE UKRAINIAN AMERICAN CONGRESS

Twenty years ago the Ukrainian Congress Committee of America was founded by the First Congress of Ukrainian-Americans. Its objectives reflected the devotion of Ukrainian-Americans to their new country and their love for their motherland. In regard to the United States these objectives called for participation in the efforts of America to maintain peace and to strengthen the American way of life. In regard to the land of their origin, they called for making known the plight of the Ukrainian people and for helping the Ukrainians in their native land achieve their goal of freedom.

Today the Ukrainian Congress Committee is representative of some 2½ million Americans of Ukrainian ancestry. It encompasses fraternal, civic, youth, religious, cultural, athletic, and other types of organizations from the many States in which Ukrainian-Americans have settled, providing a unity of action which is unique and valuable. For the past 20 years it has pursued its objectives with dedication and vigor, helping Ukrainian immigrants adapt to their new home, promoting the American way of life, and carrying on a campaign of education about the Ukraine, the largest non-Russian nation behind the Iron Curtain in Europe.

Through the informational activities of the Congress Committee, the longings of the Ukrainian people for independence have been kept before the eyes of the world in spite of Soviet attempts to hide them. The history of the Ukrainian people has been brought to life and we have become more vividly aware of their 300 years of suffering under tsarist tyranny, the proclamation of independence on January 22, 1918, and the tragic takeover by a new tyranny in the form of Soviet communism.

On this 20th anniversary, all Americans join in wishing the Ukrainian Congress Committee continued success in its endeavors. We wish to express our gratitude for the service it has performed to the United States and its citizens of Ukrainian heritage. Finally, we express our hope that its ultimate goal of freedom and democracy everywhere will someday be achieved and the people of Ukraine will live in liberty once again.

Crash Program on Farm Surpluses

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 24, 1960

Mr. MUNDT. Mr. President, the following editorial from today's issue of the Philadelphia Inquirer, a distinguished metropolitan newspaper, calls for congressional action on a proposal which I have sponsored for several years and which is developing steadily increasing support in our farming areas. I call it to the attention of the Congress and the country in the hope that both political parties will unite in getting action on this sensible approach to finding a formula for utilizing our existing farm surpluses and for insuring agriculture of a free and prosperous future.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer, Aug. 24, 1960]

CRASH PROGRAM ON SURPLUSES

Senator KARL E. MUNDT, South Dakota Republican, hails from a State where farm policies and farm surpluses are matters of vital concern. He has come forward with a proposal for the Government to set up a kind of agricultural Manhattan project to seek out means of developing new uses for vast amounts of stored grains and other commodities.

The Manhattan project reference is to the vast, intensive wartime operation which, through mobilization of the skills and knowledge of some of the Nation's and the world's greatest scientists, produced the atomic bomb.

Mr. MUNDT's idea is to apply something as outstanding to what has become a terrific burden of surplus grains and other products due to Government price support measures. In spite of fairly well developed efforts to dispose of some of the surpluses, particularly grains, abroad they continue to pile up and clog warehouses and other storage depots at enormous expense to American taxpayers.

A few days ago Secretary of Agriculture Benson, defending his farm policies, declared that storage of wheat, on which he said Congress has done virtually nothing, is costing the Government a thousand dollars a minute.

Some means of disposing of wheat and other strangling surpluses must be found. Senator MUNDT's idea of an all-out program to seek them surely merits serious consideration. Whatever politicians urge or promise, reduction of the surpluses is of vital importance.

Nasser's Personality Cult

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. ANFUSO. Mr. Speaker, I should like to draw attention to an important article which has been published in the latest issue—No. 56, summer 1960—of Prevent World War III, published by the Society for the Prevention of World War III, of New York.

This article, entitled "President Nasser and God," is an eye-opening revelation of the degree to which the "cult of personality" has been encouraged by the present ruler of Egypt. It goes without saying that Nasser's "cult of personality" is intended to cow the Egyptian masses and to hinder whatever opportunities there are for democratic development. Furthermore, Nasser's "cult of personality" presents distinct dangers to the free world just as the "cult of personality" under Stalin threatened Western security.

The facts cited in this article are shocking and should be pondered by all security-minded Americans. Under unanimous consent I include the article in the Appendix of the RECORD:

PRESIDENT NASSER AND GOD

Offhand it would seem that dictatorship is the easiest method to rule. The dictator is unhampered by constitutions, parliaments, and independent judiciary or public opinion. In short, he does as he pleases. The theory of dictatorship can perhaps best be summed up by the Roman concept that what the emperor said was law.

However, upon closer examination, rule by dictatorship is not so simple. Indeed, in many respects it is more complicated and requires an inexhaustible bag of tricks to maintain the dictator's hold on the people. After all, it is precisely because the dictator smashes all limitations to his rule that makes it necessary for him to find other instruments and symbols that will secure his position and stature. This means that he has to be constantly on the alert, forever maneuvering in one direction or another, so that at no time is his right to rule absolutely subject to question.

There are a number of stock methods employed by dictators through the ages to achieve the desired objective. For one thing, there is always the use of the scapegoat tactic. The scapegoat makes it possible for the dictator to give his people the opportunity to sound off when they feel aggrieved. It helps to absolve the dictator of any crimes that he has or intends to commit. Moreover, when he fails in a particular adventure, the scapegoat provides a convenient diversion.

Another instrument that is frequently used is the launching of aggressive wars. Here again the people are distracted from their real troubles while the dictator has the opportunity of building up still further his prestige and power in the name of the national interest. Of course, dictatorship also resorts to various forms of suppression including violence.

It is also customary in many instances for dictators to latch on to certain traditions in the history and culture of his people. This requires great dexterity, imagination, and an enormous propaganda apparatus which ceaselessly seeks to convince the people that the dictator is the reincarnation of their past glories. Mussolini, for example, tried very hard to convince the Italians that he was the true successor of the Roman Caesars. Stalin borrowed from the image of czarist rule which portrayed the czar as the little father of his people. Mao Tse-tung borrows from the legacy of the old Chinese emperors who were regarded as the great fathers of their children (the Chinese people).

THE BIG BUILDUP

The President of the United Arab Republic, Gamal Nasser, has a wealth of ancient traditions which he can and does associate with his own dictatorial rule. The earliest tradition, going back to about 3400 B.C., is based on the rule of the Pharaohs. With none to question their powers, which the Egyptians believed to be sanctified by the gods, the Pharaohs dictated every aspect of the lives of their subjects. The Pharaohs' rule on earth was regarded as reflecting the divine order of the universe. This was the meaning of the word "Ma'at" which was represented in the hyroglyphics by a white feather against which the hearts of men were weighed in the hall of judgment after death.

As one historian described the divine government on earth: "He [Pharaoh] as a god, was the state. To be sure, it was necessary for him to have officials of a government which had spread and which would become increasingly elaborated, but our evidence indicates that they were his officers, appointed by him, responsible to him alone, and holding office subject to his divine pleasure. * * * The customary law of the land was conceived to be the word of the Pharaoh, articulated by him in accordance with the concept of Ma'at and ever subject to his divine pleasure, within his interpretation of Ma'at and of his function as a god. * * *" It is clear that Nasser strives to imbue Egyptians with the feeling that he acts in accordance with the "great traditions" of the Pharaohs. Egyptian propaganda dwells on this theme on many occasions. For example, in the official government pamphlet "The Egyptian Revolution (July 1955) we read the following: "Egypt was the first country in the world to have a regular army. When Mena, the first Pharaoh of Egypt, desired to unite Upper and Lower Egypt, he organized the first regular army known to the world, and in this manner achieved his end.

"The army has suffered a great deal under the corruption of previous regimes, but in spite of these persecutions [sic] and the

limitations imposed on it by British imperialism, it has preserved its glorious traditions.

"The army has played its role in the past and will continue to play it successfully."

When Nasser first gained power, his popularity was not at all assured. However, when he seized the Suez Canal, a typical stroke of demagogic adventurism, he managed to conjure in the minds of the people the picture of an ancient hero come alive. As one reporter noted, portraits of Nasser began to appear everywhere. Significantly, a colossal one was set up opposite the giant statue of Ramses II, the Pharaoh who is noted as the great empire builder of ancient Egypt. The Egyptian vice president at that time, Gamal Salem, remarked drily to a newspaper reporter, "I am against the personality cult." The censor cut this remark out of the interview. A few days later Mr. Salem was removed from Nasser's cabinet. Nasser's notorious Fedayeens which had made bandit-like incursions into Israel, were also doused with the Pharaonic tradition. Thus, on August 31, 1955, the Cairo radio boasted about the deeds of this gang in these words: "Egypt has decided to dispatch her heroes, the disciples of Pharaoh * * * and they will cleanse the land of Palestine."

Even though Gamal Salem was promptly removed after his criticism of the personality cult, there is no doubt that he had hit the nail on the head. Nowhere else do we find a clearer expression of Nasser's megalomania than in his book "Egypt's Liberation" written in the first person. It rivals anything that Hitler wrote about himself as the predestined ruler of his people. Like Hitler's writings, it is a mishmash of mysticism, conceit, self glorification, and obscurantism. As one commentator noted, many of the passages in Nasser's book are "purple with a sort of adolescence." Here are some excerpts:

(1) "I got home, threw myself on my bed, my mind in fever, my heart and conscience incessantly boiling. * * * The ecstasy of success on July 23 did not really deceive me. * * * The annals of history are full of heroes who carved for themselves great and heroic roles and played them on momentous occasions on the stage. History is also charged with great heroic roles for which we do not find actors."

(2) "From the height of the stars, I used to come down to earth often and feel that I was really defending my home and my children. * * * I had within me a feeling of distraction which was a mixture of complex and intermingled factors: of patriotism, religion, compassion, cruelty, faith, suspicion, knowledge and ignorance."

SALADIN'S SUCCESSOR

Nasser has also leaned heavily on the historical exploits of Saladin who fought the crusades in the Middle East. Mr. C. L. Sulzberger, chief foreign correspondent for the New York Times, wrote a poignant description of Mr. Nasser, the "Saladin in a gray flannel suit" (March 26, 1958). In describing his personal interview with Mr. Nasser, Mr. Sulzberger wrote: "This dynamic but rather simple Egyptian, with no profundity either of education or experience, is likened by millions of Arabs nowadays to Saladin, the almost legendary figure who emerged from the desert 8 centuries ago to defeat Richard the Lion-Hearted and his Crusaders.

"The concept of Nasser as a modern Saladin has been developed in his own controlled and heavily inspired press. Certainly no Arab since Richard's dashing opponent has been so popular with Middle Eastern masses as this new aspirant to (in his own words) 'a role wandering aimless in search of a hero.' And certainly Nasser himself is not averse to comparing his own ambitious present with Saladin's successful past."

Besides working on the Pharaoh-Saladin angle, Mr. Nasser has also played the religious traditions of his people. Presumably, it would not be a bad idea if he could convince the Arab masses that he was the legitimate successor to Mohammed. Indeed, as his book indicates, Nasser sees himself as a sort of prophet whose mission is to bring into one embrace the people of Asia, Africa, and the Middle East. "Within the Arab circle," he writes, "there is a role, wandering aimlessly in search of a hero. * * * This role is beckoning to us since no one else is qualified to play it. * * * This is a role such as to spark the tremendous power latent in the area surrounding us, a role tantamount to an experiment, with the aim of creating a great strength which will then undertake a positive part in the building of the future of mankind." In his concluding words he repeats his self-appointed mission: "And now I go back to that wandering mission in search of a hero to play it. Here is the role. Here are the lines, and here is the stage. We alone, by virtue of our place, can perform the role."

MOHAMMED'S SUCCESSOR

The extent to which Nasser tries to depict himself as the man closest to God is revealed in many of his speeches. They are soaked through and through with self-glorification and the idea that he is the true interpreter of God's will. One of these speeches was delivered in Syria last year (Feb. 25, 1959). Although the harangue was very short, about 1,000 words, the word "God" was mentioned 12 times:

"Thanks be to God who united us for right."

"The cause which brought us together here today is a cause sent by God."

"With the help of God, your cause—the cause of Arab nationalism—will triumph."

"Your cause, as I have said, is a cause sent by God."

"As I told you before, the cause in which you believe * * * is a cause sent by God in order to awaken us and to restore our glory once again."

"We used to pray to God * * * to unite the hearts of the Arab people."

"Today I thank God after seeing you all united in one cause."

"We thank God who united our hearts in this cause."

"We make God a pledge and I pledge with you that I shall work * * * for this cause."

"With God's will we hope to celebrate * * * victories in all fields."

"May God grant you all success. God's peace and mercy be upon you."

Cairo's dictatorship is not only heavenly sent but, according to Nasser, it is he who interprets God's will in this respect. Thus, in another brief speech on the very same day he declared: "In these glorious days in which we stand to review our pledge to the Arab nation, I feel a propelling force derived from your strength, because this spirit which I see, is a spirit from God which he granted to us so that we might be able to realize the great hopes of the Arab nation."

Certainly, the above passages do not show any humility on Mr. Nasser's part. That he appears before his people as a sort of god-like character reminds us of the role that this concept played in the scheme of rule that kept the Egyptians in subjugation under the absolute pharaohs. Of course, under the modern conditions, Nasser must depend upon a first-class propaganda machine. Here, Nasser has borrowed the techniques, indeed, even the personnel of Hitler's propaganda apparatus. "Every Egyptian today is a new Goebbels and Britain will not be able to defeat these many Goebbels as it prevailed over the one Goebbels in Germany." This was written by Sami Daud in Al Tahir, one of Nasser's most important propaganda organs (Apr. 10, 1956) and so, with this directive, Cairo has let out all stops in its efforts to place Nasser on the right hand of God. Here are some examples:

"Not in vain did God's hand choose President Abdul Nasser to lead the Arabs * * * Arab solidarity in all parts of the Arab homeland, coupled with President Abdul Nasser's leadership, will result in a great force which will lead us to our victory and to the defeat of imperialism" (Nov. 30, 1958).

"Zionist-imperialist propaganda has been describing Nasser as a leader with expansionist ambitions. This propaganda has stuck in the minds of a number of Arab rulers among the agents of imperialism, who see in Nasser a threat to their existence. They do not know that Nasser is the messenger of Providence to his people" (Dec. 1, 1958).

The religious cloak donned by Nasser, is pointed up by a news item from Damascus. It appears that the Syrian Minister for the Interior told German newspapermen that the Germans should more than anyone else comprehend the Arab struggle to achieve Arabdom because the "Arabs fight for their unity like the Germans." In describing the interview with the Syrian Minister, the German reporter noted that there was a bust of President Nasser on his desk with the Koran inscription " 'This is your people—one people' (the Koran verse goes on to say: 'I am your master—therefore pray to me')" (Deutsche Wochenschrift, Feb. 18, 1960).

SUPERMAN

Besides depicting Nasser as God's messenger and prophet, Cairo has outlined Nasser's mission on earth. Here are some examples:

(1) "We established the U.A.R. out of Syria and Egypt as a nucleus of the State of Arab nationalism extending from the gulf to the ocean" (Oct. 29, 1958).

(2) "Imperialism knows very well that the construction of the high dam in the Nile Valley, and the joining together of the struggle of the two brotherly peoples in the Sudan and Egypt, would spell definite doom for imperialism in the whole of Africa, its last haven" (Nov. 3, 1958).

(3) "The revolution of July 23 which surged forth in Cairo under the leadership of Gamal Abdul Nasser was the signal that set in motion the African liberation movements" (Dec. 4, 1958).

(4) "With the emergence of Abd an-Nasir, the historic capital of the Fatimids and Ayubites became a world center no less important than Washington and Moscow" (Jan. 8, 1959).

(5) "The flame of faith, freedom, struggle, and construction which burst in Cairo and lighted the way for the entire Arab nation is now lighting the way for the nations of Africa and Asia. This flame in the strong hands of Jamal Abd an-Nasir will continue to radiate its light. The Arab people will continue to rally around their leader, the exponent of their renaissance, until we accomplish our mission" (Feb. 4, 1959).

In Mr. Nasser's book referred to above, the future Egyptian empire is outlined in the form of three circles. The first circle takes in the Arab Middle East, the second circle "the continent of Africa" and the third one involves the unity of all Moslems. Judging from his recent visit to India and Pakistan it would seem that Nasser might be in the process of outlining a fourth circle to include these two key countries of Asia.

The visit itself was trumpeted by the Egyptian propaganda machine as one of the great historic occasions in recent years. The Cairo radio declared that the Indian people in overwhelming numbers expressed their "happiness" to a person (Nassar) "dear to them." Thus, Radio Cairo broadcast that Nasser's visit "has a great effect on the Indian people" (Mar. 29, 1960). Nasser took

every opportunity to address the Indian people, haranguing them against "Western imperialism." The Egyptian newspaper Al-Akhbar declared: "Nasser is not only the UAR leader, but he is a man of ideas, principles, and beliefs which the peoples of Asia and Africa have adopted." The omnipotent qualities of Nasser's leadership were repeated over and over again as he continued his trip through India. A resolution adopted by the National Union, Nasser's hand-picked political organization, saluted "the hero of peace and vanguard of Arab nationalism, President Nasser, and prays that he succeeds in defending peace and in making the Afro-Asian peoples victorious."

The same sort of buildup took place during Nasser's visit to Pakistan. The newspaper Al-Akhbar (Apr. 10, 1960) wrote: "If the President's visit to India arouses great interest in Africa, Asia, and the other continents President Nasser's visit to Pakistan is no less important." Continuing in this vein, another Egyptian newspaper Al-Ahram (Apr. 18, 1960) wrote: "Observers were also surprised to see that the shouts which echoed in the four corners of the Indian subcontinent were similar to those which have echoed in Cairo, which, in both cases, showed unanimous support for the material and moral results achieved by President Nasser's visit." Summing up Nasser's triumph in India and Pakistan, the chief editor of Al-Ahram wrote: "In this mission Nasser was an ambassador extraordinary representing the whole Arab nation and carrying its message to the people of Asia, the largest and oldest continent." Concluding his evaluation of Nasser's trip, the chief editor declared that "Providence protects him (Nasser) for the fulfillment of missions such as the mission in the heart of Asia" (Apr. 20, 1960).

THE NEW CULT

Obviously, with all of the channels of public information firmly in the hands of Nasser, the Egyptian masses and many Arabs throughout the Middle East are subject to a constant barrage of words extolling the virtues, the heroism, the self-sacrificing, saintly character of the new superman Nasser. Throughout the Middle East his propagandists preach his "pearls of wisdom" and present him as a man who can and will do most anything for the Arab masses. Tragically, this line has made an impression on the Egyptian people because there are no other channels of information except those under the thumb of Nasser himself. They have no way of learning the truth. Under these circumstances, they become prey for the Cairo jugglers of words and ideas. They can be stamped into frenzies of hate and violence when the dictator deems it prudent to reach for a scapegoat so as to cover up his own failures. Western "imperialism" is one of these scapegoats, as is the State of Israel. As noted in the earlier part of this article, this, too, is an old tactic of dictatorship.

From the foregoing it is clear that the "cult of personality," a phrase coined by the Communists in apologizing for the brutalities of Stalin, is very much alive in modern Egypt. Of course, the personality cult could not by itself, maintain Nasser in power. He must continue to use force, terror, and maintain a state of emotional tension among his people. As Walter Lippmann once noted, Nasser's position in Egypt and his influence in the world "would soon collapse" if he agreed to abide by the moral standards of relations among nations. "He must remain in rebellion against them (the Western nations), never for long allowing the conflict to subside. He needs the tension of international, indeed of interracial struggle. He needs it to maintain among the Arab masses the image of himself as their champion. He needs attention also for his political survival at home, to divert his rivals who conspire against him, and as a distraction for the people."

Nevertheless, the cult of Nasser, while not the only element in his power structure, is not to be underrated. Its psychological value is well understood by Nasser himself. Just as the depressed Egyptian masses were forced to cast their eyes on the mighty pyramids dedicated to the ancient Pharaohs, so Nasser calls upon his people to fix their attention on his Aswan Dam project while they continue to languish in poverty and ignorance.

National Television Debates Between Presidential Candidates

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 24, 1960

Mr. CLARK. Mr. President, the House has now passed Senate Joint Resolution 207, and sent it to the White House. I feel certain that the President will sign this resolution which will make possible a series of great national television debates between the two presidential candidates. I believe these debates will make a major contribution to the forthcoming campaign by permitting millions of Americans to see and hear a presentation by the candidates themselves of the great issues before the Nation.

This week's edition of TV Guide, the most popular of the television magazines—published I am happy to note, by Triangle Publications, Inc., of Pennsylvania, has an editorial commending the Senate for passing Joint Resolution 207. I believe it states the case for this resolution well, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS WE SEE IT

The coming election campaign will make much more sense to viewers—and to candidates—if the House of Representatives passes a joint resolution already approved by the Senate.

The measure suspends—temporarily—a section of the Communications Act which requires broadcasters to give equal time to all candidates for the same office. Usually there are about a dozen candidates for President and Vice President. Since is it impossible to donate time for, say, a debate between the Democratic and Republican candidates without giving equal time to all the minor party candidates, broadcasters just don't give time to anyone. They sell it.

This results in huge television expenditures by the major parties, and a real possibility of inequity.

All three networks have pledged to give free and equal time to the Democratic and Republican candidates provided they can do so legally. The network plans differ, ranging from debates and joint press conferences to "here is the time, do what you will with it." They are willing to set aside prime evening time on a regular basis for the two political parties.

This system would also permit the Democrats and Republicans to buy extra time, but would tend to reduce the size of the war chests needed to conduct the campaign.

We urge the House of Representatives to pass the measure which would permit broadcasters to donate time to the two major parties. This is no normal election. More is at stake than ever before in our history and it would be ridiculous to permit a legal technicality to prevent full airing of issues.

If readers want to make their wishes known to their Congressmen, the measure we have described is Senate Joint Resolution 207.

A New Program for the New Situation in Asia

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include an article appearing in the August 1960 issue of the Catholic World written by Paul K. T. Sih, Ph. D. Dr. Sih is director, Institute of Asian Studies, Graduate School, St. John's University, Jamaica, Long Island, N.Y.:

A NEW PROGRAM FOR THE NEW SITUATION IN ASIA—IN OUR PAST POLICY WE WERE NOT LACKING IN GENEROSITY BUT IN SPIRITUAL UNDERSTANDING

(By Paul K. T. Sih)

The tide in Asia is turning in our favor. An evident upsurge of opposition has set in toward the Red China regime. A Bandung Conference is unimaginable at this time. If such a conference were possible today, its major consideration would not be the expulsion of the Western powers but the elimination of the Communist threat.

This view of the Asian situation may seem excessively optimistic in view of the fact that almost half the Asians are under Communist control. It is a fact, however, that communism is not as influential now as it was ten years ago. The recent riots in Tokyo indicate that Communists have tremendous power in certain circles of students and workers but these violent demonstrations were symptoms of domestic quarrels rather than proof of a popular enthusiasm for communism. The overwhelming majority of Japanese are still conservative and although they have an understandable bent for neutralism due to their memories of the last war, they are not pro-Communist.

In Okinawa a small but vociferous group expressed their grievances when President Eisenhower arrived in June. However these grievances do not reflect pro-Communist sentiment and the Communists there are weak and ineffective. The grievances are based on a rational conviction on the part of most of the islanders that they would fare better economically by having the islands revert to Japan.

Elsewhere in Asia, there has been some deterioration of American prestige due to the cancellation of President Eisenhower's visit to Tokyo but in general the neutralist nations of Asia are becoming less neutral and less sympathetic to communism. In Indonesia, the large, well-disciplined Communist Party has lost ground because of Red China's opposition to the Indonesian Government's treatment of the Chinese in Indonesia. Malaya, under the leadership of Prime Minister Tengku (Prince) Abdul Rahman, has decided to stamp out Communist

activities during 1960. The free nations of Asia are achieving new levels of stability and adopting a more realistic policy toward communism.

There are of course certain significant reasons for this development. The inhuman program of the people's communes in Red China has terrified the family-loving peoples throughout the entire Oriental world. Assault on Tibet has extended to regions controlled by India, from Shipski Pass on the Tibetan border to the North-East Frontier Agency. Pakistan is fuming over a set of Chinese maps showing some 6,000 square miles of Pakistani territory above Kashmir as part of China. Indonesia has seen the much-prized spirit of Asian cooperation callously destroyed. Nepal has taken increased defense measures against Communist infiltration from Tibet into the villages of Hilje, Limi, and Jami. Burma is taking defense measures in its northern region against Communist aggression. In Laos, it has been reported that the rebellion has been resumed with the support of the Chinese Communists. In the Arab world, Kassim in Baghdad and Nasser in Cairo find that their Communist friends are a treacherous support.

This recent decrease of Communist influence does not, however, mean that the democratic West has in itself grown more attractive to the Asian peoples. Bitterness based on recent colonial occupation and the West's economic superiority prevent that. The U–2 episode and the cancellation of President Eisenhower's visit to Tokyo were serious blows to Western prestige in Asia. Yet at the same time they did not increase respect for communism. It is most urgent, therefore, at this moment in the cold war, that we make a thorough reappraisal of our position. We must bring about a more intimate association between ourselves and the new Asian nations.

One thing is clear. Our policy in Asia in the past has not been adequate. On the whole we were not lacking in generosity, but in spiritual understanding. A soundly human friendship must be created if America and Asia are ever to achieve that firm basis upon which our future cooperation must rest. Something beyond economics determines the success or failure of economics. Once we establish this deeper understanding, an extensive renewal will take place in every phase of our relationships with Asia.

Here we outline in detail the new attitudes and activities that should follow in the political, economic, cultural, and spiritual orders if this new program of cooperation is to be put into effect.

In the political order:

(1) We must appoint ambassadors and ministers to Asian nations who are truly capable of understanding Asians and of obtaining their confidence. Some of the American ambassadors in important posts possess the attributes of good diplomatic representatives, but qualified diplomats are needed in all the free countries of Asia. Present-day diplomacy demands more qualifications than traditional diplomacy. These include an adequate knowledge of the countries to be served. Jusserand, a noted French diplomat, said testily: "Experience has already shown and will more and more show that no invention, no airplane, no wireless will ever replace the knowledge of a country and the understanding of a people's disposition." The present trend reveals that "although the language proficiency of this country's Foreign Service officers is improving rapidly, more progress needs to be made. If the number of our diplomats who can speak French, Spanish, and German is now adequate, this can hardly be said of the numbers who cannot speak other needed languages, especially non-Western tongues. There is, for example, no American diplomat who can speak Singhalese, only one who speaks Bengali, and only four who speak Burmese. We have had extensive relations with Korea since 1945, yet only nine of our diplomats can speak Korean" (New York Times, Nov. 22, 1959).

Such examples could be multiplied, but the point is clear: we cannot hope to build good will for the United States unless those who are in official posts overseas have the ability to know the people of the host country—their needs, aspirations, and point of view. Our representatives must be able to communicate easily and directly with many different peoples.

(2) We must act consistently. This is most important for if there are things that are immeasurably irritating to Asian peoples they are inconsistency, hesitation, establishment of programs that are never carried out, and making promises that we do not fulfill. On the other hand, consistency gains confidence for times of crisis. American prestige was never higher throughout Eastern and particularly southeast Asia than when our Government took a firm stand with respect to Quemoy and extended needed assistance to the Nationalist Chinese Government on Formosa in its valiant and successful resistance to Communist aggression.

(3) We must make new efforts to mitigate inter-Asian political quarrels. The nations of Asia have conflicts and little "cold wars" among themselves. Even without Communist aggravation, Asia has its quota of international tensions that can often be relieved by outside assistance. India and Pakistan have to settle their disputes over Kashmir and over the waters of the Indus River system. Japan and South Korea must solve problems that have arisen over the repatriation by Japan of Koreans to Communist North Korea and over fishing rights in the Pacific. Controversies must also be settled between Free China on the one hand and the Philippines and Vietnam on the other with respect to Chinese minority groups. For these differences, an arbiter is frequently needed. This role of peacemaker is not an enviable one. Yet nations as well as individuals do need assistance from others. The United States can furnish intelligent, sympathetic and impartial advice to both sides and thus assist in healing many of the ancient and recent antipathies that exist in Asia.

Of course, before she is able to bring about this political solidarity in Asia, the United States has to overcome some of her own difficulties in Asia. Above all, she has to seek a proper adjustment with Japan, especially in regard to those Japanese who fear that the United States-Japanese Security treaty will subject Japan to the danger of war. Then too the United States must reassure the Philippines concerning the lease of military bases and must arrive at a satisfactory agreement with Free China concerning the status of American Armed Forces. We firmly believe that, with mutual good will, these normal political differences can be bridged.

In the sphere of economics, American programs must find more effective means of aiding the national economies of the new Asian countries. With Communist Russia and Communist China looming ever more menacing in the Far East, there is no question as to the fact that those nations directly and indirectly threatened by communism should receive special attention. However, there are serious weaknesses in the execution of our foreign aid program. In implementing a new program of economic assistance:

(1) We must delegate more power to our field officers. At present, too many details in our economic projects have to be decided in Washington. Efficiency is at stake. Drastic changes for the sake of more effective operation must be inaugurated. American aid in Asia is less welcome today than it was a few years ago. Why? Since 1953 the Soviet bloc has given economic help to the area. Compared with Communist aid, American aid seems less efficient. Sukarno, President of Indonesia, is reported as saying: "It usually takes 1 year to negotiate with the United States and another year to assure delivery. Not so with Communist China. It takes 1 week to negotiate and 3 weeks for delivery." A similar situation is found in Vietnam. Saigon welcomes Australian aid more readily than American aid in economic projects because Australia is more prompt in executing its part of the program.

(2) We must institute a more extensive program for training Asian personnel in technical work. Scientists and men of higher learning are necessary and should be trained in the more developed countries on a larger scale. In this regard, the program of the U.S. Economic Cooperation Administration has achieved certain praiseworthy results in Asia. However, better trained local staffs are even more necessary for a balanced development of the area. It is generally advisable that this training be carried out in the place where the trainees are found rather than in more developed countries where social conditions are very different. Training programs set up in the West for use in the more developed nations are generally not suited to the needs of Asia. To cite one instance: medical doctors who are at work in Asia are better trained in Asia than in the United States. Asia has particular diseases and types of diseases, such as malaria, smallpox, yellow fever, typhus, dysentery, cholera, etc., that are rarely found in this country. Many doctors who received their specialized training in the United States found, after their return to Asia, that their usefulness in their native lands had been somewhat impaired. We know that India has only 23,000 hospital beds, which can hardly accommodate 2,500,000 active cases of tuberculosis. However, a pilot experiment in Madras has shown that "at home" treatment of tuberculosis patients produces results quite as good as those resulting from treatment in hospitals. Less disruption of family life facilitates considerably the recovery of the patients. It is this kind of doctoring and nursing that most of the nations in Asia, which cannot afford modern medical care, are anxious to secure. It is gratifying to note that a serious attempt to cope with the situation has been made in Indonesia. In August 1959, the University of Indonesia graduated 97 medical doctors under a cooperative training program with the University of California. Similar programs should be set up in other Asian countries.

(3) We must absolutely separate ourselves from the traditions of colonial times. This is especially important at a time when the Communist bloc nations, sincere or not, are offering "disinterested help" to the nations in Asia. American economic aid programs, of course, do not envisage any imperial interest. Yet they originated in the Marshall plan which was successful in Europe, but which cannot be transplanted, in content and concept, to the newly developing lands of Asia. Asia is essentially a rural society. Being rural, it differs in character and genius from Europe. Therefore, in extending our assistance, we must give more consideration to the views and projects suggested by national leaders. Above all, we must develop our economic aid to Asia in such a way that a regional economy, like the European Common Market, may be formed with Free China, Japan and possibly India as the leading nations. Experience indicates that many fine systems based largely on foreign patterns are not suited to the special needs of Asia. We must seek to develop "homegrown" programs that would be fundamentally based on the conditions and

needs of Asia. This is the reason why Vietnam and Thailand have often sought technical assistance from Free China in establishing textile factories and sugar refining plants. Japan was asked to build a $2,800,000 nickel smelting and refining plant at Bindura in Southern Rhodesia. To those projects for inter-Asian economic cooperation, the United States should give all-out encouragement and help.

Asia is passing from a traditional agrarian economy into a modern industrial economy. While foreign aid is made available great care must be taken to assist the Asian countries to adapt present conditions to a modern economic system. Native resources and foreign assistance can both fail to benefit the people unless they are integrated into a sound functioning economy.

In our cultural exchanges with Asia we must adjust our programs to the psychology, traditions, and cultures of the peoples there. The U.S. Information Agency has been successful in its limited attempt to carry out oversea propaganda. However, there is room for considerable improvement. The general impression has been created that intellectual quality is being sacrificed to commercial quantity. Department store catalogs often find more prominent places in our information centers than the works of Lincoln or Jefferson. With a sense of regret we read a news report published in the New York Herald Tribune of July 20, 1959, that the Malayan Government ordered the removal from community centers of all books and pamphlets donated by USIA. Minister of Labor and Law K. M. Byrne, who issued the order, said that the American publications would be replaced by "books of Malayan content." The basic defects of our cultural relations with foreign countries derive from the excessively materialistic philosophy of our programs, not from political or administrative failures. This is particularly true in Asia.

Now, more than ever, Asia wants more schooling for its children and a share in the fruits of modern cultural enterprises. However, no international program of education and culture could succeed without taking advantage of the rich traditions of Asia's intellectual life. Addressing themselves to the annual assembly of the World Confederation of Organizations of the Teaching Professions held in August 1959, at Washington, D.C., Asian delegates made a joint appeal for the setting up of a special commission to study "the educational problems of Asian countries and to make recommendations on them, taking due note of the spiritual heritage of these countries and the necessity of providing an education suited to the modern age" (New York Times, Aug. 4, 1959). This outcry indicates their dissatisfaction for what they have thus far received from the West.

So far as the United States is concerned, we fail badly even in the entertainment field. American motion pictures are generally more popular with Asians than other Western productions. However, they have often been presented in such bad taste that local authorities were forced to ban them. We know that the Legion of Decency in Taiwan, for example, has established for the classification of films a moral standard that is even higher than its American counterpart. In fact, a Puritan crusade prevails in Asia. Laos has carried out a program against indecent songs and recitals. Thailand has closed down nightclubs. Singapore has banned pinball games and jukebox parlors. In Burma, both rock and roll and beauty contests are condemned. In Indonesia, hulahoops are prohibited as sexually provocative. In Bandung, Western movies are forbidden because they tend to provoke "adventurous sentiments."

On the bright side, however, it can be said that good American motion pictures are welcomed by the young generation of Asia with enthusiasm. "The Ten Commandments," for example, was so successful in Japan that the theater in which it was shown established a new Japanese record for box office receipts. Many nations in Asia, including free China, are unable to show this film because they lack the needed cinemascope equipment. Here is an instance in which a little thought, foresight, and adapability could make American aid much more welcome.

Last but not least, we must do more to foster a truly spiritual relationship with Asia. In a special way, Asia is now in a state of expectancy, hoping for a fuller life, a spiritual fulfillment of its deepest desires. This can be provided only by Christian faith and love.

For many centuries, Asia has tended to look westward for intellectual and spiritual inspirations. Islam, the dominant religion of Malaya and Indonesia, is of relatively Western origin. Roman Catholicism, the faith of the Philippines, much of Vietnam and part of Malaya, came from the Occident. Democracy's tenets, now struggling in Asia to survive, were derived from England, France, and the United States. Even communism, being pushed in this area by both Russia and China, is a Western product. With this background, Asia tends to develop, not in isolation from the West, but through association with the West. The choice that is to be made is between the democratic West and the Communist West.

The outstanding characteristic of the East is struggle: struggle against poverty, disease, hunger, and ignorance, struggle to adopt the West's modern technology and to develop an independent way of life which would combine the East's old heritage with a new hope—hope for a re-creation of the spiritual dimension of society, without which modernization, however successful, will not satisfy the deeper aspirations of man. In this respect, America's chances of success in Asia are far greater than those of Soviet Russia or Communist China. America is viewed as Asia's finest contact with the Western World. For America, it is not so much a question of overcoming difficulties in Asia but rather of taking advantage of the new opportunities that are offered in this area.

To Asia, America's meaning is profoundly human and spiritual. Jacques Maritain in his "Reflections on America" (Scribner's, 1958), stresses the importance of America in the extension of the Christian idea to the whole world. In fact, America cannot inspire Asia to be Christian unless she herself becomes more Christian. This is the real challenge Asia offers to the United States.

In conclusion, we note that Asian neutrality has broken down. But Asia will become a carbon copy neither of the democratic West nor of the Communist West. In maturing politically, the nations of Asia will undoubtedly develop a new sense of community which is less apparent in the individualistic traditions of Europe and America.

We must be very sympathetic to these new developments in Asia even when they do not conform absolutely to our own ideals. The ability of these countries to oppose communism depends on this inner development of their national life as well as on our own external support. We have outlined a minimum program. We know not how long the present opportunity will last. It may be later than we think.

Chamber of Commerce, Janesville, Wis., Plans "Get Out Vote" Campaign

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, August 24, 1960

Mr. WILEY. Mr. President, earlier this session, I was privileged to introduce a resolution designed to establish a National Voters Day.

The purpose of the resolution was to focus a greater effort upon getting a larger percentage of our informed electorate to the polls at election time. This passed the Senate and is now pending before the House Judiciary Committee. I sincerely hope that that body will find it possible to report out the bill for approval prior to the adjournment of Congress.

Encouragingly, more and more individuals and civic-minded organizations are undertaking constructive, worthwhile programs aimed toward getting more informed voters to exercise their priceless heritage for a "voice at the polls."

As a fine example of such efforts, the Chamber of Commerce of Janesville, Wis., is setting up a hard-hitting program to get all eligible voters to the polls in November to cast their ballots for the candidates of their choice.

Recently, the Janesville Gazette published an article reviewing the objectives of this special program. I ask unanimous consent to have the article—reflecting a laudable community-minded endeavor—printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GET-OUT-VOTE CAMPAIGN AMONG PLANS OF CHAMBER OF COMMERCE

A get-out-the-vote effort will be high on the agenda of the chamber of commerce which is now in the process of completing arrangements for late summer and early fall activities.

Robert Westfall, secretary, said that the chamber has planned a hard-hitting program to get all eligible voters to the polls in November to cast their ballot for the candidates of their choice. Personal contacts, publicity and possibly rides to the polls are being planned by the chamber which will also make an attempt to get everyone registered.

SEVERAL COURSES PLANNED

Several courses and two special events, one of businessmen and industrialists with teachers, the other with farmers, are on the schedule for this fall, according to Westfall.

Education-business-industry day will be held early this fall, the businessmen and industrialists visiting the schools to see them in operation, talk with teachers about policies and problems and gain a better understanding of what is required so schools will keep pace with changing and increasing demands. The teachers were guests of some 30 businesses and industries May 24, touring the establishments and talking with leaders

to gain a deeper insight into the economic system.

CITY-FARM DAY

Businessmen will be hosts to the farmers at city-farm day in the fall. This day is one set aside for farmers and businessmen to get together to discuss mutual problems. It will be climaxed with a barbecue. Last year's city-farm day wound up the Alice-in-dairyland-princess contest, the farmers hosts to the businessmen.

Among the courses planned are those in practical politics, congressional action and economics.

Ten men have completed the pilot course preparing them to moderate the practical politics course for men and women, a course designed to better inform persons on the impact government has on their lives.

They are William Wood, Hiram Nowlan, Jr., Robert Collins, Vern Burrows, Errell Orear, Stanley Judd, Jr., Charles Sanford, Rox Lee, Robert Consigny, and Bill Beyer.

Seventeen persons have already expressed a desire to be a part of the congressional action committee which will meet weekly to discuss issues before Congress and how they affect the area. Major topics will be inflation and spending control, tax reform, labor legislation, Federal controls of business and agriculture, Federal intervention in State and local affairs, and social security expansion.

Committee members are Harry Wright, Janesville district manager of the Wisconsin Power & Light Co., who will be moderator, Alvin Baker, Paul Bergmann, Paul Bayorgeon, Art Dahle, M. J. Deignan, Don Dille, H. R. Friberg, Frank Godec, Hjalmer Hanson, Robert Jerde, William Germain, Gerald Keppert, Jack O'Neill, John Powell, Steve Ruchti, Warren Senstrom.

The economics discussion course is planned to develop informed articulate spokesmen for business. Twenty-one completed the 17-session course last year. An effort will be made to include the course in the high school economics classes here.

The Late Honorable Usher L. Burdick

SPEECH

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LEVERING. Mr. Speaker, I rise on behalf of Mrs. Levering, Usher Burdick's only daughter, and his two sons, QUENTIN, now serving in the other body, and Eugene, a district judge in the State of North Dakota, to thank our distinguished Speaker, our majority leader and so many of my colleagues for their kind remarks and expressions of sympathy on the occasion of the death of my father-in-law who served in this body for 20 years.

I have often said, "I never knew a man like Usher Burdick." I repeat that statement today. Someone has said, "I do not think the world is ever going to give much to the man who does not surprise it now and then." On the basis of this statement, the world gave much to Usher Burdick.

I have listened with pride to the praise which came from both sides of the aisle on how the "old gent" served his country here in the Halls of the people, but I knew him best for his love of the land, good cattle, and horses. Only hours before his death, he was making plans to return permanently to the land where he learned as a boy to speak the Sioux language. I will always cherish the hours spent with him riding over his Missouri River ranch on a summer day when the sky is as blue as a baby's eyes and the clouds are as white as the first snow of winter.

My father-in-law undoubtedly enjoyed a unique distinction in being one of very few families where the mother, father, and the three children were all graduates of the University of Minnesota. Also, all of the three children are admitted to the practice of law in the State of North Dakota. Usher Burdick always recognized the need for education and its importance in the molding of a wise and intelligent citizenry.

Mr. Speaker, as has been established, Usher Burdick was a humorist of the Bill Nye school and frequently devoted his weekly newsletter to the humorous side of grim events. A noteworthy example is his eyewitness account of the shooting incident by the Puerto Ricans in the House Chamber in 1954. The late Fred Othman, Washington columnist, yielded his weekly space on one occasion to carry this humorous account to the Nation.

He was the only Member of the House who was able to identify all four of the berserk Puerto Ricans, and he testified at their trial in New York in which they were convicted. He had remained standing on the floor of the House while bullets rained about him and made a careful mental note of the description of each intruder.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of Usher Burdick which he made in this body on March 11, 1954, relative to the Puerto Rican incident:

Mr. Speaker, while the revolutionists of Puerto Rico were trying to shoot down Congressmen promiscuously there were some comic incidents connected with the tragic affair.

Martin Dies, of Texas, and FRANK BOYKIN, of Alabama, were pretty much in line with bullets landing in their vicinity in the Chamber. They tried to flee to the Democratic cloakroom, and both attempted to pass through the door at the same time. They jammed in the doorway, and could not go either way. At this juncture, Martin Dies said to BOYKIN: "Who was it that just darted between us?" Finally BOYKIN got through and into the cloakroom. He announced he was going for his gun. Someone asked him where it was, and he said it was in Alabama.

Dr. MILLER, whose both legs are artificial and who walks pretty well with a cane, was in the center of the Chamber on the Republican side. Instead of ducking, he stood up, waved his cane at the gunman and shouted: "You can't do this—it's against the law."

Mr. Hale, of Maine, was more interested in the way the seats are constructed than he was in the shooting. He had tried to get his head under one of them, but a cage that holds the CONGRESSIONAL RECORD was built too close to the floor and he could not get his head under it. Before the shooting stopped he was complaining about the poor plan of construction of the seats.

T. Millet Hand, of New Jersey, tried to get down in the space below the seats, but the one he selected was already occupied by Representative CANFIELD. He was still ducking down in that vicinity when someone asked him what he did when he found the space occupied by CANFIELD. "Well," he said, "I crawled under CANFIELD."

Judge Graham, of Pennsylvania, who is about 5 feet 2 inches tall, but still large in girth, could not find a place to get into to avoid the bullets, so remained standing up. Of course, I do not think the judge would have been much protected by getting down because he would have been about as high lying down as he is standing. For some unaccountable reason he was not shot.

JOHN MCCORMACK, of Massachusetts, was at the door of the Chamber when the firing began, and TIP O'NEILL, of Massachusetts, was behind him. He is a powerful man and he wanted to see what was going on inside. He rushed at the door and shoved MCCORMACK right into the Chamber and close to the line of fire.

I did not think the firing was real until a bullet hit a seat to the right of me. The dust and splinters flew and for the first time I realized that this was the "real McCoy." I moved out of there with all possible speed and thought of getting down on the carpet, but it was so completely occupied I was prevented from doing so. The firing seemed to have ceased, and I walked down a few seats when the last of the bullets were fired. I did not see any place to go for cover, and someone asked me what I was standing for. I replied that I was looking for a gopher hole. The man said, "You could not crawl into that kind of a hole." "Oh, yes, I could," I replied. "Any common gopher hole would be big enough the way I feel now."

That was the last burst of bullets, and then we began to attend the wounded, and the attempt at assassination passed into history.

To show just what vim a few pistol shots will instill in a body like the Congress, I cite the case of the gentleman from Illinois, Mr. Bowler. Unfortunately, he is very badly crippled through a severe attack of arthritis. When the shooting began and a few bullets struck near him he rushed for the door leading out of the Chamber. Seven or eight other Members had the same notion of getting out of the Chamber at the same time. The others were not crippled, but the gentleman from Illinois, Mr. Bowler, led the "flying squadron" into the lobby, and was ahead of the whole pack. He seemed to have the stamina of a Man of War or a Whirlaway in the last stretch run.

It ran through my mind, "Just what do those rebels want to shoot us for?" My first reaction was that we were being shot at because we have given $270 billion to foreign countries, but when I heard the rebel woman shout, "Viva Puerto Rico," I became convinced that these would-be executioners believed we had been more partial to England, France, and all the other 62 countries we have helped than we had been to Puerto Rico. You know, when we start giving everything away, jealously creeps in among the donees. This should be a lesson to us.

The bravest men in the House were the women. They did not want to plunge headlong on the floor behind a seat and muss up their clothing and hair, so they sat in their seats and let the bullets come. There must have been a spark of chivalry among the assassins, for none of the women were injured.

I think it is a shame to be assassinated in the House, although in elections in North Dakota I am rather used to that procedure. I have been opposed to an increase in pay for Congressmen. I think we should refuse to wade in and boost our own salaries while thousands of citizens do not get enough to

eat. But this shooting changed my views. I would be in favor of receiving combat pay—say 5 percent—and extra pay for flight duty—say a 20-percent increase on the latter. If a Congressman has to be prepared to run every time someone tries to kill him this is flight duty and we should receive some extra pay.

All the wounded Members are recovering rapidly, and no new elections will be necessary because of this shooting melee.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Pittsburg (Kans.) Headlight of July 11, 1960, the Wheeling (W. Va.) Intelligencer of July 11, 1960, and the New York Daily News of July 12, 1960:

[From the Pittsburg (Kans.) Headlight, July 11, 1960]

FRESH VOICE FROM PAST

A voice out of the Democrat past was heard in Los Angeles Friday. It was the voice of James Farley, one of the most famous national political generals of all time. He managed the campaign of Franklin D. Roosevelt for the nomination for President in 1932. Then he ran the election campaign. He directed the second one in 1936. But he balked in 1940 over the third term which Roosevelt demanded. He stepped down from the high post of command and back into private life. That was 20 years ago.

In Los Angeles, Farley who emerged 2 years ago to seek the nomination for U.S. Senator in New York unsuccessfully, spoke out about the approaching national convention. The veteran made a target out of Adlai Stevenson and Stevenson's position of willingness to accept another nomination. Stevenson, Farley said, apparently holds the "belief that it is the duty of God, the Democrat Party, and the American people to force it upon him." But Farley did not stop with Stevenson. It will not recommend the "Democrat Party to the American people if its decisions are reached by stampede or even by deadlock," he asserted in a speech to a Los Angeles civic club.

And then Farley praised LYNDON JOHNSON and assailed the northern opposition to JOHNSON on geographical grounds as "equally absurd and unconstitutional and disgraceful."

The old generalissimo has not lost his aptitude for forceful political expression in 20 years of successful contact with business.

The voice from the past is dealing with the immediate present and the future, not the past, however.

[From the Wheeling (W. Va.) Intelligencer, July 11, 1960]

ALL IN THE FAMILY

If a Republican had said what Jim Farley did at Los Angeles last Friday as delegates were streaming into town for their National Convention, he would have been accused of dragging Nikita Khrushchev into the campaign for partisan advantage. Coming from a wheelhorse of the Democratic Party, however, the language cannot be so interpreted.

What the man who led the Democrats to their greatest triumphs in the early Roosevelt era did was to warn his party against the appeasers within it who believe they can negotiate a spectacularly successful Communist terror into giving up two-thirds of the world.

If Soviet appeasement becomes an issue in the forthcoming campaign because of the personality and background of the Democratic nominee the men who will choose their standard bearer in Los Angeles this week will have only themselves to blame.

[From the New York Daily News, July 12, 1960]

JAMES A. FARLEY

In Los Angeles last Friday:

"By their [the Declaration of Independence signers'] ideal, an American is also an intelligent man. Atomic war is dangerous, of course, but no more dangerous to the individual than any other war—as the Tomb of the Unknown Soldier proves. Yet there move among the American people self-appointed Messiahs who constantly call attention to the horrors of armed conflict, as if George Washington, Robert E. Lee, and Ulysses S. Grant were not aware of the devastation of war.

"Do these false prophets think Bunker Hill was a picnic? Do they mistake the Death March from Bataan for a May-walk? There never was a bargain basement price for freedom as the heroic martyrs from the Boston Massacre to the Hungarian revolt prove.

"No party and no free nation can deliver peace. * * * To commit this Nation to peace at any price leadership is tantamount to surrender of the free world. We cannot answer Communist brinkmanship with 'lameduck' slinkmanship."

Wisconsin—Vacation Wonderland

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, August 24, 1960

Mr. WILEY. Mr. President, earlier this session, I was privileged to invite my colleagues—following the fulfillment of responsibilities here in Congress—to come to Wisconsin to enjoy a "breathing spell" in a wonderful vacation land.

Although a great many of my colleagues will be campaigning, I sincerely hope that there will be opportunity for Senators, their families, and vacationers from all America to come to Wisconsin this year.

The creation of a vacation garden spot has not occurred haphazardly. Instead, our people individually, the State government, civic-minded organizations, and businesses and industries have made a notable contribution to further improving our rich, natural heritage.

Recently, the Employee News of the Wisconsin Power & Light Co., of Janesville, Wis., published a fine article reviewing highlights of Wisconsin as a vacation land. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VACATION WONDERLAND

Twenty-eight miles northwest of the State capitol at Madison, a narrow two-lane bridge funnels U.S. Highways 12 and 13 across the Wisconsin River, yawns abruptly and deposits vacationers at the gateway to a year-round recreation and sightseeing paradise.

Driving north through the twin cities of Sauk City and Prairie du Sac, you pass our company's 28,500-kilowatt-capacity hydroelectric plant and into Lake Wisconsin vacation land. Here a winding, 25-mile stretch of water above our dam offers fishing and water sport playgrounds. A sporty nine-hole golf course on Wisconsin Power & Light Co., property lies along the southeast shore—little more than a pitch shot away from attractive summer resorts and cabins. Another nine holes will be added soon.

Although geologists identify the Lake Wisconsin area as the western rim of the great glaciers' terminal moraine, and many of you have been attracted by its flourishing walleyed pike, other know it as one of few Midwest sturgeon waters. Still others flock here annually to enjoy its scenic beauty.

A stone's throw northeast, off State Highway 188, new Richland Memorial park, complete with brick barbecue facilities, is ideal for picnics. A hike to the summit offers a breathtaking view from "Rock of Gibraltar," which juts out some 400 feet above rich farmland. On a clear day, you can see Blue Mound hill 25 miles to the southwest.

Two miles west of the park, where 188 joins Wisconsin 113, a 6-ton eight-car ferry carries traffic over the half mile of Lake Wisconsin that bisects 113 between Merrimac and Okee. Free, the ferry is operated by the State highway commission and open from April to November.

A short drive along the east shore takes you to Okee Lodge, which merits special attention from hungry weekend travelers. A moderately priced smorgasbord dinner is served each Sunday from noon to 8 p.m., and the lodge's outdoor swimming pool is available to dining room patrons. You are welcome in informal dress at all times.

It was in the Lake Wisconsin area, among towering bluffs and tree-studded shoreline, that the Winnebago Indians settled early in the 19th century. Then came the Sauks under Chief Pyesa, whose son Black Hawk led the tribe in its moral victory over the Army in the Battle of Wisconsin Heights in 1832.

Perhaps you will spend a weekend or more here soon. In the not too distant future, the area should increase sharply in popularity; for while it is accessible now via good roads from all directions, it will be readily available to more out-of-State vacationers upon completion of Interstate Highway 90.

It is with great pride that Wisconsin Power & Light Co. has been a factor in the growth and development of this area. And it is with interest in your leisure time pleasure that the company calls your attention to Lake Wisconsin, truly a vacation paradise.

Retired Federal Employees Health Benefits Bill

SPEECH
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BROYHILL. Mr. Speaker, when Congress passed the act granting certain hospitalization benefits for active Fed-

eral employees, inclusion of Federal retirees was purposely omitted because it was felt that the problems incident to the retirees were quite different and that consideration should be given them in separate legislation. The House Post Office and Civil Service Committee, of which I am a member, has given careful thought and study to these problems, and their conclusions are embodied in S. 2575, now under consideration. I know that the National Association of Retired Civil Employees is very earnest in its efforts to obtain this legislation and it is in full accord with the provisions of this bill.

This association has its own hospitalization program, under which 54,000 policies are in operation. Without the enactment of this legislation, these policyholders would sooner or later be jeopardized in their holdings because Federal employees who now retire will, for the most part, take with them into retirement the policies which they purchased as employees. For this reason, among others, it is highly important that S. 2575 be enacted and I earnestly support the legislation.

Retired Federal employees are on a fixed income and are, therefore, in a much more difficult position when hospitalization disaster strikes than is the case among other groups. I am always glad to lend my support to any reasonable legislation which tends to relieve them of their financial burdens.

The Scheinfeld Address on Underdeveloped Countries

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. TOLL. Mr. Speaker, on Tuesday of this week the Honorable HENRY S. REUSS, of Wisconsin, presented to the House of the address of Aaron Scheinfeld, chairman of the board of Manpower, Inc., one of the Nation's thinking business leaders on the subject of "Industrial and Business Development of the Underdeveloped Countries of the World."

His suggestions may well be considered by the business leaders of the country, because they offer a method of developing free countries as friends of the United States and eventually saving the taxpayers of our country subsidies and contributions which are now needed to keep as much of the world as possible independent and free.

Congressman REUSS is to be commended for bringing to the attention of the Members a report of such great interest that their constituents may read with great profit to themselves and to their neighbors one of the most helpful solution ever offered for the problems affecting the world today.

The address can be found on pages 16157–16159 of the CONGRESSIONAL RECORD for Tuesday, August 23, 1960.

Only by Cutting Expenses Can We Hope To Cut Taxes

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. WEAVER. Mr. Speaker, of all the problems which face the average American homeowner, worker or housewife, one of the most serious, most frustrating is the burden of taxation. This is a problem which affects every citizen of our land regardless of wealth or lack of riches. It is one from which none can escape.

Every citizen is aware, in a general way, of taxes. We become acutely aware of them when April 15 rolls around and the Federal and in some instances State and city income taxes fall due. But few are aware that almost every waking moment involves the payment of some form of tax. There are excise taxes piled upon transportation taxes piled upon real property taxes, all of which the consumer must eventually pay. The taxation of large corporations means an increase in the cost of their products. The tax paid by the small retailer, too, is passed on to the housewife and consumer.

For instance, there is much discussion about the telephone excise tax of 10 percent. The telephone companies wanted it removed. It must be remembered, though, that the companies do not pay these taxes—the people who use telephones do. And not only the 10 percent excise taxes, but also the real estate taxes the telephone companies pay are reflected in the monthly bill, and so is the tax on telephone cable and other equipment, and, of course, the transportation taxes to get this equipment from factory to the home. At every step, at every level, there is additional taxation, all paid by the used of telephones.

The growth of taxation has been the result of the growth of government, Federal, State, and local. Every new service actually costs the people who are supposed to be served.

There is talk of socialized medicine for the elderly. This new service cannot possibly be paid for entirely by social security taxes; other taxes will have to go up to help foot the bill. And the very people whom this new service is designed to help will be forced to pay for it from their meager receipts.

Once a new program gets launched, it is nearly impossible to curb it or to prevent it from growing. Therefore, the Congress should look with a careful eye at every new spending proposal, regardless of its purpose.

The other way to curb expenditures is to eliminate waste. Several important efforts have been made to curb this waste. At nearly every turn these efforts, to a great extent, have been blocked. There is fat and waste in the military. Our Subcommittee on Defense Appropriations has attempted to trim this fat, to curb unnecessary military travel, to prevent the overhiring of personnel and to control the use of high-salaried officers to do menial tasks. We are making some progress in this area.

It is my own recommendation that the Congress concentrate more on developing an efficient, streamlined government and less on finding new ways to spend the peoples' money. Only that way can we ever hope to reduce taxes in an orderly, economically sound manner.

VFW Teener Baseball Team, Gastonia, N.C.

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. WHITENER. Mr. Speaker, the VFW Teener baseball team, sponsored by the Absher-Flowers Post of the Veterans of Foreign Wars of North Carolina, recently won the National Teener Baseball Championship with 13 successive wins without a loss.

Upon their return to Gastonia on August 20, 1960, the young men and their coaches were given a rousing welcome. The coaches were Jim Barker, Russ Bergman, and J. V. McGinnis. These splendid coaches gave excellent training to the following boys who were members of the team: Mark Beauchamp, Charlie Bryant, Roger Teague, Larry Johnson, Fred McMurray, Forest Dover, Boyce Morrow, Dariel Forrester, Ken Ballard, Dexter Bradshaw, Bill Blalock, George Hook, Butch Adams, and Robbie Clemmer.

I was very pleased with a newspaper story entitled "City Welcomes Teeners," as well as an editorial, each of which appeared in the Gastonia Gazette, the daily newspaper of Gaston County. I request that this news story and editorial be made a part of my remarks and printed in the RECORD:

ROUSING WELCOME—CITY WELCOMES TEENERS
(By Ray Jimison)

Gastonians gave a rousing welcome home Saturday to their national Teener baseball champions.

"I feel like President Eisenhower," confessed Centerfielder Roger Teague as he rode down Main Avenue perched atop a sleek new convertible.

An ocean of faces watched from the streets as the jubilant players tasted the glory that goes with being champions.

They won the national Teener championship in Hershey, Pa., Friday with an easy 12–3 win over Struthers, Ohio.

EASY PICKING

"I don't see how Struthers got into the finals," declared one of the victorious players. "That Louisiana team (Bossier) was the best—next to us."

Hungry baseball fans turned out by the thousands to welcome the champs home. Hundreds gathered at the Catawba River bridge at 4 o'clock to meet the bus which arrived 5 minutes early.

The players were swamped with handshakes, pats on the backs, congratulations, and kisses from happy parents and girlfriends.

Players then climbed in convertibles with their parents for a victory ride through Belmont, Lowell, and down Wilkinson Boulevard into Gastonia where a crowd estimated at between 5,000 and 6,000 waited. Hundreds gathered along the side of the highway to wave at the players.

MOTORCADE

The motorcade of parents was formed earlier at the VFW post. It reached Gastonia at 4:55 p.m. and a parade, worked up in short order, started at 5 o'clock.

Mayor Ferguson, city council members, and VFW officials took part. Ambulances and fire trucks were brought in to supplement the festivities. The drum and bugle corps managed to get enough men together for a color guard and music.

The people were not disappointed. They waved Confederate flags and shouted at their champions. Not since 1935, when the local Legion team won the junior world series, had baseball fans had so much to shout about.

REFRESHMENTS

When the parade was over, parents and players gathered at the VFW post for sandwiches and refreshments, courtesy of the VFW Auxiliary.

Fred Deal, senior vice commander, was happy over the outcome. He and Chalmas Jimison worked around the clock for 2 days lining up convertibles and getting everything in order. Everything went off without a hitch.

Several players confessed afterward that they expected a few people to meet them at the Catawba River. "We had no idea it would turn out like this."

As the motorcade arrived on Main Avenue, a player asked if it was all over with. All over with? It's just starting," answered a VFW official. "You mean there's more?" the player asked in amazement. A few minutes later he was riding down Main Avenue with thousands of people massed along the sidewalks.

Gastonians gave a fitting welcome to their teener champions.

CONGRATULATIONS TEENERS

A tired but jubilant group of youngsters were to arrive back in town this afternoon about 5 o'clock.

They would wear the smile of victory on their faces. And they would have such a deserving right, for their record is clean, their year's endeavor well posted with victory after victory.

These are the Gastonia Teeners, who just yesterday won the national championship.

They started off the season on a run. They finished it yesterday barely breathing hard. In between, they won 13 straight games, and the closest score was 9–7.

We are proud of these little fellows suddenly grown big in the Nation's eye. We had heard in midsummer from their close observers that the team would "go all the way" this year. We questioned such optimism. And we crossed our fingers for luck.

These young boys are made of champion fiber. They are durable. They are elastic. They are able to play out their hearts one day and then snap back the next with amazing vitality.

See our sports pages for their names and what they did in the final game.

And don't forget the coaches—Jim Barker, Russ Bergmann, and J. V. McGinnis.

Barker and Bergmann took over from McGinnis when tragedy struck the McGinnis family. The team retained its stature, continued its winning ways.

The community is indebted to these three men not only for turning out national champions on the field but for the high moral standards they taught along with the game of baseball.

To the teeners of Gastonia, we say welcome home. And congratulations for your splendid performance.

International Economic and Political Understanding

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. MADDEN. Mr. Speaker, this afternoon I presented the resolution for Senate Joint Resolution 170, which provides for the appointment by the Speaker and the President of the Senate 20 members from the United States to serve as our representatives at an international convention with the North Atlantic Treaty nations to discuss a program of cooperation on international political and economic problems.

This legislation was reported out of the House Foreign Affairs Committee with only two dissenting votes.

In passing this legislation, the Congress should be commended because these international discussions by the free nations will contribute greatly to curb the economic and political expansion so recently gained by Communist forces throughout the hemisphere.

The following editorial by Mr. H. B. Snyder, of the Gary Post Tribune, Gary, Ind., of several weeks ago reveals the progress made by a similar organization of European nations dealing with their economic and welfare expansion:

ECONOMIC UNITY IN EUROPE

Chancellor Konrad Adenauer of West Germany had a recent meeting with French President Charles de Gaulle, and has just finished a series of discussions with Prime Minister Harold Macmillan of Great Britain.

Out of the talks has come an Anglo-German agreement to seek a compromise formula for the economic unity of Western Europe. Ties between France and Germany have been strengthening lately, through the European Economic Community of which both are a part. The new agreement would seek to bring the EEC into closer relationship with the rival European Free Trade Association (Outer Seven) to which Britain belongs.

The so-called Common Market of the EEC was created with the idea of promoting greater internal trade among the six nations of the EEC. The example of America's 3,000-mile-wide free trade area was not lost on Europe.

Thus far the EEC has been a smashing success. Internal trade among the six member nations has risen 40 percent in 1 year. The rate is twice that these nations have had in their commercial dealings with the outside world.

It is important that the EEC not try to insulate itself from the rest of the world, and particularly not from the Outer Seven. The free world needs a constantly widening area of free-flowing trade. That is the way we can build the strength to resist the economic power of the Communist bloc.

In view of the Common Market's early success, it is logical for the leaders of Germany and France to talk of enlarging their six-nation community, and of including political as well as economic relationships. The Macmillan-Adenauer agreement is a step in that direction.

While the Russian threat still hangs over Berlin, the nations of Western Europe are slowly building a solid fortress of economic and political power. Every stone raised in that fortress will help to blunt Moscow's political and economic aggressions against the West.

Drinking Aloft Plan Criticized by Pilots

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial on the subject matter in which I have been interested for some period of time, which appeared in a recent issue of the Christian Science Monitor:

DRINKING ALOFT PLAN CRITICIZED BY PILOTS

(By Godfrey Sperling, Jr.)

CHICAGO.—The problems of drinking aloft are so compounded by the incoming jet age that the Air Line Pilots Association is intensifying its effort to dry up commercial flights—through Federal legislation.

At the same time, both the pilots group and the Air Line Stewards and Stewardesses Association have rejected a regulatory proposal of the Federal Aviation Agency as being "unworkable." This is the proposal whereby the commercial airlines would continue to serve liquor—but not to any person who "appears to be intoxicated." Also, no passenger would be allowed to drink from his own bottle.

Clarence N. Sayen, president of the pilots association here, says that to enforce this regulation to any degree of practicality, the FAA would be required to have agents on board all commercial flights to police the conduct of passengers and that of the cabin attendants.

ENFORCEMENT PROBLEM

"These agents, by necessity," he says, "must be endowed with all the powers of a law-enforcement officer from the standpoint of making arrests and confiscating evidence. Economic considerations rule out this necessity."

Mr. Sayen points out that the flight crew members of the air carriers could not possibly enforce the regulation.

Furthermore, as Mr. Sayen sees it, apprehending passenger violators carrying and consuming contraband intoxicants may result in altercations and disturbances hazardous to air safety. Pilots will continue to be distracted from their flight duties to enforce the regulations with "subsequent unnecessary absences from the flight deck."

"This proposed regulation," he continues, "would not prevent passengers from consuming their own intoxicants or intoxicants of other passengers: it would not and cannot prevent passengers, already under the influence to an unknown degree, from being served or sold intoxicants by air carriers; it does not prevent passengers from becoming intoxicated, a flight hazard and social problem on board air carrier aircraft.

"This proposed regulation, which sanctions the use of alcoholic beverages legally in flight, compromises safety on board all air carrier aircraft. Additional burdens,

with sanction of law, are placed upon pilots which are unrelated and are completely foreign to their basic important function to the flight deck."

Mr. Sayen then addresses himself to the heightened, jet-age problem:

"The problems for the flight crew, which are associated with transporting passengers in present-day aircraft, are too complex as matters now stand. The industry is now moving people at speeds in excess of 500 miles an hour and in aircraft which fly at altitudes up to 35,000 feet. This equipment costs over $5 million, weighs up to 300,000 pounds, and transports as many as 112 passengers.

"The time and responsibilities of the crews in these high-speed, complex aircraft are fully occupied with normal duties associated with flight and should not be spent solving problems which are unrelated and hazardous to safety in flight."

An Investment in the People—Educational Television

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. McDOWELL. Mr. Speaker, a significant study by the U.S. Chamber of Commerce, "An Investment in the People" concludes that the country or the State with the highest per capita income is the one with the best educated people. Obviously, if a people are not educated, they cannot take advantage of the resources of a country no matter how rich it potentially may be.

In educational television we have a new and highly important tool for bringing America's educational system abreast of the times.

It is the hope of many Delawareans that the Federal Communications Commission will assign the now silent channel 12 to Delaware for purposes of educational television broadcasting. This is a step which I have strongly supported in the past and will work for in the future with all the means at my disposal. I have, in addition, cosponsored with Senators MAGNUSON and SCHOEPPEL legislation on the subject of educational television which would give financial assistance to get this important program off the ground. In this connection it is important to recognize the tremendous support which the Federal Government has given to American railroads, to the airlines, and to shipping, and highway transportation. Certainly, educational television is equally deserving and is equally important to the welfare of the people of this great Nation.

I include here, as part of my remarks, the text of my weekly radio broadcast to the people of Delaware the week of August 23, 1960, over seven Delaware radio stations:

My subject for this week's report from Congress is one which I know is of great interest to the people of Delaware, and one which has occupied a great deal of my time these past 2 years as a Delaware Congressman. This subject is educational television.

But first, since this is my last report, I want to thank all of the listeners in Delaware who have heard my bimonthly broadcasts, and especially I want to thank your radio station which has made these public service broadcasts possible.

On May 12 and 13, 1959, hearings were held before the Subcommittee of the Committee on Interstate and Foreign Commerce on a number of bills, including one which I had introduced on the subject of educational television.

On April 13, 1959, the Senate had passed such legislation introduced by Senators MAGNUSON and SCHOEPPEL. I am going to quote to you from the testimony of two prominent educators who testified before the committee. Their views coincide with my views on this important and vital new media which is available to the American people, and more specifically of interest to Delawareans is the assigning of the now silent channel 12 to Delaware for educational television broadcasting.

Raymond D. Hurlbert, general manager of the Alabama Educational Television Commission, had this to say:

"Many of you are familiar with U.S. Chamber of Commerce study, 'An Investment in the People.' This study points out that it is not the country or the State with the greatest natural resources which has the highest per capita income, but the one with the highest literacy, the best educated people. Our State is rich in natural resources, but our great need is to raise the per capita income through education.

"We are on the threshold of tremendous advances in the field of education. Should we ask the question, Has the time come for updating the educational system of schools in America and if so, as an aid, do we not have an available tool in educational television? In fact, we have a providential tool to help make the hurdle of leaping from the traditional to the modern needs in education. What does industry do when it is time for a retooling job? Is not expense for retooling considered essential in the light of future efficiency and greater production, and are not new methods inaugurated? There is no question as to what business would do in such a case. Should we not apply just as much good business to the education of our youth? As stockholders in this big business of education, should we not test the potential in educational television, and its ability to bring increasingly valuable dividends?"

Donald H. McGannon, president, Westinghouse Broadcasting Co. had this to say:

"It is an interesting thing about educational television, that while it is in the sixth academic year and represents a $60 million investment, it has achieved the outstanding goals it has, but far more lies in the future than in the past. As I have indicated, I believe that to be true of television in general but the educational phase represents a dimension without which the medium cannot achieve its full potential or capacity. Commercial television as a medium of entertainment, information and advertising requires the pure research and laboratory techniques and opportunities of educational television, working hand in hand to achieve the degree of fuller enlightenment every one of us in the industry feel can and even must be achieved. Much has been accomplished in less than a decade but far more need be accomplished in this world of nuclear physics and international hypertension.

"In other more blunt words, get the educational station on the air in order that the whole evolutionary and developmental process of qualitative programing can be undertaken and perfected. The longer this is delayed, the longer these vital frequencies are left unused, the longer the American people are deprived of such educational opportunity; yes, the longer our already strained educational system and overburdened municipal finances are denied this dynamic and collateral aid. Then, too, will our ability to achieve the blessings and opportunities of the ultimate public service educational system be forestalled.

"The United States must improve and increase the use of all educational means at our disposal but surely television and radio, occupying so prominent a place among the interests of our people, have a great opportunity and a still greater obligation in this regard."

Many other prominent officials of public and private institutions gave similar testimony in support of Federal participation in the promotion of educational television broadcasting. It is my belief that it is only a question of time before public demand will bring about a more complete use of the vast potential of educational television. There is no mistaking that the most overwhelming fact today is that we no longer have the enormous luxury of time—we must adjust our institutions and methods of democracy to the life or death demands of a speeding world where there can be few mistakes, few revisions and few fumblings. Complete and total education of all of our people is our greatest secret weapon in the cold war struggle of democracy versus communism.

Statement to the Annual Convention of the Maryland, Delaware, and District of Columbia Moose Association

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. JOHNSON of Maryland. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include my statement to the annual convention of the Maryland, Delaware, and District of Columbia Moose Association held in Washington, D.C., on August 19–21, 1960:

Fellow members of the Loyal Order of Moose, as the Representative of the First Congressional District of Maryland, and as a member of the Salisbury Lodge, No. 654, Loyal Order of Moose, I welcome you to our Nation's Capital.

The Loyal Order of Moose, an international fraternal society composed of more than 1,700 lodges with a total membership of nearly 1 million men, is dedicated to the service of his fellow man and loyalty to his country.

Moose lodges throughout our Nation have distinguished themselves by supplying leadership, manpower, and financial aid for worthwhile community affairs, with particular emphasis on youth activities.

All of us are proud of Mooseheart, situated in the Fox River Valley of northern Illinois, 40 miles west of Chicago. Since Mooseheart was founded in 1913, more than 5,000 children of deceased members of the Loyal Order of Moose have benefited by its educational and training program.

All of us are proud of Moosehaven, located in Orange Park, Fla. This model home for our senior citizens stands as an epitaph of our concern for the aged and a challenge to all organizations to equal.

True democracy can only survive so long as all men practice humanitarian service to his fellow man. You have pioneered in child welfare, education, and care for the aged. You will carve new frontiers in service, because you are loyal members to the Loyal Order of Moose. I wish you a most successful convention.

Legislative Proposals Relating to Problems of the Aged and Aging

EXTENSION OF REMARKS
OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 24, 1960

Mr. McNAMARA. Mr. President, I believe the Senate and the American people would be interested in a summary of the legislative proposals resulting from the past year's work of the Subcommittee on Problems of the Aged and Aging.

In my opinion, they form the basis of action in the next session and should be the first order of the day in January and February—especially the matter of medical insurance financed through social security.

I ask unanimous consent that the summary be printed in the Appendix of the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND SIXTY LEGISLATIVE ACTION ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON PROBLEMS OF THE AGED AND AGING

In a series of bills introduced during the 1960 session of the Congress, Senator PAT MCNAMARA, Democrat, of Michigan, set forth a concrete program of legislation for cooperative Federal-State-local action to meet the many-sided needs of America's senior citizens.

These legislative proposals were developed out of the year-long study of the Senate Subcommittee on Problems of the Aged and Aging and placed in action the specific recommendations of the subcommittee's report.

In explaining the groundwork leading up to the drafting of this legislation, Senator MCNAMARA, chairman, said: "During the past year, the subcommittee has conducted the most comprehensive and intensive investigation of the complex problems of the aged ever undertaken in this Nation. Analysis of the extent to which existing programs are meeting the needs revealed shocking gaps in services. The subcommittee prepared its recommendations for legislative action after careful study of its findings and consultation with noted authorities in related fields.

"It would be senseless and inhumane to permit ourselves to be bogged down in interminable studies. We have much of the necessary facts. Delay in meeting the recognized needs of the aged would not only compound the problem but would, in effect, sentence millions of our senior citizens to an indefinite continuance of their roles as second-class citizens," he declared.

Bringing to life the recommendations embodied in the subcommittee report, the McNamara proposals cover a broad spectrum of needs.

Health: The Retired Persons Medical Insurance Act would help the aged finance the cost of medical care. The Health Maintenance of the Aging Act makes it possible for the aged to benefit from modern research findings on the prevention and treatment of chronic diseases (to be introduced).

Employment: The Equality of Employment Opportunity for Older Workers Act is a measure to combat the practice of age discrimination in employment. The Senior Citizens Service Training Program Act constitutes a pioneering effort designed to create opportunities for retired persons to engage in meaningful part-time employment.

Retirement savings: The Constant Purchasing Power Bond Act would give future retirees an opportunity to safeguard the purchasing power value of their savings.

Federal agency for the aged: A declaration of objectives for senior Americans bill, setting forth the rights to which senior citizens are entitled, sets the tone for title II of the bill which calls for the establishment of a U.S. Office of Aging to serve as spokesman for the aged.

Housing: An appropriation of $20 million was approved by the Congress as a substantial start on a national program of direct Federal loans—at low rates of interest—to nonprofit groups who would provide housing for the elderly at rentals they could afford.

HIGHLIGHTS OF THE M'NAMARA BILL

Retired Persons Medical Insurance Act, S. 3503

Top priority was given in the subcommittee report for developing a plan to help the aged in financing the cost of medical care.

The McNamara bill, introduced in the Senate on May 6, contains the various elements needed for a balanced health program for the retired aged (men 65, women 62). The health insurance coverage provides a maximum of 90 days a year of hospital care or 180 days of care in a skilled nursing home or 240 days of home health services; outpatient X-ray and laboratory services for the early detection of illness; and partial payment for expensive drugs. The bill also calls for continuous research and demonstration programs at the community level.

This program would be financed primarily through the social security system by a small increase in the tax—one-fourth of 1 percent each for employer and employee. In this way, men and women could, during their active working years, pay for the health protection they will need upon retirement. No degrading means test will be involved. Instead, this valuable protection will be an earned right.

(S. 3503. Twenty-three Senators cosponsored this legislation.)

Health Maintenance for the Aging Act

A deplorable gap currently exists between the rich fund of knowledge on prevention and treatment of chronic diseases and its present application to benefit America's senior citizens.

Although the subcommittee in its investigations observed encouraging signposts of progress in the demonstration programs for health screening, rehabilitation centers, organized home care programs and programs for the treatment of the mentally ill, such projects were the exception rather than the rule.

Legislation prepared by Senator MCNAMARA for introduction is aimed at closing the gap between knowledge and application. Grants are provided to enable States and local agencies and nonprofit organizations and institutions to expand demonstration programs and to evaluate findings and methods.

Equality of Employment Opportunity for Older Workers Act, S. 3726

How old is old? According to the subcommittee findings, current age discrimination practices make a worker old at 50, 40—and even 30. The subcommittee report recommended that States pass legislation to outlaw such discrimination. Seven have already done so.

The McNamara bill, introduced on June 22, proposes the outlawing of job discrimination for reasons of age in the personnel and employment practices of employers holding Federal contracts. Enactment of such legislation would set a precedent for all employers. Public attention will be focused on the problem and the progress being made through the periodic regional conferences for the orientation of labor and management groups required in the legislation. The shedding of light on the true facts about work performance records of older workers could help to dissipate many of the existing myths and prejudices which currently abound.

(S. 3726 was referred to the Committee on Labor and Public Welfare. Cosponsors are Senators JOSEPH S. CLARK, of Pennsylvania, and JENNINGS RANDOLPH, of West Virginia.)

Senior Citizens Service Training Program Act, S. 3793

A sizable number of retired persons over 65 welcome the opportunity to participate in meaningful part-time work in their communities, but have little success in obtaining such work. At the same time, ironically, critical shortages exist in the areas of health and community services—jobs which could be carried out by many senior citizens.

Introduced by Senator MCNAMARA on June 30, S. 3793 presents a new approach which would provide opportunities for those retired persons interested in gainful employment as well as ensuring a needed army of manpower to work for the common good. It would establish a program for the recruitment, training and placement of elderly Americans in community service activities and give them the opportunity to utilize their time, talents and energy.

Federal grants to public agencies and nonprofit community organizations for the next 3 years would be available to implement this program. The bill authorizes the Secretary of Health, Education, and Welfare to conduct manpower surveys within the fields of health, education, and welfare to determine the kind and extent of employment opportunities in local areas within these community service fields.

(S. 3793 was referred to Labor and Public Welfare Committee. Cosponsors are Senators PHILIP A. HART, of Michigan; MIKE MANSFIELD, of Montana; FRANK E. MOSS, of Utah; JAMES E. MURRAY, of Montana; STUART SYMINGTON, of Missouri; GALE W. MCGEE, of Wyoming; HALL S. LUSK, of Oregon; JOSEPH S. CLARK, of Pennsylvania; HUBERT HUMPHREY, of Minnesota; JENNINGS RANDOLPH, of West Virginia; SPESSARD L. HOLLAND, of Florida; and PAUL H. DOUGLAS, of Illinois.

Constant purchasing power bonds, S. 3684

Many citizens who painstakingly scrimp and save to accumulate a "nest egg" for their old age find to their despair that when retirement time arrives, their retirement savings have diminished in value.

To protect future retirees against the hazards of inflation and the steady rise in living costs, Senator MCNAMARA on June 16, introduced legislation to authorize the U.S. Treasury to issue constant purchasing power bonds to be adjusted for cost-of-living increases.

These bonds, which could be purchased by individuals, pension funds or insurance companies for retirement programs, would accumulate interest in the same manner as regular savings bonds, but they would have this added feature: 20 years after purchase, or at retirement time, they would be re-

deemed at a value which would be adjusted to any increase in the cost of living.

Not only would this safeguard the savings of individuals, but it would make it possible for insurance companies and industry to offer retirement and pension plans which could be constantly keyed in with the cost of living.

(S. 3684 was referred to the Committee on Finance. Cosponsors of this legislation are Senators JOSEPH S. CLARK, of Pennsylvania, and JENNINGS RANDOLPH, of West Virginia.)

Declaration of Objectives for Senior Americans Act—Creation of U.S. Office of Aging, S. 3807

The subcommitte report notes: A major need of America's aged and aging is a central agency of the Federal establishment to represent them and their problems. As of now there is no single office legislatively authorized to serve as a clear point of contact for expressing the views, needs, grievances, and desires of the elderly.

On July 1, Senator MCNAMARA introduced S. 3807 designed to establish a U.S. Office of Aging concerned full time with the full range of problems of America's senior citizens. This bill would provide direct grants to the States to enable them to draw up State plans, matching grants for demonstration projects, and grants to public and other nonprofit institutions and organization for research and training programs.

The bill further proposes to create an Assistant Secretary for Aging in the Department of Health, Education, and Welfare to head up the Office and to assist in stimulating and coordinating Federal activities in aging.

According to Senator MCNAMARA, creation of a high-level Federal agency to administer this program would permit the total problem to be attacked as a whole, rather than in fragmented bits and snatches.

The declaration of objectives for senior Americans, which is an integral part of this legislation, contains the following 10 points:

1. An adequate income in retirement in accordance with the American standard of living.

2. The best possible physical and mental health which medical science can make available and without regard to economic status.

3. Suitable housing, independently selected, designed, and located with reference to special needs and available at costs which older citizens can afford.

4. Full restorative services for those who require institutional care.

5. Equal opportunity to employment with no discriminatory personnel practices because of age.

6. Retirement in health, honor, dignity after years of contribution to the economy.

7. Pursuit of meaningful activity within the widest range of civic, cultural, and recreational opportunities.

8. Efficient community services which provide social assistance in a coordinated manner and which are readily available when needed.

9. Immediate benefit from proven research knowledge which can sustain and improve health and happiness.

10. Freedom, independence, and the free exercise of initiative in planning and managing their own lives.

(S. 3807 was referred to the Committee on Finance. Cosponsors are Senators E. L. BARTLETT, of Alaska; JOSEPH S. CLARK, of Pennsylvania; JENNINGS RANDOLPH, of West Virginia; OREN E. LONG, of Hawaii; EUGENE J. MCCARTHY, of Minnesota; PHILIP A. HART, of Michigan; HUBERT H. HUMPHREY, of Minnesota; JAMES E. MURRAY, of Montana; RALPH YARBOROUGH, of Texas; and CLAIR ENGLE, of California.)

Housing for the elderly

The provision of safe, sanitary and congenial housing at a rental which older persons can afford is a major unmet need of the elderly. The bulk of America's senior citizens live in unsuitable structures and will continue to do so until decent housing at low rents can be made available.

The Housing Act of 1959 authorized, in a pioneer provision, a $50 million authorization for direct Federal loans at low rates of interest to nonprofit groups to build low-rent housing for older persons. However, with no appropriation request from the administration, the House of Representatives approved a $5 million token appropriation.

In a special communication to the Senate Appropriations Committee, Senator MCNAMARA, joined by Senators KENNEDY, CLARK, and RANDOLPH, urged that the full authorization of $50 million be appropriated as a minimum, but helpful, effort.

Backing up an amendment on the floor by Senator HARRISON WILLIAMS, of New Jersey, Senator MCNAMARA helped spark a move which resulted in Senate passage of the full $50 million authorization for this program. The final sum approved by the House-Senate Conference Committee and passed by the Congress was $20 million.

There is now available for direct loans to nonprofit groups a revolving fund at low rates of interest to construct suitable rental housing in which older persons can live with dignity and self-respect.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the San Diego (Calif.) Evening Tribune of July 13, 1960, and the New York Journal-American of August 1, 1960:

[From the San Diego (Calif.) Evening Tribune, July 13, 1960]

THIS IS AN AMERICAN SPEAKING AS PATRIOTS HAVE EVER SPOKEN

There have been a lot of words flowing out of Los Angeles this week—lofty words and empty words, and a few words that rang as solid and meaningful for Americans as Plymouth Rock.

These last were spoken by Jim Farley.

They comprised one of the most significant statements to come out of all the political oratory.

Farley, former Democratic national chairman, warned that unless the Democratic Party took an unequivocal stand against the recognition of Red China and a stiffer attitude toward Russia than many party spokesmen advocate, the party "stands in grave danger of becoming the party of appeasement."

Give heed to Jim Farley, a Democrat of long and high standing in his party, but an American first, here talking straight American:

"By what possible theory can they write off the Americans now in Red Chinese or Siberian prisons?" he asked, referring to those in his party who advocate the recognition of Red China.

"A course of recognition is nothing more nor less than the ratification of the illegal seizure and detention of Americans. That principle, most had thought was settled by the War of 1812.

"The fact is that these Johnny-come-latelys to the Democratic Party have assumed an intellectual superiority which they do not possess.

"They are willing to risk the fate of the Nation on what they regard as their divine understanding and persuasive powers—a conceit so great that they believe they can negotiate a spectacularly successful Communist terror into giving up two-thirds of their world.

"Nor does their mischief end with their idiotic foreign policy. It extends to what amounts to the splintering of the Democratic Party.

"Any American administration which refuses to protect American citizens and their property in any quarter of the globe on the ground that its action will be called Yankee imperialism has, in effect, struck the flag.

"Let us not perform the disgraceful act of offering the American people a spurious dove of peace when every page of recent history identifies it as the white flag of cowardly surrender."

So spoke Jim Farley, Democrat American, in Los Angeles.

The words should ring out across the land and in the hearts of all who cherish our heritage of freedom and independence long after the political platitudes have whistled off into the ether.

America has heard a patriot's voice.

[From the New York Journal-American Aug. 1, 1960]

DO'S AND DON'TS IN THE GAME OF POLITICS

(By George E. Sokolsky)

Every human activity has its rules and regulations. Some are simple, such as the propriety of eating with a fork; some are very complicated like the complex proprieties of family life.

Politics is, of course, a science. It is the science of controlling men's minds and wills. It is also a way of life for those who engage in it actively. The first rule of a really successful politician is that "his finger is always good." This term comes from auctioneering, in the course of which a man raises his finger and that closes a transaction which might involve large sums. The "finger" is an inviolable contract. Whoever breaks it once is never trusted again.

This must be true of the politician. Once he gives his word, there is no turning on it or he is a dead man politically. The politician also must have a long memory. He cannot pretend that he has forgotten. He cannot deny that he has given his word. He dare not lie to one of equal rank with himself. These are the proprieties of the game. Every form of social existence has its proprieties. They may not be violated.

The reason, for instance, that a man like James A. Farley, who has long been inactive in politics, is still of importance and still stands out as a figure in national conventions, is that he has the reputation of never having broken faith with any man, of having lived up to his promise and of having quit over a principle and not as the result of a personal row. This rule applies to every man who wants to succeed in politics. His greatest crime is to go back on his word.

Politicians of the two parties do not hate each other usually. Sometimes they are even very close friends, as, for instance, JOE MARTIN and SAM RAYBURN always have been.

The Crisis on the Commuter Railroads—No. 10

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. IRWIN. Mr. Speaker, last week I read in various Fairfield County, Conn., newspapers an account of a proposal submitted by Col. S. H. Bingham (Army of the United States, retired), former general manager of the transit system which operates New York City's subway and surface transit system, to meet the commuter problems of the New York metropolitan region. The plan was sent to Governors Ribicoff of Connecticut, Meyner of New Jersey, and Rockefeller of New York. It provides for a logical and sensible method of using existing facilities to create an up-to-date mass transportation system for this most important urban area. I was impressed enough by the proposition to call Colonel Bingham immediately and request a complete text of the proposal. Colonel Bingham submitted his plan to the Governors as a labor of love and we are fortunate to have a person of such experience in the field of mass transportation to make such a positive contribution to a problem which has already been given much attention by myself and other Members of the Congress. Since Colonel Bingham's proposition could easily be adapted to the legislation which has been introduced by me and others to improve transit systems in metropolitan regions, I believe it is of importance to call the attention of Members of the Congress to the proposal by Colonel Bingham. As an addition to the series of insertions I have submitted to the RECORD dealing with the Nation's commuter crisis and pursuant to permission previously granted, I herewith include the proposal:

Col. S. H. BINGHAM,
New York, N.Y., August 8, 1960.

Hon. NELSON A. ROCKEFELLER,
Governor of New York, Albany, N.Y.
Hon. ROBERT B. MEYNER,
Governor of New Jersey, Trenton, N.J.
Hon. ABRAHAM RIBICOFF,
Governor of Connecticut, Hartford, Conn.

SIRS: Commuter service in the metropolitan area of New York has been the subject of studies for a great many years, and a number of plans have been offered to remedy the problem. Up to this time, however, no satisfactory solution has been presented, and the problem continues to grow.

During my years as chairman of the board of transportation of the city of New York I had occasion to review many of the plans offered and I feel I am thoroughly familiar with the situation. Since that time I have made studies of this problem for several years and I am pleased to submit herewith a "Proposal for a Tristate High-Speed Commuter System for New York, New Jersey, and Connecticut." This proposal recommends the use of existing trackage of the railroads involved, with a minimum of new construction, to provide a tristate integrated commuter service at a cost which would not be prohibitive.

The estimated cost to provide this unified service as described in this proposal is $210 million, plus $107 million if the system is to be extended under the East River into Long Island.

The construction cost for an entirely new system over the same routes to provide the identical commuter service would be approximately $915 million, exclusive of the cost of acquiring the right-of-way and interest to be paid on the capital investment during the period of construction, estimated to be at least 8 years.

This new rapid transit system would operate attractive, newly designed, air-conditioned, lightweight rolling stock capable of high speeds and would provide greater direct-to-destination service for increased convenience to the commuter.

To implement the program briefly outlined herein, it is recommended that a tristate agency be created with power to enter into the necessary agreements with the interested railroads and to construct and operate the system within the New York, New Jersey, and Connecticut areas. The adoption of this proposal is advocated as an effective solution to a commuter problem which is rapidly becoming intolerable.

I shall be pleased to discuss this proposal in greater detail with you or any representatives you may designate before it is released to the public on August 16, 1960.

Respectfully submitted.

S. H. BINGHAM.

PROPOSAL FOR A TRISTATE HIGH-SPEED COMMUTER SYSTEM FOR NEW YORK, NEW JERSEY, AND CONNECTICUT

Commuter service in the metropolitan area of New York has been the subject of studies over a great many years. Forty years ago the problem was confined to the means of increasing facilities to cope with the steadily growing number of commuters who were then taxing the commuter capacity of the railroads. The railroads were finding commuter service a profitable addition to their freight and long-line passenger business. The outlook was bright, and all signs pointed to the need for added capacity, which it was thought the railroads shortly would be unable to provide.

Rapid transit plans of great magnitude for all areas surrounding the city of New York were proposed, the estimated cost for which, even in those days, exceeded a billion dollars. These proposals optimistically forecast that future commuter earnings, with a reasonable fare structure, would suffice to make the venture a financial success. However, in later years with increased costs of labor and materials, leading to increased fares, those forecasted earnings did not materialize. Each rise in fares brought about a drop in the number of revenue passengers.

The phenomenal increase in the use of buses and automobiles shortly before and after World War II supplanted the railroads in the transportation of commuters to the central business district in New York City. To accommodate this huge volume of vehicles the enormous construction program of roads, highways, expressways, bridges, and tunnels was put into effect. Many billions of dollars were spent in these projects, but as fast as they were completed they became inadequate to cope with the rapidly expanding traffic. The greatest problem of all—street traffic congestion within the central business district—was not solved nor has any substantial progress toward a solution been made. To complicate the condition, the problem continues to grow.

In the course of this development, the number of passengers declined and, as a result, the railroads were forced to reduce their commuter services continuously. This caused great concern to the railroads as losses sustained on the commuter services substantially reduced profits from freight and long-line passenger service. Increased commutation fares could not keep pace with the increase in the cost of operation, and each fare increase brought a further reduction in commuter railroad traffic. This vicious circle continued until today when every railroad is pleading for rate increases and permission either to cut service to the leanest areas or to abandon rights-of-way.

Legislative bodies, commissions, authorities, committees and consultants have studied the problem, and dozens upon dozens of reports have been submitted. Those who have attempted realistic solutions have all indicated operational deficits and have proposed the allocation of these deficits to areas in proportion to their use or benefit. None of these proposals has been adopted, and the perplexing problem is still unsolved today.

Many reasons have been advanced for the commuter's preference for buses and automobiles. There is no doubt that it originated in the expansion of the commuter areas beyond walking distance to the stations, and within the city itself to the overcrowded conditions of the rapid transit lines during the rush hour period and the convenience to the commuter of entering his car at his doorstep and driving directly to his destination. While the elapsed time may be somewhat longer in driving the entire distance, the convenience of sitting comfortably in an automobile or bus has overcome the minor time advantage that can be gained by using mass transportation. It is true that the park-and-ride plan has gained in popularity; however, the parking areas are generally located in the outskirts of the city and the idea of standing uncomfortably in a crowded train for a considerable length of time has deterred a great many from accepting the idea.

It is reasonable to assume that if a high-speed, air-conditioned, comfortable ride could be made available to the commuter, which would take him to his destination within the city with a distinct saving in elapsed time, he could be weaned away from his automobile or bus on the crowded highway and street. Such a service has not been available up to this time. A modern, high-speed tristate commuter system which could provide such a service is described herein.

This proposal is not presented to create competition for the highways and turnpikes; it is intended to relieve present congestion and to provide for future growth.

The bankrupt Hudson & Manhattan Railroad Co. today carries less than 30 percent of the passengers it carried in the year of its maximum load. However, its rush hour passenger volume has decreased to a much lesser extent. This requires the maintenance of almost the same amount of rolling stock and equipment, while its use is restricted to rush hour periods only.

A similar condition prevails on the New York Central System and on the New York, New Haven & Hartford, the Boston & Albany, and the Boston & Maine Railroads. They have all made repeated efforts to cease operation of some of their deficit-ridden commuter services, particularly in the Boston, Mass., area, and most of the railroads in New Jersey are also trying to abandon their commuter services.

A commuter service could be established at a cost which would not be prohibitive by using the existing trackage of the several railroads involved to provide a high-speed rapid transit line directly into Manhattan.

The first stage in this proposal would be the construction of a rapid transit line from the Bound Brook Junction of the Central Railroad of New Jersey and the Lehigh Valley Railroad, continuing along the tracks of the Central Railroad of New Jersey to Cranford, thence along the tracks of the Lehigh Valley Railroad to Newark, where a connection would be made with the Hudson &

Manhattan Railroad, thence to Jersey City where the route would divide, with one branch continuing via the Hudson & Manhattan Railroad to its terminal in lower Manhattan where, if desired, it would be possible to provide a secondary passenger distribution system underground from the existing Hudson & Manhattan Terminal at Cortlandt Street to the high-density Wall Street area. The other branch would continue via the Hudson & Manhattan Railroad to its terminal at Avenue of the Americas and 32d Street.

It is further proposed to extend the Hudson & Manhattan subway toward the north in deep rock tunnel in order to make a connection with the tracks of the New York Central Railroad, which are at present used by the commuter services of both the New York Central, and New York, New Haven & Hartford Railroads. Local stations under Park Avenue between Grand Central Station and 125th Street, which at present are not in use, could be rehabilitated to provide service to the entire east side of Manhattan to 125th Street.

This line could then be extended northerly via the New York Central tracks through a densely populated area to Pleasantville and serve all commuters along the route. A branch line could use the New York, New Haven & Hartford tracks to Fairfield, Conn., thus serving the commuters in the densely populated area on that route. If desired, another branch in the vicinity of 76th Street in Manhattan could be constructed which would run in an easterly direction through a new East River tunnel to connect with the North Shore Division of the Long Island Railroad to Port Washington.

To free the New York Central Railroad of all its commuter services, its main-line Hudson Division to Ossining could be integrated into the services outlined above by the construction of a station in the vicinity of East 149th Street where an across-the-platform transfer for passengers could be provided. If desired, this branch could also be extended to the downtown area.

In the morning peak period when very light traffic moves north of 57th Street it may be found desirable to short-line the New Jersey service and store these trains at the yards of the Long Island Railroad or the yards of the New York Central Railroad at 149th Street in the Bronx, awaiting the late-afternoon return trip to New Jersey. It may also be desirable to short-line the Westchester and Connecticut lines in convenient railroad yards in Jersey City, awaiting the return north in the late-afternoon rush hours. Efficient rapid transit scheduling would reduce mileage of nonrevenue runs to a minimum.

In New Jersey the second stage of the program might include a branch along the Delaware, Lackawanna & Western Railroad to serve such areas as The Oranges, Maplewood, Summit, and Morristown which sections generate large volumes of commuters.

It is proposed either to purchase or to obtain satisfactory lease agreements with the Hudson & Manhattan Railroad and the other railroads concerned. The program would involve the construction of connections and the rehabilitation or construction of additional stations of sufficient length to permit the operation of 10-car or longer trains and the acquisition of attractive, modern, lightweight rolling stock, capable of high speeds, and designed for use in the existing Hudson & Manhattan tunnels and structure. Where feasible, the sharp curves that at present restrict train speed would be eased to permit higher speeds. The program would also require the construction of a third-rail electrical distribution system and the installation of a central traffic control signal system of the most modern type.

A brief description of this central traffic control signal system follows:

The entire rapid transit system would be controlled from a central control point by means of centralized traffic control equipment. With the use of the train identification equipment carried on the car and the associated wayside equipment, the exact location and destination of each train would be recorded on a facsimile of the rapid transit system. The information thus shown on the panel would be used by the dispatcher to regulate the train traffic.

Under normal operating conditions, the train identification equipment would also be used to operate the track switches along the route. The inductive train communication system, using the third rail and running rails, would permit the dispatcher to talk to the motorman on the moving train. It would also make it possible for the motorman on a moving train to call the dispatcher in the event that an emergency should develop on his train, or that he should observe on occurrence that required attention.

Under normal operating conditions, the terminal interlockings would be automatically operated. The train would move into and out of the stations without human supervision. By means of an automatic dispatcher, a "Next Train Out" sign would be illuminated to indicate the next train to leave. Thirty seconds before the scheduled departure time the "Next Train Out" sign would be extinguished and the starting lights illuminated. The track switches and signals would be operated automatically for the route of the departing train.

If the dispatcher should desire to change the departure time of a train, he could advance or delay the departure time by making use of the centralized traffic control system. From the central control point the dispatcher could remote-control the switches and signal of the terminal interlocking and override the automatic control. Whereas the rapid transit system would be automatic, human supervision could supplant certain of the automatic features whenever desired.

The rapid transit system would not be equipped with wayside signals, except at the interlockings. The wayside signals at interlockings would be used to indicate the route that has been established over the switches. Four-aspect cab signals, with continuous speed control, would be used. The cab signals would be installed on the train in the motorman's cab. Each of these aspects, when illuminated, would indicate to the motorman the safe maximum allowable speed for train operation. The safe maximum allowable speed would vary depending on the condition, that is, whether the train were operating over straight level track, on a steep grade, on a restrictive curve, or on track during performance of special work. It would also depend on the distance between trains.

If the motorman should ignore the aspect of the cab signal and exceed the indicated maximum safe speed, an audible alarm would sound. It would be necessary for the motorman to make a brake application within 2 seconds; otherwise an emergency brake application would be made, bringing the train to a complete stop. After the application of the brakes by the motorman, they cannot be released until the speed of the train is reduced below the maximum safe allowable speed.

The car design for this system would embody the principles and concepts of aerodynamics, and lightweight materials and the installation of air-conditioning equipment would be specified. A car body suspension system, completely new in car design, would be used to assure comfort. Doors would be spaced to permit easy and rapid passenger ingress and egress, thus reducing time of train stops at stations. Propulsion equipment for each car would consist of four 125-h.p. electric traction motors, d.c.-type, at 600 volts, capable of maintaining maximum speeds in excess of 80 m.p.h. where spacing of stations would permit. Acceleration and deceleration rates would be limited to rates that would insure passenger comfort.

Dynamic braking would be applied down to 5 m.p.h., at which speed air braking would take over to bring the car to a complete stop. In emergencies the combination of both braking systems would be acted upon automatically by the train control and signal system to bring the train to a quick halt.

All station platforms would be at car floor level and of sufficient length to allow for longer trains which would be required by increases in volume of passenger traffic.

The services provided in the first stage of this proposal are illustrated on the accompanying map (No. 1164), dated June 1960.

The plan recommends the use of existing trackage and requires tunnel construction only from 32d Street to Grand Central and the connection under the East River to the tracks of the Long Island Railroad. Therefore, a much lower capital expenditure would be required to provide the services described herein than would be necessary for an entirely new route and general plan.

A high-speed commuter service which would bring the commuter within easy walking distance of his destination in Manhattan, and in addition considerable reduce his traveling time, should apepar very attractive to him. The integration of the railroads involved in the New York, New Jersey, and Connecticut areas would provide commuter service in one unified operation and thus afford complete flexibility of passenger movement within these areas. This attractive service, together with the low capital investment required, should permit a realistic and reasonable fare structure and result in a profitable operation.

To implement this program it is recommended that a tristate agency be created with power to enter into the necessary agreements with the interested railroads and to construct and operate the system within New York, New Jersey, and Connecticut.

It is to be noted that the plan outlined herein, as it affects the State of New Jersey, is in substantial agreement with one of the steps recommended in the report to Gov. Robert B. Meyner by Commissioner Dwight R. G. Palmer, dated April 1960.

This proposal briefly outlines the plan for an integrated tristate commuter service. This plan has been studied in considerable detail for several years with respect to operational feasibility and costs of construction, modern signaling, and rolling stock by Col. S. H. Bingham and his staff of engineers. His chief engineers, Mr. I. Finkel, planning and design, and Mr. C. E. Chisholm, signal and line equipment, were associated with him for many years during the period he was chairman of the board of transportation of the city of New York and executive director and general manager of the New York City Transit Authority.

The conclusions which have been reached are all in favor of the implementation of this program for a high-speed tristate commuter service as an effective solution to a commuter problem which is rapidly becoming intolerable.

Similar studies recently have been made by Colonel Bingham for the cities of Boston, Mass., New Orleans, La., Montreal, Canada, Caracas, Venezuela, and other metropolitan areas, as well as the city of Los Angeles where he participated in the studies as an associate consultant.

In northern British Columbia toward the end of 1959 Colonel Bingham completed the first phase of a railway survey for the movement of iron ore, timber, pulp, and other bulk commodities, and recommended a route

and general plan for 697.15 miles of first-class railway within a 50,000-square-mile area from Summit Lake to the Yukon Territory boundary. On June 29, 1960, the first step in the construction commenced with the clearing of the right-of-way. A second phase involved a survey from the northern British Columbia border, through the Yukon Territory and Alaska to Fairbanks, which, if approved, would require the construction of 690 miles of railway.

COST ESTIMATE OF TRISTATE HIGH-SPEED COMMUTER SYSTEM FOR NEW YORK, NEW JERSEY, AND CONNECTICUT

The estimated cost for the installations and equipment required for the integration of the existing trackage of the railroads involved, which would be either acquired or leased, includes the following items:

Platforms at car floor levels.
Power rail installation.
Complete modern automatic signal system.
Power and substations—no generation.
Rolling stock, including cab signals.
New construction, where required, such as tunnels, stations and necessary equipment.

Estimated cost to provide an integrated commuter service within the New York, New Jersey, and Connecticut areas described in this proposal, without the Port Washington Line	$210,000,000
Estimated cost for the Port Washington Line, including tunnel under East River	107,000,000
Total	317,000,000

For a comparison between the cost of providing the integrated tristate commuter service under this plan and the cost of furnishing the identical service by the construction of an entirely new system over the same route and general plan, an estimate was prepared at current construction costs for labor and materials. The estimated cost of the completely new system is $915 million exclusive of the cost of acquiring the right-of-way and interest to be paid on the capital investment during the period of construction, estimated to be at least 8 years.

COL. S. H. BINGHAM, ARMY OF THE UNITED STATES (RETIRED), O.B.E.M. CONS. E., M.A.I.C.E., M.C.I.C France, MI. Mech. E., LL.D.

On February 1, 1956, Col. S. H. Bingham, formerly chairman of the board of transportation of the city of New York, retired as executive director and general manager of the New York City Transit Authority, which operates the rapid transit and surface transportation facilities owned by the city of New York, to enter private consulting engineering practice.

Registered professional engineer: New York State Registration No. 12369.

Professional society membership:

The American Institute of Consulting Engineers.

The New York Association of Consulting Engineers.

The Association of Consulting Engineers of Great Britain.

Chambre des Ingénieurs-Conseils de France.

National Society of Professional Engineers and its affiliate, New York State Society of Professional Engineers.

The American Society of Mechanical Engineers.

The Municipal Engineers of the city of New York.

The Institution of Mechanical Engineers (Great Britain).

The Institute of Transport of Great Britain.

The Engineering Institute of Canada.

Société des Ingénieurs Civils de France, and its American section.

The Institute of Engineers of Chile.

O Instituto de Engenharia—Sao Paulo, Brazil.

The Society of American Military Engineers.

The Order of Lafayette, Inc.

The Retired Officers Association of the Military Services.

Community Planning Association of Canada.

Colonel Bingham is a member of the National Panel of Arbitrators, American Arbitration Association, and he is an executive member of the New York Building Trades Congress. He is a member of the American Road Builders Association and the Hamilton and District Officers Institute of Hamilton, Ontario, Canada. He is listed in: "Who's Who in America," "Who's Who in the East," "Who's Who in Railroading," "National Cyclopedia of American Biography," "Who's Who in Great Britain," and "The Consulting Engineer Who's Who and Year Book," Great Britain.

Colonel Bingham, a descendant of William Hedley (who in 1812 built the first locomotive, the "Puffing Billy") and a long line of railroad men, began his career in the transit industry in 1915 when he was employed by the former Interborough Rapid Transit Co., a private company. During his early years with the company he was selected for special training which involved working in every department of the railroad for periods of 3 to 5 years. He was then assigned as technical assistant to the president in planning for future expansion and in solving current operating, maintenance, and engineering problems, in which position he continued until unification of New York City transit facilities in 1940.

During World War I he was a master engineer in the Railway Engineers, U.S. Army, AEF. For his services he was awarded the Croix de Guerre and other decorations.

At the outbreak of World War II Colonel Bingham was commissioned in the Military Railway Service of the Transportation Corps of the U.S. Army and served in the ETO. He held important assignments in planning and directing military railway operations in England, Africa, and Europe. He was in charge of designing railway rolling stock, including all types of railway freight cars which were prefabricated, shipped knocked down, and assembled at railway car shops in the United Kingdom and on the Continent. He also made the recommendation for the use of diesel electric and steam locomotives. He developed and carried out designs for specially constructed LST-2's, which enabled the invading forces at Normandy and elsewhere to carry fully loaded freight cars and diesel locomotives with them onto the first beachheads, thus saving several months in time which had heretofore been required to obtain sufficient space for assembly of the equipment. He developed the "Breathing Bridge," which made it possible to land this equipment during all 24 hours of the day, despite the 28-foot rise and fall of the tide. He designed hospital trains used by the British, French, and Americans. He also designed and supervised maintenance of an armored train, "The Bayonet," for General Eisenhower.

Before the invasion Colonel Bingham was liaison officer with the Royal Engineers, British War Office in London, serving under Maj. Gen. D. J. McMullen. He was also liaison officer with the Canadians and the Free French.

Following the establishment of General Headquarters, Military Railway Service, in Paris, he was assigned as assistant to the director general, Military Railways, and supervised the operation of over 50,000 miles of railway in France, Belgium, Holland, Germany, and Austria.

Decorations: For his service in this war he was awarded many decorations and honors, including the Purple Heart, Legion of Merit, Bronze Star, the Order of Leopold of Belgium, Order of the British Empire, Croix de Guerre with Palm and Silver Star and Chevalier of the Légion d'Honneur of France, and in January 1955 he was awarded the Rosette d'Officier of the Légion d'Honneur of France from the French Government.

Upon his return to civilian life and the New York City Transit System in November 1945, Colonel Bingham was assigned as Assistant to the chairman of the Board of Transportation. In 1946 he was appointed general superintendent of the New York City Transit System in charge of maintenance and operations and in May 1947 was appointed commissioner by Mayor William O'Dwyer. This was the first time in the history of the board of transportation that a commissioner had been appointed from the ranks. On January 1, 1950, he was named chairman of the board of transportation by Mayor O'Dwyer. When the New York City Transit Authority was created to take over the operation of the city-owned transit facilities on June 15, 1953, Colonel Bingham was appointed general manager and on March 18, 1954, he was appointed executive director and general manager.

While engaged in the administration and operation of the largest transit system in the United States, Colonel Bingham has also been active as a consultant and as a member in groups engaged in the study and planning of transit and traffic improvements. Colonel Bingham has studied the operations and planning of the Paris and London transportation systems. He has advised the Premier and the Minister of Transport in New South Wales, Australia, on road transport problems. He has acted as a consultant to the city of Oslo, Norway, and the city of Stockholm, Sweden. In recognition of his services in planning a subway for Stockholm and improving its surface transportation system, His Majesty, King Gustav VI Adolph of Sweden, bestowed upon him the Knighthood of the Royal Order of the North Star of Sweden on July 17, 1952.

In March 1948, Colonel Bingham went to San Francisco at the direction of Mayor William O'Dwyer to act as personal consultant on transportation matters to Mayor Elmer Robinson who had requested his services. He presented an interim report after a 2-week analysis of their problems, and many of his recommendations have been put into effect. The long-range plan for a San Francisco subway which he later prepared had been approved by Mayor Elmer Robinson. He has been consulted by the cities of Los Angeles, St. Louis, Minneapolis and St. Paul, Baltimore, Houston, Pittsburgh, Cleveland, Yonkers, N.Y., and Washington, D.C.

Colonel Bingham has acted as consultant for study and planning of additional rapid transit lines for suburban services in Cleveland, Ohio, and rapid transit facilities for Houston, Tex.

Early in 1950 Colonel Bingham made a study of the operations of the Metropolitan Transit Authority in the Boston area and reported on it to Gov. Paul A. Dever, of Massachusetts. In 1955 former Gov. Christian A. Herter of Massachusetts appointed him a member of his committee on regional transportation making a study of all forms of transportation in the Greater Boston area.

In December 1950, Governor Dewey appointed a special commission to study the Long Island Railroad, and Colonel Bingham was asked to act as consultant. He has also acted as adviser to the trustee administering the affairs of the Long Island Railroad who was appointed by the Federal court on the recommendation of the commission, and continued as consultant to the Long Island

Transit Authority, now the Long Island Railroad.

In August 1950 he was the transportation expert in a group of eminent engineers and city planners who made a comprehensive study of the city of Sao Paulo, Brazil. Other cities of the world that have called upon Colonel Bingham for counsel on their transportation problems are Lisbon, Rome, Caracas, Rio de Janeiro, Buenos Aires, Santiago, Milan, Calcutta, Adelaide, Istanbul, and Montreal. Toward the end of 1958 Colonel Bingham was asked to make further studies in Caracas, Venezuela, and Sao Paulo, Brazil. In February 1959, the newly elected officials invited Colonel Bingham to Caracas and Sao Paulo to discuss new studies. He was retained to make two separate studies in Caracas. The first, at the request of the Governor of the federal district, was a preliminary comparative study of two systems of rapid mass transportation for Caracas. Upon completion of this study, Colonel Bingham submitted his report to the Governor on July 4, 1959. The second study, involving general traffic conditions in the metropolitan area of Caracas, was made at the request of the Minister of Communications, and Colonel Bingham submitted his report to the Minister on August 31, 1959, which was adopted and is now being implemented.

As consultant and adviser to the President of Chile, upon completion of studies there in August 1955 he submitted both a short-term and a long-term report on commuter services and subway construction for Santiago.

In July 1956 at the request of Maj. Gen. Edward P. Curtis, Special Assistant to President Eisenhower on Aviation Facility Planning, Colonel Bingham submitted a report, "Air Traffic Control With Automatic Protection", describing an antomatic traffic control system for the airways.

Colonel Bingham is consultant to the city of Montreal for the departments of city planning, public works, traffic and finance, in which capacity he has been retained for more than 4 years. Other professional services in Montreal included the design of a vehicular tunnel under Mount Royal, in association with a Canadian consulting engineering firm. He has made extensive studies in the Province of Quebec and in Labrador for improved transportation of iron ore, timber, and other bulk material.

Colonel Bingham was invited to make an engineering and economic feasibility study on an asymmetric monorail system for the city of New Orleans, La. His report based on these studies was presented to the city council on February 11, 1959.

In the Tomorrowland area in Disneyland Colonel Bingham was consultant to Walt Disney on the mile-long monorail, which was placed in daily revenue operation on June 15, 1959.

In Los Angeles Colonel Bingham has been associated with Daniel, Mann, Johnson and Mendenhall in studies on rapid transit development for the metropolitan area.

Colonel Bingham has completed a railway survey for the movement of iron ore, timber, pulp, and other bulk commodities within the northern area of British Columbia. He has recommended a definite route and general plan to cover 698 miles of railway within a 50,000 square mile area. The construction of this railway is scheduled to begin about July 1, 1960. A second phase of the study will entail a similar survey from the northern border of British Columbia through the Yukon into Alaska.

Three large main-line railroads have retained Colonel Bingham as consultant. He has resigned rolling stock and equipment, both passenger and freight, not only for the war effort but for subway, surface, and monorail systems and for conventional long-line and commuter railroads.

Colonel Bingham has acted in a consulting capacity on the design and development of a portable monorail port system for wartime and emergency handling of cargo, supplies and personnel, which was recently presented to NATO.

Professional honors:

June 1953, honorary degree of doctor of laws, Fordham University.

May 1954, management award from Duquesne University.

June 1954, honorary member, Omega Chapter of Zeta Sigma Pi, national social science fraternity, St. John's University of Brooklyn, N.Y.

September 1954, the Order of Al Mérito Bernardo O'Higgins was bestowed upon Colonel Bingham by the President of Chile.

September 1945, honorary degree of doctor of engineering, Catholic University of Chile.

January 1955, Alfred Brahdy Memorial Award presented by the municipal engineers of the city of New York.

August 1955, honorary degree of doctor of science, Duquesne University.

October 1955, medal from the Société des Ingénieurs Civils de France.

October 1955, honorary degree of doctor of science from Lafayette College.

Out of the Deep to Target

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most interesting editorial which appeared in the Gazette, Montreal, Canada, on July 22, 1960:

OUT OF THE DEEP TO TARGET

"Polaris—from out of the deep to target—perfect."

With these exultant words, the captain of the American submarine *George Washington* informed President Eisenhower that the missile-firing submarine was no longer dream, but reality, and, although the thought may not have crossed the captain's mind, informed the world that offensive strategy had entered a new phase.

In order to reach their full possibilities of development, scientists say that organic creatures found it necessary to abandon the sea millions of years ago, and to exist on land. The missile has reversed this sequence. In order to reach the highest offensive capabilities that can yet be envisaged for it, it has had to abandon the land for the sea.

Although the Polaris has much in common with the Atlas and Titan missiles, it is that which is uncommon and different that causes it to make those missiles obsolescent at the moment they have become operational. The Atlas and the Titan are stationary; they are inflexible; they use liquid-fuel engines that have proved treacherous and unreliable.

The Polaris has solid-fuel engines; it can be carried to almost any of the large bodies of water that comprise a greater surface area than do the continents. As previous voyages have demonstrated, the nuclear submarine is as efficient in the Arctic and Antarctic as in temperate regions.

The only coming weapon which can perhaps be compared with the Polaris missile is the Minuteman missile. No doubt this will provide a land-based equivalent of the Polaris. But even this missile, which may be transported on special railway cars, will not have the safety or the flexibility of the Polaris.

The Polaris, if it is quickly manufactured in quantity and installed in nuclear submarines, may give the United States as great a lead over the Soviet Union as the Soviet Union gained over the United States with the missiles that launched the sputniks. But, just as the United States labored to close the missile gap which left it inferior, Russia can be expected to work for a new advantage. She may do this by building a Polaris-type missile herself, or she may seek to devise some more formidable weapon.

In weaponry one great power does not long retain an advantage over another. Each seeks to match its adversaries' achievements. Yet there is a lead of a different kind which exists today, and to which there seems little solution at present.

This is the lead that the offensive weapons of both great powers have gained over defensive weapons. Offensive weapons are today as superior to defensive weapons as defensive were to offensive weapons over 40 years ago, during the First World War. At that time the mass production of arms, like the machinegun, had given the defense a crushing superiority over the unprotected and frail human body. The battles of the First World War were battles of mass slaughter.

Today the situation is reversed. There is no defense against a nuclear-armed missile. The only defense is mental—the inhibition created by the knowledge that the enemy can destroy as freely and as completely as oneself.

Is this defense enough? The question has little meaning. There is no surer defense to be had. The scientists have given immense power to destroy. They have given little power to protect.

The only protection which exists is to insure that the West does not for any appreciable period become inferior to the Soviet Union in weapons. It was the fear of such inferiority that caused endless debate in the United States over the missile gap.

The West must be thankful that the United States has now produced a weapon which should, unless technical difficulties delay it, soon equal the armaments of the Soviet Union. If it is only fear of retaliation that insures security, the West must see that its power to retaliate remains inferior to none.

"Traffic Safety," Speech by Hon. Samuel N. Friedel, of Maryland, at "Clean Sweep" Luncheon, Safety First Club

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. GARMATZ. Mr. Speaker, it is a privilege to be able to insert in the RECORD the text of a speech made by my colleague, SAMUEL N. FRIEDEL, of the Seventh Congressional District of Maryland, before the Safety First Club of Maryland, at its "Clean Sweep" luncheon held in Baltimore on August 19. The luncheon marked the endorsement received from the Governors of all 50 States for the organization's nationwide campaign for the issuance of a commemorative traffic safety postage stamp.

Mr. FRIEDEL was the author of the original bill introduced in Congress to establish a Special Subcommittee on Traffic Safety, and he was appointed a member of that committee. It functioned so effectively that its work is being continued at the present time and the results of its efforts will be felt nationwide. The speech follows:

TRAFFIC SAFETY

Mr. Chairman, members of the Safety First Club, and friends, it is indeed a pleasure for me to be with you today for this "clean sweep" luncheon. I know how gratified each of you must be in the knowledge that you made a clean sweep of all the 50 States Governors in your drive to obtain support for the issuance of a special traffic safety stamp. This is a real accomplishment.

No one knows better than I do the terrific amount of work that has gone into this project. At this time I would like to commend the chairman of this drive, Harry Abell, the president of the Safety First Club, J. O. Shuger, as well as Morris Kasoff, Sam Abrams, Dr. Leo Kline and the secretary, Maurice Shochatt. Without the untiring efforts of these public spirited citizens we would not be here today to mark a clean sweep of all our State Governors in support of this worthy cause.

It has been my privilege from time to time to assist the executive committee for the special traffic safety stamp in whatever way they deemed appropriate. When your committee passed a resolution last August, calling for the issuance of a special stamp, I was very enthusiastic about using this means of calling to the attention of all our citizens the importance of driving safely on our Nation's streets and highways. In fact, I thought so much of this project that I spoke about it on the floor of the House of Representatives on August 20, 1959, and called upon the Postmaster General to issue a special traffic safety stamp. I pointed out then, and I would like to repeat now, that our most precious asset is the people of our country.

On March 30, 1960, it was my pleasure to announce on the floor of the House of Representatives that the Safety First Club of Maryland had been successful in obtaining the support of the Governors of 48 States in their drive for this special stamp. At that time I asked my colleagues in the House to get behind this drive and assist in every way possible to have such a stamp issued. Today it is a great pleasure for me to note that we now have the support of the Governors of all our States and this could not have been accomplished without the persistent efforts of the members of this club.

As you all know, the Postmaster General has advised me that a special traffic safety stamp cannot be issued this year. However, on Wednesday of this week, I was assured that this proposal will be considered when the decision is made as to the special stamps to be issued in 1961. Our present Postmaster General has made the decision regarding the stamps to be issued in the first 3 months of 1961. However, I hope we will have a new Postmaster General for the balance of next year and that he will be a man who is aware that anything we can do to stop the killing of our citizens on the highways is a moral obligation we all face. I still maintain that if we can issue special stamps calling attention to the need for soil conservation, water conservation, and such other matters, we can certainly find a way to issue a stamp calling attention to the need for conserving human lives. You can rest assured that I will continue my efforts in this direction.

I have stated many times over that traffic safety is everybody's business, yet this continues to be one of our unsolved national problems. Many fine organizations, such as the Safety First Club of Maryland, have expended great effort to bring this problem to the attention of the public and to make people safety conscious. However, much more work is needed if we are to stop the slaughter on our Nation's highways. Just this past weekend our Governor the Honorable Millard Tawes, proclaimed his desire that this be a "deathless weekend" on Maryland highways. Yet, in less than 3 hours after the start of the weekend we had two deaths resulting from accidents on Maryland highways. This makes it look as though we are not getting our message across to the driving public.

I think all of you here realize that we must exert even more effort to make every automobile driver aware of the great necessity for driving safely. We must make him understand that accidents do not always happen to the other fellow—they can happen to us. Each individual driver must do his part by obeying traffic laws and watching the other fellow as well as himself when he is behind the wheel.

I know that each of you here today are doing a great deal to help solve this traffic safety problem, but I think you will agree that the need for safety on our Nation's highways cannot be brought to the attention of the American people too often. Wide circulation of a traffic safety stamp would be very useful in our campaign to stop the needless loss of the lives of so many of our citizens. Again, let me assure you that I will continue to do everything in my power to have such a traffic safety stamp issued next year.

Thank you for giving me this opportunity to address the Safety First Club of Maryland today. Now that we have made a clean sweep in obtaining the support of Governors for our special traffic safety stamp campaign, let us use this support in every possible way so that all our citizens will be made aware of their social responsibility, respect the rights—and the lives—of others. In this way, I believe we can ultimately stop this disgraceful slaughter on the highways.

Unfinished Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial of interest to taxpayers, which appeared in the Chelsea Record on July 22, 1960.

UNFINISHED BUSINESS

Members of Congress have been taking a vacation during the political conventions, but there is no vacation for the U.S. taxpayer. Government expenses and taxes go on without a break.

Most people realize there will never be an end to paying taxes. What many do not realize—including some Congressmen—is that the Federal Government is charging heavier income taxes than necessary. Hanging fire in Congress during the current recess are bills which would reform the income tax rates and ease the load on everybody. These bills, sponsored by Democrat A. S. HERLONG of Florida and Republican HOWARD BAKER of Tennessee, would reduce Federal income tax rates in every bracket.

The Government could be expected to benefit as well as the taxpayers. Economists predict that much of the money released from taxes would be invested to start or expand businesses. This would mean new jobs, new products—and new tax sources.

Now is the time for all good Congressmen to remind themselves that the Herlong-Baker tax rate reform bills 3000 and 3001 need their attention when Congress goes back to work.

Gastonia's National Teener Champs

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. WHITENER. Mr. Speaker, on Friday, August 19, 1960, the Teener Baseball Team of Gastonia, N.C., won the national championship at a tournament held in Hershey, Pa. This team of boys under the age of 16 years was sponsored by the Absher-Flowers Post of the Veterans of Foreign Wars of Gastonia, of which I am a member.

All of the citizens of Gaston County are extremely proud of the athletic accomplishments of these young fellows, but we are even more proud of the splendid manner in which they represented North Carolina from the standpoint of their personal conduct.

The Gastonia Gazette of Saturday, August 20, carried a story of the welcome extended to these boys upon their return home. I feel that this story will be of interest to many people and for that reason I insert the story to be printed in the RECORD as a part of my remarks.

MOTORCADE TO GATHER AT RIVER

(By Ray Jimison)

A red carpet stretching from the Catawba River to Gastonia was to greet the city's national Teener champs on their arrival home this afternoon.

A motorcade was to meet the victors at the Catawba River bridge at 4 o'clock.

Players were to get off the bus at the bridge and join the motorcade. They were to ride with their parents in convertibles.

TRIUMPHANT JOURNEY

The procession was to travel to Belmont where Police Chief Frank Carpenter was to escort it through the town. It was to swing back to the boulevard for the triumphant journey to Gastonia.

The motorcade was to turn north on Trenton Street and travel east down Main Avenue. It was to stop at Chester Street, if it arrives early, to wait until 5 p.m.

PARADE

At 5 p.m., a parade was to be kicked off at Chester Street. It was to move down Main Avenue through the business section, breaking up at Broad Street.

Not since 1935 when the Gastonia American Legion Juniors captured the little world series has baseball fever been at such a high pitch in Gastonia.

Hundreds of rabid baseball fans were expected to meet the team at the Catawba River for the grand march on Gastonia.

PARENTS MEET

Parents of the players were to meet at Absher-Flowers Post No. 9337 at 2 p.m. to

make preparations to meet their sons. Eighteen convertibles have been secured to carry the happy parents.

Gastonia's homesick Teeners were to get a reception that will long be remembered. Baseball fans still recall when the city won its last national championship 25 years ago.

EVEN BIGGER

"This will be even bigger," declared a VFW official.

Capt. Roy Short of the Gastonia Police Department said the parade was worked up on short order. "We could really have shown the people something had we had more time to prepare."

Efforts were being made to obtain the local drum and bugle corps and also the Concord Drum and Bugle Corps. Several fire trucks and ambulances were to be thrown in for good measure.

RIDE TOGETHER

Teeners and their parents were to ride together in the parade. Coach Jim Barker and VFW Recreation Director Russ Bergmann and other VFW officials were to be in convertibles.

EASY WAY

Gastonia won the national Teener championship Friday afternoon the easy way. They scored 5 runs in the first inning and went on to smother Struthers, Ohio, 12 to 3, in a rain-interrupted game.

The local Teeners fought their way into the finals with three consecutive wins. They beat Bossier, La., 6 to 0; Canal Zone, 4 to 0; and Elgin, Ill., 8 to 5.

In copping the national championship, Gastonia beat three former national champions—Bossier, Canal Zone, and Elgin.

The team has been away from home since Saturday a week ago. They left here at 5 a.m. and arrived in Hershey, Pa., Sunday after stopping off in Baltimore Saturday night. In rolling to the championship, the Teeners won 13 straight games.

Fourteen players and the two coaches were to share the limelight this afternoon.

The Ukrainian Congress Committee of America

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. IRWIN. Mr. Speaker, this fall marks the 20th anniversary of an organization dedicated to an educational program designed to dispel myths and reveal the truth about activities of the Soviet Union with regard to captive nations. This is the Ukrainian Congress Committee of American, which represents some 2½ million Americans of Ukrainian ancestry. We salute the committee both for what it is doing to uphold and perpetuate the ideals of the Ukrainian people and for its efforts in the cause of freedom. How the work of the committee relates to our efforts in the struggle for freedom is clearly outlined in the following excerpt from a letter to me from Dr. Lev E. Dobriansky, chairman of the committee and associate professor of economics at Georgetown University. The excerpt:

Our aim has been purely educational. As citizens knowledgeable in the affairs of the Soviet Union, we are dedicated to the task of serving the national security interests of this country by advancing the strategic value of all the captive nations, particularly those in the Soviet Union itself; informing our fellow citizens about the independence struggles of the dozen captive non-Russian nations in the U.S.S.R.; exposing the many current myths about Soviet unity in all its alleged ramifications, and proposing concrete ways and means to defeat imperialistic Moscow in the cold war, the chief mode of which is psycho-political and propagandistic.

One Hundred and Fiftieth Anniversary of Mexican Independence Commemorative Postage Stamp Will Be First Placed on Sale September 16, 1960, at Los Angeles, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to extend the text of a letter received by me from the postmaster, Otto K. Olesen, Los Angeles, Calif., and the text of an information statement about the 4-cent commemorative stamp to be issued September 16, 1960, on the 150th anniversary of Mexican independence, with the first day of sale in Los Angeles.

While most of the great 23d District, which I represent in this great legislative body, in this my 14th year, is not within the city limits of the city of Los Angeles, a portion of the great 23d District is within the corporate limits of the city of Los Angeles, and therefore within the limits of the postal service of the U.S. Post Office, Los Angeles, Calif.

The letter and statement follow:

U.S. POST OFFICE,
Los Angeles, Calif., August 19, 1960.

Hon. CLYDE DOYLE,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: Los Angeles has been honored again.

The Post Office Department in Washington has informed me that the U.S. commemorative postage stamp, marking the 150th anniversary of Mexican independence, will be first placed on sale September 16, 1960, at Los Angeles.

This stamp is part of a joint issuance of special stamps by the United States and our good neighbor nation of Mexico. Los Angeles was designated as the place of initial issuance because it has the greatest concentration of Americans of Mexican origin.

We are planning a gala celebration for this event of international significance, to be held on the steps of the Federal Building at 10 a.m. on September 16, 1960. Please put this date on your calendar because I certainly would like to have you in attendance at this ceremony as a special guest.

Will you please drop me a line, or call my office at Madison 5-7411, extension 257, telling me whether or not you will attend?

With kindest personal regards, I am,

Sincerely,

OTTO K. OLESEN,
Postmaster.

INFORMATION ABOUT THE 4-CENT MEXICAN INDEPENDENCE COMMEMORATIVE STAMP, TO BE ISSUED SEPTEMBER 16, 1960, WITH FIRST-DAY SALE IN LOS ANGELES

The U.S. commemorative postage stamp marking the 150th anniversary of Mexican independence, which is to be part of a joint issuance of special stamps by the two neighboring nations, will be first placed on sale September 16, 1960, at Los Angeles, Calif., with a special ceremony at the Spring Street entrance to the Los Angeles Federal Building at 10 a.m. on that date. Los Angeles was designated as the place of initial issuance because it has the greatest concentration of Americans of Mexican origin in this country.

Except for the necessary differences in text and denomination, the Mexican independence stamps issued by both nations will be identical in design, featuring the historic bell at the National Palace in Mexico City which is rung each year by the President of Mexico to signal the beginning of the independence anniversary. This bell was brought to Mexico City from Dolores, where Miguel Hidalgo rang it in his call for independence.

The design is the result of the cooperate efforts of Leon Helguera of Mexico and Charles R. Chickering of the U.S. Bureau of Engraving and Printing. It was approved in Mexico City by postal officials of Mexico and members of the U.S. Post Office Department's Citizens' Stamp Advisory Committee.

This is the first time the two countries will issue postage stamps embodying the same basic designs. The stamps will be of the 30 centavos denomination for Mexico and the 4-cent denomination for the United States, these being the respective rates for first class letter mail in and between each country. Both stamps will be printed in red and green on white paper, thereby featuring the Mexican national colors.

Collectors desiring first-day cancellations of the 4-cent Mexican Independence commemorative may send addressed envelopes, together with remittance to cover the cost of the stamps to be affixed, to the Postmaster, Los Angeles, Calif. A close-fitting enclosure of postal card thickness should be placed in each envelope and the flap either turned in or sealed.

Envelopes submitted should be of ordinary letter size, and each must be properly addressed. An envelope must not be sent for the return of first day covers and orders for covers must not include requests for uncanceled stamps. The outside envelope or wrapper to the postmaster should be endorsed "First-Day Covers 4-Cent Mexican Independence Stamp."

Postmaster General Arthur E. Summerfield in announcing the Mexican independence stamps said, "The Government and peoples of the United States and of the great nation of Mexico—governments and peoples who share a long common and peaceful border—have learned to live side by side in friendship and harmony.

"It is indeed significant, in these days when international crises are all too frequent, that our two countries have created this atmosphere of good neighborliness—an atmosphere of mutual respect, understanding and trust—and thus contributed to the well-being and progress of each.

"It was with these thoughts in mind that I proposed to Rafael Murillo Vidal, Director General of Posts of Mexico, in November 1959, that our two nations jointly issue Mexican Independence stamps in 1960."

The Postmaster General recalled that the friendly relationship between the two nations was further evinced, during the past year, by the visits of President Eisenhower and his brother, Dr. Milton Eisenhower, to Mexico and by the state visit of President Adolfo Lopez Mateos of Mexico to the United States.

Statement of Thomas F. Carpenter, Assistant Research Director, District 50, United Mine Workers of America, to the U.S. Tariff Commission

EXTENSION OF REMARKS
OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call to the attention of my colleagues to the following statement of Mr. Thomas F. Carpenter, assistant research director, District 50, United Mine Workers of America, to the U.S. Tariff Commission with respect to proposed GATT negotiations:

STATEMENT OF THOMAS F. CARPENTER, ASSISTANT RESEARCH DIRECTOR, DISTRICT 50, UNITED MINE WORKERS OF AMERICA, TO THE U.S. TARIFF COMMISSION ON INVESTIGATION NO. 9, UNDER GATT, AND TO THE COMMITTEE ON RECIPROCITY INFORMATION, WITH RESPECT TO PROPOSED GATT NEGOTIATIONS ANNOUNCED UNDER DATE OF MAY 27, 1960

A notice of intention to negotiate pursuant to the Trade Agreements Act of 1934, as amended and extended, including a list of dutiable items to be considered, was published in May 1960. Under schedule I, entitled "Chemicals, Oils, and Paints," paragraph 1 through paragraph 95, of the Tariff Act of 1930, there appears a list of chemical, oil, and paint products, numbering some 425 items, imported into the United States and proposed for consideration in trade agreement negotiations. Generally speaking, these items are either directly or indirectly competitive imports of practically every major industrial chemical employer in the United States.

District 50, United Mine Workers of America, represents, for purposes of collective bargaining, a large number of workers who contribute to the production of either the source material or the end product of practically all of the items listed in the above announcement.

Taking into account the broad scope of the chemical industry in the United States, we find that a substantial number of the chemicals listed above are used by other industries in the production of durable goods—i.e., building materials, electrical equipment, furniture and fixtures, hardware, lumber products, machinery, metal products, motor vehicles and equipment, and transportation equipment—and nondurable goods—i.e., beverages, food products, leather and leather products, packaging, paper and paper products, petroleum and coal products, rubber products, and textiles.

District 50, United Mine Workers of America, represents, for purposes of collective bargaining, a considerable number of workers employed in the manufacture of those products itemized in both the durable- and non-durable-goods lists mentioned above.

Therefore, in behalf of the members of District 50, United Mine Workers of America, who may be affected by the proposed negotiations, it is the desire of District 50, United Mine Workers of America, to object to further decreases in tariffs on the May 1960 list.

Free enterprise in the United States has prospered and grown through competition. Competition has caused American industry to engage in exhaustive and costly research to make more products cheaper and better. We have today, resulting from an international competitive chemical industry, a most superior complex machine contributing its fair share to the success of the United States of America in peace and war. The members of District 50, United Mine Workers of America, employed in this industry have, likewise, made a substantial contribution to the success of this industry and the maintenance of an American standard of living.

Now this industry and the people who work to make it successful turn to the U.S. Government for the least that can be asked; i.e., an opportunity to continue to serve the United States. The American worker is entitled to necessary protection from the competitive imports of products produced by the chemical industry in other nations where wages, working conditions, and living standards are greatly inferior to our own.

For example, the workers in the six nations comprising the European Economic Community receive average hourly earnings that are between 21 and 22 percent of the average hourly earnings received by the chemical worker in the United States. It must be noted that the chemical producer in the United States is required by law to pay minimum straight-time hourly wages of nearly double the average hourly earnings of the foreign chemical producer manufacturing these competitive imports.

American industry can continually improve its output per man hour, but productivity alone can not make up the differential between the domestic industry wages and the wages paid to their foreign counterpart.

Blocs of nations such as the European Economic Community can within that geographic area remove trade barriers because this relatively small area (approximately one-sixth of the size of the United States) has within its confines similar living and economic conditions. The problem of differentials is of no significance in this community of nations. However, comparing the wages of this economic bloc with that of the United States, we have the following:

Comparison of average hourly earnings of nonsalaried workers in the chemical industry [1] in the European Economic Community (Common Market) countries with comparable workers in the United States for comparable periods

Country	Average hourly earnings		Percent of U.S. rate	Year
	Domestic rate	U.S. dollars		
United States	----------	2.31	100.00	1958
Belgium: [2]				
Males	32.08 francs	.645	27.92	1958
Females	18.59 francs	.373	16.15	1958
Germany (Federal Republic):				
Males	2.51 marks	.599	25.93	1958
Females	1.64 marks	.391	16.93	1958
Italy	234 lire	.374	16.19	1958
Luxembourg	32.47 francs	.651	28.18	[3] 1957
Netherlands	1.82 gilders	.482	20.87	1958
France	2.50 francs	.505	21.86	1958

[1] International Standard Industrial Classification 31 (Chemical and Chemical Products).

[2] Hourly rate estimated on a daily average earnings of 240.6 francs for male and 139.4 francs for female and an average workday of 7.5 hours.

[3] Latest figures available.

NOTE.—Combined average hourly earnings (excluding United States) equals $0.503. Percent of combined average to U.S. average equals 21.77 percent.

Sources: Yearbook of Labour Statistics, 1959, International Labor Office, and U.S. Department of Labor, Bureau of Labor Statistics.

Based on the above data, we find such vast differences in the wage structure that it would seem completely unrealistic to presume that any real competition could exist between the domestic and foreign industries, based on labor costs portrayed in this table.

The vast and dynamic machine of industrial United States requires all of its components in working order. The interdependence of various large and important segments of industry on the chemical industry was outlined above and discussed in a statement by the president of the Manufacturing Chemists Association before the House Committee on Ways and Means, Subcommittee on Foreign Trade Policy in 1957, and is well known to interested persons and need not be restated here.

While it is true that some American chemical manufacturers have acquired chemical plant facilities in foreign countries and enjoy cheap foreign labor, that in itself would be no justification for the further reduction in tariffs in order to unfairly enhance their competitive position against the workers in the chemical industry in the United States.

It appears that our Congress is also concerned about the unilateral trade program. On January 26, 1960, Congressman BAILEY submitted to the House of Representative House Concurrent Resolution 512, and Senator KERR, for himself and Senators THURMOND, CURTIS, DWORSHAK, ALLOTT, and JOHNSTON of South Carolina, submitted to the U.S. Senate Senate Concurrent Resolution 104. These documents express the sense of Congress that the United States should not grant further tariff reductions in the forthcoming negotiations since "profound changes in the international competitive standing of the U.S. producers have occurred since the passage of the Trade Agreements Extension Act of 1958;

"Whereas, imports have increased sharply while exports have declined."

Both of these resolutions are in appropriate committees of the respective houses of Congress and we feel certain that they capably express a growing concern of Americans everywhere.

On March 30, 1954, President Dwight D. Eisenhower sent a message to Congress, on foreign economic policy, containing the following passage:

"I have approved the Commission's recommendations that the United States withhold reductions in tariffs on products made by workers receiving wages which are substandard in the exporting country. This policy shall be placed in effect. I have also approved the Commission's recommendations concerning raising of labor standards through consultative procedures and cooperation in international conferences such as those sponsored by the International Labor Organization."

The essence of the first sentence of the President's message, quoted above, is also stated on page viii of the "Notice of U.S. Intention to Negotiate."

This announced policy should bear some weight in these negotiations where the wages paid in the exporting nations are substandard to those of the United States. The United States of America has adopted a very formal policy as to what is substandard. This is outlined in the Fair Labor Standards Act. This act proclaims that all persons, employed by employers engaged in interstate commerce, shall be paid not less than $1 per hour. If we are to compete in international commerce, the United States must require that any foreign producer, desiring to sell his products in the American market, pay his workers the minimum required to be paid under domestic policy. The alternative, then, is to impose necessary restrictions on competitive imports, produced under sub-

standard wages and working conditions, as will more fully protect the American worker in his employment opportunities as a citizen and as a taxpayer.

The policies of the United States are not to be taken lightly by Americans themselves nor should they be undersold to our foreign counterparts.

The history of the United States is resplendent with bold and virtuous actions. In this matter, an action to raise the standard of living of foreign workmen to that of American workmen is preferable to lowering the American standard to that of our foreign competition.

In reemphasizing the position of District 50, United Mine Workers of America, in this matter, it is noted that under the Fair Labor Standards Act, we have, by law, established certain restrictions upon the employment of child labor by domestic employers. Oppressive child labor is defined as the employment of minors (1) under 18 in occupations found to be particularly hazardous, (2) under 16 in any other occupation, and (3) under 14 in limited work outside school hours in nonmanufacturing and nonmining occupations.

Further, under the Fair Labor Standards Act, there is established a national policy that all persons, employed by employers engaged in interstate commerce, shall be paid not less than $1 per hour. Consideration is now being given by Congress of increasing the minimum under the Fair Labor Standards Act from $1 per hour to $1.25 per hour by step rates over a period of 3 years.

In connection with this subject matter, it might be well for both the Tariff Commission and the Committee for Reciprocity Information, during their investigation of this matter, to consider the imposition of additional import restrictions on goods produced by foreign manufacturers which pay wage rates to their employees and impose restrictions on their workers that are below the minimum standards required by law to be maintained with respect to domestic manufacturers within the United States of America.

We respectfully submit that we are opposed to any further reduction of tariff duties on competitive imports during the forthcoming negotiations.

Television's Role

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. MOULDER. Mr Speaker, in a recent talk at a dinner of the St. Louis Educational Television Commission in his honor, Dr. Frank Stanton, president of the Columbia Broadcasting System, put forward a convincing case for employing every means at our command to fill the perilous gap between what our citizens know and what they need to know in order to make fast and sound decisions. He emphasized that such a curtailment of the freedom of any information medium as the abridgment of the rights of broadcast journalism in election campaigns, is shortsighted and hazardous in the extreme.

This is a timely alert to the fundamental and central dilemma facing democracy as both a means of government and a way of life. I urge you to read it in its entirety.

Dr. Stanton's speech follows:

For some reason, I find myself coming frequently to Missouri to discuss such aspects of broadcasting as education and journalism. There seems to be here a wholly constructive compulsion to discuss and to stimulate discussion among others.

Some time ago, when CBS concluded that the responsibility of its own stations as journalists could not be fully met without their giving attention and time to the editorial function as well as to the reporting function, KMOX and KMOX–TV moved promptly to correct this deficiency. At the time the most pressing local issue was the St. Louis Metropolitan District Plan. KMOX delivered itself of a clear, forceful, closely reasoned editorial—against the plan. Its sister station, KMOX–TV also delivered itself of a clear, forceful, closely reasoned editorial —in favor of the plan.

If dissent is the chief nutrient of a democracy, you have nothing but the growth of the democratic spirit ahead of you here in Missouri. In addition to a historically robust press and lively universities as stimulators of opinion, you now have vigorous and independent-minded broadcasting stations.

This is all relevant to our concern here tonight: the contribution that television can make to education in a democratic society. This is an enormous topic, of course, and I can discuss with you only one major aspect of it. Before I do, I want to say that all of us at CBS have followed with great interest the work of the St. Louis Educational Television Commission and the progress of KETC.

As a vivid communications medium, television can supplement greatly the traditional tools of education. It can possibly also introduce a new economy in educational methods. But educational television will never, and should never, replace institutional education or even take over its major burden. Used wisely and well it can lighten that burden and at the same time add a new dimension to teaching.

A YOUNG FORCE

Such commissions as yours, made up of interested citizens with a special competence or interest in education and its problems, seems to me the right way to go about giving direction and guidance to the development of educational television. Much of what has already been done in educational television is of proved good. Some, I suppose is doubtful. Some is probably useless, misguided, or basically wrong. But educational television is extremely young. It must rely on evolution to realize itself and make a valid contribution to the formal educational process. Certainly we at CBS want, when we can, to aid in that necessarily slow progression from experiment to a sure place in the educational scheme.

In one way or another, of course, all television—as all communications—serves an educational purpose. I imagine that even those lighter entertainment programs about which the academic people may have somewhat limited enthusiasm can touch off the curiosity of sociologists and anthropologists. And if the proper study of mankind is indeed man, television—whatever its mistakes and failures—offers the student a window of unlimited proportions.

TELEVISION'S EDUCATIONAL ROLE

Tonight I want to limit my talk on the most direct educational role that television plays in a democratic society.

In all societies, education is a basic need. The Soviets have certainly recognized this—however repugnant to us their use of it may be as a mechanical adjunct of the State's business of controlling individuals so as to create a collective machine. With us education is the pervading premise of the democratic proposition. You cannot have democracy without education. But neither becomes the tool of the other. They exist side by side, feeding upon one another. Each exists for its own sake and, at the same time, for the sake of the other. You can no more separate education and democracy than you can separate energy and matter.

THE LUXURY OF TIME

Now there was a day when this interdependence of democracy and education had simple enough implications. It was necessary to have a literate people, and provisions were made to teach everyone to read and write. For the rest, the constitutional guarantee of a free press and freedom of speech, and the natural interplay in a small and on the whole peaceful society of person-to-person communications did the job. Democracy had room and time for its slow machinery to move—room and time, too, to make mistakes. De Tocqueville was quick to see the natural tolerance that the America of the last century had for the uncertainties of the democratic procedure. "The great advantage of the Americans," he said, "consists in their being able to commit faults which they may afterwards repair."

That was 125 years ago. And it was true for 115 years thereafter. But for the last decade, the words come to us from the hollow echo chamber of a lost world—a world where there was the incomparable luxury of time. Time to make mistakes, time to correct them. Time to flush out the facts on which to move. Time to feed and to feed back public opinion. Time, in short, for the slowest and most hopeful form of government devised by man to work.

A NEW DILEMMA

There seems to me no mistaking that the most overwhelming fact in political science today is that we no longer have that enormous luxury of time—that we must adjust the institutions and methods of democracy to the life-or-death demands of a speeding world, where there can be few mistakes, few revisions, few fumblings after the right decision.

This is a prodigious and a wholly novel strain to put upon democracy. And in our history it comes at a time when we have not solved other older, far less perplexing and infinitely less pressing political dilemmas. Even as de Tocqueville wrote so reassuringly in 1835, the essential problem of democracy in modern America was emerging: Democratic concepts born in the peaceful plantations and villages of the 18th century colonies, but whose embryology began 2,500 year earlier in ancient Athens, had to be adjusted to a mass society—a society made up of scores of millions, moving out across a 3,000-mile wide continent, moving too towards a complex industrial economy.

With our talent for improvising, we survived this challenge without ever really solving it. We have simply been groping towards a solution. But before we achieved it, we had imposed on us this more perplexing, more sudden and more critical challenge to the placid idea of democracy conceived in Athens and reborn in the Thirteen Colonies. The age of the intercontinental ballistics missile has pressed upon democracy standards of speed and certainly that no man envisioned when this republic was founded—that we ourselves did not envision until they were full upon us.

We have no secret weapon in our arsenal—nor any hope of one in the laboratories—to deal with this. Democracy depends upon human capacities. And prime among these is the ability to communicate—to inform, to discuss, to form opinion. Democracy cannot be saved by any substitute for these—

for that would be a denial of its own nature. Obviously then, this informing, this discussion, this opinion forming—this essentially educational process—must be adjusted to the new demands.

HOW TELEVISION CAN SERVE

I have said before that it seems to me providential that television came along at this time, when the working principles of democracy are stretched taut, when old values have been swept away by the ruthlessness of progress, and when—whether we like it or not—we are in for the most critical readjustment we have ever faced. The question is what is television doing about this opportunity for service and what can it do?

I am going to be as exact and as direct with you on this question as I know how.

This year the American people will be making a decision—a choice of leadership—that is bound to influence not only our own future but the future of mankind throughoutthe world. It is a tough, hard, fateful decision binding for 4 years into the future. It will be made impulsively, on vague impressions, on surface feelings; or it will be made thoughtfully, on clear information, in full knowledge and understanding of the issues.

LEADERSHIP FOR FREEDOM

There is no single act of self-government that is more important than this quadrennial choice of our national leadership. No matter how resolute our people, we are in trouble if that leadership is faltering. No matter how constant our devotions to freedom, we plunge it into jeopardy if the leadership we choose is indifferent. No matter what our material strength, we are in physical danger if our leadership is weak.

The role that television must play in this outstanding business of democracy is clear: it is education for effective, informed citizenship capable of making sound decisions and making them fast. Television today is in 88 percent of American homes. Through networks it can be in every one of those homes simultaneously. It can be there with voice and with image. It can be there with immediacy, with the event itself—not as somebody saw it happen but as it is happening. It can bring virtually the entire electorate into one room. That is, in fact, what has happened to the national party conventions.

TELEVISION AND THE CONVENTIONS

In 1956, more than 102 million viewers saw some part of the conventions. Out of the total convention coverage of 55 hours, the average set was turned on for over 16 hours. Even a session at 2:30 in the morning was watched by as many as an estimated 10 million people in 4 million homes. Moreover, the predictability of the convention has little to do with the size of the audience; in 1956, the general certainty that President Eisenhower would be nominated for a second term by acclamation did not diminish the size of the audience.

Television has made the convention more than an organization devise to select a candidate and frame a platform. It has become the major forum through which voters all across the land come to know the personality of the party and its leaders, to get a sense of their values, to judge them, their characters and their capacity for leadership.

CBS takes such a serious view of the conventions that it started planning the coverage of the 1960 events 2 years ago. Nearly 300 CBS staff people—reporters, news analysts, technicians—will be working at each convention. While the Democratic Convention is going on in Los Angeles, an advance crew of CBS News will be in Chicago, preparing for the Republican Convention 2 weeks later. In each convention city CBS will have two news headquarters, one in the convention hall and one behind the scenes. More than 22 tons of equipment and hundreds of miles of wires and cables will be used to cover each convention. The cost to the parties for the coverage that the three networks gave the conventions in 1956 would be $12.5 million for air time alone, not including the huge production costs.

This quantitative picture of television's convention coverage is only the beginning of the story. If we were seeking only to give every American "a seat in the hall," we could do it with a couple of cameras and a handful of men. What we are after is an understanding of the convention, not just a passive witnessing.

INTERPRETING THE NEWS

A stark chronology of the proceedings of the conventions would be meaningless, dull, and worthless to most viewers. The job of journalism is not just to record, but to appraise, to evoke meanings, to search out implications, and to probe behind-the-scenes actions and trends. A convention is necessarily chaotic, for only a fraction of the significant activity is on the floor. All the rest—the trends and countertrends, the appeals, the deals, the obstinacies, the weaknesses, the strengths—these are revealed in committee chambers, in delegation headquarters, in candidates' rooms, in corridors, and in hotel lobbies. Unless order is conferred on this chaos of happenings, unless selections are made from the vast volume of talk and action, the viewer would get little enlightenment. He would be swamped by the sheer mass of news going on before his eyes. So the job of television goes far beyond a matter of using advanced electronic equipment to bring the convention's floor proceedings to the viewer. It is a matter also of mobilizing and deploying the human resources of CBS News so that they are used in the best interest of the viewer.

Anyone at all familiar with the television networks' news and public affairs programs for the last 4 years knows that the conventions are a culmination as well as a beginning. Every issue and every possible candidate has been presented on television over and over again almost since the last election 4 years ago. The surprise candidate—the real darkhouse never heard of outside of his own State—has become an unregretted casualty of the sweeping light of television. So has the hidden issue—the prejudice or vested interest that operated behind the scenes in conventions far removed from wide public scrutiny and then slipped back into hiding for another 4 years.

THE CHANGE IN POLITICS

Since television treats the conventions not as isolated spectacles but as episodes in a continuing story and phases of a continuing discussion, subtle changes are coming about in the patterns of our political habits and customs. James Reston of the New York Times has commented upon the shift of presidential possibilities away from State and regional leaders to national figures, attributing this to the continuing television coverage of the Washington scene and the consequent prominence of Senators. Although Warren Harding was the only man in this century to be nominated directly from the Senate for the Presidency, the vast majority of candidates for the nomination this year either are or have once been Senators.

It does not seem to me too much to suggest that the whole folklore of American politics is undergoing profound changes. Regionalism is declining in the face of widely aired common problems not just of the Nation, but of the world. The alchemy of public opinion, once the distillation of bands and parades, slogans and songs, is giving way to the surer chemistry of information, discussion, and conclusion. The criticism of the opposition is made easier and more lively because it is not limited to the stilted jargon and indulgent formalism of the legislative chamber. It may well be that, whatever our troubles, we will never again face one of those desolate and dangerous wastes of history where the voices of criticism are all but silent.

HINDRANCES TO REPORTING

I hope that I do not read into television journalism achievements to which it has no fair claim. I do not think that I do. Television has shown its ability to arrest attention, to report—but to go beyond reporting to analysis and meaning, to bring the event itself into the full, unposed view of a hundred million families. Moreover, it has done this in an atmosphere of restriction and harassment. And if we press on to the question of whether television has done enough—whether it is doing enough—in the face of the staggering test to which democracy is being put, then we need to ask, too, whether it is being allowed to do enough.

I do not think that it is.

Since colonial times, it has been a basic tenet of the American creed that journalism must be free—that any risks that this involves are far less hazardous than any kind or any degree of control. Today, the facts of life are that electronic journalism is as important as printed journalism and as much a part of the lives of Americans. A survey by the University of Michigan after the last presidential election showed that, at every educational level, more Americans got their information about the candidates and issues from elevision than from news papers.

By any terms of comparison the combined news output of the three networks and some 500 individual television stations represents massive journalistic enterprise. It is obviously entitled to the same freedom that made the print media the first safeguard of democracy throughout our history. Obviously there is no area of the news in which this freedom has more relevancy or importance than in the political field. That, indeed, is the whole point of a free press.

EQUAL TIME STRAITJACKET

Yet this is the one area singled out by section 315 of the Communications Act to deny broadcast journalism its freedom and to apply the "equal time" straitjacket, requiring every candidate—however obscure—to get equal time on all but regularly scheduled news and news interview programs. For all practical purposes this not only strips broadcast journalism of both the right and responsibility of news judgment, but it makes really significant and useful special election programs impossible. For example, under the present law, if in 1956 we had broadcast a debate between the Republican and Democratic Presidential candidates, we would also have had to invite candidates from the New Party, the For America Party, the Mississippi Black and Tan Grand Old Party, the American Third Party, the Christian National Party, and the American Party, among others. The resulting Donnybrook would, of course, have been utterly useless.

THE NEED FOR A CHANGE

Virtually every thoughtful person has agreed that this legalized negation of the classical role of a free press in a democracy is dangerous, wasteful, and intolerable. Chief among the most articulate critics of section 315 have been the print media of the country. Yet it is still on the statute books. Monday the Senate passed a resolution—Senate Joint Resolution 207—which waives the equal time requirement of section 315 insofar as it applies to presidential and vice-presidential nominees during the 1960 campaign. To become effective, this temporary measure also must have the approval of the House. Unless the House acts in the few remaining days until adjournment, television

will be unable to go beyond regularly scheduled news and news interview programs in covering the critical campaign we are about to enter.

A BATTLE TO BE WON

Education and journalism have always been related. They are both directed at conveying knowledge and promoting discussion. Journalism is that part of the continuing educational process that deals with the events, and personalities, and issues of our own time. If we in any serious way restrict this freedom of journalism, we deny ourselves the only road to salvation open to us—an educated and informed people.

This is the great unfinished business in television as an educational force. I have every confidence that the institutional uses of television as a tool of formal education are off to a good beginning and in good hands. As I said earlier, aside from the support of all of us, their major need now is time to develop. And the outlook is positive.

But this broader use of television as education for democratic living and, indeed, democratic survival, is plagued and choked by a statutory negativism. I believe it essential that educators and those interested in education see the need for permanently correcting this as infinitely more than a battle of journalism versus government. It is, in sober fact, a battle to meet the increasingly urgent need for information if this society is to survive.

Can We Keep Our Living Standards?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial regarding the forthcoming political campaign which appeared in the Boston Globe on August 1, 1960:

CAN WE KEEP OUR LIVING STANDARDS?—IN WORLD OF TODAY UNITED STATES FACES HARD CHOICES—NEXT PRESIDENT WILL HAVE TO ASK FOR SACRIFICES

(By John Harriman)

With the convention fanfare and shouting behind us, we now settle down for the long grind of the political campaign.

In many ways this campaign will be quite different from any that have preceded it. Not since the deep depression of the 1930's have issues so questioned the strength of the American economy and the national security, even the whole American way of life.

When Franklin Roosevelt first took the reins of Government, it was touch and go whether the system we call capitalism could survive. The next decade will ask an equally profound and challenging question: In the jungle world that emerges today can the towering living standards of the American people be maintained?

This is the great issue. It is in a sense the only real issue, for the politics, the trade, the economics of the world today are but reflections of what might actually be called an assault on our living standard or, to put it differently, on the huge difference between our standard of living and that of the rest of mankind.

The cold war is one facet of that assault. The Communist ideology was born to the economically dispossessed, and to fulfill its mission it must raise the well-being of its masses to equal at least that of the system it seeks out of bitterness to destroy.

In the underdeveloped areas, unrest and revolution are rising, demanding by what God-given right the American economy should be suffering under the problems of distributing its abundance while much of the rest of the world goes hungry and in rags.

But the challenge, the assault, is not only from our ideological antagonist and the economically frustrated. It comes also from our allies. From a Europe and Japan, reinvigorated and enjoying such economic strength and expansion as they have not known in 50 years.

The Soviet challenge is in what we call the cold war. That of the underdeveloped areas is through political revolution that threatens us with isolation. And Europe and Japan challenge in the markets of the world, competitively, with currencies now as strong as the dollar and production costs that cast a shadow on the whole high wage-high purchasing power concept which is at the core of American life.

The danger here is that there is no political capital to be had in meeting such issues, and forging a policy which will cope with them. Roosevelt could move to meet the threat of his times with ringing phrases, "a quarter of a nation ill-housed—ill-fed." He was a champion of the people pointing to a better life.

But the successful candidate next year must tell people that which no one will want to hear. He must point out that unless the farm problem is solved, we shall slip ever nearer serious economic trouble—that unless trade is freed at a sacrifice to many industries and jobs, the result will be another serious depression.

He must say in effect that it may be more in the public interest that a mill be built in Calcutta by American capital than in some American city. He may well have to say to the Ameriacn people that a certain amount of deflation and unemployment here is a necessary experience, if our international position and leadership is to be maintained.

Roosevelt could offer security, and an increase in the standard of living. But next year's occupant of the White House must in effect point out that in the modern world there is no security, and that it is not ours but the living standards of others which must occupy our minds.

Both political candidates are tough young men, and a tough campaign is expected. But the real toughness will be that which the victor will be called upon to exert when he is in the White House—the toughness to face the dangerous issues of a dangerous age.

Three Months To Live

EXTENSION OF REMARKS
OF
HON. RANDALL S. HARMON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. HARMON. Mr. Speaker, the most terrible of modern diseases, cancer, is still an imminent threat to humanity. Therefore, it would scem of the utmost importance that tests be made of any new drug which might reduce the pain and number of deaths caused by cancer. The eminent physiologist, Dr. A. C. Ivy, has made widespread tests which show that Krebiozen has apparently been helpful in treating many patients. Despite these reported results, the American Medical Association has violently denounced Dr. Ivy and his discovery. Why should the opposition of the official branches of medicine prevent an impartial testing of Krebiozen as a cure for cancer? Why, as long as there is even a slight possibility that Krebiozen has curative and palliative effects, should it not be given the same tests as are given other discoveries in this field? Cancer usually strikes two out of every three families in America. Miss Edna J. Reese of Muncie, Ind., is a member of one of these ever-growing families; and, under unanimous consent, I include her statement in the Appendix of the RECORD. It is hoped that her words will be carefully read by every Member of Congress, for this disease cares not about party affiliations.

The statement follows:

THREE MONTHS TO LIVE

When cancer strikes two out of every three families in America it will care little whether its constituents are Democrats or Republicans.

Typical of thousands of cases, an air of suspense and tragic waiting pervades the lives of relatives and friends of my nephew.

His dilemma has intensified my interest in cancer, aroused by many acquaintances dropping out of the picture, as well as by pupils of mine who have been blinded by retinal blastoma, brain tumors, and other malignancy.

Our nephew, 21, was operated on in December 1959 for the removal of an external tumor (after a week of having his foot hung over the end of the bed with a 10-pound weight, in the hospital, thinking the lump was a twisted muscle on his back).

The doctors who operated said he wouldn't need radium.

In January his wife had him examined by a surgeon. His prognosis was 3 to 6 months to live. July? This is August.

He is said to have a malignant Schwanoma tumor on the nerve sheath in the fourth or fifth lumbar region.

My prayer has been that his life might be preserved until something beneficial could be done. "Faith without works is dead."

I have been warned, "Just leave it up to the doctors." The doctors are not to mention the word cancer until his wife releases it. Unless he can be rescued from a maelstrom of prejudice and unbelief, as dooming as cancer itself, there is no hope.

Here lies my appeal.

If the word "cancer" may have a new connotation, created by a new social concept, then something might be done. Little more can be accomplished without the help of God and Congress.

For this reason I enlist your interest in Krebiozen—its possibilities and its struggles.

To read of the beneficial results of the drug on other inoperable, X-ray resistant tumors of advanced and terminal patients makes me wonder if Krebiozen just might apply to this tumor so rare that little experimentation has been done with any chemicals, let alone Krebiozen.

Why not try something to save or prolong a life instead of letting it die, doing nothing?

Since this (Krebiozen) represents the first and only nontoxic chemical agent to show definite biological activity of any degree against tumors of all types, it seems justifiable to encourage as much basic and clinical investigation as possible.

Here are just two examples of the treatment of tumors:

"Patient G.C.: Malignant neoplasm, bedridden, terminal.

"No benefit from X-ray therapy was obtained. Tumor was inoperable. More than 3 years after boy was declared hopeless and with a life expectancy of 6 to 8 weeks, patient

is without any signs of malignancy and is in perfect physical condition."

"Patient L.T.: Malignant melanoma, advanced, inoperable.

"One year and three months after beginning Krebiozen therapy—'following this therapy (Krebiozen) patient is free of symptoms of malignancy.' Patient is entirely normal and carries a full day's work."

A further example of the benefits of Krebiozen:

"Patient No. 2, Mrs. H.D.: Brain tumor, terminal.

"On January 20 patient was deeply stuperous and death seemed imminent. On the dose of 0.1 mg. weekly, this patient has retained a normal condition for the last 2 years. She goes to market, to church and her attitude, physically and mentally is that of a normal person."

Concerning leukemia:

"Patient No. 3, Mr. S.Y.: Acute lymphatic leukemia.

"After his second dose of Krebiozen—feeling very much better and his hemoglobin is begining to rise."

"Patient R.S.: Acute leukemia, advanced

"Clinically his condition is excellent."

Many other types on cancer are listed. Since many patients are advanced terminal, inoperable cases, what might be the results if Krebiozen were employed earlier? Two other types are:

"Patient No. 5, Mrs. M.P.: Adenocarcinoma. Bedridden, Terminal (death was expected within a day or two). Two months after beginning Krebiozen therapy: patient is improving."

"Dr. R.P.: Michigan: Patient: A.V. Cancer of Lung, Bedridden, Terminal: 'Whether or not the Senator's life could have been saved had Krebiozen been administered at an earlier stage, is, of course, a matter of conjecture. To see a man suffering unbounded pain only partially dulled by maximal doses of morphine, abruptly become completely and permanently relieved, in the presence of widespread devastating malignancy, has been one of the most dramatic therapeutic achievements it has ever been my privilege to observe. Dr. S. and I are unable to express in words our gratitude to you Dr. Ivy and Dr. Durovic for your courtesy and cooperation and assistance in Senator V's terminal illness."

For your convenience, these are only abreviated examples of many cases listed in the Report on Krebiozen, published in 1954.

"Krebiozen has already been withheld unnecessarily for several years from many cancer patients whom it might help, through no fault of their own, but by the excuses of pseudocritics."

WHAT IS KREBIOZEN?

"Krebiozen is a compound extracted from the blood serum of horses which have been previously infected with a preparation made from a culture of a 'mold', called Actinomyces bovis * * * Enough is now known about the chemistry to warrant the hope that it may be synthesized."

"Biologically there is evidence that Krebiozen is a hormone which acts to restrain the unregulated growth of body cells."

"The Krebiozen Research Foundation is a not-for-profit organization incorporated in April, 1951, under the laws of the State of Illinois. Its purpose is to conduct scientific research in the cancer field. The foundation is located at 105 West Adams Street, Chicago 3, Illinois.

"Since 1951 the foundation has been investigating the drug Krebiozen, a new drug agent discovered by Steven Durovic, M.D., for the treatment of cancer.

"Dr. Durovic is the scientific director of the Promak Laboratories (formerly Duga Laboratories) incorporated in the State of Illinois."

"All the investigations on Krebiozen have been directed under the auspices of the Krebiozen Research Foundation with the advice and supervision of Dr. A. C. Ivy, distinguished professor of physiology and head of the Department of Clinical Science at the University of Illinois.

"At the time when Dr. Ivy began his investigation of Krebiozen, he was Executive Director of the National Advisory Cancer Council of the U.S. Public Health Service and a member of the board of directors of the American Cancer Society. Dr. Ivy had been selected and proposed by the board of trustees of the American Medical Association, to the Secretary of War and the Secretary of State to serve as an expert adviser and witness at the Nuremberg medical trials on the subject of medical ethics and clinical investigation. Dr. Ivy served in this capacity during the Nuremberg trials."

The secretary, Dr. J. F. Pick, is "well known for his demonstration among prisoners at Stateville Penitentiary, Joliet, Ill., of the role of facial deformity in the genesis of criminality. This involved corrective surgery of more than 1,000 men and aided the rehabilitation of most, a feat for which Dr. Pick has been honored by the John Howard Organization, and scientific as well as legal groups the world over."

Why has Krebiozen met such opposition?

"Unscientific and unusual criticism of an experimental work before it had been completed and its results published gave rise to the appointment by the 68th Illinois General Asembly of joint committee of 14 legislators to investigate the Krebiozen controversy. The committee later became a legislation commission to continue the work after the adjournment of the Illinois Legislature on July 1, 1953.

"As to Dr. George Stoddard, who resigned as president of the University of Illinois on July 25, 1953, at the height of the controversy over Krebiozen on a vote of noconfidence by university trustees, the commission concluded that unsatisfactory handling of his public statements added to the controversy.

"The records of the legislative commission show that an attempt to secure financial rights to Krebiozen and control of its commercial exploitation preceded publication of the AMA's status report. These facts, taken from sworn testimony and written material accepted in evidence by the commission, were never denied under oath, though those concerned were given full opportunity to do so.

"A group of businessmen headed by Mr. Edwin R. Moore, president of the Bell & Gossett Co., Morton Grove, Ill., attempted to use their acquaintance with the Durovics to gain financial control of Krebiozen. It should be borne in mind that these individuals had in no way contributed to the development of the drug financially or otherwise.

"They enlisted the aid of Dr. J. J. Moore, then treasurer of the AMA, who brought pressure on the Durovics to give the financial exploitation of Krebiozen to these men. Dr. Moore had a very bitter discussion on this subject with Mr. Marko Durovic, as was testified to under oath by the interpreter Dr. Moore brought with him on this occasion.

"Subsequently, the Durovics were warned that the AMA would destroy Krebiozen unless they made a financial arrangement with Mr. Edwin Moore.

"When this warning was ignored, Dr. George Lull, secretary and general manager of the AMA, stated to the press: 'The American Medical Association has begun a critical study of Krebiozen, the experimental cancer drug, and will issue a public report on its findings within the next 6 weeks.'

"Shortly thereafter, Franklin Bing, a former secretary of the AMA Council on Foods and Nutrition, wrote to Dr. Ivy informing him that he would be ruined unless he offered the AMA for publication a letter stating 'Krebiozen has no value in the treatment of cancer.' He offered Dr. Ivy a dubious recompense: Let him first deny Krebiozen publicly and then he might, if he wished, continue his research on it in secret. Probably no scientist ever received a more astonishing or cynical suggestion. Dr. Ivy refused. This refusal was the real reason why the Chicago Medical Society was stirred up to discipline Dr. Ivy. The formal reasons—those given to the profession and the public—were merely invented and were on their face ridiculous, as the then president of the Chicago Medical Society tacitly admitted when he said the society's action against Dr. Ivy was a big mistake.

"Thus the reason for the AMA 'Status Report on Krebiozen' is apparent. It was never intended as a true evaluation of this drug. It had only one purpose, to destroy Krebiozen, whatever the consequences to science and humanity.

"The transcript of the hearings of the Illinois Legislative Commission investigating the Krebiozen controversy contains the full record of the matter.

* * * * *

"As further evidence that Krebiozen has been tested and found worthless, the American Cancer Society paper cites the 'Report of the Committee on Cancer Diagnosis and Therapy of the National Research Council,' chairmaned by Dr. Ira T. Nathanson, who was also one of the collaborators on the AMA's status report.

"The American Cancer Society paper attempts to convey the idea that this National Research Council committee tested Krebiozen. Actually, it did no such thing. It did not make a test. It only endorsed the forged report of the AMA. In 1954, Miss Isabella Wason, executive secretary of the committee, stated: 'Dr. Ivy sent us Krebiozen to use in clinical trials, but it was not used.'

" 'The Status Report of the Committee on Research of the Council of Pharmacy and Chemistry of the AMA' dealt with 100 cases allegedly treated with Krebiozen. The facts are supported by uncontroverted documentation and testimony given under oath.

"They fabricated 24 case histories denying any beneficial effect to Krebiozen and stating that all these patients were dead or dying. * * * This falsification was discovered when the commission subpenaed the AMA file on Krebiozen, and the patients identified. Ten of those declared dead or dying by the AMA in 1951, then in 1953 appeared before the commission. * * * 'We the undersigned were among those Krebiozen patients and herewith certify that we are alive and in good health for over 3 years.'

"Today, after 8 years, seven of these patients, all residents of Chicago, are free of cancer."

"On March 9, 1959 the American Cancer Society released what it calls a 'Background Paper on Krebiozen,' which has since been reprinted in the Journal of the American Medical Association.

"Excluding the 24 fabricated cases, the AMA report was based entirely on selected negative cases. Meanwhile, and this is very significant, the AMA had in its possession 140 clinical histories of patients treated in outstanding scientific and medical centers throughout the country, including 6 large university clinics and 2 world-famous medical centers. These reports were almost universally favorable to Krebiozen, and had been supplied the AMA in ample time to be included in the status report but the AMA did not include one of them. Thus it is obvious that the AMA never intended that Krebiozen be honestly and scientifically evaluated, but that its report was and is a smear report."

THE COLE REPORT

The society's paper also refers to the committee of six physicians headed by Dr. Warren Cole (of the University of Illinois) and known as the Cole committee.

Even "13 patients who were free of cancer after Krebiozen treatment were brought before this committee."

"In the published part, in 'conclusions' the Cole committee report states: 'We have been presented with no histological evidence by Dr. Ivy that the material produced degenerative or regressive changes in tumor cells.'

"At the time the conclusions of the Cole committee were published, this report bore only the signature of its chairman, Dr. Cole. It was revealed at the legislative hearings that a plain signature sheet had been circulated to the other members, who signed without reading the report."

The part containing favorable evidence for Krebiozen was marked "confidential" and was not released until called in by the commission.

But observe: "Writing in the Journal of the American Medical Association of April 11, 1959, Dr. Cole (president-elect of American Cancer Society) remarked: 'Evidence of the occurrence of spontaneous regression of cancer supports the concept of biological control of cancer and reinforces the hope that more satisfactory methods of treating cancer than surgery and/or radiation may be found in future years.'"

CHEMISTRY?

"The American Cancer Society points out that two chemists, Drs. Paul Kirk, of the University of California, and Arthur Furst, of Stanford University, testified in 1958 that Krebiozen is nothing but nujol.

"Dr. Kirk stated he received six ampules from Dr. Batchelder, chairman of the American Cancer Society division in San Francisco. Dr. Furst testifies that he found one ampule at Stanford University and that another ampule was given him by the same Dr. Batchelder (scientific procurement?). As an experimental drug Krebiozen can only be obtained from the Krebiozen Research Foundation. Neither Dr. Kirk, Dr. Furst, nor Dr. Batchelder ever requested Krebiozen and none was ever sent to them."

"No pharmaceutical company reveals all of its manufacturing details on any substance. The American Cancer Society paper [tries to] convince the public that Krebiozen is a 'secret remedy', intimating that it may also be nonexistent.

"It may be as difficult to define the exact chemistry of Krebiozen as it was to learn the exact chemistry of insulin, which was still a mystery 25 years after its discovery and has only recently been precisely prescribed."

PUBLICATION OF KREBIOZEN INFORMATION BLOCKED

The American Cancer Society paper sights absence of publications on Krebiozen in U.S. scientific journals.

"The real fact is that all publications on krebiozen in the medical literature has been systematically blocked—through the exercise of bureaucratic control by the American Cancer Society and the American Medical Association over the scientific community.

"The latest attempt by Dr. Durovic to gain scientific publication was in December 1958 when he submitted to General Practitioner a very substantial article on the activity of Krebiozen aaginst spontaneous tumors in animals. The article was rejected.

"Publication of a report on 40 cases treated with Krebiozen at the Lankenau Institute has not been permitted. This report written by the man who treated these patients is still being suppressed.

"Dr. Ivy has never succeeded in publishing one article in a medical journal on Krebiozen.

"The monograph on this subject written by Drs. Ivy, Pick, and Phillips was initially accepted by a medical journal but was later returned after pressure was brought to bear on the publisher."

This publication which would be enough to justify further "exploration and perfection—was sent 3 years ago to all of these organizations and has been deliberately ignored."

No tests on Krebiozen at National Cancer Institute

In August 1958 Senator PAUL H. DOUGLAS' proposal to test Krebiozen "was immediately accepted by Dr. Ivy and the Krebiozen Research Foundation. The National Cancer Institute and its Director, Dr. John R. Heller, rejected.

"At one of the meetings Dr. Durovic asked Dr. Heller if he 'considered the double-blind test unscientific.'

"Dr. Heller answered: 'No; of course not. It is our standard of drug evaluation at the National Cancer Institute.'

"Nevertheless he admitted in answer to another question that in his capacity as a director of the American Cancer Society, he had voted a little earlier that the proposal to evaluate Krebiozen by this method should be turned down as 'unscientific.'

"From Pasteur on the double-blind test has been accepted in science as the most objective and certain method for evaluating a new therapy, since it rules out subjective impressions of both the physicians giving the treatment and the patients receiving it. Only results based on facts count.

"Yet the American Cancer Society and the National Cancer Institute contend for one reason or another that this method should not be used for Krebiozen. One reason assigned for refusing the test, for example, is that its results—under the stipulated conditions—would 'not be acceptable to the scientific public.'

"Entirely invalid is the astonishing opposition to Dr. Ivy's assisting in the administration of the drug. Neither Dr. Ivy, nor anyone else, could by serving in this capacity make an inactive drug give positive results."

"Dr. Ivy has experimented with Krebiozen for nearly 10 years. He has more knowledge of the dosage rate and effect of the drug on various types of tumors than anyone else. In a committee of five, he would have only one vote, which would certainly not be decisive."

FINANCES

In his speech in the U.S. House of Representatives, May 27, 1959, Hon. ROLAND V. LIBONATI of Illinois, from Dr. Durovic's own district, stated:

"Dr. John R. Heller, director of the National Cancer Institute, with its millions of dollars for research given by the Government through the Congress—knows and is fully cognizant of the nefarious practices against Krebiozen. He further knows that the American Medical Association is in control of the American Cancer Society and the individuals serving in its official family are known enemies who have fought against Krebiozen."

Recalling the monetary ambitions of some of Krebiozen's early opponents, let us observe the other side of the picture:

The fact that Mr. Marko Durovic (brother of Stevan Durovic) was the chief financial supporter of the Krebiozen Research Foundation for 3 years; and that Dr. Andrew C. Ivy who "has been and is research adviser—has accepted no remuneration for his services to the foundation; and that no official of the foundation has ever received any compensation for his work. They rely on other sources for their livelihood;" and that "for 5 years Krebiozen was given free and office maintenance was paid by the Durovics; and that today about 60 percent of patients still receive the drug free."

All should be proof in itself that they are dedicated in their service to humanity, in direct antithesis to the apparently ulterior motives of some of their adversaries.

Why did not the American Cancer Society go to the U.S. Department of Internal Revenue, where it is open for inspection, instead of to the foundation library center so they could report that "the Krebiozen Research Foundation has not published a list of officers, a report of activities, or a financial statement"?

"Krebiozen should be produced in larger amounts so that larger doses may be given to patients with resistant tumors." The radiant tumor is my immediate concern in the present crisis.

Convincing

After careful study I am convinced of the veracity of the statements I have quoted.

Dr. George Crane, Chicago columnist, wrote, "From what I've been observing in the last year and a half, I think Dr. Ivy's Krebiozen Theories seem to show a great deal of merit."

My regard for the profession of medicine is such that I have often thought of studying it myself. If so, I believe I'd never say die.

For several years I have deducted certain minor theories of my own regarding cancer, whatever their value.

"Some 40,000 chemical compounds are being screened each year on the bare chance that they will show anticancer activity. Krebiozen alone—a drug which at the least has the evidence of some 300 doctors that it gives a 70-percent beneficial activity in advanced and terminal cancer patients—is denied a test by the very people who profess to be leading the search for drug remedies against cancer."

"Krebiozen alone has a reparative function and represents an attempt to solve the biological problem of cancer on a biological basis by supplying the substance which normally prevents cells from becoming cancerous."

It is an interesting coincidence that my registered letter to Dr. Heller, Director of the National Cancer Institute, was the only one returned, "Unclaimed." Maybe he was away. The others responded with a great deal of thought.

Yet due to the prevailing fatalistic attitude, all attempts have failed to get a report to Sloan-Kettering or others for professional review or further analysis.

A plea for united effort

What action can be taken to alleviate this intolerable situation in the status quo?

Could the Illinois Legislative Commission interim report of March 25, 1954, derived from 6,502 pages of testimony, be consulted?

What can be done to remove the whole matter from prejudicial surveillance?

How could enlightenment or protection be supplied to members of the profession whose careers seem to depend upon acquiescence?

Why is application for a patent still pending? "Dr. Durovic first filed for a patent (No. 254,985) November 5, 1951. This application has been amended three times and is still pending under continuation dated May 5, 1958"—contrary to quotes from the American Cancer Society paper.

Could action be so direct, so immediate, and so publicly avowed that it will banish some of the shadows that slink into the realm of the unknown and the enigma of the closed mind?

I sight again just one thin, quiet, blond youth with a crewcut, big ears—and eyes growing sadder with the passing weeks. He can now walk only with assistance.

Waiting for the next Congress will be too late to possibly help many to be cured or live under therapy who now watch their dream clouds drift slowly by.

In this matter of life and death, the individual should no longer be deprived of the traditional American right of freedom of choice.

EDNA J. REESE.

Burdick Election Victory Proves Farmer's Revolt

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. KASTENMEIER. Mr. Speaker, Publisher Harry F. Miedema, Jr., has put together facts and common sense in his editorial in the July 15, 1960 issue of the Badgerland Farmer, a hard-hitting, biweekly farm newspaper circulated to 12,000 Dane County, Wis., farm homes.

Senator BURDICK's election was, as Mr. Miedema concludes, the farmer's call for action on the farm situation. I commend the following editorial for your consideration:

BURDICK'S NORTH DAKOTA VICTORY IS A SIGNAL—FARMERS DEMAND ACTION

Metropolitan newspapers and the slick magazines are engaging in mental gymnastics in their interpretation of the recent North Dakota U.S. Senate special election returns.

Newsweek's interpretations of the significance of the special election is summarized in their conclusion: "a farm revolt fails to develop."

City newspaper editorials and the other slick weekly news magazines made a similar interpretation of the election.

A close examination of the North Dakota election returns discloses that these editorial writers are way off base.

No one expected that QUENTIN BURDICK, the farmer-endorsed candidate for the U.S. Senate in North Dakota, could possibly win in a landslide. No matter how deep farm discontent was in that State, a change in voting habits from overwhelmingly Republican to overwhelmingly Democratic just doesn't happen overnight or even in 8 years.

In 1952 the Republican vote in North Dakota was 191,000 while the Democratic vote was 76,000. In other words, the Republicans received 70 percent of the vote or better than 2 to 1. The 1952 Republican percentage vote in North Dakota was higher than in any other State in the Union.

When there is a change from the Republicans winning over 2 to 1 in North Dakota in 1952 to the Democratic candidate just winning in the recent special election, though winning by less than 1 percent of the vote, there must be something really big brewing.

That "something really big brewing" in North Dakota was farm unrest and farm revolt.

The personality factor could not have been overriding because the Republican candidate was a popular young two-term Governor.

The only other explanation is that the Democrats' popularity went up that much on the issues generally in North Dakota. We don't believe the Democrats "just got more popular." People don't change that much without a strong reason. The only strong reason in North Dakota is farm unrest and farm revolt.

In light of these facts, the QUENTIN BURDICK victory in North Dakota is little short of fantastic.

Those newspapers and magazines which refuse to believe that American farmers are in a recession or refuse to believe they are angry because nothing is done about it should take a look at the following facts:

1. The purchasing power of total net income of U.S. farmers declined 19 percent from May 1952 until May 1959. At the same time corporation dividends were up 41 percent; personal income from interest was up 69 percent; and nonagricultural personal income was up 41 percent.

2. Farmers have been underpaid $129 billion during the past 9 years on the basis of parity prices. Parity prices are standards declared by law to be fair to farmers on the basis of prices charged farmers for goods and services they buy.

3. An examination of operating statements of American farms shows a pitifully low return to the farm operator for his own work on the farm. For example—the Wisconsin dairy farmer earned only 73 cents per hour for his labor in producing 3.5 testing milk at the average of $3.11 per hundredweight for 1958 after deducting other costs of production including return on his investment.

4. The return to the average western Wisconsin dairy farm operator for his labor in operating the farm declined from $2,852 in 1952 to $1,997 in 1958. At the same time U.S. average family personal income before Federal taxes went up from $5,120 in 1952 to $6,220 in 1958.

No wonder farmers are hopping mad.

Hoover's Birthday

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. HENDERSON. Mr. Speaker, on August 10, during the recent congressional recess, one of the most celebrated Americans observed his 86th birthday. I refer to our former President Herbert Hoover.

President Hoover is the Nation's eminent elder statesman who through a long life actively devoted to the service of his country has become one of the most beloved and respected Americans of the 20th century. I wish to cal the attention of the House of Representatives to the statement by Mr. Wilbur D. Matson concerning President Hoover which appeared recently in the Chicago Tribune. I might add that Mr. Matson himself is a significant figure in Ohio and beyond our State whose sound philosophy expressed in the editorial voice of the Morgan County Herald has had wide influence far beyond the reaches of his newspaper's circulation. The statement is as follows:

HOOVER'S BIRTHDAY

MCCONNELSVILLE, Ohio, August 2.—August 10 is the 86th birthday of America's grand old man and first citizen, Herbert Hoover. No American statesman of the present century has given as much of himself and his great talents to the preservation of our free institutions and American ideals. Great of mind, great of heart, great of character, our ex-President has been an inspiration to a higher and better life and the cause of liberty throughout the world.

One of the moving scenes at the recent convention was Hoover's appearance before that body. He received a splendid ovation from a host of admirers. America will not soon see another character such as Herbert Hoover, who easily ranks with our all-time great.

WILBUR D. MATSON.

Spencer Olin

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. SPRINGER. Mr. Speaker, it was with great personal pleasure that I learned of the recommendation of Spencer T. Olin, of Alton, Ill., for the post of treasurer of the Republican National Committee. The recommendation was made by the National Committee Chairman, the Honorable THRUSTON B. MORTON.

Mr. Olin, whom I am proud to call friend, has long been devoted to service, to his community, his State, and his country. As a young man he early became active in community affairs in his home community of Alton. His leadership soon became apparent, particularly in the field of finance. Over the years he has served as chairman of fundraising activities for various organizations, including Community Chest drives and fund campaigns for the benefit of the three hospitals located in Alton. His activity in public affairs has included chairman of the Madison County (Ill.) War Finance Committee in 1943, finance chairman for the National Citizens for Eisenhower Congressional Committee, and, in 1955, an appointment by President Eisenhower to a 4-year term as Chairman of the National Monument Commission.

Mr. Olin assumed active charge of the Republican Finance Committee in August 1958. Through his experience, his diligent devotion to duty, his tremendous executive ability in fundraising, he has accomplished wonders in bringing the Republican National Committee, and its dependent committees, to a sound financial structure.

I need not go further into the accomplishments of this splendid citizen, and one who has proved his mettle in many places. These are detailed in the article I insert herewith from the Champaign (Ill.) News Gazette. I do want to state that, with a man of Spencer Olin's skill, intelligence and integrity at the financial helm the Republican Party will have the type of leadership from which it will not only benefit but so will the Nation. The article follows:

SPENCER OLIN HAS BROAD RECORD OF PUBLIC SERVICE

(By Richard W. Lay)

ALTON, ILL.—Spencer T. Olin, Alton, who has been recommended for treasurer of the Republican National Committee, is a hometown boy with a long background of service in business and public affairs.

Olin, whose name was suggested by GOP National Chairman THRUSTON B. MORTON, is now chairman of the National Finance Committe for the Republicans.

Previous to this assignment he was the finance chairman for the National Citizens for Eisenhower Congressional Committee.

Olin, who was born in Alton, August 20, 1900, is a director of the Olin Mathieson Chemical Corp. He attended schools in Alton and Ithaca, N.Y., before entering Cornell University where he was graduated in 1921 with a B.S. degree in mechanical engineering.

FATHER OF FOUR

Immediately following his graduation, he began his successful business career with the Western Cartridge Co., East Alton, a company founded by his father, Franklin W. Olin, in 1892.

Olin was married to Ann Whitney of Alton in 1928. He is the father of four children and has eight grandchildren.

Aside from his many activities at Olin Mathieson he is associated with other business and financial institutions. He served as a director of the Illinois Bell Telephone Co., the Laclede Steel Co., the St. Louis Union Trust Co., the First National Bank & Trust Co., Alton, and the Illinois State Bank of East Alton.

He has also been active in many community affairs in past years. He is a past chairman of the Community Chest campaign, and was one of the leaders of a fundraising drive for three local hospitals in 1957 and 1958.

AID TO EDUCATION

In addition to these many activities, his interest in education has benefited several universities and colleges. In 1957 he announced he was donating the money for the construction and furnishing of a new civil engineering building to his alma mater. He also provided a substantial portion of the funds necessary for the construction of a new medical dormitory at Washington University in St. Louis.

However, his concern with the improvement of the educational system does not end with his monetary contributions for newer facilities.

He also serves in the role of adviser, as a director of the Washington University corporation, and as a member of the board of trustees of Cornell University, and Monticello College in Godfrey, Ill.

H.R. 9866

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. BERRY. Mr. Speaker, the vote on the bill, H.R. 9866, to authorize the spending of $100,000 for five agricultural employees in the island of Guam is typical of what has been happening under the leadership of the Democrat majorities in Congress. The Department already has about 30 employees serving the island of Guam in an agricultural area about 37 square miles or, in other words, about the area of one township.

Only the day before yesterday afternoon I appeared on the same platform with my colleague, GEORGE MCGOVERN, who blasted the amount of spending of the Department of Agriculture and told how much it was costing the taxpayers to operate this Department as compared with a few years ago. He left that meeting by plane, flying directly to Washington, and upon his return yesterday afternoon one of the first bills upon which we were called to vote was this bill requiring the Department to spend an additional $100,000 on a project as unnecessary as any project could possibly be and yet he and his New Deal colleagues voted for it.

My opponent in this campaign has many times said he would vote exactly as MCGOVERN has voted. Just how can they make sense out of blasting spending one day and voting additional spending on the very next day?

The Cost of Medical Education

EXTENSION OF REMARKS

OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. HALPERN. Mr. Speaker, one of the serious problems confronting the Nation is the mounting cost of a medical education and its relation to the growing shortage of physicians. Despite the gradually worsening ratio of physicians per 100,000 of population in the country the opportunity for talented young people to enter the profession is restricted by the factor of cost. At a minimum, a family must be able to spend $12,000 to finance the medical education of a son or daughter. As a consequence, although only 8 percent of all families in the country have incomes of $10,000 a year or more, 40 percent of the medical students come from families with such incomes. There is no real shortage of talent, it is just not being identified and assisted.

I have introduced legislation—H.R. 11651—to provide for a 10-year program of Federal scholarship aid to medical and dental school students plus a 10-year program of loans to interns as a means for enabling needy but talented youngsters to complete a medical education. I urge that Congress consider action in this field before it adjourns. The Nation is becoming more and more aware that the shortage of physicians will become more acute unless steps are taken now to correct the factors inhibiting the entry of trained and skilled persons into the field of medicine.

One of the finest descriptions of the need and its remedy was contained in an editorial in the Long Island Daily Press of August 22, 1960. Under unanimous consent I insert this excellent article entitled "The Cost of Medical Education" in the RECORD at the conclusion of my remarks:

THE COST OF MEDICAL EDUCATION

Legislators from 16 Southern States, meeting to consider the South's shortage of physicians, point out that the average family can't pay the full costs of a medical education.

It surely can't. The average family must lay aside about $12,000 if Junior plans a medical career.

About one-third of the money is needed for tuition, fees, books, and instruments and two-thirds for living expenses.

Scholarships accounted for only $3 million of the total outlay of $78 million for medical education in 1959, according to the Association of American Medical Colleges, and about 28 percent of the 1959 graduation class had to float loans.

This was true even though the family of the medical student has a median annual income of $9,374, considerably higher than the nationwide median.

The fact is, that despite the shortage of doctors, which is not confined to the South, financial need is a big bar to the study of medicine.

What's the answer? A program of grants and loans to supplement a student's own financial resources, the legislators were told. Grants are available for other scientific careers. Why not medicine?

More Federal funds should be devoted to the expansion of medical schools and to aid qualified young men and young women.

The national ratio is 129 physicians for every 100,000 of population. The shortage will continue until something is done.

Discriminating Against the Worker

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, in the Senate, Senators KENNEDY and JOHNSON, respectively Democratic candidates for President and Vice President, with a two-thirds Democrat majority back of them and Senator JOHNSON in the powerful position of majority leader, are pushing S. 2643, introduced by Senator KENNEDY—H.R. 9070 in the House—in an effort to please a few labor leaders and so capture the so-called labor vote.

At the same time, they are insisting upon legislation which they say will give equal rights to all. On equality they blow hot and cold.

It needs but a glance at S. 2643 and H.R. 9070 to show rank inconsistency. The purpose of both bills is to amend the present labor law so as to enable a minority group on a construction job to tie up the whole job.

Example: A partnership at Port Chester, N.Y., contracted to build a home for a man in Greenwich, Conn. The partnership used its own employees on all but the electrical installation. That they subcontracted to an employer who had two nonunion men on the job. Other workers by a strike tied up the whole job. The U.S. Supreme Court held (*Electrical Workers* v. *Labor Board* (341 U.S. 694)) that it was not lawful to throw all the other workers out of their jobs just because the two electrical workers did not belong to the union.

Now Senator KENNEDY and Senator JOHNSON insist the law be changed to enable union officials to do just that.

Where hundreds of union workers are employed on the construction of an apartment building, an office building, or

an industrial plant or home, they can be thrown out of work just because a comparatively small minority is dissatisfied.

In this day and age when there are several million out of work in this country, when workers from other countries are coming here, when politicians are insisting upon equal rights for all, is there any consistency or advantage in advocating legislation which will enable a few (in the case decided by the Supreme Court they numbered but two) to throw hundreds of other workers who are satisfied with their working conditions and their wages out of their jobs and onto the unemployment rolls where the rest of us must contribute to their support?

Yet that is just what S. 2643 and H.R. 9070, sponsored by Senators KENNEDY and JOHNSON, the Democratic candidates for President and Vice President, would permit if it became the law of the land.

In my judgment, after spending 38 years trying jury lawsuits, 25 years here in Washington, it seems the height of folly to enact legislation which will permit any small group to injure and deprive other citizens, several million of them, of their right to earn a livelihood.

This proposed legislation is not designed to protect the worker against his employer.

It is designed to permit a few union employees—a very few—and a very few union officials, to tie up any construction job. Its enactment would permit a few dissatisfied union workers to throw all other workers—union and nonunion—on the job out of their jobs, halt construction.

Apparently, the advocates of the legislation have forgotten the slogan over the Supreme Court door, "Equal justice under law."

I shall vote against the bill—vote to protect the worker against discrimination by a union would-be dictator.

Fake?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mrs. ST. GEORGE. Mr. Speaker, the newsletter Inform of August 23 put out by the International Services of Information Foundation, Inc., has an interesting lead sentence:

FAKE?

(By phone from London)

It is the consensus of opinion in informed emigre circles that Soviet claims to have shot dogs into orbit and recovered them, were made in panic and are not to be trusted. The Soviet Government and the Soviet Communist Party feel that they must surpass any American achievement anywhere, and will claim to have done so, whether true or not. Emigre intelligence authorities insist that no Soviet claim to anything should be accepted unless proved beyond any reasonable doubt.

This may be distressing news to those politicians who hope to garner votes through proving that the United States is a second-rate power, and at best always second to the Soviet Union.

I heartily agree that politics or not, "No Soviet claim to anything should be accepted unless proved beyond any reasonable doubt."

Tariff and Trade Policy

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. MOORE. Mr. Speaker, the problem of imports continues to be of uppermost concern to many of our domestic industries. In my own State of West Virginia the glassware and pottery industries, the coal and chemical industries and others have been sorely beset by imports and the injury inflicted upon the companies and their workers is not subsiding, but from all appearances continues to get worse.

Many industries in other parts of the country are experiencing similar difficulties. Industries that in the past were little concerned about imports have within the past year or two begun to complain. In some instances the import tide has risen very rapidly; and it may be expected to do so in yet other cases. Products that have long been immune to imports are beginning to feel the encroachment of low-priced goods competing for consumer patronage.

The problem is national in scope and the two political parties must meet the issue as it grows in its demand for a solution.

Under leave to extend my remarks I wish to offer for the RECORD the statement made before the Republican resolutions committee at Chicago on July 20, preceding the national convention by O. R. Strackbein, Chairman of the nationwide committee on import-export policy, and commend his reasoning to all Members of this body:

TARIFF AND TRADE POLICY

The 1956 Republican platform contained the following paragraph with respect to foreign trade policy:

"Barriers which impede international trade and the flow of capital should be reduced on a gradual, selective, and reciprocal basis, with full recognition of the necessity to safeguard domestic enterprises, agriculture, and labor against unfair import competition. We proudly point out that the Republican party was primarily responsible for initiating the escape clause and peril point provisions of law to make effective the necessary safeguards for American agriculture, labor, and business. We pledge faithful and expeditious administration of these provisions."

Since the adoption of this plank in 1956 changes of possibly far-reaching and unhappy consequences in our foreign competitive position have broken through the placid surface of our self-assurance.

This country today faces a set of competitive factors that are stubbornly different from any we have ever faced before. There is little evidence that the peril to our industry, our agriculture, and our labor is either transient or superficial.

The trade policy of the past 25 years has been made obsolete by a series of domestic and foreign developments. It is now badly out of focus with the competitive realities of the world.

1. The leading foreign industrial nations have installed tens of billions of dollars' worth of advanced machinery and equipment. They have adopted modern mass-production methods. They are improving their technology and are gravitating toward mass markets.

2. Their wages continue very low in relation to ours while the productivity gap between them and this country has narrowed visibly.

This combination of rapidly rising foreign productivity hand in hand with lagging wages has confronted us with loss of export markets and with the need of manufacturing abroad. At the same time it has exposed us to an increased flow of imports, particularly finished and semi-manufactured items, against which there is now no effective official remedy. Industry after industry in the past 2 years has felt the rising tide of deadly import competition engulfing the market. The imports of manufactured products have doubled since 1956.

Because of the rising prosperity of the past year, the high consumer income and liberal consumer spending, distress has been kept from the factory door in many cases; and the fear in such instances is for the future rather than the present. In other instances there is present distress, attributed directly to import competition.

The remedy, then, would seem to be perpetual prosperity, assured by constant expansion and full employment. High wages would furnish the necessary consumer income as it has in the postwar years.

This formula would continue to work as it has in the past were the past conditions to continue. Unfortunately for the formula, the conditions have changed. We are challenged from without, not (except in the Russian threat) as a matter of hostility but as a natural consequence of postwar rehabilitation, foreign aid, etc. This external factor is a new element in our economy. Unless we insulate ourselves against it in some reasonable degree we cannot hope to operate our domestic economy on the same basis as in the past 15 years.

Assuming no military outbreak, all presently proposed measures to right ourselves must necessarily fail because we cannot pull away from the encroaching competitive realities. This conclusion assumes the continued vigor of labor bargaining in this country, for this will prevent the catchup of foreign wages (even in terms of relative labor productivity). Should labor oppose the necessary protection against imports it must be prepared to moderate its demands for higher wages, better fringe benefits, etc. Otherwise it will strip this country of many industries that employ tens of thousands of workers.

If we are to increase our exports we must have prices that will help sell our goods, or services or credit terms or quality of goods that offset foreign advantages. In a world of trade rivalry we cannot assume that other countries will not also bestir themselves. They, too, can lengthen credit terms, reduce prices, and offer high quality goods, and they are out to do it. In the race of increasing productivity they have outdone us with our help. The substitution of modern machinery for relatively backward equipment means a greater leap in productivity than does the replacement of relatively modern machinery by more advanced models, as in this country.

If water is poured into a tapering glass the water rises faster with the first few ounces than with the next and the next.

The broader and deeper the water becomes the less the water level rises with each equal increment. So it is with our productivity as we add more improved machinery. It has less effect in raising our level than the addition of an equal or even smaller amount in other countries.

Already over half our exports of agricultural products depend on some sort of Government assistance program or noncommercial factors. We subsidize both wheat and raw cotton some 30–35 percent in order to export the bushels and bales in large quantities. These subsidies in 1960 will cost the Treasury some $500 million. Much of the exports under Public Law 480 are at special prices, for foreign currency or no currency.

In other words, the more we export of our agricultural surplus the heavier the Treasury burden and the less our net returns from exports. Thus our subsidized agricultural exports add to the weakening position of the dollar in the world.

With respect to industrial products we are also in an unenviable position. In many lines we are as surely and as deeply outpriced as in agricultural products. This should be expected since our general price level is no exception to the level of farm prices. In point of fact, farm prices have been lagging for several years and many of them are well below parity. Parity with what? The answer is parity with industrial prices. This fact indicates that if our farm prices which are below parity in this country are well above world prices, our prices on industrial products, which are well above the farm parity level, should be expected to be above world prices.

If we then seek to reduce the cost of our industrial products, how can such a reduction be accomplished? Examine the possibilities: Automate? Other countries have the advantage over us in that field, as already explained. Moreover, automation leads to displacement of workers, in the short run. In the long run it has generally led to an increase in employment; but with foreign competitors waiting on our doorsteps this is another honored economic theory that may burst on impact with the new reality.

Increase the efficiency of labor? This is usually accomplished in any meaningful sense by the introduction of new machinery. This door is closed as a way of staying ahead of other countries, again, as already explained.

Reduce wages? Ask the leaders of American labor what their attitude would be.

Many alarms over imports have been sounded by American industrial leaders, labor organizations and agricultural groups. They have seen the havoc worked by low-cost imports and have beaten the drums to awaken the country to the danger.

Yet too many of these complainants walk to the edge of the only remedy with fear and trepidation. After drawing the problem in compelling terms they back away and say "but tariffs are not the answer. Trade restrictions, such as tariffs and quotas, would be a step backward. Other countries would retaliate." They forget that we have run forward so far and so fast, that a few steps backward now would be better than a full retreat later.

Their fears of retaliation in any case are false and unfounded. These favorite fears have been so often voiced as a means of supporting the trade agreements program that few have stopped to consider their meaning.

Trade restrictions have been used more extensively by other countries since World War II than in any other period of history undoubtedly. Where was the retaliation? Did we retaliate? No. We continued to reduce our tariff and we recognized the need of other countries. The diplomacy of the other countries saw to it that we understood the plight of their position. Because of or despite the restrictions adopted by them the afflicted countries have recovered and reached booming proportions in their trade.

Now we are in need of import regulation. Can we not explain that to the countries that we accommodated, in terms understandable by them? Why then should they retaliate against us?

We should make a true remedy available to each industry, including labor, that is seriously hurt by imports. This should not be in the form of a general tariff increase or import quotas applied willy-nilly; but it should be an instrumentality far superior to the useless one now on hand.

The remedy of today, consisting principally of the escape clause of the Trade Agreements Act, has, in the words of a U.S. Senator, become a "hollow sounding board." With the minor exception of the very recent typewriter ribbon cloth, not a single new case in the past seventeen months has found its way to the White House in the form of a recommendation for higher duty. About a dozen cases were disposed of during this period.

This record is in sharp contrast to the numerous assurances voiced over the past 25 years by three Presidents, every Secretary of State and sundry Under Secretaries, Assistant Secretaries and other Cabinet members that it is not the intention of the Trade Agreements Act to injure American industry; and that should such injury nevertheless occur, there is a sure and prompt remedy. These assurances have not in fact been honored administratively.

What is needed is an escape clause that cannot be nullified by unsympathetic administration. It should be invoked when injury is demonstrated and should provide relief either in the form of an increased tariff or an import quota or a combination of the two. The Clause should of course not be invoked to satisfy trivial complaints.

We suggest that this year's platform recognize the changed competitive position of this country and the implications of the massive shifts among the economic factors that have moved us into an unenviable corner.

More is needed than a pledge of "faithful and expeditious administration" of the escape clause and the peril point provisions of the law. This has in any case not been forthcoming. A change in the law is needed, for today an industry can have but the slightest hope of gaining a favorable recommendation from the Tariff Commission, and even less hope of support from the President. This fact points to the responsibility of Congress in the case. All the fair words of the executive in proposing extensions of the Trade Agreements Act and all the fair words of political platforms will remain meaningless and will be nullified unless a drastic change is made in the administration of the remedies provided by Congress.

Failure to face this problem squarely would represent evasion of one of the greatest issues of today and tomorrow.

Brooklyn and the Census

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which Borough President John Cashmore of Brooklyn, N.Y., addressed to Mr. Arthur F. Young, regional field director of the Bureau of the Census regarding the Bureau's preliminary announcement of Brooklyn's population:

THE CITY OF NEW YORK,
OFFICE OF THE PRESIDENT OF THE
BOROUGH OF BROOKLYN,
July 19, 1960.

Mr. ARTHUR F. YOUNG,
Regional Field Director,
Bureau of the Census,
U.S. Department of Commerce,
New York, N.Y.

DEAR MR. YOUNG: This is to thank you for sending me the preliminary announcement of the Census Bureau's enumeration of New York City's population.

The statistics you have forwarded consist of the census returns for each of the city's boroughs. I have studied them, and I have noted especially your statement that "these figures are believed to be substantially correct, but are subject to revision after the returns for nonresidents are credited to their proper locality and other routine checks have been made."

You also state that "although a significant revision is unlikely, minor revisions may possibly occur after careful examination of the returns."

Your preliminary announcement of the enumeration for the Borough of Brooklyn places this community's population total at 2,604,001.

I am satisfied that the effort of your enumerators was conscientious and painstaking. Yet, because there is so much evidence to the contrary, I am compelled to tell you, in all sincerity, that I cannot accept the total shown for Brooklyn as an accurate one.

I realize, of course, that the country's large urban centers have shown declining populations, in many instances, while suburban areas have experienced growth.

The factors responsible for such population shifts have been well known and understood for many years. The war and the postwar period produced problems which, in their economic and social impacts, impelled many families to move to the suburbs. These problems affected the Borough of Brooklyn just as they affected other large residential centers. Indeed, anything else would have been most remarkable.

The Federal census of 1950 places the population of Brooklyn at 2,738,000. In subsequent years, the Consolidated Edison Co. of New York prepared careful estimates of population changes in Brooklyn as well as the other boroughs of the city. From 1950 to January 1, 1958, this company's estimates showed a decline from 2,738,000 to 2,696,000, or about 1.5 percent. After the latter date, however, its estimate obviously reflected its conclusion, based on data available to the company, that this declining trend had been arrested and reversed and that Brooklyn's population was again on the upgrade. Thus, the estimate for January 1, 1959, was 2,706,000, an increase of .4 percent over the previous figure.

Therefore, your preliminary returns for Brooklyn show a difference of more than 100,000 from the statistics of the Consolidated Edison Co., a variation of almost 4 percent.

Moreover, as president of the borough, I have been in a position to appreciate and understand developments, confirming the conclusions of Consolidated Edison as they have taken place on a week-to-week and month-to-month basis.

I have seen whole areas, once sparsely developed, emerge into new and attractive communities. These are now inhabited by persons who occupy one-family and two-family dwellings built in such areas within recent years. These sections include Sea-

view Village and the larger Canarsie environment where thousands of new homes have been constructed. Mill Basin, East Flatbush, and Bergen Beach are other areas where new home-building activity has taken place on an extensive scale. In addition to small private dwellings, scores of large apartment houses have been built in other sections of Brooklyn and more are under construction at the present time.

In view of these factors, and the disparity between your figures and the Consolidated Edison Co.'s estimates, I am convinced that the total offered in your preliminary announcement must be regarded with skepticism.

Despite this disagreement, however, I want to express my appreciation of your thoughtfulness in calling the preliminary figures to my attention. I shall await, with much interest, the official announcement of population returns which the Director of the Bureau of the Census will make at a later date.

With kind personal regards, I am,

Sincerely yours,

JOHN CASHMORE,
President.

Hawaiian Airlines: America's Pioneer Carrier in the Pacific

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. INOUYE. Mr. Speaker, it is with a deep sense of personal privilege and pleasure that I commend to the attention of the Members of this Congress an address by Mr. Arthur D. Lewis, the young and aggressive president of Hawaiian Airlines, given before the 1960 Hawaii dinner of the Newcomen Society honoring Hawaiian Airlines.

In his address, Mr. Lewis describes cogently and eloquently the history of Hawaiian Airlines and its pioneer father, Stanley C. Kennedy, as a central chapter in the larger history of commercial progress in Hawaii.

Mr. Lewis, a Texan by birth and now a Hawaiian by choice, has long been a valued friend to Hawaii. His brilliant leadership of Hawaiian Airlines in recent years is more than worthy of the high standards set in its earlier years. Certainly Hawaiian Airlines can stand as one of the symbols of forward-looking Hawaii; its success can illustrate the conducive climate in Hawaii for pioneer effort and initiative in whatever field of endeavor.

I know the Members of this Congress will enjoy reading this address as much as I have enjoyed it:

HAWAIIAN AIRLINES—AMERICA'S PIONEER CARRIER IN THE PACIFIC

(By Arthur D. Lewis)

By long and honorable tradition the Newcomen addresses have recorded the history of distinguished men and the institutions which they have created and served. You have invited me to talk to you about the history of Hawaiian Airlines, and in doing honor to Hawaiian, you are honoring no less surely the one man who possessed the imagination, perseverance, and faith to nurture it into existence and husband it during its perilous first years. That man is Stanley C. Kennedy.

It is fitting and proper that we pay tribute tonight to one of the outstanding men of the airline industry who has played so notable a part in the development of aviation in Hawaii. It required great tenacity and strength of purpose, together with a very real type of courage, to establish scheduled airline service back in 1929. In fact, it took more than a little courage just to be a passenger—much less the organizer who placed his money back of the company and placed his dreams up for possible public ridicule if failure should be his lot.

Hawaiian's existence is taken in a rather matter-of-fact way today—but it was not a matter-of-fact proposition on November 11, 1929, when that first Sikorsky amphibian rolled down the runway and lurched into the sky with 11 worried passengers and crewmen aboard. Hundreds of airlines have been organized in the past 31 years which did not make the grade. In fact, another airline was organized simultaneously in 1929 and operated throughout the island chain for approximately 1 year before it washed out one of its five airplanes and with it washed itself out of existence.

Stanley Kennedy first started flying in the First World War—over 40 years ago. With the outbreak of hostilities, Stanley tried to enlist in the infant air service in Hawaii—only to be turned down, since they were not recruiting here. He filed an application with the Bureau of Naval Operations. Without waiting for an answer, he packed his bag and made the long trek to Washington. Shortly after his arrival there he passed the rigid physical and mental qualifications and was sent directly to the Massachusetts Institute of Technology in Cambridge, where his career as an aviator began. After 6 weeks of intensive study at MIT, he was sent to Pensacola, Fla., where he graduated as a naval pilot in January 1918.

Apparently his determination to fly impressed naval officials because after his graduation as an ensign Stanley was posted to a desk in the Navy Department in Washington. Unhappy with this assignment, he was able to convince his superiors that he belonged in a cockpit—not in a swivel chair. Six months later he was on combat patrol over the North Sea piloting the largest aircraft ever operated by the U.S. military up to that time. After his arrival at Killingholm on the east coast of England, Stan flew H–16 twin-engine flying boats on daily patrols over the North Sea. While in England in 1918, he established a worldwide record for sustained flight when he and his four-man crew flew for 7 hours and 59 minutes on submarine patrol. Those long hours in that H–16 amphibian gave rise to his dream of organizing an air transport service in Hawaii.

Stanley returned to Hawaii after the war and went to work for the Inter-Island Steam Navigation Co. He became assistant general manager of the company in 1926 and was solely responsible for convincing the officers and directors of Inter-Island Steam that they should establish an air service in Hawaii. In 1928 he began working full time toward his objective and from that time on labored unceasingly to give birth to this fledgling airline, 2,500 miles out in the Pacific and completely isolated from the developing stream of aviation on the mainland. It was not a simple matter to operate in such isolation, particularly when communication was either by wireless or by letter on a slow ocean steamer. Support for the airline depended on ship supply. It was impossible then to rely on air freight for a resupply of spare parts to prevent the grounding of an airplane. This isolation meant that all maintenance service had to be provided in Hawaii. The company had to have the ability to overhaul its engines, airframes, and any component part of the airplane.

Airline operation today is a complicated business—and getting more so, but today we operate with nearly 31 years behind us to provide systematic approaches to solutions to our problems. We operate from a body of technological and scientific understanding which did not exist even remotely in 1929. But to the pioneer in 1929, everything had to be proven out. Everything we assume today to be simple routine operational matters developed only after vexing trial and error. The fact that those problems were ever solved, that a successful operation did come out of the sweat, strain, and disappointments is a tribute to the pioneer spirit, the capability and determination of Stanley Kennedy and, of course, his associates persevering with him.

A few weeks ago I was handed a complete airline guide for all the American carriers operating on regular schedules in the United States and to foreign airports during the year 1929—our first year of operation. There were then only a very few national and international airlines and their schedules were listed on a single sheet of paper. The folder is about the size of Hawaiian's present timetable, which is a four-fold single sheet. The Official Airline Guide which lists airlines in operation today is nearly 3 inches thick and weighs more than 3 pounds. A note at the bottom of the 1929 Airline Guide reads, "Unless otherwise indicated, the planes are single-motored." Well, it was "otherwise indicated" very few times in those days, and Stan's decision to purchase the twin-engine S–38 for interisland operation was a progressive one. Of course, the planes carried no stewardnesses and passengers simply sat by themselves until they reached their destination.

The choice of the S–38 with its two Pratt & Whitney engines and accommodations for nine passengers and crew of two was the result of months of study. It was an amphibian and therefore had the capacity to land either on land or water. The cabin was suspended below the wing and engine mounts providing a unique pendulum effect for which the young airline found it could not charge. With a comparatively broad expanse of wing, the airplane tended to react to wind gusts like a kite. In the slightest turbulence, this pendulum effect caused the craft to roll sickening from side to side. The passenger of early days not only had to have courage in good measure, but had to have an iron stomach as well. The S–38 cruised at 110 miles per hour, and with a stop at Molokai and Maui the overall elapsed time from Honolulu to Hilo was 3 hours and 15 minutes. However, with all of the limitations of the S–38, it was a good airplane for the specific job of flying in the islands. There were several instances in the early days when an accident would have resulted except for the ability to land the airplane on water.

Inter-Island Airways began regular operations on November 11, 1929, when thousands of islanders flocked to a small coral and dirt runway which is today the bustling Honolulu International Airport. In those days the airport consisted of a tiny strip only 1,000 feet long and 25 feet wide. Sugar cane grew on all land areas surrounding the field, and it seemed a considerable distance from downtown Honolulu to the airport—today only 10 minutes by car. Miss Betty Judd, daughter of the then Governor of Hawaii, christened the first two Sikorsky S–38 amphibians which were to operate the company's schedules. It was an exciting occasion with more than 40 Army and Navy airplanes taking part. Following the gala celebration, the first commercial flight was made from Honolulu to the islands of Maui and Hawaii. On the following day another inaugural flight was made from Honolulu to

Kauai. With this, interisland commercial aviation had at last become a fact.

Those first happy days of inauguration, however, were only the beginning of a long and difficult struggle. The vast majority of people were simply afraid to fly and believed that flying was a sport only for the venturesome few. In those days Hawaiian was faced with the same problem encountered by all beginning airlines. In order to get the public to fly, the company had to perfect its product to a point considerably beyond that which the average passenger understood or believed existed. This provided real problems in generating sufficient revenues to undertake developmental operations. By and large, development costs of scheduled airlines had to be borne out of paid-in capital and could not be generated from earnings. And there were not too many stockholders interested. The first stock offering to the general public was underwritten by the parent company, the Inter-Island Steam Navigation Co. It had to pick up 80 percent of that offering. The company was started with an initial paid-in capital of $313,880. There was a loss from operations in each of the first 5 years. In the first full year of operation, the company carried 10,367 interisland passengers. However, because of the effects of the advancing business depression, business steadily declined, and in 1933 the company carried only 6,868 passengers. By point of comparison, we recently carried 4,505 interisland passengers in 1 day. The company was not able to secure a mail contract in the earlier days. The first real break in the affairs of the company came in 1934 when the Post Office Department awarded the first contract for carrying airmail between the islands. This contract, however, did not provide for subsidy. It provided only for a service payment for carrying the mail. (In fact, the company pioneered the air transport system in Hawaii without a penny of subsidy until 1949 after certification of interisland competition forced it into losses.)

The second major factor bringing the company out of the era of losses was the acquisition of the S–43 amphibian in 1935. This airplane carried 16 passengers and a crew of 2 and with this plane the company crossed over into an era of profitability. The third major factor boosting Hawaiian along its road was the strike of employees of the Inter-Island Steam Navigation Co. in the summer of 1938. This forced many passengers to fly between the islands, and for the first time focused attention throughout Hawaii on the fact that the airline had been in existence almost 10 years and had performed its pioneering services without accident. The most important change in the company's fortunes, however, occurred with the delivery of the DC–3 in 1941. With 24 seats, this airplane developed a reasonable profit with a reasonable load factor.

Success in attracting passengers to the amphibians was due in large measure to the fact that they could operate from land or water. This presented something of a problem when the company bought the DC–3 land planes. The question was how to convince the traveling public that the new planes, more comfortable and modern in every way, were perfectly safe. Stanley Kennedy decided upon a dramatic move. Three planes took off from Oakland, Calif., one August evening in 1941 and flew in formation all the way to Honolulu in only 14 hours and 58 minutes. It was at that time the longest overwater flight ever made by the DC–3. Thousands of people were at the Honolulu Airport when the planes came in over the city. The event was heralded in Hawaii's press and the DC–3 won immediate acceptance as a safe and advanced transport for the islands. It was at this time that the company changed its name to Hawaiian Airlines. This was done primarily to pave the way for ultimate transpacific operation.

With the December 1941 attack on Pearl Harbor and other Oahu installations, Hawaiian became directly involved in the Second World War. When the Japanese had finished their surprise strafing attacks at Honolulu airport, every airplane but one in the fleet was touched by bullets. One was riddled to such an extent that for years after it was repaired it was known as "Old Patches." On that morning, 24 passengers had already boarded a DC–3 and the captain was ready to start the engines when he noticed enemy fighter planes diving on the airport from the south. He was able to have the passengers unloaded just in time for them to watch in awe as a torpedo bomber riddled the plane with incendiary and explosive bullets. One of the engines burst into flames as the plane swooped past, and then, in one of those seemingly impossible quirks of fate, a following plane's bullets struck the system which activated the fire extinguisher and the fire was put out. Additional strafing attacks ripped into the company's hangars and other buildings at the airport, and one pilot was killed outright as he ran for safety.

In retrospect, it was fortunate that the attack did not take place 10 minutes later. If it had, the fully loaded DC–3 to which I have referred would have been directly over the entrance to Pearl Harbor on its scheduled flight to the island of Kauai. Since there were more than 200 enemy planes in the air at that time, we can assume with certainty that its fate would have been a tragic one.

The destruction to Hawaiin's equipment and buildings was considerable—yet within 2 weeks the company was back on a military-regulated schedule to meet the increasing demands for wartime transportation. It was touch and go for nearly 2 weeks as to whether the Army would take over the airline and run it as an arm of the military. Fortunately for Hawaiian Airlines, however, they decided to let the company continue its operation under their direct supervision.

During the years of the Second World War interisland steamship service was removed and the airplane became the only means of transportation. The company boomed when thousands of people took to the air. However, with the company under the direct supervision of the Army, seats were allocated on a strict priority basis to those passengers directly connected with the war effort. This system of control had its damaging effects on Hawaiian Airlines immediately after the war. Many islanders had strongly resented the military system of priority and the manner in which it was administered. Although the whole airline industry faced a postwar public relations problem, Hawaiian's was particularly acute for this reason.

Shortly after the outbreak of the war it became necessary to airlift meat and fresh vegetables from the neighboring islands to Honolulu. The interisland ships were needed to transport troops into the Pacific, and the island of Oahu faced a growing food shortage. On March 20, 1942, Hawaiian Airlines became the first scheduled carrier in the United States to be granted an air cargo certificate by the Civil Aeronautics Board. Two of the S–43's were converted to freight carriers and airlifted more than 1 million pounds during the first year of operation.

Interisland steamship service, which was suspended during the war, was reinstated shortly after termination of hostilities. But its future was to be short-lived. Once the people in the islands had become converted to air travel with its speed and comfort, there was no turning back to a slower surface form of transportation. Interisland steamship service was discontinued in 1948 and Hawaii became one of the few places in the world where intercity travel was limited to air transportation only.

In 1949 competing air service was certificated by the Civil Aeronautics Board. With this, the affairs of the company began to take an adverse turn and it was necessary to file for subsidy. Prior to this time Hawaiian had operated without subsidy and with satisfactory earnings. In fact, for the first 20 years of our existence, Hawaiian averaged earnings equal to 8½ percent return on invested capital. This is about par for the course in this business. Since 1949 the success of the company has been dependent largely upon the amount of subsidy received, and that has been irregular indeed.

The 23d anniversary of the inauguration of air service in Hawaii was highlighted by the company's acquisition of five new Convair 340 aircraft. The first was delivered on November 11, 1952—exactly 23 years to the day from the time Stan Kennedy watched with pride as Betty Judd christened the first S–38. By the end of May 1953, all five of these planes were in service. The Convair 340 met with immediate acceptance throughout the islands as the first pressurized aircraft ever to be placed in operation in Hawaii.

In 1955 Stanley reached his 65th birthday and retired from active management to become chairman of the board of directors. I was invited to succeed him and am very proud to have had the opportunity to be associated with him. We have valued his advice and counsel since that time. Stanley, of course, is with us here today and is celebrating his 70th birthday this month.

In 1958 the company took its first steps toward transpacific flying when it acquired a four-engine DC–6C and began contracting with the Military Air Transport Service to fly passengers and freight throughout the Pacific area. Since the advent of statehood, Hawaiian has been able to develop a substantial volume of commercial charter flights between Hawaii and various cities on the mainland carrying principally tour groups. This year we will carry nearly 6,000 passengers between the mainland and Hawaii. With inauguration of transpacific services, the company began contracting to perform flight planning and flight watch services for miscellaneous transpacific carriers, principally MATS contractors, and to perform en route turnaround services at Honolulu. We have a variety of contracts with eight carriers and this now comprises a major activity of the company.

We acquired four-engine equipment and began transpacific flying as a step leading toward attaining a possible certificate to operate regularly scheduled flights throughout the Pacific. In developing our contract operations we have in fact become a transpacific carrier as well and not just an interisland operation. We have developed the procedures, the organization, and the trained personnel as required for an overseas operation.

I think that some description of the basic company today is now in order. We have a peculiar situation here in Hawaii which does not exist in many places in the world. As I have said before, the airlines of Hawaii carry all interisland, or, in effect, all intercity travel. There is no surface means of travel between the islands. This fact produces many unique characteristics in our operation.

Hawaiian's customers are a complete cross section of the population of these islands. On every flight we have, of course, a sprinkling of business men, some of whom virtually commute between the islands. Also, on our flights, we will have a goodly number of children, grandmothers, and family groups of all kinds. You will see a

kamaaina dowager and a plantation worker sitting side by side. The people on our airplanes resemble more the composite load which is found in bus travel on the mainland as compared to mainland airlines. The cross section of people we carry represents all racial groups in Hawaii. Some of the older people will speak with a heavy pidgin accent. A few retain the languages of the Orient. Because of this, we have a requirement that a stewardess must have lived most of her life in Hawaii. She must be able to speak or understand pidgin and to address a customer by his name even if that customer has a name as difficult to pronounce as Kealanahele (one of our passenger agents) or Yoshikazu Matsui (one of our sales representatives).

We get deeply involved in the family life of people who live on the neighbor islands. For example, on the golden wedding anniversary of Mr. and Mrs. George P. Cooke of Molokai, Hawaiian and Aloha Airlines airlifted to the island more than 300 people in 1 day. We alone operated 12 extra sections just to accommodate friends and relatives of the family. People flew to Molokai from every island in the chain. While this is probably the biggest wedding anniversary movement we have had, it is certainly not the only one. And, of course, in family life we get involved in matters of drastic urgency involving life and death. This might include rapid transfer of a seriously injured person to a Honolulu hospital where specal equpment is available, or involve flag-stopping a flight at Kona for a heart specialist from Honolulu. All airlines figure in emergencies, but ours is of a more intimate sort.

There is a certain informality in living in Hawaii, particularly on the neighbor islands, and this is reflected in the way many people travel. We have men in business suits and aloha shirts and/or shorts, and some that are barefoot or wearing go-aheads. We have women in muumuus, pakemuus, pedal pushers, large straw hats, small straw hats, some carrying parakeets, some carrying flowers, and others carrying leftover luau foods in paper sacks. By and large, a completely friendly and informal family-type service exists.

Another characteristic of our business which is peculiar to us is he tremendous number of group movements that go by air. Such groups might include a statewide Rotary meeting—if held on Maui, we might carry 200 people to and from that island—or a statewide meeting of Credit Union Associations in Hilo might result in our carrying 500 people from Honolulu to Hilo. This fall Hawaiian exclusively will transport 5,000 Gibson appliance dealers to Kauai. Other group movements develop from church activities, spotrs competition, and the like. We have a lot of them.

Because of the absence of surface travel, the airlines of Hawaii must organize to handle the peak movements of passengers which on the mainland are normally handled by private automobile or buses and trains. On the day school is out, traffic almost doubles. Over the Easter and Christmas school holidays we operate sharply expanded schedules over that of the period immediately preceding or following the holidays. Similarly, with a 3-day weekend, we handle the peak movement which is handled elsewhere by the private automobile. Instead of major highways out of Honolulu being three lanes deep and jammed for hours over a July 4 weekend, it is the airport and the flight schedules which are jammed. To point out the degree of this peaking; on the last day of the 1959 Christmas holiday period, we carried 4,500 people. Two weeks later we averaged less than 1,000 daily.

The degree of peaking cannot be compared with any other airline system on the mainland. Almost 25 percent of our total mileage is in extra sections. This compares to 1 to 3 percent for the average airline. Last summer, on the Friday before the July 4 weekend, we operated 26 extra-section round-trip flights to Kauai. Normally we schedule only six round trips daily. Our daily operations usually terminate at about 7:00 o'clock in the evening simply because people do not care to travel after business hours on the short 30 to 60 minute flights in Hawaii. But, on many peak weekends, we have operated extra sections around the clock for several days in a row.

This peaking takes the company into several complicated labor problems related to working conditions, overtime, on-duty hours, and a host of other problems caused by irregularity of operations. And operating costs are higher, reflecting the inefficiencies of standby equipment, manpower, and facilities. But, this is part of doing business as an airline in Hawaii.

Peaking of traffic in Hawaii is also caused by the fact that our flights are short haul. On these short-haul flights, people tend to want to fly to their destinations in the morning and return in the afternoon. This, coupled with the fact that 80 percent of our traffic originates in Honolulu, means that our traffic is highly peaked outbound from Honolulu in the morning and inbound in the afternoon. Again, 1 day last summer we operated 343 seats out of Honolulu between 7:30 a.m. and 9:30 a.m. There were only nine empty seats. Inbound on that same day there were only about one-third of this number destined for Honolulu within those hours.

Another interesting aspect of our business in Hawaii is that such a high percentage of our business comes from tourists visiting the islands. This year visitors will contribute approximately 45 percent of our traffic. They come principally from the mainland United States and Canada, although the number of people from foreign areas who now have enough dollars to stop over in Hawaii for a vacation is growing substantially. The tourist trade brings about entirely different sales problems than we encounter in the local market. First, we must extend our sales efforts to the sources of this traffic. We have three offices on the mainland—New York City, San Francisco, Los Angeles. The effort of our people there is supplemented by personnel from Honolulu who are traveling extensively on the mainland and in Canada. This year we have for the first time extended sales effort to Japan, Hong Kong, the Philippines, and Australasia to tap the layover business from those countries. For a carrier operating only in Hawaii, geographic coverage of our sales force borders on the fantastic.

Then, too, the nature of our sales effort is somewhat different than that of the average airline. One of the unique charms of Hawaii as a vacation land is its mixture of Pacific cultures. We have found it particularly effective to supplement our regular sales effort with dancing and singing teams who entertain at cocktail parties and other special events. We have four to six people in this capacity on the mainland almost constantly. As a result of this need, most stewardesses are selected on the basis of their ability to entertain as well as to generate a warm and friendly atmosphere aboard our planes. And we make certain that we have stewardesses whose origins are representative of the various racial groups which live in Hawaii. We can organize a professionally qualified show among our stewardess and agent personnel—and we can put on surprisingly good productions with our stewardess group presenting representative dances of all the countries of the Pacific—Hawaiian, Japanese, Korean, Chinese, Filipino, Tahitian, and the like.

Hawaiian's operations are unique in still other respects. One of the greatest differences between running an airline in Hawaii and on the mainland lies in the fact that Hawaii business is done on a highly personal basis. On the mainland, airlines are engaged in developing a long-haul, essentially interstate business. Their operations are not related to the basic requirements of one community. By and large, the relationship of the carrier to the community is impersonal. Here it is not, and the airline gets involved deeply in community life. This is not an unpleasant thing—actually, it adds to the enjoyment of doing business here. It is different, however.

In addition to our passenger operation, we run the only interisland freight service with freighter equipment. We carry 93 percent of all interisland air cargo. In the freight business, too, we differ somewhat from mainland airlines in the makeup of the freight load. Mainland air freight is composed principally of high-value commodities such as machines and electronic parts, the latest in fashion clothing, and the like. However, in Hawaii bread is the single largest volume account, closely followed by newspapers. In addition to this, we airlift a substantial volume of fresh vegetables, principally lettuce from Kamuela; dressed beef, principally from Maui; and in season we carry a substantial quantity of bulk fish, principally tuna from Maui and Hawaii to a cannery here in Honolulu. We have even carried a small elephant and some water buffaloes. Movement of household goods is also done on a surprisingly large scale. This is followed closely by finished goods, furniture, appliances, and other miscellaneous consumer goods.

At the present time we are operating two DC–6C's in transpacific military contract operations or in commercial charter service. In addition, we operate eight Convair 340 aircraft. We are currently in the process of converting these eight airplanes to the Super Convair 440 configuration. The difference between the Convair 340 and 440 is that the latter airplane has been soundproofed to a point that the cabin noise level is lowest of any twin-engine, propeller-driven airplane in commercial service. Vibration level is also sharply reduced, and the speed has been increased slightly. The Convair 440 is a superior airplane for interisland use. We have removed the carry-on baggage feature and installed eight seats in the space previously occupied by it—thus we have a 52-passenger airplane. Even with this seating capacity, we can carry between 1,000 and 1,500 pounds of freight in baggage compartments. As a result, the airplane is not only very comfortable for the short-haul interisland flights, but it is a very economical airplane as well. In addition to the Convairs we still have five DC–3 passenger aircraft and two C–47 freighters in operation.

Today the entire Pacific area is in the midst of an air transportation revolution. We are living in an age when jet aircraft fly from San Francisco to Hawaii in less time than it required the S–38 to make the 432-mile round trip from Honolulu to Hilo. The speed and range of the jets are remaking world relationships, and their impact on Hawaii and the countries bordering the Pacific will be enormous. As America's pioneer carrier in the Pacific, Hawaiian is eager to participate in this revolution.

Last year we applied for authority to operate regular common carrier services between Hawaii and Los Angeles/San Francisco—and from these two west coast cities through Hawaii to Hong Kong, Japan, the Philippines, Tahiti, and Australasia. We visualize our future role as a regional carrier in the Pacific, and since we have had such complete identification with this area for so many years, we feel the name "Hawaiian Airlines" is known and respected throughout all parts of it.

Some of you may wonder about Hawaiian's prospects in obtaining these additional routes. Frankly, I hesitate to predict.

There are other major applicants for most of these routes, but we think the natural factors in the case favor Hawaiian Airlines to a greater degree than other applicants.

We of Newcomen believe that the imagination, drive, and ingenuity of the pioneers of industry have left a legacy of which we can all be proud. All too frequently, I suspect, we tend to feel that the day of pioneering has passed. Nothing could be further from the truth. The difficulties, the challenges, the opportunities that confront today's management of Hawaiian Airlines, as well as those of your companies, are every bit as exciting as those of generations past. As we have honored Stanley Kennedy tonight, so also do we honor countless other pioneers in Hawaii. While we are confident that agriculture and tourism will be the two cornerstones of Hawaii's economy for many years to come, our commerce must diversify and grow if we are to provide the jobs and prosperity which will continue to be needed by our rapidly expanding population.

To honor Stan and the rest of these pioneers, we can do no less than follow the leadership patterns which they have set. It is our firm conviction that a good corporation owes the debt of growth to the community which it serves, as well as to its stockholders and employees. Since those early days when Stan Kennedy pioneered interisland air service with the first Sikorsky aircraft, Hawaiian Airlines has attempted in every possible way to discharge that debt. Hawaiian is now a major corporate taxpayer, and our 900 employees have consistently enjoyed wages at or above the local level. Throughout the company we are proud of our record of good citizenship. Hawaiian Airlines has delivered to the people of our islands a caliber of service we feel they have every right to expect. This of course is the obligation of any good public utility.

As we now complete our 31st year of continuous operation, we can look back on an impressive list of milestones which have marked the progress of Hawaiian. We take this moment to rededicate ourselves to continue this record of public service and to continue to provide the State of Hawaii with the finest air service which is economically feasible.

Retirement of Leo Allen

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. HOFFMAN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem honoring our colleague, LEO ALLEN. As we all know, LEO is leaving us after the close of this Congress, having faithfully served his country and the constituents of the 16th District of Illinois for 28 consecutive years.

Mr. ALLEN will be sorely missed on both sides of the aisle. Not only is he a fine citizen, a good Congressman, but a true friend.

The poem follows:

From the lead mines of Galena,
From the Apple River Canyon,
From the county of Jo Daviess,
Came to Congress—LEO ALLEN.

From the father of the waters,
From the borders of Wisconsin,
From the town of "Old Ulysses,"
Came our friend and brother—LEO ALLEN.

He ranked high in legislation,
High in Presidential estimation,
High in argumentative presentation,
Statesman—scholar—LEO ALLEN.

Now he leaves the Halls of Congress,
Now he leaves the field of legislation,
He'll be homesick and so lonely,
Our honored colleague—LEO ALLEN.

May the future bring him gladness,
As he rocks and reminisces,
He will always have our friendship,
Our beloved colleague—LEO ALLEN.

The Honorable Albert P. Way, Prominent Businessman of Du Bois, Pa., and Former State Assemblyman, Is Hailed on the Attainmentof His 91st Birthday as the Oldest Theater Owner in the World

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. VAN ZANDT. Mr. Speaker, among the outstanding businessmen of the central Pennsylvania area, the Honorable Albert P. Way, of Du Bois, Pa., who recently reached the 91st milestone on life's highway may well be proud of his varied activities in every phase of community life, including the 4 years he served in the Pennsylvania State Legislature as assemblyman from Clearfield County during the period 1929–33.

Sixty-one years ago, Al, as he is affectionately called by young and old alike, went to Du Bois from his native Curwensville and for well over a half century he has been identified with every facet of the civic and business life of Clearfield County's third-class city. Despite his many business interests, Al Way has always found time for his family, his neighbors and his church. He has enshrined himself in the hearts of the youth of Du Bois-because of his intense interest in their problems and more important his determination to help solve them. His efforts in behalf of the little league baseball program in Du Bois is one instance by which he has demonstrated his love and faith in American boyhood.

It has been my good fortune to have known Al Way for over a quarter of a century and to admire his many fine accomplishments and his love for his fellow man, despite the demands of his many business enterprises It is a pleasure to salute Al on the 91st anniversary of his birth and to aid in calling attention to the fine tribute tendered him by Jane Dietzel, staff writer of the Clearfield (Pa.) Progress, who in the August 13, 1960, issue referred to the recent issue of Boxoffice, a motion picture trade journal in which it was pointed out that Al Way is the oldest theater owner in the world. Miss Dietzel interviewed the Du Bois theater owner at his office and then wrote the following nostalgic account of his 64 years in the theater and motion picture industry.

Miss Dietzel's article follows:

IT SEEMS TO ME
(By Jane Dietzel)

An item in a recent issue of Boxoffice, a motion picture industry trade journal, noted that Alber P. Way, of Du Bois, who celebrated his 91st birthday July 26 was the world's oldest theater owner—so we decided to call on Mr. Way one afternoon this week and see how he was taking this double honor.

He greeted us in his office in the Avenue Theater Building where he was clearing the mail—among it a letter concerning one of the two annual scholarships his company provides for students at the Du Bois Campus—and told us he was feeling fine.

It took a little time to learn how Mr. Way's theatrical career began, but it was worth it as he reminisced about boyhood and his ventures as a young man in Curwensville. They included working as a youngster at all sorts of things—delivery boy, farm boy, hotel boy—the latter finding him trundling trunks on a wheelbarrow from the Pennsylvania Railroad Station up an unpaved hilly street to a hotel that stood a few doors beyond the present Park Hotel. He made one trip downriver to Lock Haven on a logging raft and worked on other lumbering jobs around the big dam that was the first stop for the rafts from Cherry Tree and the Chest Creek floods. The fishing above the Pee Wee's Nest was also good, he remembered.

When he was slightly more grown up—but still in his teens—he went into the chicken business, encouraged by a national contest conducted by the North American, the big Philadelphia newspaper of the day, with his blooded, imported-from-England stock one time placing fifth in the nationwide competition. At the age of 20, he was the youngest storekeeper in Curwensville, but it didn't work out too well because people kept charging things and sometimes—most times—not paying for them.

So, when Charles E. Patton, son of one of Curwensville's first citizens and a good friend of young Mr. Way, suggested that he take over the opcration of the Academy of Music, he was willing. On December 1, 1896, the Academy of Music opened under new management—Mr. Way's—and show business was his life from that point. Within a year, he leased the Pierce Opera House at Philipsburg and operated it successfully for 2 years.

Special trains transported the patrons from Osceola Mills, Houtzdale, and the other Moshannon Valley towns. In the meantime, Curwensville's academy of music (this was just a fancy name for a theater, perhaps to allay the stigma that some people still associated with "playacting") was in its heyday. In 1899, Mr. Way moved into the Du Bois scene, leasing the Fuller Opera House, a church building converted into a theater. A couple of years later, the congregation rallied and, back on its feet financially, was able to repossess the building and Du Bois was without a theater.

Forming a partnership with his Curwensville friend, Mr. Patton—one that was to last 34 years—Mr. Way began construction of the Avenue Theater, opening September 2, 1902 with "The Messenger Boy," a gala production starring Frank Deshon, with a company of 50.

Some of the great ones of the American entertainment world played on the stage of the Avenue. John Philip Sousa brought his band there three times—once leaving on a special train for Pittsburgh immediately

after the show when his manager caught the rumor that the company was to be arrested for playing a Sunday night concert. Madam Schumann Heink received $1,000 for a 1-night, standing-room appearance. Victor Herbert and his concert orchestra was one of the high marks, and another DuBoisite told us "I was just a kid and a bunch of us stood in the alley and tried to sneak into the lobby to hear through the doors—I waited until the show was over and saw Victor Herbert come out of the theater. He was, I thought, old, but he was humming and smiling and said, 'Hello, there boy' as he and a lot of people and the draytrucks started down the street to catch the nightflyer to Pittsburgh."

DeWolf Hopper, appearing with Marguerite Clark (later to desert the stage for movies) came back on stage after his role in "Happyland" to give a request rendition of his famous "Casey at the Bat" and George M. Cohan brought New York to Du Bois with his "Forty-five Minutes From Broadway."

A list that Miss Aloyse Simmons, Mr. Way's right-hand-Girl Friday and secretary-treasurer of the company, prepared for me is a history of American theater when it lived, not just in New York, but in the very blood of the land—the small towns.

"Some of them had never heard of DuBois," Mr. Way remarked, telling of his trips to New York to book the shows, "but I could get them as a stopover bill between two larger places. We had the best in our time. One time I bought a show for a whole week—played seven times in 6 days—here, Punxsutawney, Ridgway, Curwensville, Brookville, Clearfield and someplace else—one experience like that was enough. I ran special trains into here, you know, sell a block of tickets in a town and arrange for a train, the railroad companies were very cooperative." He thought a minute and then continued, "Once we had eight horses on the Avenue stage—rented them and the men to ride them from a livery stable—the audience didn't know what to think when they came riding down a hill, you do it with scenery, but it all worked just right."

These enterprises were Mr. Way's as head of the central Pennsylvania circuit, at its time one of the biggest booking agencies in this section of the State.

The coming of movies and a new phase of the entertainment world was to bring an end to it. The movies were introduced as novelties in 1907 or 1908—records are a little hazy on this—and nobody expected them to supplant the living stage, except possibly Mr. Way—"Things kept changing," he mused.

They changed more swiftly with the coming of sound, with one of the most significant the way entertainment could be furnished without the efforts of so many people. Long gone was the pit orchestra, now no longer needed was the pianist who had supplanted the orchestra. Everything required was on the screen and sound track. The first talkie shown at the Avenue was "Fox Follies"—plot, if any, forgotten. Next came "The Jazz Singer." What today offers, you know.

Time has been kind to Mr. Way, or perhaps he has licked it by joining it, if you will excuse the cliche. Retirement is no part of his plan. His son, Marlin, and Miss Simmons have taken over the bulk of the work, including the management of the latest Way enterprise, the Du Bois Hi-Way Drive-In Theater, but one senses that his is still the guiding spirit.

Theater, however absorbing and demanding, is not the sum total of Mr. Way's life. Nor is business. As vice president of the Union Banking & Trust Co., he was more interested in telling about a bank employees' picnic and the fun he had attending it, than talking about the trend of commerce. Fishing at a lodge in Potter County is still a prime recreation. His friends report that he has always, and to this day, played a sharp game of bridge and don't get involved unless one wants a battle.

For many years, Mr. Way and his wife, the former Sara E. Draucker of Lock Haven, spent a good portion of the winter in St. Petersburg, Fla., where the bridge partners were cunning and one could see six or seven preseason big league baseball games before it was time to return home to DuBois.

Interest in baseball and the recreation it provides for youngsters led to Mr. Way's sponsorship of the Du Bois little league program and eventual establishment of a little league park, although he tries to deprecate his contribution. Sort as if, well the money was just lying around and the ground was there and boys ought to have a place to play—and suddenly, there's the ball field.

The scholarships mentioned earlier are equally casual. The only stipulation is that, in one case, a recipient must have been a little leaguer, and in the other, at one time been a newsboy. What they want to do with their future is of no concern, except that it is hoped that it will be a satisfying and productive one.

Such as, for instance, Mr. Way's has been.

Big Problem of Our Times for the State Legislatures

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the editorial which appeared in the May-June 1960 issue of the Carolina Israelite which, as you all know, is edited by the famous Harry Golden. I do not have to give him accolades at this time in view of his prominence in the literary field. I am sure you all know his books and columns.

The editorial which appeared in this latest issue of the Carolina Israelite in my opinion, typifies the problems of small business in this monopolistic world.

The story relates to the credit problem of poverty and the terrible conditions that exist when a poor man must live on credit which he cannot attain in the same fashion as his affluent neighbor.

This is the problem of financing small business.

The small businessman must pay high interest at unreasonable and extortionate rates. He is never in the position of the wealthy or of the big businessman who can receive credit under favorable terms. Permit me to quote the last paragraph of this editorial:

It is exciting to talk of sending astronauts to the moon, of making a new planet, of the new aids in education. But it is well to remember that there are many matters concerning the dignity of the individual which we should not overlook and which we all too unfortunately do. Let us try to help.

It is high time that we took a look at the credit situation of small business.

The item is as follows:

BIG PROBLEM OF OUR TIMES FOR THE STATE LEGISLATURES

The English, who have several hundred years on us in the experience of human dignity, call installment buying, "Never, never." They are absolutely correct.

Take Rudy, a young colored man who works in Charlotte. Rudy marries and buys furniture which costs him $1,100. He pays off this bill at the rate of $14 a week. The furniture could be purchased at either of the two leading department stores in Charlottee for just under $500. Rudy doesn't have $500, and he is unlettered in the ways of buying wisdom. He buys the $1,100 in furniture and pays an additional carrying charge of $87.50. In a year's time he has paid back over $500. But he runs into some financial trouble. His wife goes to the hospital and he cannot command an extra $14 a week for his furniture payments. He stalls. Oddly enough the furniture installment house does not press him.

They let him go, because they knew Rudy would sooner or later become delinquent in his payments. Rudy goes along for 5 weeks and has just about convinced himself that they have forgotten him when they lower the boom and lower it hard. They tell him to bring in all his delinquent payments or they will come and get the furniture.

Rudy cannot spare $14, let alone spare $14 times 5. He is shocked that they didn't forget him after all, they did not lose his account sheet.

What he does not know is that the company does not want to repossess the furniture. That $1,100 worth of furniture now will bring exactly $85 from a secondhand furniture dealer.

But they threaten Rudy with repossession the following Monday unless they receive that $70 he owes. Rudy consults his boss who tells him to inform the company that he will pay them what he can. Surprisingly, the loan company is agreeable. They make a brand new bill with Rudy. He can forget the delinquent weeks and start off anew and now he owes $511, plus a new addition of $87.50 carrying charges. Exhilirated, Rudy will make payments for 6 weeks, then he will fall behind again, and again they will not bother him. But at the end of the fifth week, they catch him up short again. He owes then $421.16 and they will clamp down unless he pays them the money he owes for the past month or so. Rudy again appeals to them.

Again they introduce the same procedure. They waive the 6 delinquent weeks and let Rudy commence at $14 a week plus, of course, that additional $87.50 and again he owes them in the neighborhood of $500.

Over the next 2 years, Rudy will repay them. The brute facts are that he will have spent over $2,000 on $1,100 worth of furniture which he could have bought in Altman's on Fifth Avenue or Ivey's in Charlotte for $500.

The small loan companies operate on the same principles. They occupy small, nondescript offices and supply the bread-and-butter keep-the-lights-on money to thousands of people who always stand in need of an extra dollar. The vast number of loans they negotiate are for $25. This $25 represents the most brutal exploitation imaginable. For that $25 plus interest, plus investigation charges, a debtor owes $34 to be paid back at the rate of $2 a week. This is only the beginning. In many instances a debtor pays 5 cents a day for tardiness. In some instances, if he needs $100, the loan company will insist he borrow $100.01 because they can charge another $1 for all loans over $100. These loan companies never let their customers off the hook.

In repaying $34 for that $25, the debtor reaches a point where he owes $8. They say to him, "Let us lend you $17 on a new loan." You can be sure that a man who borrows

$25 from a loan company always stands in need of $17; he will be happy to walk out of the place with $17, instead of minus $2.

These companies are segregated. There are Negro loan companies and white loan companies, but the suffering is integrated. The $25 loan can be juggled over a period of 4 years and the man will have paid back $109 for the use of that $25.

It is exciting to talk of sending astronauts to the moon, of making a new planet, of the new aids in education. But it is well to remember that there are many matters concerning the dignity of the individual which we should not overlook and which we all too unfortunately do. Let us try to help.

The Mere Fact of Existence

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. DORN of South Carolina. Mr. Speaker, Dr. Louis M. Orr, of Orlando, Fla., is a distinguished, patriotic American fighting to preserve the principles and ideals that made the United States great. Dr. Orr as past president of the American Medical Association rendered outstanding service. He was an ambassador of Americanism around the world and rendered great leadership to the medical profession. I commend to the attention of this Congress the following superb speech made to the graduating class of Emory University on June 6, 1960:

THE MERE FACT OF EXISTENCE

(By Louis M. Orr, M.D., president (1959–60), American Medical Association; delivered before 1960 graduating class, Emory University, Atlanta, Ga., June 6, 1960)

President Martin, members of the board of trustees, faculty, members of the class of 1960, ladies and gentlemen, I was truly pleased when President Martin invited me, on behalf of the trustees and faculty of your university and mine, to deliver the commencement address. At the same time, I was somewhat awed by the responsibility of delivering such an address from the position of a returning alumnus.

A situation like this usually implies a kind of model for success who is going to tell you to go and do likewise. I am much better qualified, I can assure you, to discuss the mistakes I have made and to warn you against doing likewise.

However, I do want to talk about you and the mere fact of existence.

An engineer in one of America's largest companies has described a human being this way:

"Man is a complete, self-contained, totally enclosed powerplant, available in a variety of sizes, and reproducible in quantity. He is relatively long lived, has major components in duplicate, and science is rapidly making strides toward solving the spare parts problem. He is waterproof, amphibious, operates on a wide variety of fuels; enjoys thermostatically controlled temperature, circulating fluid heat, evaporative cooling; has sealed, lubricated bearings, audio and optional direction and rangefinders, sound and sight recording, audio and visual communication, and is equipped with an automatic control called a brain." Thus ends his description.

The engineer's picture of a human being is significant, I think, for what he has omitted. He did not tell us what sets his "robot" apart from such mechanical marvels as manmade moons in the sky, factories run by electronic brains, and engines powered by atoms. He does not tell us what goes beyond the mere fact of its existence and turns it into a human being.

The meaning of being human is a big, broad subject. But for our purpose, let me put it this way: Science will never be able to reduce the value of a sunset to arithmetic. Nor can it reduce friendship or statesmanship to a formula. Laughter and love, pain and loneliness, and challenge of accomplishment in living, and the depth of insight into beauty and truth, these will always surpass the scientific mastery of nature.

WANTED: IMAGINATIVE MEN

Yet, strange things are happening. We are doing our best to act as though the engineer's description of man is accurate. We are accepting a system under which workmen, regardless of skill or productivity, receive the same pay for the same job. Laborers are forbidden to do more than a specified amount of work per day. The doctrine of promotion on the basis of seniority is creating human deadwood that does only what it is accustomed to do, or what it is told to do.

Throughout the country, many college graduates entering business are reported to be more interested in security than in competition. In politics, voters are accepting vague enthusiasm and expressed good intentions as substitutes for talent. In our communities, civic appointments are being influenced not by outstanding skill, but by extraneous considerations.

For example, in Massachusetts, the head of a local veterans' organization maintained that any former serviceman, regardless of the grades he received on his qualification tests, should be given the appointment as a public school teacher in preference to nonservicemen who had passed with higher marks. He was quoted as saying that a few points more or less on an examination make no real difference.

In the book, "The American Conscience," Roger Burlingame offers this explanation:

"We are prosperous. We are complacent. Religion has become, for the most part, a social convention. Skill is anonymous. Thought is under pressure to conform. Security has replaced venture as a dominant aim. Intellect is in the discard, and politics are dictated by * * * mediocrity."

As I see it, the mediocrity in our lives, the leveling down, the elimination of competition inevitably leads to the final step at the bottom—the acceptance of the idea that the mere fact of our existence gives us a claim on the productive powers of our fellowmen. Is the philosophy behind this parasitic idea already damaging the competitive spirit of young America?

A businessman, the head of a large, enterprising manufacturing company, has remarked:

"I have dozens of fine-looking, well-groomed young fellows for routine jobs. What I want, though, is restless men with imagination, ready to break out of conventional procedures and move into untried fields."

Can this businessman find such young people today?

LEARNING, LIBERTY, AND LIGHT

Here at Emory, you have all been exposed to an influence which I call the "Three L's." They are learning, liberty, and light.

As seniors, you know what learning is. Criticism notwithstanding, our American education is imitated abroad for its basic philosophy which is: There is no profession nor significant occupation for which an ambitious and capable person cannot prepare himself in some American institution.

As Americans, you know what liberty is: The atmosphere that makes possible strength combined with inquisitiveness; the inventive turn of mind; that masterful grasp of material things; that restless, nervous energy; that dominant individualism; that buoyancy and exuberance that comes with freedom.

As men and women, your light has been cast for you by those who have gone before, leaving the beacon glow of understanding, of ambition, and of dedication to ideals under which we have lived and progressed.

But one of the most frustrating aspects of contemporary life is its tendency to develop compartmental divisions. Business is business, politics is politics, science is science. Thus, it is easy to confine ourselves to our own thinking, our own immediate problems and interests—to communicate only with our own kind.

In such an atmosphere, young people probably will hardly notice that they are living in a restricted world filled only with the requirements of their interests. But we should not make the mistake of thinking ourselves into such a narrow channel. A man must be concerned with the environment in which he lives.

HEART OF A FREE SOCIETY

The individual must be prepared not just to work, but to live—both as a unique person and as a fellow member of the human race. American philosophy places a fundamental value on the uniqueness and worth of the individual in his own right. The individual is the heart of a free society. Achieving this end depends upon how conscientiously individuals use their freedom.

In a free society, the individual, be he businessman, politician, or scientist, plays many roles and shares in making many decisions. Of course, the individual must have special knowledge and skills in a vocation or profession. But in addition, he plays three major roles: in the home, on the job, and in the community. These are the atmospheres in which he lives, in which he makes his presence felt. These are the atmospheres in which he finds his responsibilities and through them his individuality.

I believe it is especially important to know people to be a part of the people. As each of you grows in your various careers, change will dominate your life. Upheavals and pressures from scientific, technological, and social advances will confront you. But mankind will always remain the basic factor. The physical world was meant to serve man, not vice versa.

As Clarence Manion, in his "Key to Peace," has said: "It must be remembered that 95 percent of the peace, order, and welfare existing in human society is always produced by the conscientious practice of man-to-man justice and person-to-person charity."

DIFFERENCES DISAPPEAR

Many of you are aware that man is moving toward a worldwide sameness in cultural pattern. In my travels, I have observed that the house in America is beginning to look like the house in Brazil, Switzerland, or Turkey. Furnishings in the house in Sweden are beginning to resemble those in England, Japan, or Argentina.

The people in the house, too, are undergoing a worldwide stereotyping process through the spread of mass production and distribution. To cite two extreme cases of distribution: The late hula hoop fad went around the world, and I have been told that a popular nightspot in ancient Kyoto, Japan, is called Bar Brigitte Bardot.

As mass appeal spreads, as it undoubtedly will when worldwide filmed television and other mass media of entertainment further influence styles in living and standards of taste, New Delhi will look and act like Chicago, Hong Kong, or Mexico City.

At the moment, America seems to be supplying most of this sort of thing because we are currently able to please the common denominator of taste throughout the world.

In my travels outside the United States, I like to look at local newspapers. I am continually surprised to find American columnists and cartoon strips in many of the papers.

Some people look upon this growing sameness in the world as evidence that humanity is surrendering its individuality, country by country, and man by man. They say that sameness is creating mediocrity. Unlike these people, I am not too concerned over the worldwide standardization of things. In the end, the similarity of styles in living and standards of taste could bring people closer together. Perhaps travel will not be as interesting, but the common ground between people will be firmer because it will be less strange, and perhaps less suspicious.

I am not too concerned either over the worldwide standardization of ideas—which is undoubtedly the step following the standardization of things. In the end, the similarity of ideas could give people fewer differences to reconcile. The differences left will be bigger and more basic, probably, but less cluttered with regional biases.

FREEDOM SPURS PROGRESS

Some of you may be wondering how I can stress the inestimable value of individuality and at the same time show little concern for standardization. I do not believe that standardization can harm true individuality in man because standardization is a pressure from without and therefore can be resisted. Standardization leaves room for the rebel. It merely narrows down the field of details and provides more room in which the rebel can work.

On the other hand conformity, not standardization, is the true cornerstone of mediocrity. Conformity kills individuality because conformity is an attitude from within. Conformity is the atmosphere of nationalization. It is surrender. It destroys the rebel.

There is the standardization of a basic idea making the rounds of the world today. The idea, of course, is nationalization versus individual freedom. Those of us who are free to do so have chosen sides. We know that mankind needs freedom in which to realize its greatest triumphs. We know that under the personal freedoms already won by people throughout the world, more advancement has been made in the last 200 years than was made in the 5,000 preceding years. We know that standardization of this idea, individually accepted of course, should be based upon the rights of the individual. And the most important right is freedom.

The alternate can only lead down to that final step in the surrender of individual liberty and the responsibility that goes with it—conformity to the idea that the mere fact of our existence gives us a claim on the productive powers of our fellow men.

How important is our individual choice in this matter? The author, Frank E. Holman, put it clearly when he said:

"In all the world, we are the last hope and last stronghold of individual liberty. When the great problem of world peace is examined from all sides, the necessity for preserving America's integrity and strength becomes more and more apparent. And one is impelled to the conclusion that a strong, independent and free America is not only best for its own citizens, but is also the best guarantee of world peace and world order."

As young people in the changing world of today, your idea of freedom may be different from mine. You may be succumbing to the idea that your existence gives you a claim on the productivity of others. You may not be aware that this idea can smother your natural spirit of restlessness, your ardor for healthy disagreement, under a blanket of conformity.

A GIFT FROM GOD

As a member of the older generation, I have seen the American conception of a free people replaced by the concept of a free nation. This suggests that freedom is a gift from the National Government, and not, as I grew up to believe, a gift from God.

Some of you probably think of security as a synonym for freedom, or will when you begin actively to establish your place in the world. This is an understandable modern misconception. For example, the four freedoms—freedom of speech, of worship, from want, from fear—have become for many people a sort of digest version of our Bill of Rights.

May I point out that the so-called freedoms from want and fear have no relation to our traditional concept of freedom because they do not come from a self-directed course of action. For fulfillment they depend upon an outside source—the National Government—and because of this, they must be considered a form of security, and not true freedom.

I have nothing against security. Security is essential to the full happiness and productivity of which we are capable. But few of us have really found it. Most of us are still searching. You are on the threshold of looking for yours. Whoever we are, at whatever age, the majority of us seek security in the same three general areas—money, public programs, and company benefits such as pension plans, vacation schedules, and seniority.

Money is a weak base for security. It does not hold its value over the years. In all the world's history, no currency has even survived for more than 42 years after being transferred from a physical base—on gold, for instance—to a political base. Your money and mine was changed from gold to congressional paper 26 years ago, and thus far has more than halfway disappeared.

Public programs such as social security, unemployment insurance, public housing, while they may have merits of other kinds, represent the great delusion that we can obtain security by voting for it. No political program has ever given more than a passing semblance of security. Programs invariably change with political expediency.

SELF: THE SOURCE OF SECURITY

Lately, company benefits have become more important to job applicants than opportunities for advancement. Employees' interest in what a company will do for them is greater than concern over their capacity to earn the income and financial advancement they demand.

We have not found security in these three areas. We have not found it because we are looking in the wrong places. For you and me, whether we even believe it or not, there is only one place where security can be found. That place is inside ourselves. Here, and here alone, lies the real source of security—ideals, not dollars; principles, not pensions; character, not convenience or expediency. Here is the place where each of us is in absolute control—beyond standardization, beyond conformity, beyond claiming the skills and efforts of others to underwrite our existence.

Backed by the strength of learning, liberty, and light, we must listen to and heed the restlessness in our spirit. We must grow in both individual and national vigor. We must act together, not as members of a herd following the loudest voice, but as diversified individuals of a group, combining our experience into an ever greater wisdom.

EXISTENCE: JUST THE BEGINNING

This then, is the way in which we must approach the ideological conflict of nationalism versus individual freedom, the way in which we combat human robotism, the way in which we prove that mere fact of existence is only the beginning of life.

And what will that life be? An old Chinese story gives us the only answer possible:

One day, a traveler met a philosopher on the highway. The traveler held a small bird enclosed in his hands. To test the philosopher, the traveler asked him whether the bird was alive or dead.

The philosopher did not answer right away. He surmised that the bird was alive. However, should he say that the bird is dead the traveler would need only to open his hands and let the bird fly away. If the philosopher should say that the bird is alive, the traveler could so easily crush the bird and prove the philosopher wrong.

At last the philosopher replied: "I cannot say what the answer is, because the answer lies in your hands."

And what will your life be? The answer lies in your hands.

Post Office Department Official Makes Dedication Speech for Branch Post Office Building, Lynwood, Calif., East Lynwood Station, in Great 23d Congressional District, California

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of what happened to me as a very appropriate and informative dedication speech given in my presence on July 23, 1960, by Mr. Michael F. Houlihan, field service officer, Post Office Department, San Francisco regional office, on the occasion of the dedication of a new and most beautifully and efficiently constructed branch post office building at East Lynwood, in the important city of Lynwood, Los Angeles County, Calif. At this dedication it was my pleasure to also participate as Representative in Congress of the great 23d District, wherein this very much needed new branch post office building was dedicated.

The speech follows:

DEDICATION SPEECH OF MICHAEL F. HOULIHAN, FIELD SERVICES OFFICER, POST OFFICE DEPARTMENT, SAN FRANCISCO REGIONAL OFFICE

Mr. Chairman, Postmaster Lane, ladies and gentlemen, it is indeed a privilege to be here today in Lynwood to participate in this dedication ceremony as a representative of the Post Office Department and to have the honor of extending to you the personal greetings of Postmaster General Arthur E. Summerfield and Regional Operations Director Verne Scoggins.

As we dedicate this new post office today, we should look at this structure as a symbol of the Government of our country and all that it represents—freedom, opportunity and justice for all. That's because the building will be used by the agency of our Government which has the closest and most intimate daily contact with the American public.

In fact, the U.S. Postal Service is the very trademark of a free people. It is vital to such basic American freedoms as freedom of speech, freedom of press, and freedom of religion, because they all require freedom of expression. All of our basic American freedoms would be seriously curtailed if you did not have good mail service to communicate thoughts and ideas.

The right to communicate freely with one another—to express your ideas without fear of censorship—is fundamental to all of our freedom and, like the postal service itself, it is a freedom nearly all of us take too much for granted.

The postal employees who will serve you from this new building are united with more than half a million other postal employees throughout the United States to provide the American people with fast, dependable mail service and to protect your freedom to communicate in absolute privacy, without fear of censorship.

In doing that, postal employees are helping our country to overcome the most crucial challenge of this era. The people of our country and the free world must be constantly alert to the true danger we face.

The Communist challenge to our way of life and to our form of government is many-sided. It is military, political or intellectual, spiritual, and economic.

We know that the Soviets are extremely able and resourceful people. They are dedicated competitors and they have shrewd and well-informed leaders.

Americans must buckle down to engage the Communists in every field to prove and demonstrate that we are better because our way of life is better.

Our country advanced into a position of world leadership because of the strength that developed in an environment of personal liberty, human dignity, and sound moral and spiritual values.

I want to emphasize here today that postal employees throughout the United States are loyal, dedicated, patriotic citizens and they are determined to provide the American people with an ever-improving mail service because that will be an important contribution toward protecting and preserving our fundamental freedoms.

We in the Postal Service are proud of the fact that under the leadership of Postmaster General Summerfield there have been so many improvements in the mail service in the past 7 years. This new building we are dedicating today is part of the sensational parade of postal progress which has resulted in tremendous improvements in every phase—every function and activity—of the postal service.

A new "metro plan" for mail movement in major metropolitan areas throughout the country is highly successful. Barring occasional uncontrollable factors such as human errors—it practically guarantees next-day delivery for letters within each metropolitan area. Here in California, virtually the entire State is included in two "metro" areas.

General Summerfield's announced goal is to link the "metro" areas in such a way that next-day delivery will be effected almost anywhere in the country.

You often hear about "growth industries." Well, your postal service certainly is a "growth industry" and we have our growing pains, too. In this region—which includes the States of California, Hawaii, and Nevada—the budget for postal service this year is $340 million and the budgeted expenses keep increasing every year because we have to provide additional service.

For example, in California during the past 12 months, an average of two new letter carrier routes have been added every working day. That's one of the effects of our ever-increasing population and the suburban residential and shopping center developments throughout the State.

Nationally, mail service was extended last year to more than 1¼ million additional American families and nearly 100,000 additional business concerns.

We operate the world's largest fleet of vehicles—more than 85,000 trucks of all kinds. Obsolete, inefficient vehicles have been eliminated and replaced by new red, white, and blue equipment which is specially engineered for specific mail duty.

Mail transportation methods have been changed and improved to take advantage of modern superhighways and jetplanes.

Amazing advances have been made in the development of automatic equipment to improve and speed the processing of mail. A great deal of mechanization is operational in many of the larger post offices.

Mechanization and automation are essential because mail volume has been growing at twice the rate of the population in this country. This year the postal service will handle 62 billion pices of mail. That's equal to twice as much as all of the mail for all other countries combined.

Recently Postmaster General Summerfield told me about some of the progress in the mechanization program.

He visualizes a time—not too far off—when almost every step of mail processing will be mechanized. There are already machines in operation that sort out regular-size letters from bulky envelopes and packages.

There are canceling machines with electric eyes that find the stamp and put on the postmark no matter which way the envelope enters the machines.

Other machines are being used for semi-automatic distribution of letters, but Mr. Summerfield told me the scientists and engineers are experimenting with an electronic-brain type of machine which recognizes typewritten or printed addresses and automatically sorts the letters according to destination.

Various kinds of self-service machines have been invented, and soon there will be 24-hour self-service post offices. There will even be a self-service parcel post machine which will accept your package, weigh it, apply postage and insurance. These mechanical marvels will also return your exact change.

Looking farther into the future, the Postmaster General said a system of coded postal addresses is in an experimental test stage. Someday you may not have to address letters the way we do now. Envelopes will be standardized in size for rapid and efficient handling. You will have a code book that will give you the postal code of the person you are writing to—it will be somewhat similar to using a telephone directory.

With a handy little device, you will stamp your friend's postal code on the envelope. Then your letter will be fed into a machine whose electronic eye will cancel the stamp, scan the coded address, sort it, and dispatch it in a matter of seconds on a streamlined journey to its destination.

Mr. Summerfield's crystal ball also shows that the day is coming when missiles will carry mail in a few minutes between the key cities of the world. As a matter of fact, the postal service has already done some pioneering in the missile field. Last year, mail was delivered safely by a Regulus missile from a Navy submarine 200 miles at sea to the Florida coast.

A basic requirement for modernizing, mechanizing, and improving the mail service is represented by the reason why all of us are here today—and that is the need for modern functional postal buildings.

When Mr. Summerfield became Postmaster General, he recognized the need for many, many new post offices. He also wanted to get away from the old, forbidding, monumental post offices and replace them with buildings that are light, airy, modern, and efficient.

The need for buildings was so great that it was impractical to expect Congress to appropriate all of the money that was needed. So a program was developed which makes it possible for the Post Office Department to get private investors to construct the kind of buildings we wanted and needed to provide mail service and then lease the buildings to the postal service on a long-term basis.

Approximately 4,200 of the new kind of post offices have been built and Congress has been asked for funds to equip 12,000 more that must be built or modernized as fast as possible.

This building we are dedicating today is modern. It is utilitarian. It is in architectural harmony with the rest of the community.

As we dedicate this building to its important role in a vital public service and welcome it into the world's greatest communication system, I suggest that we also rededicate ourselves to doing all that we can to promote and strengthen the American way of life.

We in the postal service dedicate this new building to the proposition that we will continue to do our utmost to preserve and strengthen the moral, spiritual, and economic values of our country by providing the best mail service in the world—and, indeed with man on his way to outer space, we will expand that pledge to wherever man goes, even to the moon and beyond.

Thank you very much.

America's Military and Economic Strength Is Great

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. TOLLEFSON. Mr. Speaker, for the benefit of those members who have not had an opportunity to read them, I am inserting herewith in the Appendix of the CONGRESSIONAL RECORD excerpts from President Eisenhower's speech at Chicago last month. He pointed to our economic and military strength, and to our position in the world today. What he said merits the attention of everyone who has concern over these matters.

The excerpts follow:

To this convention I bring no words of despair or doubt about my country—no doleful prediction of impending disaster. Whoever misleads by calculated use of some but not all the facts, whoever distorts the truth to serve selfish ambition, whoever asserts weakness where strength exists—makes a mockery of the democratic process and misrepresents our beloved country in the eyes of the watching world.

The irrefutable truths are that the United States is enjoying an unprecedented prosperity; that it has, in cooperation with its friends and allies, the strongest security system in the world, and that it is working ceaselessly and effectively for a peace with justice, in freedom.

Our own mounting living standards, and the history of these Republican years, provide the proof that these are facts.

THE ECONOMY

There are more Americans today employed, at higher wages and with more take-home

pay, than ever before in our history. They have more confidence in the stability of their money than they have enjoyed in three decades.

In these past 7½ years, the annual gross national product has increased by $100 billion or 25 percent. This figure, though stupendous, is asserted by some to be unnecessarily low. But what would they say if they knew that during the almost 8-year duration of the prior Democratic administration, the gross national product actually declined in every single peacetime year, save one.

During all the years of this administration, I've heard much from the opposition, especially from its free-spending clique, about increasing the rate of economic growth by depending principally on governmental activity, with vastly increased Federal expenditures.

We reject the argument that healthy growth can thus be bought from the funds of the Federal Treasury.

We believe profoundly that constant and unnecessary governmental meddling in our economy leads to a standardized, weakened, and tasteless society that encourages dull mediocrity, whereas private enterprise, dependent upon the vigor of healthful competition, leads to individual responsibility, pride of accomplishment and, above all, national strength.

Inflation—the most insidious and cruel form of taxation ever devised—drove prices up to 48 percent in the previous administration, thus robbing millions of our people of savings and of purchasing power.

In the last 7½ years, we have succeeded in keeping the total price rice below 11 percent. And, at least this is my fixed opinion, this record could have been even better if I might have had the privilege of working all these years with a Republican Congress.

SECURITY

In the sum of our capabilities we have become the strongest military power on earth. But just as the Biblical Job had his boils, we have a cult of professional pessimists who, taking counsel of their fears, continually mouth the allegation that America has become a second-rate military power. This extraordinary assertion amazes our friends in the world who know better; it even bewilders many of our own people who have examined our 7½-year record of military expansion and who are not used to hearing their gigantic defense efforts so belittled.

Defense expenditures during the twelve months preceding the outbreak of the Korean war were less than 12 billion. Today we are spending, after 7 years without hostilities, over three times that much, more than $41 billion annually on a powerful, flexible and adequate defense establishment, which commands worldwide respect.

The United States today possesses a military establishment of incalculable power. Combined with the strength of our NATO, SEATO and other allies, the free world is prepared to meet any threat and, by its retaliatory strength, to face any potential aggressor with a mighty deterrent.

All this—all this—has been brought about by vigorous and imaginative leadership, the genius of our scientists, the skill of our Armed Forces, and by the sacrifices of the American people. To belittle this might, and the prestige, pride and capabilities of these groups does such violence to my sense of what is right that I have difficulty in restraining my feelings of indignation.

If we can be blessed with experienced and steady leadership in Washington, the possibility of the outbreak of future war will be minimized and we can eventually win the peace.

THE WORLD

In the pursuit of world peace, I have personally journeyed more than 90,000 miles during the past year and visited the people of more than a score of nations on four continents. I have heard the insistent demands of multitudes for the right to live their lives in peace, and I have seen and taken part in many impressive American initiatives directed toward this crucial goal. The United States has made proposal after proposal, each in good faith, in an effort to reduce tension in the world and to lessen the economic burden of armaments. Moreover, we are prepared always to consider any reasonable proposal made by others.

Only a few months ago the men in the Kremlin were calling for complete and total disarmament. But suddenly thereafter, they began devising one crisis after another.

They brutally wrecked the summit conference.

They have threatened us with missiles.

And today, they cold-bloodedly boast of shooting down one of our planes legitimately traveling over intercontinental waters.

The Soviet dictator has said that he has, in his recent journeys and speeches, succeeded in damaging the prestige of America.

Now, this is indeed an empty boast.

Concerning this matter of comparative national prestige, I challenge him to this test: Will he agree to the holding of free elections under the sponsorship of the United Nations to permit people everywhere in every nation on every continent to vote on one single simple issue?

And that issue is: Do you want to live under a Communist regime or under a free system such as is found in the United States?

My friends, are the Soviets willing to measure their world prestige by the results of such elections? Well, you know the answer to that.

But the United States would gladly do so.

THE PARTY

The people expect and demand honesty, integrity and moral courage from the men and women who bear public responsibilities. They know that political office should be, and demand it be, a position of trust and honor; qualification for it must comprehend more than mere personal ambition. They realize, as never before, that the stakes in today's world are too high to risk their futures to the hands of frivolous, irresponsible or inexperienced government.

In the successes of the past 7½ years you have a solid foundation on which to build toward new levels of attainment.

Oscar Hammerstein

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LINDSAY. Mr. Speaker, Oscar Hammerstein II left the world a better place than he found it. His contribution to the happiness of mankind cannot be measured. The most we can do is to state simply that millions of people the world over were left a legacy by Oscar Hammerstein that will continue to inspire and lift them for all time. The world is saddened by his death. It seems that everyone, whether they knew Oscar Hammerstein or not, feels they have lost a warm and old friend. Joshua Logan, the producer and director along with Oscar Hammerstein of "South Pacific," spoke for everyone when he said, "He is going to be immortal. His songs will never die. There is no question but that Hammerstein will be remembered as long as people sing."

Oscar Hammerstein was born on July 12, 1895, on West 125th Street, New York City. He received a B.A. and a law degree from Columbia University. He was president of the Dramatist Guild and a member of the board of directors of the Fund for the Republic. In 1923 at the age of 28, he collaborated on the musical "Wild Flower." The following year he collaborated on "Rose Marie" and "Sonny." In 1927 he joined Jerome Kern on "Show Boat." In 1943 he formed his partnership with Richard Rodgers and they jointly created "Oklahoma," "Carousel," "The King and I," "South Pacific," "Sound of Music," and others.

None of us can ever forget the songs for which Oscar Hammerstein wrote lyrics. These include "Rose Marie," "Indian Love Call," "Who?" "One Alone," "Desert Song," "Ol' Man River," "Only Make Believe," "Why Do I Love You?" "Can't Help Lovin' Dat Man," and many others.

What a priceless heritage this is. We are grateful for it.

I am sure that I speak for all of my colleagues in the House of Representatives when, as a Representative from New York, I express our sympathy to Oscar Hammerstein's family and friends. We remember today particularly Oscar Hammerstein's widow and his great friend Richard Rodgers. The country shares their grief.

For the benefit of my colleagues who may not have seen them, I include in my remarks the editorials which appeared in the New York Times and Herald Tribune, which are particularly moving tributes to the memory of Oscar Hammerstein:

[From the New York Times, Aug. 24, 1960]

OSCAR HAMMERSTEIN 2D

Although Oscar Hammerstein 2d had a genius for the musical theater, he had something finer than that. He had character. His death yesterday shatters the remarkable collaboration of Richard Rodgers, composer of the music, and Mr. Hammerstein, composer of the lyrics and most of the books of their plays. Now we must accept the doleful fact that there will be no successors to "Oklahoma," "Carousel," "The King and I," and "South Pacific." The big four—written within the span of 8 years—have become part of our cultural heritage.

But the theater has also lost a man of character who stood for all that is decent in life. His point of view was implicit in everything he wrote. The concern for racial respect in "South Pacific," the sympathy and respect for a difficult though aspiring monarch in "The King and I," the indomitable faith that runs through "Carousel" were not clever bits of showmanship. They represented Mr. Hammerstein's faith in human beings and their destiny.

Outside the theater, as well as inside, he quietly accepted the responsibilities of a man of conscience. If his work represents something more than surface pleasure, it is because he brought the whole force of his character to it. Like Billy in "Carousel" he was always prepared to be judged by the highest judge of all.

Since he was at heart a serious man, his lyrics were rarely clever. Instead of turning facetious phrases he made a studious at-

tempt to write idiomatically in the popular tradition of the musical theater, for he was a dedicated craftsman. But the style that is apparently so artless has brought glimpses of glory into our lives. "There's a bright, golden haze on the meadow" sings Curly in "Oklahoma," and the gritty streets of a slatternly city look fresher. "June Is Bustin' Out All Over" sing Carrie and Nettie in "Carousel," and the harshness of our winter vanishes. "Getting to Know You" sings Anna in "The King and I," and the world becomes a friendlier place.

In memorable songs there is a quality of transmutation that turns the common materials of life into something that seems ideal. Since Mr. Hammerstein was a craftsman it must have been a gratifying experience to have written the lyrics of so many songs that have become musical literature—all the way from "Show Boat" to "Sound of Music." To us it is gratifying that he also had the character to use his genius with faith and scruple.

[From the New York Herald Tribune, Aug. 24, 1960]

OSCAR HAMMERSTEIN AND HIS SONGS

The role of the librettist traditionally is a minor, even a minimal one. When one thinks of "Aida," "Carmen," "Don Giovanni," one remembers Verdi, Bizet, and Mozart, not Ghislanzoni, Meilhac, and da Ponte.

But this was not true of Oscar Hammerstein 2d any more than it was true of W. S. Gilbert. The great musical shows of our time such as "Oklahoma," "South Pacific," "The King and I," and "Carousel" were all by Rodgers and Hammerstein, and few conjunctions have been as significant in theatrical history.

Mr. Hammerstein's achievement was all the more remarkable in that, in his partnership with Richard Rodgers, he stepped into a role that had been filled with flair and distinction by another man, Lorenz Hart.

To this collaboration Mr. Hammerstein brought new qualities of literary distinction and emotional impact. He wrote not only good lyrics but good plays. He respected and put to good use the richness of the American language.

Even aside from the collaboration that began in 1943 with "Oklahoma," Oscar Hammerstein was assured of his share of immortality. It could not be otherwise with the man who wrote the words of such songs as "Ol' Man River," "When I Grow Too Old To Dream," "The Last Time I Saw Paris"—words which caught a mood, a moment; words which stirred profound emotions.

Others made his country's laws; Oscar Hammerstein made its songs. And in them he lives beyond death.

Coal Tax for New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial regarding the coal and oil industry, which appeared in the Boston Sunday Herald, on July 31, 1960:

COAL TAX FOR NEW ENGLAND

New England has been handed a kind of tax bill for the assistance of the soft coal industry. This "tax" is now at the rate of over $20 million a year. It is collected through a contrived increase in the price of residual oil. Its purpose is to force New England utilities, industries and office and apartment buildings to shift from residual oil to soft coal.

The Government is a party to this outrage. The import quotas on petroleum products, ostensibly set to maintain a healthy petroleum industry in the United States, have been extended to residual oil, which matters little or nothing to the domestic oil producers, but a great deal to the coal producers.

New England relies heavily on residual oil imports, chiefly from Venezuela. Recently the Government sharply cut the import allowance and at the same time reduced the quota period from 6 months to 3 months. This latter means that dealers cannot stock up on oil for winter consumption during the slack period for tankers ,and must pay higher charter rates in the fall.

Of course the price of residual oil shot up. The military installations here, must pay $2.6968 beginning October 1, under a new contract with the Military Petroleum Supply Agency. This is a measure of the price increase, around 16 percent.

This will bring an increase in electric rates by those utilities which, like Edison, are permitted to increase rates to meet higher fuel costs. It will tend to raise rents for apartment houses and office buildings. Industries will have to pay more. And we may expect soft-coal prices to go up, as they always do when residual prices rise.

Senator SALTONSTALL and representatives of Massachusetts oil dealers and industries recently met with officials of the Interior Department and the Office of Civil and Defense Mobilization to urge an increase in the quota. They got only a promise that the fairness of the price would be studied.

Actually, there is only one fair price for residual oil in New England—the price that it can be shipped in here for in a free and competitive market without import restraints. This is not the price today.

Why is coal able to impose this tax on New England?

Because coal industries flooded Government officials with their demands and the oil industry and the consumers did not protest. A writer in the trade magazine Petroleum Week quotes one official:

"I was against this proposal [to reduce the quota] and hoped we would be flooded with protests so that we could show good reasons for dropping it.

"But what happened? We received 400 comments, of which only 7 were from the oil industry.

"All the rest came from coal and its organized supporters—labor unions, banks in the coal areas, coal-carrying railroads, coal-equipment manufacturers, etc.—all strongly backing the proposal.

"So we had no alternative but to go ahead with the proposal."

In Government, it appears, the nonsqueaking wheel does not get the (residual) grease.

This interference in the operation of a free economy is something we usually think of as more a Democratic policy than Republican. And, sure enough, the Democratic platform contains a recommendation for a national fuels policy, which would be a way to force coal on New England by permanently restricting residual oil. The Republican platform is somewhat less specific on this, but still sanctions economic intervention.

New England is already taxed $118 million a year because of import restrictions on crude oil. Here is another $20 million tax even more indefensible.

How long must we pay to help support the domestic oil industry and the coal industry?

Anniversary of the Ukrainian Congress Committee of America

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. DINGELL. Mr. Speaker, in this period of our history of conflicting ideals and sometimes lack of definite purpose it is encouraging to find an organization of 2½ million Americans united in one single, overpowering aim. The Ukrainian Congress Committee of America is just that. I take pride in congratulating it on its anniversary for 20 years of holding the ideals of freedom and independence from tyranny before the American public and all the world. It is indeed rare to find such a group that works selflessly and tirelessly to prove to those of us who have sometimes taken our liberties for granted that there are hundreds of millions of people today that do not and have never had such liberties. The members of the Ukrainian Congress are ideally suited to make us aware of these facts, for the history of the Ukraine is the history of liberty hard fought for, hard won, and then hard lost.

In 1918, the Ukrainian peoples declared themselves independent from the newly formed Soviet Government. Two years later it capitulated to the forces of the Soviet, after more than a year of resistance against overwhelming military odds. There followed the suppression by force of the Ukrainian culture and the Ukrainian heritage under the militant Communist regime, which confiscated the produce and resources of the Ukraine. Collectivization was enforced; Ukrainian nationalist leaders were persecuted; and the Ukrainian Autocephalous Orthodox Church was dissolved. Thus was the Ukraine drawn into the Soviet Union, no longer to have a voice in the world except through such agencies as the Ukrainian Congress.

The Congress was organized in 1940 for one major purpose—to be the voice of the 40 million Ukrainians who are not free to inform the world of their captive condition. The membership of the Congress is composed of 2½ million Americans of Ukrainian ancestry. Ultimately they hope to see once again an independent Ukraine. In the interim they devote their time to exposing to Americans and to the world the methods and atrocities of Russian tyranny, so well exemplified in the history of the Ukraine in the last 40 years. They speak on behalf of all captive nations and captive peoples. In their publications, local organizations, public programs, and promotion of the annual Captive Nations Week their message has become more and more startlingly clear. Soviet goals and methods are diametrically opposed to everything the United States stands for. Sometimes it takes an organization like the Ukrainian Congress, with ties and

interests in a country subjected to Communist rule, to remind us of our own purpose and beliefs.

Enter Ye in at the Strait Gate: for Wide Is the Gate, and Broad Is the Way, That Leadeth to Destruction

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, today, Tuesday, July 26, 1960, Republicans in Chicago are writing their party platform and tomorrow will name their candidate for President—the Democrats recently finished that job.

You now have an opportunity, a duty, to consider seriously the kind of Government you will bequeath to your children and their descendents.

We differ in our decisions as to methods and policies we should follow which will give to our people the greatest possible opportunity for prosperity, happiness, and freedom, as to the course we should follow in dealing with other nations.

Differences in opinions are not only permissible, but unavoidable. However, there is no excuse for the mentally indolent individual who fails to think and act when opportunity is given to personally, effectively participate in solving questions which vitally affect not only his own welfare, but that of all, as well as the future security of our Nation.

By 8 long years of hardship, suffering, sometimes death, our forefathers won our freedom, and for the first time in the world's history, established a Government of principles which, if religiously followed, mean freedom and happiness to us as individuals, as well as security for our future existence.

Billy Graham, today's evangelist, might well have used the words uttered last night by Herbert Hoover who, in substance, told us that insuring our moral and spiritual future is just as, if not more important than attaining temporary material prosperity. It is obvious that unless we give more and effective thought and action to the principles underlying our Government, the United States of America will follow the road to ruin down which every nation has traveled since the dawn of civilization when its people preferred idleness, pleasure, and wasteful practices to methods and policies which called for courage, endurance, and thrift.

The nation, as well as the individual, which seeks "the wide gate, the broad way" is, as was written so many years ago, doomed ultimately to failure.

Reading the Chicago Tribune this morning, I learn that Republican politicians are striving for a platform which will assume to give the greatest degree of civil liberty to each of us, regardless of race, creed, or state of origin. That is all to the good, and to that principle, all can subscribe.

However, on the same page stretches a headline reading "One Thousand Goons Besiege Plant." The caption reads "State Refuses Protection in Racine," and the story discloses that "a mob of 1,000 strike goons and sympathizers besieged the struck plant, without deterrence by State authorities or Gov. Gaylord Nelson." Is anyone concerned about the civil liberties of colored, yellow, or white who desire to work?

Eager to secure votes in November, the Democratic Party platform and presumably the Republican platform to be adopted today, will go far to protect some civil rights, to prevent certain discrimination, but why deny the right of any one to earn a livelihood as at present is the practice? Why boast about efforts to prevent discrimination in some fields of activity while sanctioning it by failure to act in others? Why yield to political expediency rather than adhere to principle?

All civil rights of everyone should be protected.

Veteran Organizations Coordinating Council of Los Angeles County Resolution Supports H.R. 3508

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do I present the text of communication dated August 10, 1960, from the Los Angeles County Veteran Organizations Coordinating Council of Disabled American Veterans with reference to H.R. 3508, together with the resolution accompanying said communication. This is for your information and for the information of all members of this great legislative body:

VETERAN ORGANIZATIONS COORDINATING COUNCIL OF LOS ANGELES COUNTY,
Los Angeles, Calif., August 10, 1960.

On July 8, 1960, the Los Angeles County Council, Disabled American Veterans, passed a resolution, authored by John S. Taylor, past commander C.C., that H.R. 3508, having been introduced by Congress, should be passed and sent to the President for his signature.

By regular rules of order and bylaws, this council sitting in session on July 28, 1960, did move and pass that the Veteran Organizations Coordinating Council of Los Angeles County approve and support the above resolution that H.R. 3508 be passed and sent to the President for his signature.

JOHN J. FLYNN,
President.
HARVEY T. STEINHOFF,
Secretary-Treasurer.

LOS ANGELES COUNTY COUNCIL DAV DEPARTMENT OF CALIFORNIA JULY 8, MEETING

In regular session, under powers granted the council by its bylaws, as governed by Roberts Rules of Order, the following motion by Past Commander Taylor and seconded by Past Commander Paul Whithill was put, to wit:

Whereas since World War II our compensation has risen 95 percent and our cost of living has risen 145 percent; and

Whereas if this condition continues the same trend the disabled veteran will shortly become distressed veterans in a very prosperous nation; and

Whereas legislation to remedy this deplorable condition has been introduced by Congress in the form of House H.R. 3508; and

Whereas the increase asked in H.R. 3508, is modest and should be passed and sent to the President for signature: Therefore be it

Resolved, That the Los Angeles County Council in regular session adopt this resolution; be it further

Resolved, That a copy of this resolution be sent all Congressmen and Senators of California and to other persons the council believes should be interested in the disabled veteran.

JOHN S. TAYLOR,
Past Commander C.C.
(Author).

Adopted July 8, 1960.

MURRAY MILLAR,
Commander.
RAY WALKER,
Secretary-Treasury.

The Nation's Wartime Disabled Veterans

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution submitted by William S. Bartlow, commander, disabled American Veterans, Department of Ohio, and adopted by a unanimous vote of the DAV convention, July 29, 1960:

A RESOLUTION BY THE NATION'S WARTIME DISABLED VETERANS

Whereas the many complaints received regarding the inefficiency and near chaotic conditions in certain areas of the Veterans' Administration, prompted the State commander of the Disabled American Veterans, to appoint a committee to make a thorough investigation of this entire situation—and this committee reports as follows:

"Finance: Some months ago the Veterans' Administration established an automatic data processing center in Chicago for the purpose of distributing benefit payments to wartime disabled veterans. It is apparent that the management misjudged the problem involved and the failure to deliver the payments to the needy wars' disabled, the widows and other dependents is astounding. Many of these payments are delayed for months: payee names are abbreviated, making it very difficult to get the checks cashed and addresses are also abbreviated to the point of difficult postal delivery. This situation particularly involves payees in the northern part of Ohio as the Cleveland office of the Veterans' Administration presumably is completely integrated with this new system. The conditions have caused an indefinite postponement of complete merging of the Cincinnati office of the Veterans' Administration with this new setup. The present situation is such that inquiries at Chicago are limited to only individual cases of stress.

"Claims: The backlogs in the rating of claims for benefits by wartime disabled veterans and widows of veterans are increasing in the regional offices of the VA checked, with

no improvement in sight. Much of this delay is due to ever-changing procedure instructions, statistical coding, so-called quality reports and the continuing review of war-disability claims to determine whether the service connection for disability is legal, after many years of—review and review. Where doubt is indicated, the record is sent to Washington for further instructions. Many of these records have been handled so frequently over a period of years that the housing jackets are torn and worn out, leaving loose papers and documents that could become misplaced. The Veterans' Administration, faced with a dead line by a law enacted by the present session of the Congress and approved by the President, which will prevent the Veterans' Administration from breaking service connection and eliminating or reducing the benefits of many thousands of wartime disabled veterans, it appears that they are making a determined effort to accomplish this in as many cases as possible before this law becomes effective on January 1, 1962.

"The records of individual wartime disabled veterans are shifted from place to place, remaining out of the files weeks and even months, which make it difficult to locate them when an emergency arises.

"Hospital and medical service: The Veterans' Administration management continues to reduce the bed capacity for medical treatment and domiciliary care for veterans disabled as a direct result of war service. Many so-called reasons are given for this action. Buildings, apparently in satisfactory repair are suddenly declared obsolete. In one instance an entire ward was vacated to make space for an additional canteen. Only recently 22 beds were eliminated in one VA hospital to set up a barber chair. Admissions to VA hospitals, to an extent are on a selective basis as to the type of disability or disease—and long term patients are usually rejected. The outpatient medical department of the office of the VA in southern Ohio was moved to the VA hospital in Cincinnati in recent years. This experiment has certainly proved far from satisfactory. The VA have publicized the advantages of this move, which was supposed to make available all hospital facilities in connection with the out-patient examinations, medical study, as well as treatment. However, there has never been an actual integration of the outpatient service with the hospital itself. This Department is operated separately and independently; authorized physical examinations for rating purposes are delayed; out patient medical treatments, authorized on a fee basis for out-of-town veterans, are delayed; purchase of needed prosthetic appliances for veterans suffering with war-incurred disabilities are sometimes held up for months, all on the theory of insufficient funds. The hospital facilities are rarely used in connection with outpatient needs, thus it is felt that perhaps the hospital did not graciously accept the merging of the outpatient service, which could well account for the failure to allocate sufficient funds to carry on this important activity in serving veterans with war disabilities. As an example of the hospital management efficiency, the many veterans housed at the Veterans' Administration Center, Dayton, Ohio, for domiciliary care are sent to the outpatient clinic in Cincinnati for the necessary routine physical examination. Naturally, this entails much added expense in transportation costs to the Government. And at the same time—problem cases requiring special medical study and observation to determine diagnoses—are sent to the Dayton VA hospital. Many complaints are received from veterans with regard to the lack of courtesy, etc., shown them by some employees and especially by some physicians at Veterans' Administration hospitals.

"Publicity: The Veterans' Administration at Washington maintains—an extensive public relations program, with ample funds for constant News Releases, advising the public of the wonderful service extended to the wars' disabled and the widows of war veterans. Many of these Releases do not give all the facts and lead to false impressions. It is felt that a Government agency, such as the Veterans' Administration, should not require a press bureau—beyond reporting the true facts to the public.

It is apparent that the operations of the Veterans' Administration today—place the principal stress on research, statistics and a revised philosophy of veterans' benefits—with the need or consideration, etc., of the welfare of the war veteran and his dependents—secondary."

In view of the above report: Now, therefore, be it

Resolved by the 39th annual State convention of the Disabled American Veterans, Department of Ohio, assembled in the city of Columbus, July 29, 30, 31, 1960, That we enter our protest regarding the above mentioned conditions direct to the Administrator of the Veterans' Administration; and be it further

Resolved, That copies of this resolution be sent to the chairman of the Committee on Veterans' Affairs of the Congress, to all Members of the Congress from Ohio, and to others.

San Jose Is Place To Reassert Real Revolution

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. ROGERS of Florida. Mr. Speaker, all Americans in the Western Hemisphere are watching developments at the Organization of American States foreign ministers' meeting now in progress in Costa Rica. They want to know what action will be taken to stop the advancement of international communism in the Americas.

The citizens of Florida are particularly concerned about the OAS meeting because Cuban based communism is but 90 miles from our shores. The necessity of action by the OAS is imperative. An editorial from the Pompano Beach Town News in Florida clearly points up the interest and concern, and also expresses our sympathy for democratic evolution in our sister Republics. Because this editorial should be of interest to all who are taking part in the conference and the Members of Congress, I ask that it be reprinted here in the RECORD:

SAN JOSE IS PLACE TO REASSERT REAL REVOLUTION

We hope, as the Organization of American States meets in San Jose, Costa Rica, Tuesday, that our statesmen will contrive to fill the atmosphere with the spirit of true revolution—the painfully conceived, hardily initiated and still continuing American revolution.

That, we believe, is the one sure and abiding antidote for the insurrections against the inter-American conceptions of freedom with which Fidel Castro and his shadowy Moscow confrerees will expect to poison the conference atmosphere.

Since it is more than evident that nothing said or done by Latin Americans in the conference will be far removed from a spirit of social and economic restlessness that has been in ferment in their countries since World War II, it should be no insurmountable task for our people to channel the conference toward the unfinished business of the great inter-American dream.

For inter-American dream it certainly is.

The British colonies in our northern sector had not become the free United States too long before ardent Simon Bolivar initiated his series of patriot victories against Spanish rule in New Granada in 1819. This was a long campaign, as bitter in frustration and starvation as George Washington's struggle, but ending with such battles as Carabobo and Ayacucho now recited by the school children of Latin America as milestones on the road to liberty.

Enshrined in history as "The Liberator" and "The George Washington of South America," Bolivar lived in those stirring times when the great North American Revolution was still being tested by the monarchic pretensions of England, France, even Spain.

He left a legacy as the first man to attempt a league of American States. The very first conference of American States was held under his plan in Panama in 1825.

Since then, pursuit by our various nations of the great inter-American dream has at times taken diverse routes dictated by diverse national ambitions and necessities. Inter-Americanism has been painted in many colors, has developed many faces.

But one rallying point had thrust many an incipient inter-American struggle into the background. The shared determination of keeping this hemisphere free from foreign domination has made inter-Americanism a potent force in world politics. In many instances, too many to enumerate here, the inter-American conference table set up in the spirit of the various American revolts against outside rule has proven a more powerful instrument of history than any intra-American battlefield.

Probably because they are younger as free men than we, Latin American patriots and statesmen are apt to be more vehement in their recollections of the purposes of men like Blivar and San Martin, Sucre, O'Higgins, Marti, Morales, Juarez.

But their pride in the revolutions these men brought about can be no deeper than our pride in the Union established by Washington, saved by Lincoln, ennobled by its unselfish assistance to Cuban freedom, and savagely fought for by our unpretentious millions through two world wars, a United Nations action in Korea and now during an imposed cold war.

We think the aware and cognizant Latin American statesmen who are to assemble in San Jose Tuesday will welcome a show of this pride. For their own democratic revolutions are far from completely stabilized. In them we may be sure to find a responsive chord if we show a scorn for the betrayers of the American Revolution while we face up solidly to the fact that the revolution itself is a piece of unfinished business.

We should eloquently and truthfully demonstrate to the assembled statesmen that what we and they have gained by keeping faith with our revolutionary forebears is but a sample of what that same faith will bring our grandchildren.

This does not mean the launching of unbridled giveaway programs. It does mean our fraternal aid where that aid is needed. It means better cultural and commercial interchange, better educational facilities everywhere in the Americas, a jealous regard for the progress of the democratic system in our hemisphere—a replenishment of our

faith in the American way—the inter-American way.

Only thus, we submit, will the puppets in our midst be revealed for what they are—prattling insurrectionists who seek to use the very words and phrases and themes of our own long-enduring revolution, to cloak their undemocratic, sacrilegious, and internecine thirst for power.

If nothing else comes of the meeting of American States we hope it will establish at least one thing: That there is still a very real economic and social revolution going on in these Americas and that there are a sufficient number of thoughtful leaders in the hemisphere to see that it continues toward those freemen's goals dear to the hearts of Americans everywhere.

Tribute to Air Force Personnel on the 20th Anniversary of the Opening of Westover Air Force Base, Mass.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. BOLAND. Mr. Speaker, just 20 years ago, in the summer of 1940, the Army Air Corps officially opened its newly designated northeast airbase named Westover Field in honor of the late Army Air Corps Chief of Staff, Maj. Gen. Oscar Westover.

Westover Air Force Base played a major role during World War II, the Berlin airlift, the Korean war, and now is a vital link in the worldwide force of the Strategic Air Command.

Mr. Speaker, the Air Force personnel stationed at Westover Air Force Base enjoy a very high rate of mutual respect, friendliness, and understanding with the citizens of adjoining cities and towns in my congressional district. Westover Air Force Base has burgeoned into a new community and a good neighbor in the last 20 years. I wish to extend my best wishes to Lt. Gen. Walter C. Sweeney, 8th Air Force Commander, Col. William C. Lewis, the base commander, and all Air Force personnel my best wishes for continued success and friendship in the future.

Under leave to extend my remarks in the Appendix, I include a message from Colonel Lewis entitled "Community Relations Everybody's Business," which appeared in the Westover Yankee Flyer newspaper on August 12, and an editorial from the Springfield Union of July 25 entitled "Westover's 20th":

[From the Springfield Union, July 25, 1960]

WESTOVER'S 20TH

Twenty years ago this summer Army Air Corps personnel from Maxwell Field, Ala., were getting settled on a 7½-square-mile tract in Chicopee that was being converted from tobacco land to an airbase. Congress had appropriated some $3,608,000 for the project, designated as Northeast Airbase. Soon it was renamed Westover Field, in honor of the late Army Air Corps Chief of Staff, Maj. Gen. Oscar Westover.

The mission of the base has varied. First it was a World War II training center—for fighter pilots and antisubmarine crews, then for B–24 bomber crews. In February 1946, the Air Transport Command turned Westover into a huge aerial port of embarkation. After ATC became part of the Military Air Transport Service, the Berlin airlift brought renown to MATS and Westover too. The Chicopee base was also a staging point for Operation Bluejay, the "top of the world" Thule Airbase project in Greenland.

Westover Air Force Base today is a mighty link in the armor of the free world. It is headquarters for the Strategic Air Command's 8th Air Force and a forward base for retaliation against any aggressor. From the lumbering B–24 to the jet-driven Stratofortress, from the demolition bomb to the unspeakable power of the atom, Westover has kept up to date, and seen many changes.

Unchanging has been the friendly spirit existing between the base and its civilian neighbors—a spirit much older, incidentally, than the $25 million annual base payroll that nourishes the Greater Springfield economy. For a good neighbor and a powerful keeper of the peace, may the past 2 decades be only a prelude to future successes.

[From the Westover Yankee Flyer, Aug. 12, 1960]

COMMUNITY RELATIONS EVERYBODY'S BUSINESS

(By Col. William C. Lewis)

Recently, the Springfield Union paid tribute to Westover and its growth over the past 20 years.

This acceptance of Air Force personnel as good neighbors was made possible through the full cooperation of everyone.

It is imperative that each of us remain constantly aware that community relations is everybody's job. Many of you, I know, give generously of your off-duty time to promote and improve this relationship individually and in large-scale community efforts.

My thanks to each of you for your contribution to this friendly relationship with our neighbors.

Paul Brown

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following tribute to our distinguished colleague, the Honorable PAUL BROWN, appeared in the Anderson, S.C., Independent. This splendid article in this great newspaper indicates that the admiration for PAUL BROWN is universal. He is loved and admired in South Carolina the same as in Georgia. We are going to miss him here in the Congress, but our affection and love will go with him to his beloved home town of Elberton.

The article follows:

"FATHER OF SAVANNAH"—REGION GRATEFUL TO ELBERT STATESMAN

Heart-warming tributes from hundreds of business and civic organizations and individuals in all walks of life have been received by Elberton's PAUL BROWN—the "Father of the Savannah Valley"—who is retiring as Georgia's 10th District Representative in Congress this year with 28 years of incomparable service.

From the day the distinguished statesman announced he would not seek reelection in the September primary on the advice of his physician, messages and resolutions containing grateful thanks for his contributions to build a better world, together with sincere regret he is leaving Congress, have poured into his office in Washington, D.C.

They have come from friends and well-wishers throughout Georgia, from South Carolina and other sections of the Nation.

Apart from his ardent support in behalf of the farmer, small businessmen, veterans, Commodity Credit Corporation, REA, and other national legislative measures now law of the land, it is agreed that Congressman BROWN has fathered Congress steps in the development of the Savannah Valley of South Carolina and Georgia.

Only those behind the scenes know of the constant labors of the 80-year-old statesman that led to the construction of Clark Hill and Hartwell Dams to open the way to what leaders say will revolutionize the economy of this entire region.

The U.S. House Banking and Currency Committee, of which BROWN is vice chairman, recently honored him at a dinner in the Nation's Capital. Members told of their high respect and admiration for the Georgian and his high principles and integrity. They presented their colleague with a silver tray bearing the engraved signatures of committee members.

Said Representative A. J. MULTER in remarks to the House of Representatives printed in the CONGRESSIONAL RECORD:

"While all of us want him to do the things he wants to do, and wish him and his family long life, good health, and the utmost of happiness, it saddens us to know that he will not be with us in the next session of Congress.

"For 14 terms his integrity, his knowledge, his competence, all coupled with his genial personality, have been a leveling influence in bringing about the enactment of legislation in the best interests of our country. He served his people and his Nation long and well. He was always willing to compromise on form to advance principle but he never compromised on principle.

"It is unfortunate that we did not take a stenographic report at the dinner of the nice things that were said about PAUL, led by our distinguished chairman, Mr. BRENT SPENCE from Kentucky. I am sure that before this session ends he and our other colleagues will have an opportunity to express themselves to the same effect on the floor of the House."

The American Bankers Association held a reception for Congressman and Mrs. Brown at the Mayflower Hotel in Washington. In attendance were high ranking Government officials, many Members of Congress, including the Speaker of the House and other leaders.

Numerous resolutions of praise for his services have been passed by organizations in the 10th District of Georgia.

Typical of wide commendation from veterans is the resolution unanimously adopted by the Hart County American Legion Post 109 at Hartwell. "Upon his retirement a true friend of the veterans of all wars will be missing from the Nation's Capitol," the post said. "We hereby express to Congressman BROWN, as a post and as individual members, our sincere appreciation for his loyal and patriotic service in the effective and able performance of a job well done for his district, State, and Nation. We extend to Congressman BROWN and his family our very best wishes for the days to come and a hearty 'welcome home.'"

And a resolution adopted by the Board of Commissioners of Roads and Revenue of Richmond County, Augusta, Ga., said in part. "We are cognizant of the faithful and untiring efforts on behalf of the Honorable

PAUL BROWN for all things constructive for the 10th Congressional District, and the central Savannah River area of Georgia, and South Carolina."

The Rayle Electric Membership Corp. at its annual stockholders' meeting in Washington, Ga., this summer said in its resolution that "during the 27 years that PAUL BROWN has represented the 10th Congressional District, he has been a true and loyal friend of the rural electrification program throughout this Nation and he has been largely instrumental in the construction of the Clark Hill project, which construction has made available to persons in the area of said dam low-cost electric power. PAUL BROWN has proven himself a true and loyal friend of both the REA as well as all other programs affecting rural people and the farm economy of this Nation."

Members of the Georgia Savings & Loan League at its 35th annual convention sent a resolution to Congressman BROWN extending "sincere expression of gratitude for his service to this business and to all of the people of Georgia and to his country. Congressman BROWN has served his district, his State, and his Nation in a very able and efficient manner throughout a long and illustrious period of service."

The Hart County Electric Membership Corp., which serves families in Hart, Elbert, Franklin, Madison, and Stephens Counties, dedicated to Representative BROWN the June issue of Along These Lines, a monthly publication going to thousands of rural electric users.

Col. T. S. Mason, of Hartwell, manager of the rural electric facility, wrote this glowing account:

"Congressman PAUL BROWN, who has served the 10th Congressional District of Georgia for 27 years, has announced his retirement at the end of his present term. This announcement came as a great surprise to his thousands of friends at home, in Washington, and throughout the country.

"Mr. BROWN is leaving Washington on account of his health. He said, 'I am tired and want to go home.' God bless you, PAUL. A great welcome awaits you back in Georgia. You can truly say as the great Apostle Paul said 2,000 years ago, 'I have fought a good fight; I have finished my course; I have kept the faith,' and I say that a crown of love, respect, and admiration will follow you from now on. History will record your life among the most faithful of the great men who have served in the Congress of this Nation.

"Born on a farm in Hart County, attended Pleasant Hill rural school, PAUL was known as a serious student as a child. Growing to young manhood, he graduated from Hartwell High School, entered the University of Georgia where he graduated from law school and soon became one of the most brilliant lawyers of his day and generation.

"PAUL never did things in a halfway manner, for it is told by the older people of this county that he, as a teenage boy, often picked 400 to 500 pounds of cotton in a day while he was living on the farm.

"After leaving college, he opened a law office in Lexington, Ga., the seat of Oglethorpe County, and shortly afterward was elected to the State legislature. For personal reasons, he did not offer for another term, which he could have had without opposition. Later he married Miss Frances Arnold of Hampton, Ga., a former resident of Oglethorpe County, and shortly moved his law office to his present hometown of Elberton, forming partnership with the late Judge W. D. Tutt, and the two comprised one of the strongest law firms in the State.

"There were born to this couple one son, Bobby, who was lost in World War II, and one daughter, Rosalyn, who resides with her parents in Washington.

Congressman BROWN is known as one of the most able men in either branch of the Congress, and he counts his friends by his acquaintances. Republicans and Democrats alike call him PAUL. He is truly a beloved man. We hate to lose your influence in Washington, but we will welcome you home. Rural Electrification will lose one of the stanchest supporters when Congressman BROWN retires.

"Much worthwhile legislation sponsored by Mr. BROWN, such as the Federal Deposit Insurance Corporation, soil conservation, rural electrification, the development of the Savannah River, and many others, are now the law of the land and will continue to bless the Nation in the years to come.

"We wish for you and yours, PAUL, a long and peaceful life after you retire. We welcome you home as a friend and neighbor and expect to see lots of you in the days to come."

Wadsworth Bargains Hard but With Irresistible Charm

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. CANFIELD. Mr. Speaker, I like James J. Wadsworth and I like the following article written about him in Tuesday night's issue of the Washington Daily News:

WADSWORTH BARGAINS HARD BUT WITH IRRESISTIBLE CHARM

(By Dickson Preston)

The words that best fit James J. "Jerry" Wadsworth, who is slated to succeed Henry Cabot Lodge as U.S. delegate to the United Nations September 3, are "big, friendly, and extremely competent."

He's so popular with U.N. delegates from other nations that it often takes him half an hour just to walk through the delegates' lounge at U.N. headquarters in New York.

And he's so affable that when he first took over as this country's disarmament chief, in 1958, a friend remarked: "If Jerry can't disarm the Russians, nobody can."

But Mr. Wadsworth is also an old hand at dealing with the Soviets without losing either a disputed point or his temper.

He has been Mr. Lodge's deputy since 1953 and has spent most of the last 2 years in Geneva negotiating on the tricky—and so far unresolved—question of banning atomic tests.

UPSETTING

Mr. Wadsworth occasionally upsets Russian delegates by winking solemnly at them during a hot exchange. Usually, after a startled stare, they wink back. They like him—although they admit he's a hard bargainer.

He's 55, 6 feet 4 (an inch or so taller than Mr. Lodge), weighs 225. At Yale, where he was graduated in 1927, he played fullback.

Since then he's learned a few other things, such as how to play jazz and folk ballads on the guitar and how to do primitive paintings so well his pals call him "Grandpa Moses."

His father, the late James W. (Jim) Wadsworth, was a Senator and Congressman who showed his political courage by running as a wet in the heyday of prohibition and by tangling bitterly with Franklin Roosevelt at the height of the New Deal. His grandfather, John Hay, was Abraham Lincoln's secretary and later Secretary of State.

Mr. Wadsworth was born near Geneseo, N.Y., where the family for many generations owned a huge estate. With a brother, he still manages a 4,000-acre cattle farm there.

ASSEMBLYMAN

He was elected to the New York General Assembly at the age of 26, served 10 years, worked for the Curtis-Wright Aircraft Corp. during World War II, and has held increasingly important Government positions under both the Truman and Eisenhower administrations.

He is married to the former Harty Tilton, of New York, and has a daughter, Mrs. Trowbridge Strong, of Philadelphia, and four grandchildren.

In moving up to the top U.S. post at the U.N., Mr. Wadsworth will get a $2,500-a-year raise to $27,500.

He'll also get living quarters in the U.S. mission's de luxe Waldorf Towers apartment, a "representational allowance" (to entertain other delegates), and use of the mission's 1960 Cadillac.

Although he's a Republican, he'll bring a measure of family bipartisanship to his new job. His sister Evelyn is the wife of Democratic Senator STUART SYMINGTON, of Missouri.

A Project Worthy of Every Citizen's Support

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. ROGERS of Florida. Mr. Speaker, a project worthy of national recognition and one that could be put into use throughout the country has recently been launched by the Fort Lauderdale Symphony Orchestra of Fort Lauderdale, Fla.

The residents, visitors, and school children of Fort Lauderdale are proud of their fine symphony orchestra, and its valuable contribution to the cultural life of the community cannot be measured. The fact that the orchestra is supported by civic-minded individuals and receives no tax-supported income is another reason for the pride our people have in this fine organization.

This year the orchestra has undertaken a new project to help raise funds to continue to bring good music to the community, and also hopes to bring a new feeling of patriotism into our lives.

The organization has undertaken a countywide sale of new, 50-star American flags. The profits from the flag sale will go into the orchestra fund, while the new flags will go to homeowners for display on all national holidays.

Twenty or thirty years ago such a sale might not have produced very much revenue, as most Americans had flags for their homes and displayed them with pride on all civic occasions. But today, too often on holidays the only flags to be seen in many communities are those displayed in the business areas by our merchants. A drive down a residential street clearly shows that either there are few flags in our homes today, or we have

forgotten to display a flag on proper days.

This project by the Fort Lauderdale Symphony Orchestra is one that should be duplicated by other organizations throughout the country, to help bring about a rebirth of patriotism that we need to meet the challenges confronting us today.

The Fort Lauderdale News presented an editorial by Mr. William Mullen on August 4, outlining the flag project and its implications to the community. Because this project should be of interest to other cities and towns and to all Members of Congress, I include the editorial here in the RECORD:

A PROJECT WORTHY OF EVERY CITIZEN'S SUPPORT

The Fort Lauderdale Symphony Orchestra is engaged in a countywide project desreving of the support of every patriotic citizen here.

What the symphony offers is an opportunity to catch up with the times, to manifest love and pride of country and to assist an important adjunct to our community culture.

The program is the sale of the new 50-star Old Glory, which most of us don't have, along with a lawn pole and socket so that the flag may be readily displayed on appropriate occasions.

Through this program, the symphony not only hopes to raise sufficient funds for its inspiring, entertaining and beneficial work, but it also envisions through this effort a beautiful city proudly displaying the American flag during Fort Lauderdale's 50th anniversary next March.

The flagpole-socket kit, boxed for easy storage, is priced at $8. Also available are a 3 by 5 banner with embroidered stars and sewed stripes at $6 and a 2 by 3 bunting of the same quality for $3.

The flag sales will be conducted by the women of the symphony orchestra society. They plan to call at every house in Broward County in a 4-week period to inform citizens of the project and to solicit their help in the orchestra's fine work.

A self-supporting organization, the symphony orchestra derives its funds from ticket sales, program advertising, individual contributions and money-raising projects, such as the ambitious and practical flag sale.

The orchestra then transposes its money into entertainment, education and opportunity for young musical talent here. These accomplishments are effected through five annual subscription evening concerts, four Sunday afternoon chamber concerts, in-school concerts, the donation of 300 tickets to students for the evening concerts, a youth orchestra and a symphony chorus.

The orchestra also presents two youth concerts annually in the War Memorial Auditorium, estimating that it brings fine music to 19,000 students each year through its varied youth programs.

Of course, adults who enjoy the works of the masters and of fine contemporary composers have them available through the symphony presentations.

The purpose here is to acquaint further the people of Broward County with our fine symphony orchestra and to urge that its "Buy a Flag To Fly" endeavor receive the fullest public support.

The tie-in of "Buy a Flag To Fly" and aid to the Fort Lauderdale Symphony Orchestra is indeed appropriate.

Some of our most stirring music has been composed in tribute to our national emblem; "The Star-Spangled Banner," "The Stars and Stripes Forever," "It's a Grand Old Flag," and many others.

The sales promotion also offers a fine opportunity to those who may not necessarily lean toward classical music, or the "Pops," but who nevertheless are patriotic and civic minded.

In purchasing a new flag from the women of the orchestra's society, citizens of Broward County will acquire a very fine Old Glory at a reasonable price; they will reward the women for their devotion to a worthwhile cause, and they will assist in continuing an esteemed musical project benefiting our school children.

If for no other reason, those who Buy a Flag To Fly may display it with pardonable extra pride for aiding in the school music endeavor.

The sales program is under the direction of Mrs. Roger Nesbitt and her cochairman Mrs. John L. Callan.

Undoubtedly, the sweetest music to their ears will be a "Yes," when you are asked to buy a Star-Spangled Banner to help the Fort Lauderdale Symphony Orchestra.

The money will not be wasted and the patriotism will not be lost.

An Attack Is Launched Against the Record of Representative Ken Hechler

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. HECHLER. Mr. Speaker, yesterday afternoon's mail brought a letter from my opponent in the November 8 election in the Fourth Congressional District of West Virginia. Mr. Clyde B. Pinson, who lives in my hometown of Huntington, W. Va., honored me by writing a spirited criticism against my record in the House of Representatives.

Politics and life itself would really be pretty dull if we did not have some good differences of opinion. That is what I like about Mr. Pinson's letter: It will help to sharpen the issues, so the people of our district can decide for themselves which one of us should represent them.

Of course, I am writing a complete answer to Mr. Pinson's letter which I will mail to him so he gets it before my answer is made public. Right now I just want lots of people to read Mr. Pinson's letter so they can get the full benefit of his point of view.

Most people realize these days that candidates cannot be wholly objective about their own records, how hard they have worked, how effective they are and what they have accomplished. A man's colleagues in the Congress, his constituents in his district, members of the press and others are probably in a better position to pass judgment on the achievements of the individual Member of Congress. That is why I would like to have Mr. Pinson's letter printed, and ask anyone who reads it to send me comments on what they may know of my own record or efforts on behalf of the people of West Virginia and the Nation.

There is a wonderful morning paper in my hometown, named the Huntington Herald-Dispatch, which printed Mr. Pinson's letter half a day before I even received it. Thus I am not violating any confidence by reprinting the letter. The Herald-Dispatch has attacked me editorially for putting too much junk into the Appendix of the RECORD, but I am sure that great newspaper would not place Mr. Pinson's letter in that category.

Anyhow, here is the letter, and I hope I hear from those who may read it:

AUGUST 22, 1960.

Mr. KEN HECHLER,
House Office Building,
Washington, D.C.

DEAR MR. HECHLER: When you were elected to Congress in the Democratic (sic) landslide 2 years ago, I had grave doubts about your ability to do a good job for the people of this district. You had only been in the State a few months and quite naturally you knew little of our problems.

Since January 1959 it became apparent that you were obsessed with only one thing, reelection. You made headlines through the use of gimmicks, but you did nothing to help my State. The articles you wrote on your trip to Formosa were interesting, but they did not feed our hungry children. The book you sent the Queen of England on how to take care of her baby was unique publicity, but it did nothing to bring new industry into our State. When you wore rose colored glasses into a House Space Committee hearing, you made headlines, but many people know of your consistent record of opposing defense expenditure bills.

Your party has an almost two-to-one majority in the House and Senate. This special session of Congress called by your party leaders for the sole purpose of escaping the responsibility for a do-nothing Congress, is your golden opportunity to help my State.

If you will use the remaining time left to you in Congress to do something for our people, I shall be happy to consult with you on the problems we face. As you know, Mr. HECHLER, I have lived all my life in this district. I am a taxpayer. I have a large family. I will continue to live here in the future. Aside from politics, I am vitally interested in the welfare of my State.

This is your last opportunity to ensure that this session of Congress produces something that you can show the voters of this district prior to their passing judgment of you, as the Representative of their interests.

Sincerely,

CLYDE B. PINSON.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Address of Senator Moss Before the 11th Annual Summer Conference of the National District Attorney's Association

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. CANNON. Mr. President, the distinguished junior Senator from Utah, Mr. Moss, on August 13 was accorded a unique honor.

As a former prosecutor myself and one who has studied the career of Senator Moss for many years, I believe it is worthy of our attention that the National District Attorney's Association presented the distinguished Senator with the Furtherance of Justice Award.

Edward S. Silver, district attorney of Kings County, Brooklyn, N.Y., and president of the association, stated that Senator Moss, who was twice national president of this outstanding group, has made a notable contribution to law enforcement. In presenting our colleague with a bronze plaque, the association honored him for "his outstanding service as a prosecutor exemplifying by his courage and humanity the highest ideals of justice, and for his resourcefulness, initiative, and continued interest in all Federal legislation contributing to more effective law enforcement throughout the country."

I ask unanimous consent that the remarks of Senator Moss at the conference of the National District Attorney's Association be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR FRANK E. MOSS, DEMOCRAT, OF UTAH, AT THE 11TH ANNUAL SUMMER CONFERENCE OF THE NATIONAL DISTRICT ATTORNEY'S ASSOCIATION, BOSTON, MASS., AUGUST 13, 1960

Gentlemen, once again I have the opportunity to address this great organization—an organization in which I have labored and of which I am honored to be a member. I cherish the organization, my membership in it, and I cherish my colleagues and friends whom I have learned to love, to respect, and to enjoy. It is an honor to be with you at this 11th annual meeting of the National District Attorney's Association.

Sincerely I thank you for the honor you have just bestowed upon me. I accept it with the greatest pride and with deep humility. I regard it, however, not so much as a badge for service already rendered but rather as an invitation and a license to render service and as a challenge to do so. It is my hope that I can meet the challenge and make some significant contribution to the furtherance of justice.

When Ed Silver notified me that I was to be honored by being selected to receive this most coveted award, my first reaction was disbelief. Naturally I was thrilled and pleased, even though I felt unworthy. And upon further reflection I became somewhat overwhelmed with the seriousness which the subject of justice demands. Justice is a word which is used often, in many different contexts, and many times very loosely. Because of its constant use I think we tend to forget its real meaning and its significance.

Justinian's Digest says of the lawyers: "We worship justice and profess knowledge of what is right and just."

Daniel Webster said: "Justice is the greatest interest of man on earth."

Roscoe Pound defines it to be "The ideal relation among men." He further says, "The administration of justice is the adjustment of human relations and ordering of human conduct in order to achieve and maintain that ideal relation."

In the rotunda of the Department of Justice Building in Washington there is carved a sentence that was first written in a Government brief by Frederick William Lehman, a solicitor general of the United States in President Taft's administration. The words have become famous. They have a more profound meaning in 1960 than when they were first written. They will remain fresh and meaningful as long as men love justice and prize decency. The words, simple but eloquent, are: "The United States wins its point whenever justice is done its citizens in the courts."

Justice is the most pervasive purpose of society. It is an ideal for all men. It is the dream of all men of all religions, races, and creeds all over the world. It is the goal which today throughout the world is causing men to revolt against the old and established order—causing them to make sacrifices, risk their lives and their modest fortunes in their aspirations for decency and justice.

I would define justice to be that fair and impartial resolution of differences between man and his fellow man, between man and government, and between government and government, with a view to preserving to each and every individual his right to dignity, privacy, decency, and liberty.

I think that we who work daily with the law and with the management of justice sometimes become so involved with informations, indictments, warrants, depositions, witnesses, court reporters, judges, bailiffs, sheriffs, coroners, complicated legal problems (and our wives) that we cannot see the forest for the trees. Occasionally we should step back, take a deep breath, and take a look at the forest. By doing so we can recall this noble purpose of mankind—justice—and we can rededicate ourselves to that purpose.

You are probably interested in two or three things that are taking place at the national level. I suspect you think I can give you a knowledgable report on these matters. It is only fair to warn you that I, too, find it necessary to read the daily newspaper to find out what is going on in Washington, so don't be disappointed if this news is old hat.

As you know, there are two bills pending before the Congress dealing with wiretapping and eavesdropping. Both of these bills were introduced by Senator KEATING, of New York.

S. 1202 is a comprehensive bill modeled after the New York statutes. It not only relates to wiretapping and eavesdropping by Federal agents but also has an enabling clause granting authority to the States to enact legislation dealing with the same subject. There has been no hearings on this bill and it has not been considered this session. It is very unlikely that anything will happen to this bill this year.

The second bill introduced by Senator KEATING is S. 3340, which is a rather limited bill. As you know several States have statutes permitting wiretapping under court order. The U.S. Supreme Court has indicated that the Federal statutes dealing with Federal Communications Commission prohibits any wiretapping by the States, even under court order. S. 3340 would merely clarify the FCC provisions dealing with this subject and would, in effect, say that there is no prohibition in the Federal statutes to prohibit wiretapping by State agents under court order with adequate safeguards. This would, as you see, merely revalidate those State laws which permit wiretapping under court order.

Hearings have been held and the full committee reported the bill to the Senate floor. It came up on the consent calendar for consideration and upon objection by Senator HART it was passed over. I cannot predict whether or not the Senate will take action on it this year.

With reference to the legislation dealing with pornography, I can report a little more progress. A bill, which would strengthen the hand of the Postmaster General in dealing with pornography, has passed the House but there has been no action in the Senate. On the other hand, the Senate has passed a bill which would establish a commission to study the problem and set some guidelines. This bill has not been acted upon by the House. As you know, there are some constitutional questions involved and many fear that we might do more damage than good in attempting to legislate in this area. Because of the controversial nature of the problem—and I attribute good motives to all who speak upon it—I doubt that there will be any legislation passed this session.

I am sorry to tell you that we haven't had much success in getting a national charter for NDAA. The House committee has held hearings but has not taken any action. The Senate committee has not yet held any hearings and we can't really expect any favorable legislation this year. Unfortunately, it will be necessary for the organization and its members to spend a great deal more time and energy in educating the individual Members of Congress. I will continue to do my utmost for this cause.

I submit, however, that what we in Congress do or fail to do in any of these areas is relatively insignificant in comparison with the work the local prosecutors do or fail to do from day to day. This is so because the discretionary power exercised by the prosecuting attorney in initiation, accusation and discontinuance of prosecution gives him more control over an individual's liberty and reputation than any other public official.

As you from day to day go about your work as professional prosecutors, you should be consciously aware of the very vital role you play in a democracy.

Underlying the structure and fabric of our low is a bill of rights designed to protect the

life of every citizen, his liberty and his property.

At the time they framed this charter of liberties, the lawyers who in an earlier day set the fires of the revolution were mentally smarting from the personal abuses heaped upon them by king and government and the violation of personal and property rights that had been secured to free men by the Magna Carta. Officers of the king had broken into shops and homes of frnends and neighbors, searched and seized anything and everything at pleasure. Respected and honored citizens had not been free of arrest upon a hint or a sly suggestion of a petty official. Often they were imprisoned on suspicion with no opportunity to be heard and without a fair trial.

Out of their bitter experiences they wrote into the Constitution basic and fundamental principles to restrain any excesses of government and check any arbitrary power that might invade the rights of personal liberty and private property.

Today the principles of freedom and fair play are being challenged and opposed around the world by totalitarian ideology that denies the existence of God and subjects the individual to arbitrary naked power of the state.

The greatest threat to the rule of law in any of the nations of our free world is the danger that the people will become dissatisfied with the functioning of their system of justice and do irreparable injury to it, without realizing that by so doing they are destroying the very foundation of the rule of law in their society.

It is our professional responsibility to keep the pulse of life beating strongly in the law. We cannot do this by treating our fundamental freedoms as abstract theoretical concepts of a legal system. The people of the free world must learn to believe those freedoms to be what we believe them to be, the practical dynamic concepts for living, unalienable in every human being.

In earlier days the status of law in other nations was not a vital concern to us. But we are living in an era where it is no longer possible to ignore the attitudes of other peoples. This state of society is the result of two factors. Under the impact of science and technology our world is shrinking. And old empires are dissolving into new nations, filled with aspiration not unlike our own.

The tremendous success of scientists and technicians has left a gap between our scientific discoveries and their beneficial and peaceful utilization within the framework of the institutions devised to insure freedom and rights of the individual. The bridging of this gap may well prove to be the legal framework of free societies in the making.

If we reflect on the issues at stake in the cold war, if we analyze its deepest meaning, we come to the inevitable conclusion that among the most essential values at stake are legal ones: the relation between citizen and State, and the liberty and liberties of individuals.

Obviously, our system is under attack and tremendous pressure from without. Our national survival will depend upon our internal social strength. We cannot be strong in a democracy unless we can effectively enforce the criminal laws and at the same time safeguard the sacred right of the individual.

You are the agents of your State who from day to day must work and live with the criminal law, its ramifications and complexities. The strength of our Nation and the reputation it enjoys in the world is in your hands. Only if the criminal law is fairly and properly administered can this Nation survive in its present democratic form.

Keeping in mind the necessity of effectively enforcing the criminal law and at the same time safeguarding the rights of individuals it is somewhat disconcerting to look at the results.

The latest available figures dealing with criminal activity in the United States are published in the 1958 Uniform Crime Reports. The figures are astonishing. For the 1958 calendar year (the latest published report) the following criminal offenses were reported:

Murder and nonnegligent manslaughter, 3,870 for an increase of 3.2 percent over 1957.

Forcible rape, 7,622 for an increase of 13 percent over 1957.

Robbery, 56,207 for an increase of 13.7 percent over 1957.

Aggravated assault, 72,460 for an increase of 3.5 percent over 1957.

Burglary, 427,457 for an increase of 11.8 percent over 1957.

Larceny ($50 and over), 272,805 for an increase of 10.3 percent over 1957.

Auto theft, 196,784 for an increase of 1.9 percent over 1957.

It should be of interest to us that during the calendar year 1957 45 police officers were killed in the performance of their duties.

It is apparent that organized crime is growing. Starting with the days of prohibition, we saw the advent in America of organized crime on a large scale. There were different mobs operating in well-defined territories in the handling of liquor and these mobs often warred with each other. But their organization was loose and their methods were crude compared with the type of organized crime which I perceive to exist at the present time.

Since the 1930's crime has become better organized and criminal gangs now operate with the best legal and accounting advice. They have adopted corporate methods in the handling of vast enterprises.

There is no lack of money in these criminal enterprises. It is estimated that narcotics peddlers take between $180 million and $300 million a year from a gullible public. In the field of labor racketeering the take could amount to $100 million very easily. It is estimated that between $14 and $16 billion are involved in gambling enterprises of one sort or another in this country. Of this amount, over $2 billion goes into the pockets of the gamblers and the syndicates. I shall not try to estimate the millions of dollars which are involved in the distilling and sale of illegal alcohol, or in the other areas of criminal activity.

Needless to say, most of this money is not reported on income tax returns—it is "hot money." As such, it goes into the channels of illicit trade such as narcotics, vice, and other enterprises. Some of it goes into bank accounts in Switzerland identified only by a number and kept in great secrecy by bank officials, to be siphoned off abroad where it can be invested without fear of discovery.

It is no wonder then that these organized criminals have set up as a control, an invisible government whose edicts are carried out by unknown enforcers and nameless assassins and who, themselves, are not prohibited from employing the most modern devices to perpetrate their crimes and to conceal them. It is not surprising that they attempt to buy protection from those who enforce the law.

I do not wish to belabor the point and I do not wish to appear as an alarmist, but it is important to recognize the threat posed by the modern criminal—he is a modern man, with modern tools at his disposal and the know-how to use them. He is represented by modern attorneys. He deals in and with the modern corporate institutions. He circles the globe in modern airplanes and he has readily available to him modern means of communication that can put him, within minutes, in touch with almost any place in the world.

We cannot cope with a jet age criminal with a horse and buggy prosecutor. We need a modern district attorney, with modern tools and the legal right to use them. He must have the right to intercept messages, with proper safeguards for personal liberty; he must have power to compel attendance from foreign jurisdictions; he is entitled to expert counsel and testimony. American never has believed a fight to be fair and even when one participant had one hand tied behind his back. The never-ending war against crime calls for every modern weapon we have.

The prosecutor needs to become a specialist and as such should have some specialized training. There was a time when the only training a posecutor received was on the "battlefield." As a specialized profession, however, the situation is changing, and for the better. The prosecutor now has several inservice training schools which are doing a great deal toward professionalizing the office. Most of you have attended these. I submit that it is in the public interest that attendance by prosecutors should be at public expense since the public reaps the benefits in better service.

The professional prosecutor needs a professional library and the public needs to be educated as to the wisdom of paying for one. In many States the bar association can be persuaded to cooperate in the development of a good library for the prosecutor.

I am proud of the small part I have played in the National District Attorneys' Association. Through this association of prosecutors there is a continual exchange of information and ideas. And through this exchange, members not only become more competent in their duties, but they discover that many situations arise where they can be helpful to each other and thereby discharge their duties better. This cooperation of district attorneys is of inestimable value to our people.

Of course, the prosecutor can do a great deal to improve the effectiveness of his office by helping to train the personnel of the other offices with which he works. Classes and lectures for the police officers and sheriffs force can pay untold dividends in cooperation and in giving direction to the efficient performance of their duties.

Fortunately the prosecutor has now learned the value of new and modern tools in meeting the challenge—and fortunately new and better tools are becoming available—the wire tap—the FBI lab—the medical examiner, and other scientific laboratories. Also the regular exchange of information about criminals and their activities has been greatly facilitated.

The best tool which we have, however, is the well-trained, competent and imaginative professional prosecutor.

In the complex society of a democracy the modern district attorney must be a man of dedication, strength, and honor beyond reproach. This is by far the most imoprtant quality.

Perhaps one of the greatest problems facing today's prosecutor is that of his salary. This is especially true in the smaller jurisdictions. The district attorney is generally a well-trained, competent, and professional atorney. His responsibilities are large and complex, and the demands on his time are excessive. Of course this is the age-old problem of salaries for public officers, but here it is magnified since the public at large fails to realize the responsibilities involved and the value of professional legal competence. To hold any public office generally involves personal sacrifice but in the case of attorneys, the sacrifice is usually larger.

Because of this simple fact new problems are created. The prosecutor usually needs and looks for additional sources of income. He practices law on the side, either solo or in partnership and then the delicate prob-

lem of conflict of interest raises its head to haunt the prosecutor and constantly to subject him to criticism, either warranted or unwarranted, of the press and the profession. Sometimes this results in a loss of confidence by the public. I needn't tell you what this leads to.

In the same general area the prosecutor is always subject to the pressures and influence of groups who want favors and the temptation is strong to dispense such favors in the hopes of winning votes. It is interesting to note that such favor seekers consist of not only the criminal element, but also the chamber of commerce, labor groups, racial groups, churches, in fact almost everyone—his seems to be the American way of life. The prosecutor who succumbs to these requests by special groups, however, is surely undermining his own effectiveness and will eventually pay the price.

It is necessary because of these problems for the prosecutor to have the finest sense of discretion—to be absolutely honest and of unquestioned integrity. This seems to me to be the only answer and it is a standard which the great majority of prosecutors meet.

I have spent considerable time talking about the problems of prosecutors—these are the problems you live with daily—the problems each prosecutor must resolve for himself. But, the trust and the challenge of the prosecutor are greater than any one of these problems—in fact, greater than all of them put together.

The Supreme Court of New Jersey has said:

"In his county, as we have seen, the prosecutor is the foremost representative of the executive branch of the government in the enforcement of the criminal law (*State* v. *Winne* (96 A. 2d 63))."

And in Kansas, the supreme court held:

"He is the officer upon whom the State relies for the prosecution of all criminal offenses within his jurisdiction. If he fails or refuses to act, the law is voiceless and powerless. It is paralyzed (*Johnston* v. *Foster* (32 Kan. 14, 3p. 534))."

You must keep in mind that you are the chief law enforcement officers of America. By way of contrast, the courts are too remote and too formal—the public cannot speak with, deal with, or negotiate with the courts. On the other hand, the police department often is regarded by the public as being hostile, antagonistic, severe, and unapproachable. Thus, it is the prosecutor who must deal with the public on a day-to-day basis—on whom the public relies—who must shoulder the responsibility and the honor of maintaining law and order.

The public must feel that the district attorney is alert, incorruptible but understanding. He must be a man of courage—but he must also be a man with a heart and with wisdom.

It would be well for you to stop and realize that in this context, the office which you hold is to a degree more important than any other office in government. Justice is the cornerstone of our democracy, and the framers of our Constitution and the drafters of our statutes have entrusted this cornerstone in your keeping.

The Supreme Court of the United States identified this trust in the case of *Berger* v. *U.S.* when it said:

"The [prosecuting] attorney is the representative not of an ordinary party to a controversy, but of a sovereignty whose obligation to govern impartially is as compelling as its obligation to govern at all; and whose interest, therefore, in a criminal prosecution is not that it shall win a case, but that justice shall be done. As such, he is in a peculiar and very definite sense the servant of the law, the twofold aim of which is that guilt shall not escape or innocence suffer. He may prosecute with earnestness and vigor—indeed, he should do so. But while he may strike hard blows, he is not at liberty to strike foul ones. It is as much his duty to refrain from improper methods calculated to produce a wrongful conviction as it is to use every legitimate means to bring about a just one."

Speaking of fair play, I am reminded of an amusing story about a very famous international incident. During World War II, at a meeting between President Roosevelt and the Russian dictator, Stalin made a proposal which the President said he could not undertake to carry out because he thought the Republicans in the Senate would never agree to it. Stalin was genuinely astounded. "You mean," he asked, "that you have been in power all these years, and you still have Republicans?"

I would like to conclude by reminding you that this great and noble experiment in democracy has provided mankind with his best opportunity for justice. The quality of that justice is in your hands. It will not be perfect—but it is an ideal for which you can work.

Carl Schurz once said:

"Ideals are like the stars—we never reach them, but like the mariners of the sea, we chart our course by them."

It is my firm conviction that our democracy is here to stay and that the individual's opportunity for justice will survive.

If the public chooses its local prosecutors carefully, pays them well, and provides them with adequate tools and training, then our quality of justice will continue to improve.

In my experience, the district attorneys of America have been people who are devoted to the public welfare and are concerned with the effective execution of the office which they hold. Some of our finest district attorney's have turned down the opportunity to sit on the bench or to hold other public office because they were devoted to the position of prosecutor. Many others, who have chosen to move on to other fields, have nevertheless given their best efforts while holding the office of prosecutor. In any field of public endeavor where many are involved, there will always be a few misfits and downright rascals. Fortunate it is that we have had so few in America. The office of the modern prosecutor is one of great power and a fine tradition. He who takes the oath and embarks upon this service should be prepared to devote his heart and mind and his personal life to the service of his people.

Gov. G. Mennen Williams' Remarks Before Americans for Democratic Action

EXTENSION OF REMARKS

OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. O'HARA of Michigan. Mr. Speaker, there is no question in the minds of any of us that the overriding issue of our times is that of maintenance of a just peace.

The great Governor of the State of Michigan, G. Mennen Williams, has often expressed his interest in this vital subject and in a recent address to the Americans for Democratic Action succinctly stated the basic requirements that must be met if this objective is to be attained.

Because I believe that Governor Williams' statement would be of interest and value to Members of the House, under unanimous consent, I include excerpts from his statement at this point in the RECORD:

REMARKS BY GOV. G. MENNEN WILLIAMS BEFORE AMERICANS FOR DEMOCRATIC ACTION, SHOREHAM HOTEL, WASHINGTON, D.C.

One of the most important questions of our time then, if not the most important, is just this: Is there a reasonable alternative to the deterrence doctrine of balance of terror?

Do we have to leave the business of peace wholly to the generals or can we do something about it ourselves?

ADA has established itself as an organization dedicated to meeting the great challenges head on, with bold answers if the situation requires, so I have no doubt as to what the nature of your answer is.

Today it is not enough to be just intellectually for peace. Remember the Sermon on the Mount didn't promise the peace lovers that they should be called the children of God. The promise rather was to the peacemakers. Today's imperative is for action.

In my mind a positive, creative, active peace program can be effective. It should include at least five elements: (1) Disarmament, (2) domestic programs and institutions for peace, (3) relief of world tensions, (4) development of viable and stable economies throughout the world, and (5) world law.

DISARMAMENT

Disarmament is the symbolic keystone to a successful peace program. It is the great litmus test of sincerity of intentions. It is the unmistakable demonstration of action rather than talk for peace.

Disarmament to be effective must be mutual. Unilateral disarmament creates uneasiness rather than security. Erosion of military strength on the altar of a balanced budget creates neither peace nor good will. The world will not be happier with an unarmed America and a well armed Soviet Union. What the world looks for is mutual disarmament of all the great military powers.

There has been the practical possibility of mutual agreement on the banning of all atomic tests. And this could be the break in the logjam holding up disarmament.

As you know the U.S.S.R. has seemed willing to agree to suspend all atomic testing and submit to a detection setup that would even pierce the Iron Curtain. But our negotiators have been held back by lack of a clear American policy. The State Department has been confused by lack of Presidential directive while the Pentagon, the AEC, and others have pulled in all directions.

The choice of policy seems clear to me. The risk of the Soviet Union violating a test ban by attempting a series of small underground explosions is so small—in the face of the chance of their utter condemnation by an aroused world—that we are foolish to risk the possibilities of a nuclear holocaust by holding back from entering into a reasonable inspection-guaranteed test ban agreement.

* * * * *

Obviously the first requisite here is that the Chief Executive be prepared to organize a massive movement for peace and back it up. Outside of a travel bureau there has been no organization for peace in the White House since Stassen left.

One good way to mount such an organization is the Democratic advisory council's peace agency which Trevor Gardner has described as follows:

"One of their missions would be to apply the techniques of operations research—presently employed so sucoessfully in the development and use of weapons systems—to the generation of new ideas and new concepts for the development and use of 'peace systems.' They would work on techniques for limiting the use of space for military purposes. They would study and develop surprise attack de-

tection systems. They would examine the legal aspects of national sovereignty extending to the space domain and to the subsurface of the oceans."

Another important job is to blueprint a plan for economic and social readjustment as we disarm. There should be programing which will hold to a minimum industrial dislocation and unemployment through imaginative development of work on school buildings, roads, etc., through stimulation of the private sector by tax relief, through stimulation of business through foreign aid and investment, and so on. There should be also programs to promote individual and industrial rehabilitation for new kinds of jobs.

* * * * *

As long as men are ill-fed, ill-clothed, ill-housed, in ill health, as long as men suffer the devastations of poverty—in other words, as long as the average per capita income for two-thirds of the people of the world is less than $100 per year, the achievement of an enduring peace is indefinitely postponed.

The very idea of peace as a desirable social condition contains the corollary idea of the importance of human dignity. We must help the peoples of Asia, Africa, and Latin America to find their way to healthy, viable, and vital economies—to break through the vicious circle of poverty and dependence, into a new cycle of self-propelled economic growth, capital formation, and growing dignity and strength in freedom.

* * * * *

Certainly there are no easy formulas to solve such tension-packed problems as the Arab-Israeli differences, the political limbo of Korea and Vietnam or the freedom of the captive nations. But that is cause for consistent attempts to break through the pseudostability of status quo stalemate.

As one example, both Adenauer and De Gaulle have indicated they might subscribe to a plan marking off a zone of relaxed tensions from the Atlantic to the Urals. This kind of disengagement would be a real breakthrough, and because it has many potential advantages for both East and West is not an impossibility.

Another example is China. Our current policy ignores the one-quarter of the human race residing in Communist China. We must seriously consider the participation of China in disarmament agreements. The policy of enforced noncommunications solves nothing, and perhaps heightens tensions. At a minimum we should encourage the exchange of newspapermen and open a freer two-way flow of information.

Well, each of these first four programs—disarmament, political settlements, economic aid and mobilization for peace—points toward a world which substitutes order for chaos, law for force in the settlement of international disputes.

* * * * *

This brings me to the fifth peace proposition and let me state my belief in this matter in no uncertain terms: Ultimately, world peace will depend on world law.

Leaders throughout the world have recognized it. Our own Secretary of State, in a recent speech, said that one of the objectives of disarmament is: "to create certain universally accepted rules of law which, if followed, would prevent all nations from attacking other nations. Such rules of law should be backed by a world court and by effective means of enforcement, that is, by an international armed force."

Obviously, we can't accomplish all of this at once, but we can begin by strengthening international institutions wherever possible: Border patrols, test-ban agreements and inspection teams, foreign aid—all of these activities can be effectively channeled through the United Nations. And that is why I believe in strengthening the one unmistakably contemporary institution of law in the world community—in the International Court of Justice.

Today the functioning of the World Court is hampered because we reserve to ourselves, under the so-called Connally reservation, the right to call a matter domestic whenever we consider it expedient not to submit to the jurisdiction of the Court. We should repeal the Connally reservation and thereby take a step in the direction of world order, demonstrate our desire to live in peace with our neighbors under the rule of law, and lead the way for other countries of the world to repeal their own Connally amendments, which they adopted after we adopted ours. The repeal of this amendment is a tangible objective we can all understand and all work for.

Family Farming—America's Ray of Hope

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 25, 1960

Mr. HUMPHREY. Mr. President, throughout our Nation thousands of farm families have worked long years through the National Catholic Life Conference to maintain those spiritual and social values that the family farm alone can contribute to the enrichment of our rural community life and our total national life.

It has been a great privilege during my years in the Senate to work closely with the Catholic Rural Life Conference to secure a national farm policy founded on a full realization of the irreplaceable social value to our Nation that accrues from thriving family farms and rural communities. In these years of cooperation it has been especially satisfying to know and work closely with the conference's former director, Msgr. Luigi Ligutti, now the director of international activities, and with the Washington representative, Father James Vizzard, S.J.

The conference in its most recent statement of policy reflects again its dedication to spiritual and social values and with the usual practical commonsense of this group emphasizes that a sound economic policy for agriculture is absolutely essential to the future of the family farm. But the conference insists, as I insist, that the question of farm policy cannot and must not be reduced to a purely economic question—ignoring basic human freedoms and all the range of spiritual and social values involved.

In the same July 1960 issue of Catholic Rural Life, the conference magazine, in which this policy statement appears there is printed an article which I prepared outlining my views on a family farm development program as contained in my proposal, S. 2502. I am greatly complimented to have my views included in the farm policy discussions of this group and to see that the conference statement of policy and my proposals are generally in agreement on the fundamentals of the farm policy our Nation must have.

Mr. President, I ask unanimous consent that the policy statement of the National Catholic Rural Life Conference and my article entitled "Family Farming—America's Ray of Hope," from the July 1960 issue of Catholic Rural Life be printed in the Appendix to the RECORD.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

RESOLUTIONS OF POLICY

Introduction: The American farmer is confronted with serious economic problems which jeopardize the family farm pattern and endanger many religious, social, and cultural values of the rural way of life. Procrastination and indecision on the part of rural leaders in the face of this situation would be inexcusable.

Some of the solutions proposed are so controversial that agreement about them can be hoped for only after extensive debate. Such would be true, for example, of the debate on whether or not farm subsidies are to be continued. Other proposed solutions would require extensive education and far-reaching changes in the economic, political, and social structure of rural America. An example of this would be the formation of cooperative organizations capable of controlling surpluses, strengthening farmers' bargaining power and effectively competing with vertically integrated enterprises.

Agricultural leaders should work diligently on these controversial and long-range solutions. In the meanwhile, we urge immediate action on the following solutions—solutions about which little rational disagreement can be had, solutions which can be applied readily and within the framework of our present economic, political, and social structure:

1. Let us put an immediate end to the payment of unlimited subsidies to large farms. Subsidies can be justified only on the principle of distributive justice according to which assistance is to be given in proportion to the needs of the recipient and with a view to the effect of such assistance upon the common good. No single farmer has a rightful need for tens or even hundreds of thousands of dollars of taxpayers' money. Neither is the common good advanced by such unlimited subsidies which often enable wealthy farmers to increase their acreage at the expense of relatively poor farmers.

2. The importation of hundreds of thousands of low-paid agricultural workers from Mexico under the provisions of Public Law 78 embodies an unjustifiable subsidy for the large-scale growers who employ them. Family farmers must compete with these underpaid workers. American born agricultural workers suffer because these alien laborers depress wage rates and reduce employment opportunities. The braceros themselves endure inadequate wages, working, and living conditions. This is not only an unsound economic policy, it is morally indefensible.

3. We must share our surplus foods more generously with undernourished peoples at home and abroad. Missionaries in underdeveloped areas can guarantee distribution to those who need food. Such a program need not seriously disrupt agriculture in other lands, because the recipients do not have funds to purchase food. If we continue to store billions of dollars worth of foodstuffs, domestic market prices will continue to fall, spoilage and storage costs will steadily consume the capital invested in these foodstuffs and we shall incur the wrath of needy people overseas.

4. We must adopt a soil use policy in keeping with the fact that presently we are overproducing some commodities and in the future we shall need to increase production for an expanding population. To advance, the conservation program must have a continuing supply of new knowledge, new ideas and

better ways of getting the job done—hence, the need for a sound research program to back up the technical assistance program essential on individual farms.

5. We must accelerate the development of industry in communities outside the metropolitan centers. This will create employment needed by rural people, make our Nation less vulnerable to attack, and alleviate the problems of supplying housing, schools, and churches in metropolitan areas.

For several decades the Extension Service of the U.S. Department of Agriculture provided leadership in multiplying the productivity of the farm but it did not provide new employment opportunities for those who were put out of work by the introduction of machinery and improved methods. We urge the Extension Service to utilize its talented personnel and grassroots contacts in assisting rural communities to attract suitable industries.

Since nonfarm industries in rural areas mean the prospect of a new way of life with new problems and new pitfalls, rural leaders should make a thorough study of what is desirable and undesirable in industry. It is of supreme importance that morally sound principles be instilled at the beginning of rural industries.

As factories are established in rural areas, new legislation will be needed to protect the rights of both labor and management and to provide zoning regulations needed for the good of the community.

6. It is inevitable that some rural youths must leave the countryside to seek careers. There is great need for schools and parish organizations to furnish more guidance to these young people regarding their aptitudes. Those who are leaving should be given training for trades and professions in keeping with their abilities. Parish organizations in the urban areas should assist the incoming youth in finding dwelling and making religious and social contacts. Some of the necessary steps to accomplish these aims will need legislative action.

America's Ray of Hope—Family Farming

(By Hubert H. Humphrey, U.S. Senator from Minnesota)

For too long, our national farm policy has been engulfed in deep-seated controversy that shows little sign of abating.

The continuous debate waged over the past decade has, unfortunately, engendered more heat than light. Regrettably, it has been marred by distortions of fact, by recriminations, by misinformation, by a belittling of agriculture's basic role in our economy, and by attempts to turn city people against farm people.

Controversy is neither wrong nor harmful if it is aimed at a constructive goal. Spirited debate is helpful in a democracy, and necessary to the formulation of public opinion. But out of it should always come decision—and progress.

Make no mistake about it—better solutions can be found and must be found to the complex economic and social problems confronting rural America and its currently depressed economy. Solutions can be found that are far more in the national interest, and far less costly to taxpayers.

Supposedly, the great national debate on farm policy has all been over differences of opinion about best methods to achieve the same objectives.

The Nation's press, in trying to oversimplify a complex issue, has led the country to believe that it is merely a fight between advocates of higher price supports and lower price supports, or no price supports at all.

Actually, far more is involved.

I can no longer accept as true the premise that this struggle is merely over differences as to how we can best achieve the same objectives for farm people.

DIFFERENCES REMAIN

If we really were in accord on the purpose and objectives of farm policy in this country, reasonable men of good will long ago would have resolved such differences out of the experience of trial and error of the last two decades. The fact that it has been impossible to do so brings us face to face with the inescapable conclusion that much more is involved than the best methods to achieve common objectives.

The truth is that fundamental differences do exist over the objectives themselves—over the pattern of agriculture we should have in America.

Until we bring those differences out in open, frank discussion, we will remain bogged down on farm policy progress.

The real issue is the right to economic survival of America's traditional family farm pattern of agriculture—the most efficient the world has ever known and a solid bulwark of our free enterprise democracy.

America's independently operated free enterprise agriculture—the owner-operated family farm where managerial skills, capital investment, and actual labor are all combined; where ownership carries with it an inherent pride in the care and conservation of our productive resources; where human and social values of rural community life are not subjected to mere material values of a soulless corporation—this is what is at stake.

We are being led down a path that threatens this fundamental, basic American pattern with extinction. This is being done (overtly, not directly)—and certainly with no sanction from the Congress of the United States.

EMPHASIS ON BIGNESS

We hear less and less concern about perpetuating our family farming pattern, and more and more about giving way to the pressures of mass operations. We hear more emphasis on mere bigness and so-called efficiency, and less on human values and social problems of rural living.

This trend is deeply disturbing to me.

I am against collectivization of our agriculture—either by the Soviet pattern or by the corporate pattern of absentee ownership.

I seriously challenge the current school of thought that "bigness" may be the answer to farm prosperity. Currently the efficency factor of mass corporate farming activities is essentially cheap labor—just as it once was in the sweatshops of our industries.

I cannot conceive of a permanent, peasant-class "cheap labor" force as the source of our Nation's food supply, and the custodian of our productive resources. It would be a dangerous backward step in America's social progress, inviting the seed of social unrest and revolt. At the very minimum, it would create the necessity of farm workers organizing to bargain collectively for decent pay, eventually wiping out the supposed efficiency factor of cheap labor and at the same time endangering the assured flow of food abundance we Americans now take for granted.

No one can convince me, for example, that the Nation's consumers can ever be as well protected by having productive resources concentrated in the hands of a few giant corporations as they are today with the widely dispersed ownership of the source of our food and fiber supplies.

No one can convince me, either, that we are really more efficient if we separate capital, managerial skills, and labor into three classes in agriculture, instead of having them all combined in the family farm unit.

None of us wants to perpetuate inefficiency, or tie farmers to units too small to be economically practical. Yet, there is a distinct line between improving the efficiency of family farmers and increasing their opportunities to make family farming profitable, on the one hand, and abandoning the family operated farm concept to be replaced by large-scale industrialized farming operations with absentee-ownership and hired labor on the other.

POLICY CONCERNS CONSUMERS, TOO

Serious questions of public policy are involved if we are to cross that line. It isn't just the farmer who should be concerned. It is every consumer in America. It is every believer in real competitive free enterprise. It is every American wanting to see democracy succeed in the world.

The entire Nation needs to realize that farm policies must be geared to desirable social objectives as well as desirable economic objectives.

And foremost among such social objectives there should always remain the encouragement and preservation of our traditional rural pattern of the family farm type of agriculture that has long been accepted as essential to a strong democracy.

It is easy to understand why.

A large number of prospering farm families on family farms is a strong balancing force within the Nation against the political and social extremes of economic class warfare.

On the family farm, the economic functions of capital ownership, of arranging for financial needs, of managing the productive enterprises, and of farm labor are all performed by the farm operator and his family, thus eliminating controversy and tension along economic lines.

BUILDS GOOD ATTITUDES

Our family farm pattern of agriculture has been the basis of all our agricultural progress and good community life. It builds in farm family members attitudes of self-reliance, social responsibility, individual initiative, tolerance, and self-government—the attitudes that make for a sound and progressive democracy.

The family farm builds strong families, and the family farm builds strong social communities with good schools and active churches.

There is no need for either corporatizing agriculture, or collectivizing it. Family farmers themselves, in the true democratic tradition of learning to work together, have developed their own extension of the free enterprise system in farmer-owned, farmer-controlled cooperative marketing and supply enterprises—as a legitimate and desirable means of preserving individuality and yet finding a way to compete in an economy of bigness.

Farm cooperatives are the free world's answer to collective agriculture of the Soviet Union—and a far more successful answer. They are a powerful example to the world of how freemen, working together, can develop democratic institutions that far surpass Government-dominated collectivization for efficiency. Farm co-ops must be recognized as a vital part of our free enterprise system, and must be zealously guarded and protected along with the family farm system which they serve so effectively.

The family farm system is the right pattern for our democracy. It is right for the farmers, and to the best interest of the rest of our country. But even more, it offers a ray of hope to much of the rest of the world.

As seriously concerned as we are with our domestic problems in agriculture, the gravest problem of our time is war or peace in the world. Everything we as a Nation do, or fail to do, has an influence on the world's destiny for generations to come—perhaps even on our own survival.

AGRICULTURE'S ROLE IMPORTANT

Too little attention is given by our foreign policy experts to the real role of agriculture in creating a just and lasting peace.

At long last, we are making some progress in winning recognition of how powerful a

force for peace and freedom our undistributed abundance of food and fiber can be, when converted into economic development and elimination of hunger, disease, and misery in vast areas of the world.

Yet an even more significant contribution is being ignored.

America's foreign policy needs a dramatic symbol—a symbol of hope to newly created natons, a symbol of democracy's effective answer to Soviet propaganda.

What more dramatic symbol, what more effective ray of hope, can we offer the uncommitted nations of the world than the example of America's free enterprise family farming system, where farmers own their own land—and have a decent opportunity to share equitably in returns from the produce of their soil and their labor?

That is the story the world needs to hear.

FREEMEN WANT LAND

The dream and desire of freemen everywhere is to own land. Unrest in many parts of the world today results from insecure and inequitable farmland tenure, creating hopelessness among those who work the soil, and making them easy prey for communism's glittering false lures and promises.

The restless peasants of the world can find the ray of hope they seek in America's pattern of family farming and family farm ownership that enables the Nation's farmers to farm efficiently, conserve soil and water resources, provide adequately for their family needs, and participate fully in civic, community, and public interests.

Can we risk destroying that ray of hope ourselves?

Can we risk destroying the very symbol that proves democracy's superiority over communism?

With all of its trips into outer space, the Soviet Union cannot equal our achievements in agriculture. And it can offer no fulfillment to the dream of peasants elsewhere in the world of eventually owning a farm of their own.

How we take care of our own farmers, and our own system of farming, can have a profound effect on the struggle now underway in the world.

Other areas of the world are revolting against exploitation by bigness, and insisting upon opportunity for individual independence and dignity.

We have in our grasp the opportunity to lead them by our example, to prove democracy's effectiveness in offering equal opportunity for all.

I have not made specific suggestions here as to the means to correct our farm plight. The specifics are the easiest part of it, if we can create a real understanding in the Nation as to the fundamental objectives we seek to achieve. These objectives are fourfold:

OBJECTIVES LISTED

1. To assure the American people continued abundance of food and fiber.

2. To offer America's farmers an opportunity of achieving economic equality with citizens in other walks of life.

3. To preserve and protect America's traditional pattern of family-owned, family-operated farms as the type of agriculture best adapted to our democratic way of life, and to encourage farm cooperatives as a democratic extension of the free enterprise system to serve farm families.

4. To make greater use of America's undistributed abundance as a force for peace and freedom in a world of the hungry, and to hold forth the American pattern of family-owned and family-operated farms as a ray of hope to the millions of struggling peasants in underdeveloped areas of the world.

Once we make clear that national farm policy must be shaped to serve these objectives, the way will be clear for once again giving America the kind of farm programs that are needed.

Problems of the Textile Industry

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of August 22, 1960:

OFF THE RECORD

Retrospect: Several years ago, when the battle against Japanese textile imports was at its height, a sincere citizen of this community wrote the editor of this newspaper asking why, in a free America, people should not have the right to choose between a 98-cent Japanese shirt and a $2.98 American shirt.

If the Japs could offer us a quality shirt at one-third the cost of the domestic product, he said, then it was up to the American industry to match that price or suffer the consequences of failing to meet the competition.

The answer to the letter was contained in some hard facts on Japanese and American production costs. Jap wages at 14 cents an hour compared with American wages of $1.40 an hour and the ability of Japanese manufacturers to purchase American-grown cotton at 8 cents a pound cheaper than American mills, placed the American mills in an impossible competitive position. They could not remain in business without some form of tariff and quota protection.

As a tribute to the logic of this situation, the Japs did patch up a voluntary quota system which released American mills temporarily from bankruptcy. But it was a temporary release and one that rested on the commercial instincts of a predatory foreign industry. The Japs were wise enough to realize that the American market could not be swallowed in a single gulp.

The answer: We are afraid we now have a different answer to the query in our friend's letter. Americans are going to have the unlimited privilege of buying 98-cent Japanese, Hong Kong, and other foreign-made shirts.

In September in Geneva the member nations of the General Agreement on Tariffs and Trade are going to meet in plenary session to work out reductions in international tariff restrictions. The American delegates are already committeed to concessions in cotton textiles.

For the majority of America this may represent a real break. Shirts at 98 cents, sheets at $2 a pair, dresses at $1.98 and cloth at 50 cents a yard are real bargains.

But what of an industry second only to steel in its importance to the defense of the United States? That is how the Pastore committee characterized the cotton textile industry in its report last year to the U.S. Senate.

The cotton textile industry is going to fold. Our friend is going to have a chance to buy 98-cent shirts. But he lives in a textile-supported community. When the mills shut down, where is he going to get the 98 cents to pay for his shirt?

What is important? As against security for the United States or peace for the world, let us concede that the American textile industry is as nothing. If the decision to sacrifice the textile industry had come about as a long-range, well-considered program, we would not be happy. But we hope that we could put national considerations above personal welfare.

Actually, no such serious consideration of long-range effect has ever been included in bureaucratic planning. Cotton mills represented the quickest way to give employment to the most people in the underdeveloped nations. So the foreign aid program financed cotton mills.

It was inevitable that the output of these cotton mills would exceed the demand of native populations and that the surplus production would find its way into international trade. This was not included in the thinking of our planners.

We now have a worldwide surplus of cotton textiles. Native populations cannot afford and have no desire for 98-cent shirts. But the United States is a ready, profitable market for cheap cotton products. In fact, with its high standard of living, it is the greatest market in the world.

Tapping this market has become the most important objective in international trade. Every member nation of the GATT concentrates on securing concessions from the United States. We are accused of being a high-tariff nation; we are charged with being unfair to the have-not nations.

Nothing could be further from the truth. Of 36 major trading nations, the United States ranks eighth from the bottom in average import duties. In the percent of money collected from imports, the figure is only 5 percent of declared values. For most nations this figure is upward of 9 percent, with two major European industrial nations ranging as high as 25 percent.

What is important? Up to now the United States has been more than generous to the rest of the world in reestablishing its industrial production, in providing a market for its surpluses. Britain, France, West Germany, Japan, and a host of others are now prosperous.

But their prosperity, their continued existence, depends on the strength of the United States, economically and militarily. Should the United States fade, they would be left naked in their opposition to Communist aggression. Diplomatically, they recognize this. Commercially, the United States is their patsy.

It is important that we reassess our position in world affairs and act our age and weight. It is no longer necessary that we give any concession to any nation. Maintaining the United States in full military and economic strength is the most important objective of the free world. Nothing else counts.

Why textiles? Textiles are clothing. In the basic needs of mankind, food, shelter and clothing are always listed. The production of textiles is one of the necessary activities of mankind. To surrender this to foreign mills, to rely on importation for our needs, would amount to a return to dependence on the favor of kings for our survival.

You say this cannot happen? Let's go back to the 98-cent shirt. No American mill can produce the cloth for a 98-cent shirt. If you buy one, you have saved yourself $2. But you have deducted $2 from the sales of an American mill, an American shirt manufacturer and the store that sold it to you.

You have saved yourself $2. But you have given approval to 14 cents an hour for a Japanese textile employee. You have denied a fair wage to an American textile employee, an American shirtmaker and a fair profit to an American store.

A little of this doesn't hurt anybody. But a lot of it closes mills, discharges textile employees and bankrupts an industry. This is the result our planners have never considered.

The American textile industry is ninth in the United States in economic importance. As an employer of American citizens, it is one of the largest in the Nation. What affects this industry is bound to affect the prosperity of the United States.

Yet, our planners are willing to play ducks and drakes with this most important segment of American prosperity because some

muddleheaded idiot decided a few years back that the American textile industry could be expended in the struggle for world friendship.

Water Resources Developments: Key to Tomorrow

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. MOSS. Mr. President, on August 22, the Senator from Wyoming [Mr. McGEE] delivered an address in Boulder, Colo., at the Western Resources Conference, entitled "Water Resources Developments: Key to Tomorrow."

It is an excellent address which contains a great deal of information in terms that can be understood by the public. The Senator from Wyoming [Mr. McGEE] has done a great service to the Nation in pointing his finger to a very serious subject.

Because of its timeliness and its importance, I believe it should be read by all Members of Congress. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WATER RESOURCES DEVELOPMENTS: KEY TO TOMORROW

For a rank outsider to venture into the realm of water resource development in the presence of those who have dedicated a lifetime to mastering its problems is brazenly presumptuous. Yet, the remarks to follow are undertaken in precisely such a context.

In the 1st session of the 86th Congress the Select Committee on National Water Resources of the U.S. Senate was created. Under the skillful and energetic leadership of its chairman, Senator ROBERT S. KERR, of Oklahoma, and with the participation of all of its 17 members, the committee has striven to integrate the large volume of materials assembled in earlier studies; to update the most critical of the information; and is now preparing to translate the whole into meaningful programs for action. More than any other single force, it has been my membership on that committee which evokes the comments which follow. In no sense, however, should these remarks be attributed to that group. I, alone, bear responsibility for what I am about to say.

This intrusion into your affairs by a "Johnny-come-lately" may carry more significance than one might first think. If, as I believe it does, it symbolizes a new and spreading concern among plain citizens about our national water needs, then we may, indeed, be on the verge of a major breakthrough of one of the chief barriers to an adequate water resources program—that of massive public indifference.

In a much larger measure than some in the water fraternity are wont to admit, the problem is less and less one of definition and more and more one of action.

For all too long water experts, resource engineers, and assorted technicians have spent a disproportionate amount of time talking to each other, usually in a professional jargon unintelligible to the rest of us. Along the way, there has been altogether too little effective communication with the man on the street. What use, one is entitled to ask, is there in calculating the coefficient of N in an unlined channel unless a channel gets built in the first place. In my judgment the time has come when you should talk less with your colleagues and more with your neighbors.

Without popular understanding of both the magnitude and the urgency of the problem of adequate water resources; without a public disposition to accept—or even demand—greater tax expenditures for water, there can be little hope for major strides forward. Without it, moreover, professional and scientific advances in the field remain largely academic exercises, or possibly suffer a worse fate—that of being drowned in a sea of public apathy.

Since most everything these days seems to begin and end with money, this discussion might just as well start there, too.

The Department of Commerce has come up with an estimate that between now and 1980 we are going to have to invest through all government levels, from Federal to local, and through private instrumentalities well in excess of $200 billion in the development of our water resources. This figure is based upon a most conservative estimate, which may in fact be on the low side, that our gross national product will increase only 2.7 percent per year. A more rapid growth rate—say of 4 or 5 percent—would inescapably mean proportionate increases in water demands.

To put it differently, the per capita consumption of water is expected to double—or according to some projections—even to quadruple in the next quarter century. At present rates our population will nearly double by the year 2000. Simple arithmetic calculation suggests the magnitude of the new demands for water which lie immediately ahead of us.

To see what will be involved in this effort, one has only to examine some of the projections which have been charted for us by agencies which deal with water.

From the Public Health Service we have learned that between now and 1965—scarcely 5 years hence—we shall need to spend over a billion dollars a year on a local, State, and Federal basis just to catch up with the sewage and waste treatment needs which will exist by that date.

The Corps of Engineers warns that the total foreseeable flood control program will cost another $10 billion. This program will protect the lives and property of a substantial portion of our population.

Within the Department of Agriculture there are studies which suggest that to protect the vital watersheds from which our streams and rivers flow is going to cost over $4½ billion by 1980 and is going to involve the treatment of almost a quarter billion acres.

The Federal Power Commission foresees that by 1980 we will need almost four times the installed generating capacity we now have.

In the vital and rapidly developing field of recreation needs, the National Park Service has proposed a policy which envisages 8 billion annual visitor days of use of National, State, county, and municipal parks by 1980. By that time also there will be a total of 70 million hunters and fishermen in the fields, according to the Fish and Wildlife Service.

Resources for the future predicts that by 1980 in our own area we shall need 14.5 million acre-feet of additional storage capacity to develop the remaining water in the Colorado River system. At least this much storage is essential if we are to meet the anticipated need for power, irrigation, recreation, domestic, industrial, and other uses. The majority in Congress has consistently supported appropriations for the Colorado River storage project and has advanced its construction more rapidly than proposed by the administration, and, indeed, against strong administration opposition. There is much to be done if we are to meet the predicted need, and recognizing this, Congress has initiated six of the participating units of the project in the last four annual appropriations; three of them by overriding a Presidential veto.

One of the most damaging features added to the original bill to authorize the Colorado River storage project by the administration was the drastic change in the basis for determining the interest rate on power and municipal water construction repayments. The interest rate formula was changed from "the average rate paid by the United States on its long-term loans" to "average yield to maturity." This would result in substantially higher interest rates that would limit the financial feasibility of the project and deprive water users of many millions of dollars of financial asistance to irrigation projects from surplus power revenues. This crippling requirement has finally been removed by Senator ANDERSON'S majority-backed amendments to Public Law 86-529. We can ill afford a policy which prefers to add additional millions of dollars to interest charges at the expense of desperately needed water resource developments.

The predicted additional storage requirement in the upper Missouri River system to develop the remaining water supply by 1980 is 30 million acre-feet, and the requirements for other systems are correspondingly large.

What a delight it would be to be able to report to you that new technological breakthroughs may enable us to meet expected water needs for much less money than is now estimated. How gratifying were I able to report that by waving the wand of modern science we would solve our water problems. But, of course, I cannot do so. While Federal agencies have undertaken research programs in the deveolpment of these technical processes which may make much more water available for use or reuse, to date, progress has been painfully slow.

We are indebted again to Senator ANDERSON for his vigorous leadership in the development of research in the conversion of saline water. Thanks to his bill, passed in 1958, the administration is now finally getting around to setting up five experimental stations to test various methods for converting both sea water and brackish groundwater. There are also programs underway for the development of chemical films, such as hexadecanol, to prevent evaporation of water stored in open reservoirs, to test the feasibility of storing water in relatively impervious underground aquifers, to change the nature of plant cover for arid areas so that more water will be retained in the soil and less will be consumed through evapotranspiration and to salvage water which has hitherto been regarded as waste.

These programs do hold a great deal of promise, but they should be crash programs and not just designed to find the answers "someday." Suddenly—now in 1960—some among us have begun to grasp a sense of urgency with regard to water. Many millions more must come to the same realization before we can hope to stir public demands to meet our needs. Only in this way can the popular will become disposed to spend more money on research.

As I said, these programs are promising. But even if they are brought to fulfillment in time, they will not do the whole job. Even if they are put on a crash basis, the lag in time between the ideas which are the most concrete results of this research and their realization in efficient production inevitably lengthens as the technology involved becomes more complex.

After all of these expensive and challenging prognostications, you may be wondering

whether a sudden act of magic will pull some sort of rabbit out of a hat in the form of an easy way out. Unfortunately, there is no simple way out, but there is reason for hope.

With imagination, resourcefulness, and real tenacity of purpose our chairman, Senator ROBERT KERR, of Oklahoma, has channeled the select committee's intent into a program which has enabled us to hold hearings in every section of the Nation and in almost half the States. We have consulted with technical experts on every phase of this vastly complicated problem area; we have asked the appropriate Federal agencies for their best estimates not only as to the size and nature of the problems, but as the figures I have cited make obvious, for their best estimates of the programs we need to solve the problems.

A competent staff has toiled diligently with the tremendous volume of material which we have gathered together. All of these hearings, studies, and researches which the committee has undertaken help to mark out the road ahead.

Senate Resolution 48, introduced by Senators MURRAY and MANSFIELD and unanimously endorsed by the Conference of Western Democratic Senators, created for us the obligation to find out "the extent to which water resources activities in the United States are related to the national interest."

To serve that national interest properly in the coming years it is probable that we shall need even more than the $40 billion per year we now spend on military preparation if we are going to prevent the balance of power in the world from shifting irrevocably against us. In addition, we are going to have to develop more adequate systems of education, economic distribution, and technology here at home. In order to maintain our position of leadership in the free world, we cannot expect to rely upon military expenditures alone. We must also give economic, technical, and moral support to those nations and peoples which have recently grown to nationhood and which look to us for leadership because our Revolution has produced durable democratic institutions.

The question which is obviously raised by the size of the water resources programs we are going to have to undertake is whether or not we can do it and still meet all of these other goals which as Americans we have set for ourselves. This is a question for the members of our committee to answer in the immediate sense, but ultimately it is a question which must be answered by every American. The only answer which the American people can tolerate is that we must do it.

We have learned that such seemingly disparate problems as the development of the Central Valley project in California and the eradication of the pollution which, carried to the ocean by the rivers of Maine, threatens the future of the commercial fishing industry of that State are related. They are related because they are all involved in the national interest.

To bring it close to home, I should like to read to you an excerpt from a letter written to me as a member of the committee and included in the record of the committee hearing held in my hometown of Laramie last October. It is from the county assessor of Carbon County, Wyo. In it he speaks of the need for increased supply of irrigation water for the fertile but arid land within his county, and he says:

"In viewing the economic aspects of the present situation, we find that 6.8 percent of the land on the tax rolls of Carbon County pays 41.4 percent of the county tax. If it were possible to increase the irrigated acreage of the county, it is apparent that our revenes would increase materially, our towns would once again begin to prosper, new people would settle here, creating new wealth, and it would be an inducement for our children to stay here instead of moving away to places where opportunities are greater."

It is the people who are on the tax rolls in Carbon County, Wyo., as well as in each one of the other counties throughout the Nation who are going to have to pay the taxes which we use to accomplish our national plans and achieve our national goals.

The individual water resources development projects which are needed to increase the incomes of the residents of Carbon County, Wyo., will not only make it possible for Carbon County to meet its public goals, but, multiplied throughout the Nation, they will also make it possible for the United Sates to achieve its goals. The connection between the development of our water resources and the national interest is that only if we develop our water resources can we achieve these broad and inspiring objectives. Only in this way can we expand and otherwise "beef up" our national economic capabilities.

Up to this point in these remarks, I have dealt primarily with the enormity of our task. The Senate Select Committee on National Water Resources is asked to do more, however, than to state the problem. There have been many reports on the state of the Nation's water resource development in the past. In most cases they have delineated the problem adequately. Senate Resolution 48, however, requires us also in transmitting the results of the study it authorizes, to make "such recommendations as at that time may be found desirable."

Nineteen hundred and eighty is only 20 short years away. As a Nation, we have fritted away the time we once had to do this job in a leisurely manner. Having defined the problem, we are now required to tackle its solution. This is where the West comes in. Not only is our section of the country one of the greatest remaining repositories in the world of mineral wealth, but it is also the one major section of the United States which has not yet fulfilled the promise which these riches imply.

One of the most precious of our unexploited nonmineral treasures is space. We have room for the burgeoning population of America and if we develop our water resources so that water shortages do not put a ceiling upon the extent to which our population can increase, we can support this population at a desirable standard of living. The programs which I have already described are national in scope, but the West is going to be called upon to do more than its share in carrying them out, and the West is ready.

Even with transpiration, evaporation, consumption, and seepage into impervious acquifers, three-fourths of the water of our western rivers still discharges into the ocean. This means that the West has only begun to use its water. The Bureau of Reclamation, in its report to the committee, states, "The amount of physically feasible water resource development remaining in the 17 reclamation States is enormous."

Their report summarizes 1,085 reclamation projects, both public and private, upon which construction has not yet been undertaken.

The Bureau estimates that 75 percent of the Federal projects and 90 percent of the non-Federal projects listed can be developed by the year 2000. Such a program would provide for the irrigation of 17 million acres of new land equivalent. It would pour over 4 million kilowatts of hydropower into our transmission systems. It would cost $22 billion.

At this point someone not acquainted with our western economy and with the vital relationship of the reclamation program to the national interest might ask, "In light of present crop surpluses, is it all worth it?" The answer is that it is not only worth it, but that the Department of Agriculture has warned us in its report to the committee that we may need an increase of as much as 34 million acres of irrigated land on a nationwide basis by the year 2000 to feed our population. The Department makes it clear that whatever the level of present crop surpluses, the need for the products of agriculture will increase in the future.

It is estimated that the domestic market for farm products by the year 2000 will range between 85 percent and 200 percent higher than it was in 1954. Not only is our population going to increase but our consumption per person of meats, fruits, and vegetables is going to increase. Millions of acres of currently productive nonirrigated land are going to be converted to other uses by the year 2000 as the result of population growth.

Obviously, it would not be in the country's interest to steal these new millions of needed acres from existing forest lands. Reclaimed land is the answer. The West is ready to do its share, but we cannot make the necessary progress if our vision of tomorrow is blurred by a myopic fixation upon today's surpluses.

A Bureau of Reclamation report describes a program in which the West can provide food and fiber and otherwise absorb 25 million more people. In addition, it would enable us to build a quarter-million new full-time family-size farm units and add 800,000 persons to the farm population. Additionally, this new West could support an increase in local nonfarm population of 2.4 million people. In the process there would be need for over 40,000 new local retail enterprises which would do more than $4 billion in retail trade each year. Predictable growth of this magnitude in our western economy would add almost $1 billion to the Federal Treasury each year.

I want to call particular attention to the last of these points because it reveals dramatically the relationship to the national interest which I have already discussed. This is the type of investment in the Nation's economic future which some habitually charge off as free spending. Evidently they do not realize, either, that these investments are repaid to the Government, or that they add many times their own sum to the gross national product.

It is diffcult at this time to foresee the exact nature of the Senate Select Committee on National Water Resources' report to Congress. It is already obvious, however, that the committee and the Nation are going to have to muster the courage to ask the right questions and to face the consequences of honest answers and unpopular solutions. It is not simply a matter of spending a great deal more money. While finding more than $200 billion for water resource development is a staggering prospect, it would be a delusion to think that we can somehow buy our way out of our predicament. Much more than money is demanded of us.

We have conflicts of long standing which are now hindering the progress of vital water resources development work. For example, what shall be done about the question of Federal-State water rights? The first Iowa and Pelton Dam decisions have intensified this conflict, rather than resolving it. Unless one understands its true nature, and thus how serious it is, one cannot comprehend the extent to which it diverts the energies of officials at all levels of government as well as those of private individuals. The overall result is a tragic sapping of the thrust for progress at the very point in our history when progress is absolutely essential to the national interest. We must now face the fact that until this area of controversy and uncertainty is resolved, it will continue to erode our water resource capabilities.

This conflict must be resolved in order to unleash our full energies for progress in water resource development.

A second question is: How many agencies of what kind are needed to supply the maximum development with the minimum waste of the Nation's water resource potential?

At present, 25 separate Federal centers alone possess jurisdiction over some phase of water development. Would 125 do it better? Or would just one be more effective? The answer will not be easy to come by. Deep-vested interests, bureaucratic empires staked out earlier in our history, and petty jealousies and rivalries mitigate against a clearcut decision. Yet in some way, a wise decision must be reached. This problem can no longer be swept under the rug.

Perhaps the moment is at hand to apply to our water agencies the same harsh demands made of our defense agencies. In the late forties, after they had existed separately for more than a century and a half, the Armed Forces were finally coordinated by act of Congress. It was not an easy job, and I would be the last to claim that we now have entirely effective coordination in our military effort. Yet, most citizens have come to accept the central judgment that national defense should be first in priority, rather than the perpetuation of historic rivalries for tradition's sake.

So it might be with water. If, despite their advantages, there is reason to believe that our multiple efforts and dispersed responsibilities for water development slow down and/or waste too much of our water potential, then what was done for the armed services could also be done, if careful study disclosed it to be good public policy, for our water agencies.

Whatever may be done about combining our water agencies, there is no doubt that we now need greater coordination of resources and conservation efforts within the administration and Congress. Led by Senator MURRAY, of Montana, many of us sponsored a bill (S. 2549) during the second session of the 86th Congress which was designed to supply this coordination by creating a joint committee in Congress and a responsible agency in the Executive Office of the President. This seems to many of us to be a good approach. But the question is not whether this approach is right or whether there is a better one; it is whether we are going to make an approach to these problems and attempt to solve them now or to fritter away once again the chance to take decisive measures.

Perhaps the most acute problem which we must face with respect to water resources, whether we have one Federal agency or many, whether we have a joint committee in Congress or not, and whether we settle the Federal-State water rights problem or not, is that of water priorities. How we shall allocate our water resources among the various geographic and functional sectors of our economy? If we do not utilize fully the water-saving techniques of which we are already aware and if we do not start now to develop our water resources, there are going to be greater shortages and the need for water will rise more sharply than our capacity to furnish it.

This question is a tough one, too. Unless present trends toward greater water shortages are reserved, we in the West, for example, may someday soon have to determine whether we can spare water for both cows and people. We may be approaching the point in parts of the West where a gallon of water will be worth more than a gallon of oil. Last summer the State engineer in New Mexico was forced to limit the use of irrigation water to protect municipal supplies because the San Juan-Chama project—already authorized twice by Congress—hadn't been constructed.

Similar shortages are threatening irrigators on the east slope in Colorado. There, also, projects have been authorized by Congress but remain unconstructed.

In 1954 38 percent of our cities all over the country with a population of more than 100,000 had to ration water. Such shortages, always particularly acute in the West, weaken and erode the capacity of our western cities to attract new citizens, and lessen the willingness of new industries to locate here.

Not only do these shortages put an artificially low ceiling on our growth, but they also cause industry and population to pile up in the already populous areas which, for the moment, have enough water. Thus, the vulnerability of our industry to military attack may be increased, social and economic problems affecting proper community growth arise, and all relate the problem of water location and use, once again, back to the national interest.

In the future we must apply a new standard when we are trying to decide whether any particular water development project should be undertaken. This new standard must, in my judgment, take into account the effect of the project on our national rate of growth. It should also measure the results of the project as a generator of employment as well as its effects on the distribution of income among the geographic and functional sectors of our economy. In addition, the revenue potential for all levels of Government—Federal, State, and local—should be weighed in the balance. In short, it must relate the particular water resources development project to our national destiny in a much more sophisticated and relevant way than has any conceptual device we have used up until now. Such a standard will reflect the relationship of the needs of individual people throughout the Nation to the national interest. It will reveal to us in each instance the connection between the fulfilling of these needs by the individual water project and the fulfilling of our national aspirations.

This, then, is the problem of water as it appears to me. Forgive me for having taken the question of water out of the professional arena and for having tried to put it in the public market place. Stripped bare of jargon, the facts are tough—sometimes shocking—and, in a few instances, even frightening. They will be ignored or soft-pedaled only at the Nation's peril. If not ignored or soft-pedaled, they still will pose a difficult future because they lay upon the public conscience weighty problems, the solution to which will cost much money and even more hard work. I am confident it can be done; I know it must be done.

Military Cemeteries Overseas—Part 1

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. DULSKI. Mr. Speaker, as a member of the Committee on Veterans' Affairs, I represented our committee at the dedication of the American military cemeteries and memorials overseas during the recent recess of Congress.

Upon my arrival in France, I was immediately escorted to the dedication of the Henri-Chapelle Cemetery and Memorial in Belgium. It is located about 2 miles northwest of the village of Henri-Chapelle which is on the main highway from Liege. This cemetery covers 57 acres and 7,989 of our war dead are buried here, most of whom gave their lives during the advance of the U.S. Armed Forces in Germany. The headstones are arranged in gentle arcs sweeping across a broad green lawn which slopes downhill. To the east is the long colonnade which, with the chapel and museum room, form the memorial overlooking the burial area. The chapel is simply but richly ornamented. In the museum are two maps of the military operations, carved on black granite with inscriptions recalling the achievements of our Armed Forces. On pylons of the colonnade are inscribed the names of 450 of the missing who gave their lives in the service of their country. Also carved thereon are the seals of our States and territories.

The dedication address was delivered by Capt. William Hallam Tuck, U.S. Naval Reserve. Others addressing the gathering were the Honorable William A. M. Burden, American Ambassador to Belgium; the Honorable John J. McCloy, representing the President of the United States; and the Honorable Albert Lilar, Vice Premier of Belgium.

The band played the national anthem of Belgium, "La Brabançonne," which was followed by our anthem, "The Star-Spangled Banner."

Since I was unable to be present at the dedication ceremonies held on July 4 at the military cemeteries in Luxembourg and Margraten, in the Netherlands, I requested permission to visit these two cemeteries which was granted by the Chairman of the American Battle Monuments Commission, Gen. Jacob L. Devers.

The Luxembourg Cemetery lies within the city limits of Luxembourg. It is situated in a beautifully wooded area, 50½ acres in extent. Not far from the entrance is a white stone chapel, set on a wide circular platform surrounded by trees. It is embellished with sculpture in bronze and stone, a stained-glass window with American unit insignia, and a mosaic ceiling. Flanking the chapel at a lower level are two large stone pylons upon which are maps carved in various granites with inscriptions recalling the achievements of the American Armed Forces in this region. Inscribed thereon also are the names of 370 of the missing whose remains were never recovered or identified.

Sloping gently downhill from the memorial is the burial area, containing 5,076 of our military dead, many of whom gave their lives in the Battle of the Bulge and in the advance to the Rhine. The headstones follow along graceful curves; and trees, fountains, and beds of roses along the main paths add to the dignity of the ensemble.

My next visit was to the only American military cemetery in the Netherlands, which covers 65½ acres and lies in the village of Margraten. Its tall chapel tower can be seen from a considerable distance. Upon entering the cemetery, the visitor is led to the court of honor with its pool reflecting the tower. To the right and left, respectively, are the visitors' building and the museum which has three large engraved maps depicting the military operations of the American Armed Forces. Stretching

along each side of the court are two walls with the names of 1,722 of the missing who rest in unknown graves.

Beyond the chapel is the burial area, divided into 16 plots, for 8,301 of our military dead. The headstones are set in long graceful curves and a wide tree-flanked mall leads to the flagstaff which crowns the crest.

The light fixture in the chapel, the altar candelabra and the flower bowl were presented by the Netherlands Government and by the local provincial administration. During the dedication ceremony, Her Majesty, the Queen of the Netherlands, was presented. The following addressed the gathering: the Honorable Philip Young, American Ambassador to the Netherlands; the Honorable John J. McCloy, representing the President of the United States; His Excellency Ir. S. H. Visser, Netherlands Minister of Defense; and the Honorable Wilber M. Brucker, Secretary of the Army. After the Netherlands national anthem, "Het Wilhelmus," the band played the "Star Spangled Banner."

In the next issue of the RECORD, I will include the remainder of the military cemetery dedications I attended.

Automation Without Fear

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered at the Harvard Business School Conference on Automation, June 2, 1960, by the secretary of labor and industry of the Commonwealth of Pennsylvania, the Honorable William L. Batt, Jr., on the subject of "Automation Without Fear."

These remarks are an unusually able analysis of the problems of displacement of workers by technological change and of the steps which must be taken if we are to minimize the hardships and suffering which result.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

AUTOMATION WITHOUT FEAR
(Remarks of William L. Batt, Jr.)

Automation, like so many innovations in our society, is a mixed blessing. It protects jobs by making the companies that keep abreast of technical innovations more competitive. It also causes unemployment by replacing men by machines. We welcome it because we have been conditioned to welcome laborsaving devices, whether they promise added economies in production, or greater volume with lower unit cost, or simply less work for mother. Automation has been promoted in the United States perhaps more speedily than elsewhere in the world not only by aggressive managements, many of them forced to compete in increasingly competitive national and world markets, but also by aggressive unions which have steadily driven wage levels up through free collective bargaining and made the considerable capital required for laborsaving machinery well worth the investment.

Despite enormous such investment in recent years, much of our industrial plant is still obsolescent and must be replaced if our industries are to remain competitive and the jobs of their workers protected. Leaders of organized labor have generally recognized this, despite their quite understandable fears of the unemployment it causes. One steel union official recently, after pointing out to me that production in his plant was down to half its capacity and the labor force had gone on a 4-day week, expressed the ardent hope that that company would succeed in its current efforts to raise new capital to replace some of their old open hearth capacity with new oxygen converters, even if it cost jobs for his members.

Isn't this the problem we face? How do we assure to ourselves the blessings of automation, without exacting a prohibitive price in increased unemployment, the impact of which falls today almost entirely upon the displaced worker and his family?

After all, to the displaced worker, unemployment caused by automation is not unlike unemployment caused by a myriad of other causes, and it's often hard to differentiate, identify, and measure. The 20 percent unemployment in the southwestern bituminous coal mining section of Pennsylvania has been caused in large part by the dramatic automation in that industry as a whole. Four-hundred and forty-five million tons of coal were produced in 1937 with 492,000 employees, and 410 million tons in 1958 with 195,000 employees, only 8 percent less production with 60 percent less workers. But major contributing factors have been the loss of the railroad market to oil, the exhaustion of some deposits in this area, decreasing exports as world production and trade barriers have increased, and import competition from residual fuel oil from South America.

Nor is there much difference between the character of bituminous unemployment in southern Illinois and eastern Kentucky, or anthracite unemployment in eastern Pennsylvania, or textile unemployment in New England, or automobile unemployment in Michigan.

Just as there is not much difference in the character of unemployment, so there is not much difference in the cure. Whether it be New England or southern Illinois or upper Michigan or West Virginia, the areas have got to find a new economic base and set about attracting and developing the new industries needed to employ their workers. Aggressive Federal and State Government aid is essential if this problem is to be substantially solved in our lifetime.

What we need as a matter of top priority in the next administration is to undertake as a nation a three-point adjustment assistance program. Although they are listed consecutively, this implies no time priority. We can and should move on all three fronts at the same time.

First, strengthen our unemployment compensation and other social insurance programs so that the most pressing immediate financial needs of the displaced worker and his family are met;

Second, vastly supplement and strengthen our counseling, retraining, rehabilitation, job development, and placement resources so that he can be promptly retrained for and steered into a new job in a growth industry well matched to his aptitudes and interests; and

Third, and most important of all, see that our Federal Government effectively implements the Employment Act of 1946, not only as regards maximizing production and employment nationally, but also in areas and regions long plagued by chronic unemployment. The best social insurance system and retraining and placement resources are of little use unless there is a job at the end of the readjustment process.

1. We must have more adequate social insurance throughout the Nation, to provide an immediate source of financial support for the jobless worker and his family. Unemployment compensation only lasts for 26 weeks in most States. Chronic unemployment in areas like the anthracite section of Pennsylvania or the cutover areas of Michigan's Upper Peninsula may last for years. Even in the recession of 1958, much of our cyclical unemployment in the steel industry lasted from September 1957 until late fall of 1958, a far longer period than unemployment compensation is now designed to cover.

Unemployment compensation benefits are far below the levels contemplated when the act was passed. Originally conceived as replacing two-thirds of a worker's lost pay envelope, in most States it still falls short of replacing half of average earnings. Since there is no required standard nationally, benefit amounts and duration differ widely. Low-benefit States use their poor standards as an inducement to industry to favor their States for new plant location. Federal minimum standards along the lines proposed by Senator JOHN KENNEDY are long overdue.

Yet in pointing out the shortcomings of our unemployment insurance system, let none of us underestimate the unique role it already plays as our first line of defense against unemployment of whatever character—cyclical, chronic, seasonal, automation-caused, or merely frictional. It not only helps the displaced worker and his family meet their irreduceable minimum needs, but it helps support consumer purchasing power in the economy at exactly the places and times that economy is hit by reduced payrolls. Even conservative economists credit this program with being one of the most influential forces in reversing recent recessions. The National City Bank Newsletter and Harvard's late, great Sumner Slichter both agreed on this point in late 1958. In Pennsylvania alone, close to $400 million was paid in U.I. benefits in calendar 1958. For purposes of comparison, payrolls in steel, our largest industry, totaled $1.5 billion in the same year. The steel-union supplemental unemployment benefits plan certainly proved itself of immeasurable value in that recession too, not only to its workers, but as a considerable countercyclical influence in the National and State economies as well.

No matter how you improve unemployment insurance, however, it will still fall far short of meeting the needs of many unemployed in many national or local economic crises. While the suggestion has been made that unemployment insurance continues until a worker gets called back or gets another job, however long a period this might be, and this certainly has a great appeal from the worker's standpoint, it would be quite unmanageable from the Government's viewpoint and inequitable to the business taxpayer.

More feasible expedients are extending benefit duration in long national recessions by temporary unemployment compensation, extending benefits for the worker taking retraining for a new occupation, as proposed in the Douglas area redevelopment bill, reviving the food stamp plan so that our huge agricultural surpluses can be far more effectively used than they are today in feeding our own hungry people, and finally, improving public assistance by national participation and national standards.

Public assistance now has a connotation of the pauper's oath that degrades the recipient. In my State, a worker has to sign over his mortgage to the State to qualify. Seventeen States deny public assistance to families with one employable member, whether there are jobs available or not.

Residence requirements in 49 States ban many needy families. In 18 States, the father must desert his family for his children to qualify for aid to dependent children. Obviously, if public assistance is to do its part of the job of building a better minimum standard of decency under the families of our long-term unemployed, we need to take a good long look at it all across the Nation.

2. Social insurance by itself is obviously not enough. Unemployment compensation is designed primarily for the temporarily unemployed—the steelworker laid off because of lack of orders—as tens of thousands are laid off today—with the full expectation on their part and their employer's part that they'll be called back when business picks up.

It is of much more limited usefulness to the anthracite miner laid off for good, who never again will work at his trade. What he needs, like all the rest of us, is the self-respect that goes with a useful job. What can be done to help him help himself back into dues-paying membership in our reputedly affluent society? We can identify him the first time he appears in the unemployment compensation line and make sure he obtains the fullest benefit of our testing, counseling and job development resources in the employment service side of the same office. If retraining is needed in a new skill in order to land a new job, we can see he obtains such training while his benefits are still coming in to support his family.

True, substantial additions must be made to our State and national employment services in skilled personnel, in budget allowances for counseling and job development activities and in imaginative leadership. Likewise, our public school systems and vocational educators must take on their proper responsibility for equipping the unemployed with new skills in short supply occupations. We have some brilliant examples where this is being done—centers like the Williamsport Technical Institute who equip young and old from their town and from other towns throughout the country with saleable skills in jet engine repair, draughting, neon sign construction, welding, bricklaying, electrical wiring, offset printing and many others, placing 95 percent of their graduates even in national recession. Such facilities should be available to every one of our long-term unempolyed as well as to our young people graduating into job markets demanding progressively higher and higher skills.

Of almost equal value is adequate testing, counseling, job development and placement effort in cases where retraining is not required. In an experimental program in Philadelphia with unemployed older workers, we succeeded in placing 30 percent of 1,600 between 40 and 65 years of age, when we poured in this kind of intensive personal attention to each case. In our control group without this personalized attention and left to the vagaries of the job market in the recession year of 1958, only a fraction of 1 percent were placed, despite State legislation making discrimination against hiring older workers illegal.

We have noted with interest the work being undertaken in the steel and meatpacking industries to distribute the benefits of automation fairly between the workers, the stockholders and the public. How about the fellow who loses his job because of automation? Should he not be perhaps the first claimant on any benefits? Surely he is the one paying the highest price.

Clint Golden, of Steelworkers Union and Harvard Business School fame, suggested in a recent talk at Duquesne "creating a fund out of the savings from automation. This could be used for training men, more liberal severance pay and the transfer of workers to other companies."

I would like to see a pooling not only of financial resource, but also of knowledge of men, of skills and of the labor market, by management, labor and government, to make sure that those men who lose their jobs as the result of automation or any other reason get the full benefit of our society's resources for counseling, for retraining, for job development and for placement in a new occupation.

Progressive management must realize that the victims of automation must be helped to readjust if they expect to maintain the wide public and labor acceptance of technological innovation that they enjoy in this country today.

Adoption of an "every-man-for-himself" philosophy by management could lead to demands on legislative bodies to restrict the right of management to lay off workers, irrespective of decreased demand or increased automation. In Italy, such government-sponsored featherbedding is the law of the land.

3. But without a doubt, the most important single factor of this three-point adjustment assistance program is the achievement of substantially full employment, not only in the Nation as a whole, but also in areas and in population groups of long-term chronic unemployment.

Unemployment insurance is of limited duration, and so is a worker's morale. Long-continued enforced idleness exacts an immeasurable toll in a man's self-confidence and feeling of usefulness to society, to himself and to his family.

Nor is the most effective counseling, retraining and job development program of much use in a job-scarce economy. It makes no sense to train people for jobs that don't exist.

We can only solve our problems of unemployment in the context of an expanding full employment economy. Prof. John Dunlop of Harvard, in his provocative paper for the Senate Special Committee on Unemployment Problems, suggests this would mean 2 million unemployed or 3 percent of the labor force; 3 percent would represent a dramatic improvement over the 5 percent average unemployment of the last 6 years, but this is a goal well within the realm of possibility. The fears of automation we're concerned about today cannot be dispelled if we set our sights any lower or achieve any less.

Of course, overall statistics tend to obscure disproportionately high unemployment rates among special hard-to-place groups in our labor force, such as older workers, unskilled younger workers, minority groups and handicapped workers. National averages also gloss over much higher unemployment in areas of chronic long-term labor surpluses.

For instance, while we have unemployment today of only 5 percent nationally and 7 percent in my State of Pennsylvania, almost 20 percent of the labor force is idle in the Pottsville anthracite area, the Uniontown bituminous area, and 15 percent in the Altoona railroad area, in spite of heavy outmigration and intensive and outstandingly successful State-aided industrial development programs.

These situations are well known, as are those of the textile cities of New England, the automaking cities of Michigan, the coal towns of Kentucky, West Virginia, Ohio, Indiana, and Illinois. But in a dynamic economy like ours, who can foretell what industries will decline next, forcing wholesale readjustments by workers, communities and States now largely dependent upon them? What would happen to Wichita, East Hartford and Los Angeles if peace broke out, disarmament progressed from dream to reality, and we folded up our defense industries as we did in 1945?

It is my firm conviction that we cannot solve the unemployment problem in the United States and reach the targets Professor Dunlop has set until we face up to and solve this problem of chronic area unemployment. In November 1959, the total unemployed in the 172 distressed labor markets numbered 923,000. With but 13.7 percent of the civilian labor force, they accounted for 25.1 percent of the unemployed. The average rate of unemployment was 9.8 percent as compared with a national rate of 5.3 percent with rates of 20 percent and higher in some of the areas. If we had better statistics on duration of unemployment, we would see that a far higher proportion of the Nation's long-term chronic unemployment, by any standard our most critical kind, is centered in these same areas.

The techniques for solving area unemployment are well known. We have used them in foreign-aid programs since the days of President Truman's Marshall plan and point 4 program. They consist of a combination of technical assistance to regions and communities for economic planning, loans to industry for plant expansion, loans and grants to communities for utilities necessary for new industry, and training and subsistence for jobless workers to equip them with needed new skills. They have been embodied in the so-called area redevelopment bill introduced by Senators DOUGLAS, CLARK, KENNEDY, COOPER, and many others of both parties which has passed the Senate three times, the House twice, only to be vetoed by the President on two occasions.

This area redevelopment bill is based on extending and accelerating tried and proven principles of diversification of industry through attracting new growth industries into communities and areas to replace jobs lost in declining or migrating industries. The vast expansion of electronics in New England to partially replace the lost textile industry is a case in point.

In my State, hard-hit communities of 20,000 population have raised a million dollars and more to lay out planned industrial districts, construct 40,000 square foot industrial shell plants on speculation, and brought in branch plants of "bluechip" industries to help provide jobs for their unemployed. The State has supplemented their efforts with an aggressive industrial development program initiated by Gov. George M. Leader with strong utility, banking, railroad, and industrial development backing, and with $20 million in second-mortgage funds. This enables us to offer industry 100 percent financing for new plants and plant expansions. This program has been instrumental in Pennsylvania's attracting 84 new enterprises in the last 6 months of 1959—more than any other State in the Union.

But these new plants are not absorbing our labor surpluses fast enough. Continuing to subsidize this surplus unemployment is enormously costly—far more than the cost of helping finance new jobs in expanding industries. In the last 7 years, Gov. David L. Lawrence has recently estimated that unemployment insurance and public assistance for our surplus labor areas alone has cost us $440 million more than it would have, had we had full employment, an average of $63 million a year. We have found it is far more economical to invest in productive jobs than to subsidize idleness. You can understand Pennsylvania's interest in Federal area redevelopment legislation.

Both parties have endorsed the idea in their platforms. The differences between Congress and the President have been more of mechanics and of degree than of basic principles. It is my devout hope that such a program will be high on the agenda of the next President and the next Congress. Until we apply what we already know to the solution of long-term chronic unemployment, we will never reduce our national unemploy-

ment to the low levels achieved by Switzerland, Sweden, Great Britain, and other Western European nations we like to think are no smarter than we are.

On the whole, I am optimistic that the dislocations of unemployment caused by automation, just as those caused by unemployment from any other source, can be absorbed with a minimum of shock to our society. But we will have to invest some of the same kind of money we put into machinery, into people. And we must have national leadership with the will and imagination to do so.

Government's role may be viewed as a three-sided adjustment assistance program. First, greatly improved social insurance to build a floor of human decency beneath our unemployed workers and their families. Second, radically improved machinery of counseling, testing, retraining in short-supply skills, job development and placement, to assist our technologically unemployed to become self-supporting and self-respecting. And third, a far more effective national full employment policy, aimed not only at minimizing cyclical nationwide unemployment, but also at correcting chronic, long-term area and group unemployment.

Only if we achieve substantially full employment in our free society, once defined by Sir William Beveridge in his historic study of that name as an economy in which there are more jobs than men instead of more men than jobs, a society where people feel in demand and not in surplus, only then can we greet automation without fear.

Health Aid for the Elderly

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times, August 25, 1960:

HEALTH AID FOR THE ELDERLY

Few issues have aroused such prolonged and warm debate during this session of Congress as has the question of providing adequate financing for the medical needs of persons over 65. Among the various alternatives available we favored the principle of attaching to the social security system a mechanism for accomplishing this end. This principle the Senate has now rejected, and whatever plan emerges from conference with the House is bound to be less than adequate.

The arguments for the social security approach may be briefly summarized. It would avoid anything resembling a means test for eligibility, a kind of test we believe Americans find abhorrent. It could have taken effect nationally in short order because the apparatus required already exists in the existing administrative arrangements for social security measures. There is no objectionable element of compulsion involved because Americans already accept the principle of paying social security taxes, and the change involved would only be a slight increase in those taxes accompanied by corresponding benefits for those meeting eligibility requirements. And we believe there is no real element of socialism attached since hospitals, doctors, and others involved in giving medical care to beneficiaries would not be controlled by the State as they are where systems of socialized medicine exist.

By now the use of the social security system as the means by which our society attempts to provide a minimum cushion and protection for the elderly is a well-established part of our American tradition and practice. Its extension to medical care for this same group seems logical and beneficial. We hope and believe it will ultimately prevail.

The increased number of our people in the elderly population bracket and the steadily rising cost of medical care combine to present a problem that must for human reasons be solved, and before too much time has passed. The Congress will have to come to grips more realistically with this problem when it reconvenes in January after the political season.

The Rugged Individual and Government Aid

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Rugged Individual," which was published in the Rotary magazine.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RUGGED INDIVIDUAL

It seems a young man lived with his parents in a public housing development. He attended public school, rode the free school bus, and participated in the free lunch program. He entered the Army and upon discharge kept his national life insurance. He then enrolled in the State university, working part time in the State capital to supplement his GI check.

Upon graduation, he married a public health nurse, and bought a farm with an FHA loan and then obtained a Small Business Administration loan to go into business. A baby was born in the county hospital. He bought a ranch with the aid of a GI loan and obtained emergency feed from the Government.

Later he put part of his land in the soil bank and the payments helped pay off his debt. His parents lived comfortably on the ranch with their social security and old-age assistance checks. REA lines supplied electricity. The Government helped clear the land. The county agent showed him how to terrace it, then the Government paid part of the cost of a pond and stocked it with fish. The Government guaranteed him a sale for his farm products.

Books from the public library were delivered to his door. He banked money which a Government agency insured. His children grew up, entered public schools, ate free lunches, rode free buses, played in public parks, and swam in public pools. The man owned an automobile so he favored the Federal-aid highway program.

He signed a petition seeking Federal assistance in developing an industrial project to help the economy of his area. He was a leader in obtaining the new Federal building and a new post office and went to Washington with a group to ask Congress to build a great dam costing millions so that the area could get cheap electricity.

Then, one day, he wrote to his Congressman:

"I wish to protest excessive Government spending and high taxes. I believe in rugged individualism. I think people should stand on their own two feet without expecting Government handouts. I am opposed to all socialistic trends and I demand a return to the principles of our Constitution."

Let the Enemy Do His Own Work

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. WILSON. Mr. Speaker, with the Powers trial in Moscow a front-page story we must be careful at this time not to get hysterical about the U–2 program. It has been of invaluable assistance to our defense planners in providing much-needed information about the Soviets' aggressive intentions.

As one who has investigated the entire U–2 program, I can assure my colleagues that our country and its people should thank God for the foresight that brought about the U–2 reconnaissance flights. America is safer today and in the future because of this program.

Under unanimous consent I include as a portion of my remarks an outstanding column from the San Diego Union by one of the Union's most respected editors, Richard F. Pourade:

LET THE ENEMY DO HIS OWN WORK

(By Richard F. Pourade)

The liberals have fallen back in exhaustion after the excesses of deriding their own country over the U–2 spy incident, the summit conference failure, and the Communist-inspired riots in Japan. There hasn't been so much excitement since Alger Hiss.

A liberal crescendo can be set off by the merest of incidents, but the magnitude of the events of the past few weeks caused their usually well-synchronized proganda effort to get out of hand. Adlai Stevenson went so far as to shock many of his own supporters, and Senator JOHN KENNEDY was stirred to suggest President Eisenhower should have apologized to Khrushchev.

In all fairness it must be said that there was general restraint in legislative halls. Most Senators and Congressmen realized the terrible implications of careless words at such a delicate time. The country came first.

From where, then, came the barrage that swept the country, that caused doubt and confusion, that turned one citizen against another in angry debate, and for a time left the country appearing divided and uncertain before the world?

The United States is a country of almost overwhelming communications. Thousands, even millions of words pour down upon the average citizen. The very volume of information and the competitive speed with which it is disseminated makes selectivity and appraisal—and caution—difficult but vitally necessary.

While most newspapers in the last few decades generally were driving toward objectivity in the news, there was a paralleling development of comment and interpretation. The newspaper columnist and then the radio and TV commentators largely took over from

where the old-style personalized journalism left off.

This has been an attractive field for the articulate idealist, the liberal, the reformer and even the radical, for all those who would set the world straight every day.

Separate from the responsibility of decision or action on their many conclusions, they have been able to roam far and wide. Gradually many have drifted into partisanship and crusading.

In short, many have become advocates. It is not a question of direct misrepresentation or deceit. It is largely a question of emphasis and premise. If you begin with the assumption that the administration by its very political position is handling things wrong, selected facts can be assembled to indicate you are right.

If, for example, an Adlai Stevenson, a Walter Lippmann or an Edward R. Morrow says the United States has been humiliated by being caught spying, this is in the concept of their beliefs of obvious administration weaknesses. This statement, or suggestion, can quickly pass into the public realm as an accepted assumption, and then become a fact, by mere repetition.

The United States has been embarrassed before the world. Much hand wringing can ensue.

If a Red-instigated riot in a Japanese street is suggested as another humiliation for the United States, repetition, too, makes it an assumed fact. We are humiliated, thus communism has scored another triumph and the U.S. foreign policy has suffered another serious defeat.

This isn't an organized effort. It springs out of common thinking. Its like following the leader. One commentator jumps in. The next one takes over, and so on down the line. In a few hours, or days, an incident has been blown into a major issue, or a major happening has been turned into a national calamity.

Many politicians ordinarily take their cues from these same sources. It is a phenomenon of the times that the issues today are being created more by sociological writers and commentators than by political leaders and responsible organizations.

Looking back over the U-2 incident, after this passage of time, is it now certain that this was an embarrassment to the United States? That it was a diplomatic and strategic defeat?

Who screamed the loudest? Russia. Who was exposed to the world as vulnerable? Russia. Who had to back away from its own threat of force over a summit conference table? Russia.

When all the sound and fury dies, the country usually is found to be sitting about where it was before. We have an implacable enemy who will try anything to damage us and eventually destroy us. We should let him do his own work.

Progress of National Railroad Museum at Green Bay, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 25, 1960

Mr. WILEY. Mr. President, during the 1st session of the 86th Congress, I introduced a concurrent resolution to grant congressional recognition to the National Railroad Museum at Green Bay, Wis.

The purpose of the museum is to tell the dramatic story of railway progress and its contribution to growth and development of our great country.

In introducing the resolution I felt that granting congressional recognition to this splendid project—which I strongly feel merits such recognition—would help contribute to its stature.

Regrettably, action on the resolution has long been delayed.

I am deeply proud, however, that the forward-moving, public-spirited citizens of Wisconsin—rather than demonstrating dependence upon congressional action—are going ahead successfully with improvement and expansion of the museum. As a matter of fact, the project, in addition to its historical value, is turning into a new business for the community. According to estimates, the museum, as a tourist attraction, may well result in an income of well over a million dollars for the community.

In this constructive effort to make the museum a success, the Wisconsin State Historical Society and many others cooperating in the project, I believe, deserve real commendation.

Now, I ask unanimous consent to have an informative article published by the Green Bay Gazette on progress of the project printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette, Aug. 19, 1960]

RAIL MUSEUM DESCRIBED AS NEW AREA INDUSTRY—INCOME FROM TOURISTS ESTIMATED AT $1.2 MILLION; FUND DRIVE PLANS MADE

The National Railroad Museum is a new industry for this area which can bring $1¼ million in new business on a conservative estimate.

So stated Dr. Clifford Lord, former director of the State historical society and now a dean at Columbia University, before the board of directors of the museum corporation at the Beaumont Hotel Thursday evening.

Dr. Lord reviewed the beginnings of the idea of the museum and told how it came to be located in Green Bay. Here's how he estimated its potential monetary value to the area:

A through traffic count on nearby Highway 41 6 years ago revealed that the museum has a potential of attracing 125,000 visitors each season, based on percentages experienced at other such sites.

WOULD STOP TOURISTS

An attraction like the railroad museum would stop tourists in the Green Bay area whereas now they mainly drive right through. National statistics reveal that a tourist spends $20 a day. Cutting this half, again for conservatism, new income of $1,250,000 per season is reasonably possible when the museum is in full operation.

Dr. Lord qualified his remarks by saying that such results cannot be expected the first year of operation. He said that he was highly gratified that actual construction is now starting on the museum project, but he pointed out that this initial phase, in which a depot and operating standard-gage railroad will be built, is only the beginning.

He said that buildings must be erected as soon as possible to house the very valuable historical collections already assembled. "Those," he said, "will flow in from all over" once housing is available for them.

RECALLS GRAY COLLECTION

Dr. Lord recalled how Gen. Carl R. Gray, Jr., president of the Omaha Railroad at St. Paul, began assembling a collection of early railroadia before World War II. It was displayed in the board room of the Omaha offices.

World War II interrupted his project, when he rose to be General Eisenhower's transportation chief in Europe. After the war General Gray interested the State historical society in founding a national railroad museum, but he died just when the idea was being formalized.

Attending last night's meeting was Col. Stanley Beggs of Hudson, Wis., a close personal friend of General Gray who as executor of his estate, secured this collection for the historical society. This was the keystone of the collection now being assembled for the railroad museum here. Colonel Beggs is director of the museum.

REASON FOR SITE CHOICE

Dr. Lord said there were three factors which led the historical society to locate the museum in Green Bay against competition from Milwaukee, Stevens Point, and other communities. These were the fine site given by the city of Green Bay, the reputation of this community in getting things done, and a pledge by business and labor here of all-out support.

John Torinus, museum corporation president, told the directors that the time has now come for the community to demonstrate this support with cash.

"Now that Brown County and the city of Green Bay have made additional land available, we are ready to build the museum," he said. "Now we have something concrete to sell. The museum is no longer just an idea. Its value to the community will be graphically illustrated when the Short Line Railroad Association of America holds its national convention here in October."

ASKS FOR PLEDGES

Torinus asked each director to pledge himself to raise $1,000 for the museum. There are 45 directors, and allowing for those far removed from this area he estimated this should result in $30,000.

In addition, sale of souvenir stock in the museum will begin in September and Torinus said all media in the area have promised all-out support of the drive. Stock brokerage houses in the city have agreed to conduct the sale.

"This will give everyone in the area an opportunity to help build this museum," he said.

Each person buying a $10 share of stock will be entitled to submit his idea for a name for the new railroad. Torinus announced that the winner, to be announced in October, will receive a free trip to Disneyland for himself and another member of his family.

ST. LOUIS COMPETITION CITED

Both Dr. Lord and Dr. Leslie Fishel, Jr., his successor as director of the historical society, referred to the fact that Green Bay has competition in building a railroad museum. A group in St. Louis, for example, has started promoting a National Museum of Transport there and is out to raise $5 million.

"But we've got a head start on all of them," said Dr. Fishel. "We welcome the competition. It is good for all of us. No railroad museum as yet has any building in which to house exhibits, and we're going to be the first one off the ground. We're all going to build in the Green Bay area the best railroad museum anywhere," he declared.

Torinus pointed out that one advantage this museum has which no other can boast is that the historical society has agreed to take over the operation of the museum when it is erected, thus guaranteeing permanent administration.

TO START OPERATIONS

Jack Doering, head of the local model railroad club, said the club will have its narrow gage steam railroad at the museum in operation by next week.

Torinus reported for Vern Bushman of the Short Line Association that the contractor will start putting in footings for the depot Monday.

Harold Fuller outlined construction plans for the railroad, saying that construction will start next week on the first section, and that ties and rails will start arriving next week.

The main track north of Dutchman's Creek will be built this fall. Army Engineer reserve units will start construction of two trestles across the creek this fall, and the entire setup will be ready by the tourist season next year.

Officers were elected for the next year by the directors at the end of the meeting. Clayton Ewing was named second vice president and Mike Barnard secretary. John M. Rose was renamed treasurer.

Improving Mail Service in Our Cities

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mrs. GRANAHAN. Mr. Speaker, as chairman of the Subcommittee on Postal Operations of the House Committee on Post Office and Civil Service, I am very much aware of the delays and disruptions in the delivery of first-class mail in our major cities. Time after time, we have called to the attention of postal authorities instances where letters have been diverted to the wrong cities resulting in interminable delays. And the promise of overnight delivery of first-class mail within cities is still, I am sorry to say, mostly a promise and not a reality.

To divert attention from the continuing inadequacies of postal service, the Postmaster General has been shedding many tears lately over the so-called interference from Congress in his airlift program for sending first-class mail by air on a space-available basis. One would think Congress had no right to look into this matter.

Actually, it is quite the opposite. Congress has never given the Postmaster General the authority he has exercised in recent years to send first-class mail by air. It has been an assumption of authority. When we looked into the matter comprehensively, it was the decision of the Committee on Post Office and Civil Service that very strict limitations should be imposed on the airlift—not as a rein on the prompt delivery of mail but rather to prevent disruptions in mail service. The airlift is a hit-and-miss proposition in many instances; worse than that, by eliminating rail service we find ourselves in a real mess when weather conditions are such the mail cannot go by air—or when the airlines do not have space available for first-class 4-cent letters.

Of course all 7-cent airmail goes by air and people who want and need airmail service are normally willing to pay for it. But if there is a good chance some of this mail will still go by air even if it only carries a 4-cent stamp, many people are taking that chance and not purchasing airmail service, hoping to get it anyway. So airmail revenues are falling off.

But that is not the point which so concerns me right now. The House has passed the bill on use of air service for 4-cent letters and it is up to the Senate. But in the meantime, this is not an issue as concerns local mail deliveries in, say, Philadelphia, or in other major cities.

The service has suffered terribly because of impractical management practices and out-of-date personnel practices dictated by the Post Office Department here in Washington. This is true all over the country, as every postal worker will quickly point out to you once you start to ask some searching questions about postal operating policies.

We can all remember when the postal worker was so proud of the postal service that he could tolerate no criticism of the Department, and always wore proudly the uniform of his service. In recent years, however, the postal employees have been kicked around so much by their superiors in Washington that many have lost their sense of dedication and pride in the postal service. This is too bad.

A new President in January must correct this deplorable situation by appointing as Postmaster General a man who can work with and inspire the postal employees to give their very best, and who regards them and their work as important. In recent years, the postal workers have been downgraded by the very man who should be most interested in their welfare.

Atom Submarine Opens Route Under Ice of Northwest Passage

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. STENNIS. Mr. President, recently I had the privilege of visiting the Portsmouth Naval Yard. I spent an entire day there. It was my privilege to go aboard the U.S.S. *Seadragon*, an atom-powered submarine, which was then making preparations for its planned trip through the Arctic under the ice by the North Pole. This was to be the first complete passage from east to west in that region.

On this visit I met a very fine young naval officer, the commanding officer of the submarine, Comdr. George P. Steele II, who is one of the finest clean-cut young men I have ever met. I was most favorably impresed with him. I was also favorably impressed by his staff and with the enlisted men who make up the *Seadragon's* crew.

I went all through the submarine. I visited with the officers and with the men. I observed the supplies being placed in the submarine. The preparations seemed to be most complete and efficiently handled. I was particularly impressed with the fine spirit, the esprit de corps, the high morale of the men. This experience gave me a better appreciation of our submarine fleet and the men who serve it. The U.S.S. *Seadragon* and its crew is one of the great assets of the Navy and of the Nation.

Mr. President, I noticed in the morning newspaper that the submarine has completed the more hazardous part of its journey. It has opened a new passage and it has made a contribution to naval history. It has opened new thoroughfares to the world. I ask unanimous consent that the article published in the New York Times of today be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATOM SUBMARINE OPENS ROUTE UNDER ICE OF NORTHWEST PASSAGE

WASHINGTON, August 24.—A U.S. nuclear submarine has made the first underwater transit of the Northwest Passage through the iceladen waters of the Arctic, the Navy said today.

The U.S.S. *Seadragon*, with Comdr. George P. Steele 2d of Washington, D.C., serving as captain, made the 850-mile east-west passage in 6 days. She emerged from the waters of McClure Strait on Sunday.

Tonight, the *Seadragon* was reported in the Beaufort Sea, heading for the North Pole.

The submarine, by using the Parry Channel route, was said to have opened a more direct passage through the Canadian archipelago from the Atlantic to the Pacific Oceans. Previous explorers used longer, more tortuous "southern" routes.

The *Seadragon* sailed from Portsmouth, N.H., on August 1, and went up the Greenland-Labrador "slot" through Davis Strait and Baffin Bay. In Baffin Bay, she dived deeper under ice than any submarine had before. She went under one iceberg that was 1,400 feet long and extended 300 feet down into the sea.

The submarine encountered no difficulties, the Navy said.

In addition to blazing a possible military and commercial route through the Parry Channel the *Seadragon's* trip is expected to help the Navy further develop techniques for underice operations.

Only five transits have been made of the Northwest Passage. The first was made by the Norwegian explorer, Roald Amundsen, whose 47-ton herring boat sailed the east-west route in 1903–06.

The Navy's nuclear submarines have operated under Arctic ice on other occasions. In August 1958, the *Nautilus* submerged in the Bering Strait off Alaska, and 4 days later surfaced in the vicinity of Iceland. At the same time, the *Skate* traveled under the ice to the North Pole. The *Skate* repeated her performance under more difficult winter conditions in March 1959. Last February, the *Sargo* went under the Arctic ice from the west.

The *Seadragon* is a sister ship of the *Skate*. For the current voyage, in addition to her crew of 75 men and 8 officers, she is carrying a group of civilian advisers and technicians. They are headed by Dr. Waldo K. Lyon of the Naval Electronics Laboratory in San Diego, Calif.

Dr. Lyon's group was using sonar and underwater television to study the ocean, the sea ice overhead and the sea bottom. By watching screens inside the submarine, crewman could spot "ice lakes" where the

surface ice was fairly thin and where the *Seadragon* could break through to surface, the Navy said.

The *Seadragon* traveled most of the Northwest Passage submerged but surfaced for a day near the Royal Canadian Air Force Base at Rosolute Bay to put ashore mail and photographs of the voyage.

The *Seadragon* was commissioned at Portsmouth Naval Shipyard, Portsmouth, N.H., last December 5. She has an overall length of 267 feet, a beam of 25 feet, and a surface displacement of 2,250 tons.

This was her first major cruise. She is due to report to the Pacific Fleet at Pearl Harbor, Hawaii, on September 9.

Alaska Warming Up to Legion Program

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. RIVERS of Alaska. Mr. Speaker, during the congressional recess, the Sporting News, "The Bible of Baseball," ran a series of articles on the American Legion junior baseball program. One of the articles featured American Legion baseball as it is played in Alaska. American Legion baseball is relatively new in Alaska, the first teams having been formed only in 1953. However, since its inception the program has been enthusiastically received by Alaskans, and, as a result, it has been expanded with each passing season. This year, for example, a team from the city of Anchorage competed—unfortunately without success—in the western regionals of the American Legion junior baseball playoffs at Bend, Oreg. To convey to my colleagues the interest of Alaskans in our great national sport, under unanimous consent I insert in the Appendix of the RECORD the article by Dodge G. Morgan, as it appeared in the July 20 issue of the Sporting News:

ALASKA WARMING UP TO LEGION PROGRAM

"When it's springtime in the Rockies," they're still shaking dry snow from fur parkas at Fairbanks, Alaska, 140 miles below the rim of the Arctic Circle, America's farthest north exposure of American Legion junior baseball. But if summer baseball fever is slow coming to the 49th State, it's as hot as anywhere else in the Nation when it arrives.

Joseph M. Briones, State chairman of Legion ball in Alaska since its inception in 1953 (long before the 49th star was added), is perhaps more aware of Alaska's unusual baseball problems than anyone.

"Our short playing season, great distances between population centers, and scarcity of playing fields tend to load the count against junior baseball," says Briones. "But in spite of it all, we've watched the program grow from one city and 5 teams to 7 cities and 11 teams in a period of only 7 years."

The 39-year-old Briones, player-veteran of the Texas League and armed services baseball, is one of the primary reasons for the success of Alaska's Legion baseball. A member of Anchorage's Jack Henry Post No. 1 in 1953, he now carries on his activities from Post No. 4 in Juneau, Alaska's capital city. His domain of 571,065 square miles, the State of Alaska, covers two junior baseball districts, the western and the southeastern. It's routine for Briones to make a 1,500-mile trip, measured on a line drive, from Ketchikan to Fairbanks, to contact sponsors.

The State's 2 largest population centers, Anchorage (82,586) and Fairbanks (42,746), provide the manpower for the western district. Fairbanks supports two teams, the Chuck Jays and the Ladd Air Force Base club, as the northernmost contingents. The Chuck Jays are the only Alaska Legion team to break into the winner's column in national competition, so far. Their victory came in the region 8 playoffs last year.

In Alaska's largest city, Anchorage, one team led this summer's Legion league awakening. The Alaska Sales and Service Braves were raring to go even before the sled-dog racing season had ended. Their eagerness was a reflection of the enthusiasm of Jim Vernon, manager of Alaska Sales. In addition to sponsoring the Legion club, he also is president of O.B.'s Tricity Braves of the Northwest League.

Three more Anchorage area clubs, sponsored by the Elks, Elmendorf Air Force Base, and Fort Richardson Army post, are competing with the Braves.

ALASKA'S SOUTHEASTERN DISTRICT SUPPORTS FIVE TEAMS

In the southeastern district, five towns, ranging in population from 900 to 9,000, support just as many teams. The defending district champs are the Sportsmen of Juneau, sponsored by the whole of the capital city and monitored by Post No. 4 of the American Legion. The expenses are considable because the only way out of Juneau for competition is by air. A big money-raising effort was made on July 4 when everything from a car raffle to a potluck supper was run off for the boys.

Other southeast teams which are town-sponsored are the Ketchikan Kings, tutored by Post No. 3; the Petersburg team, Post No. 14, and the Sitka club, Post No. 13. Auke Bay, with a population of 900, just 15 miles from Juneau, is sponsored by Hudson's Shoes for Post No. 25.

The great distances and general lack of inexpensive transportatiton throws up the major hurdle for Legion ball in Alaska. Many of the teams must scavenge for competition until they can meet their contemporaries. This year, for instance, the Anchorage Braves played senior teams in the Anchorage City League, waiting for the Legion season to start.

But problems withall, the call of "Play ball" sounds much the same in Alaska as it does in Texas or Rhode Island, California or Michigan. And Alaskans doubt whether the enthusiasm can be matched anywhere.

The Soil Bank

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. BURDICK. Mr. President, I ask unanimous consent to print in the RECORD a letter addressed to the editor of the Atlantic Monthly by Rev. Richard D. Vangerud of Bottineau, N. Dak., dealing with the soil bank.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 23, 1960.

The EDITOR,
The Atlantic Monthly,
Boston, Mass.

DEAR SIR: Your editorial in the July Atlantic to me was one of the most fair discussions of the farm situation I have read. The trend to the soil bank that you discuss is a trend that can cause real concern. To be sure this trend is causing real socioeconomic problems in the towns and cities dependent on the rural economy as well as to the open country areas. The statistics are real people caught in these forces. However, the problems that cause me concern are the moral and religious questions involved.

Every vocation needs a religious-moral purpose in which a man seeks to express himself purposefully in serving his God and his fellow men. A man needs to have a feeling of beng useful, that his life has a real purpose. If this need is obliterated in reducing a life calling to a mere economic formula the moral, creative worth of the individual is destroyed.

Farming stands high as a vocation with a real purpose. The farmer has the calling to produce food for the human race and to conserve his soil for unborn generations. If this sense of purpose is divorced from his calling his dignity as a creative human being is eroded. If making money is the only goal in life there would be no real moral question involved, but if there is a higher goal the farmer's dignity as a human being is being destroyed my any farm program that does not look beyond mere economics.

To me, it seems, that the soil bank is guilty of destroying the moral-religious purpose in the farmers' calling. The farmer is paid for not carrying out the basic purpose of his vocation. There are cases, of course, where taking land out of production may be necessary for the purpose of conservation. There is land that should never have been put into cultivation. In such cases a program of assistance such as the soil bank or something related does serve the religious-moral purpose of conservation, however, the entire soil bank cannot be written off in this Senate.

I still feel that the real problem is not overproduction. It is rather faulty distribution. The negative approach of controlling production certainly is not the solution in the world of 1960 where starvation is the rule for the world's people. There is a need for the farmer to produce bread for the hungry, for the hungry are certainly with us. We should not blame the farmer for expressing his God-given purpose in abundant production. The world has a need for this production.

Long-range programs that are positive and forward looking should have priority and not the expedient of the moment. The solutions should not counter the religious-moral purpose of the farmer's vocation. In addition to the problem of international distribution that needs a solution, there is the local need of planning to meet the food needs of the future. Perhaps incentive should be given to meet these needs. Water diversion programs that would help transfer areas now limited to small grain production into diversified farm areas merits consideration. This is out of my field, but I am certain that our creativity as an American people is capable of something greater than paid curtailment.

Again, what will be the end result of a farm program that will not let the farmer express his religious-moral reason for being? What will its result be on the farmer? What will its result be on the American nation as a whole? I feel that a farm program that will stand the test of time should let the farmer creatively express the religious-moral purpose of his vocation—to produce food for man and beast, to conserve the soil for generations yet to come.

Sincerely,

RICHARD D. VANGERUD,
Pastor, First Lutheran Church.
BOTTINEAU, N. DAK.

Secretary of Defense Thomas S. Gates, Jr., Awarded the VFW Americanism Medal at the Annual National Encampment, Veterans of Foreign Wars of the United States, at Detroit, Mich., August 22, 1960

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. VAN ZANDT. Mr. Speaker, during the current week, the Veterans of Foreign Wars of the United States is holding its annual convention in Detroit, Mich.

Secretary of Defense Thomas S. Gates, Jr. delivered on August 22, the keynote address at the opening meeting of the convention. In view of the great contributions which our very able Defense Secretary has made to our national security, the Veterans of Foreign Wars bestowed upon him, prior to his address, the Americanism Medal of the VFW. This is the highest honor which that great oversea veterans organization—the Veterans of Foreign Wars—can bestow on any American citizen.

The award was made, on behalf of the VFW, by its commander in chief, Louis G. Feldman of Pennsylvania. Mr. Feldman's introductory remarks set forth in clearest terms why this huge veterans organization selected Secretary Gates to be the recipient of this rarely bestowed award.

I believe that Mr. Feldman's remarks are particularly significant in that they reflect the deep interest of the VFW in national security matters, and express an understanding of the importance of the things Secretary Gates has done to enhance the effectiveness of our Armed Forces. Appropriately, Mr. Feldman referred to Secretary Gates' leadership in accepting the decisionmaking responsibilities of his office by sitting with the Joint Chiefs of Staff, his key role in bringing into reality the Polaris missile, and his strong but prudent action in ordering, on the eve of the ill-fated summit in Paris, a worldwide readiness test of our military forces.

These were some of the reasons why, in making the award, Mr. Feldman said to Secretary Gates "We are grateful for the many things you have done to give us military power second to none."

The speech delivered by Secretary Gates is a penetrating, well-reasoned, and precise statement of the great power of our Nation's Armed Forces. In his address, the Secretary pointed up the great accomplishments of our Nation's science, industry, and military, in providing such powerful defense forces. Also, Secretary Gates expressed the belief that while recognizing the need for able and constructive criticism, there must be appropriate care exercised so that unjustified criticism does not undermine confidence in our Armed Forces, which is so important not only to our Nation, but also to our allies throughout the world.

Because of the importance of Secretary Gates' remarks, as well as the significance of the introductory address by the Veterans of Foreign Wars commander in chief, Louis G. Feldman, under unanimous permission I insert both speeches at this time:

INTRODUCTORY REMARKS OF COMMANDER IN CHIEF LOUIS G. FELDMAN, VETERANS OF FOREIGN WARS OF THE UNITED STATES, IN PRESENTING THE VFW AMERICANISM MEDAL TO SECRETARY OF DEFENSE THOMAS S. GATES, JR., VFW NATIONAL CONVENTION, DETROIT, MICH., AUGUST 22, 1960

Secretary Gates, distinguished guests, fellow comrades of the Veterans of Foreign Wars, this opening session of the 61st convention of the Veterans of Foreign Wars of the United States is indeed an auspicious occasion. We are honored in having as our keynote speaker for this convention a man whose statesmanship is internationally respected, a man whose professional competence is widely admired, a man whose leadership is daily demonstrated in discharging his responsibilities in keeping America strong so that our Nation may persevere against the ceaseless aggressions of communism.

As you know, I refer to Thomas S. Gates, Jr., the Secretary of Defense.

We welcome him not only as the distinguished Government official, but also as a former companion in arms, a naval veteran with two European battle stars and eight battle stars on his Pacific campaign ribbon. In 1953, Secretary Gates came to Washington to serve as Under Secretary of the Navy. I suspect that he, like others, who left private life for the perils of the Pentagon, intended to serve for a respectable period of a few years, and then return, as others have done, to private business.

Yet for him there was always one more problem to solve, one more development to explore, one more crisis to meet. The result was that Mr. Gates came to Washington and stayed there.

Although it may well have been burdensome for Mr. Gates, it has been good for the United States. Our Nation is safer, and the free world is stronger because Secretary Gates is still on the job.

Coming to Washington as Under Secretary of the Navy, he has successively served in the higher positions of Secretary of the Navy, Deputy Secretary of Defense, and now in his present position as Secretary of Defense. It was during his service in the Department of the Navy that he saw the vast possibilities of what was then a wild theory of firing a solid propellent missile from a submerged nuclear submarine. Contrary to the opinions of those who said it would not work, he vigorously supported his Chief of Naval Operations, Arleigh Burke, in giving highest priority to that project. Thus today, we have Polaris. We have, in Polaris, a virtually invulnerable missile that makes our retaliation certain and deadly. Again, the vision and ability of Secretary Gates has contributed tremendously to our Nation's security.

Shortly after taking his oath as Secretary of Defense, he issued what is probably the most important single directive in the history of defense organization in this country. I refer to his directive by which he announced that he, as Secretary of Defense, would thereafter sit with the Joint Chiefs of Staff. Seldom has any one action by a Government official received such widespread acclaim and support from the press and from Congress.

The reason for such acclaim was apparent. It was readily recognized that by his decision to sit with the Joint Chiefs of Staff, Secretary Gates was actually accepting and discharging the decisionmaking responsibilities which were properly those of his office.

I believe it appropriate to repeat a few of the comments that have been made concerning this historically important action by Secretary Gates.

The distinguished military writer, George Fielding Eliot, said:

"Thus, for the first time, a Secretary of Defense not only formally assumed personal responsibility for civilian leadership in top-level policy decisions, but insures that in reaching such decisions he will have given full consideration to the views of all his military advisers."

Mr. Hanson Baldwin, the famed military commentator of the New York Times, summed up the effect of Mr. Gates' action by writing:

"Secretary of Defense Thomas S. Gates has galvanized the decisionmaking process of Government by the simple expedient of making decisions."

In Congress there has been unprecedented commendation expressed on the floor of the House and Senate by outstanding members of both political parties.

While it would be far too voluminous for me to quote even briefly from the many commendatory speeches made on the floor of the House and the Senate concerning Mr. Gates' Joint Chiefs of Staff directive, I would like to read to you a passage from a speech by the ablest authority on military affairs ever produced by our Congress, a man to whom the VFW awarded its Distinguished Citizenship Medal at our annual congressional dinner last February. I refer, of course, to that great statesman from Georgia, the Honorable CARL VINSON, chairman of the House Armed Services Committee. Address-in his remarks to Secretary Gates, Chairman VINSON said:

"I especially wish to commend you for your recent directive with regard to your participation in the deliberations of the Joint Chiefs of Staff.

"With this one directive you have left an impressive mark on defense organization.

"You have strengthened our great Joint Chiefs of Staff system and, at the same time, have dealt a shattering blow to the advocates of a single Chief of Staff system, and you have vitalized and reaffirmed the constitutional principle of civilian control."

I think also that it should be noted that Secretary Gates' action in strengthening the Joint Chiefs of Staff and thus blocking the efforts of those who would separate the Joint Chiefs of Staff members from their positions as Chiefs of Services and thereby impose on our Nation some form of alien and discredited system of supreme command is in firm accord with the longstanding position of the VFW, a position repeatedly reaffirmed by resolutions of the national encampment.

I would like to recall one other action taken by him. You will undoubtedly recall that on the eve of the ill-fated summit meeting in Paris last spring—the summit meeting that ended before it took place—United States-Soviet relations reached a new peak of tension. The bombastic truculence of Nikita Khrushchev had all but shattered the uneasy peace which characterizes East-West relationships.

It was on the eve of the summit that Secretary Gates, who accompanied our President to Paris, quietly, without fanfare, but reflecting great prudence, maturity, and statesmanship, ordered a worldwide command readiness test of our military forces.

This was a precautionary step which, had an enemy intended an overt act against the United States, would have prevented another disaster such as Pearl Harbor.

This action was widely acclaimed by our friends of the free world.

It was the kind of leadership that we continually seek, but all too seldom achieve in moments of peril.

But unfortunately, the acclaim was not unanimous, as there was some gratuitous criticism from a few eager and vocal critics in our own country.

While there may have been isolated criticism in this country, we veterans can understand why that action of Secretary Gates enhanced American prestige and strengthened the courage of free men throughout the world—free men who appreciated the bold and simple grandeur of this masterful action.

One of the foremost leaders of the Far East, the much-respected, youthful, and fast-rising mayor of Manila, the Honorable Arsenio H. Lacson, bluntly gave his opinion as to Secretary Gates' action in Paris. This is what Mayor Lacson, one of the most astute Far Eastern observers of world affairs said:

"You Americans would have looked irreparably foolish but for the brilliant action of the Defense Secretary Gates when he ordered a worldwide alert.

"Asians really understood that one and applauded. It saved your face as no other act could have."

From the other side of the world, from Paris, there were similar reports. In a syndicated article from Paris following the breakup of the ill-fated conference, the widely respected writer, Alice Widener, reported:

"Here in Paris, after the arrival and departure of Khrushchev and Malinovsky, the public opinion is 'Good for Gates.'"

We veterans, with a feeling of pride in our Secretary of Defense, echo the words "Good for Gates."

Mr. Secretary, we veterans who have carried the flag, and the arms to protect it, to foreign lands throughout the world, appreciate your leadership, patriotism, and courage. We are grateful that you have heeded the call of duty, and by your selfless service have provided those rare attributes of leadership which our Nation and the free world so desperately need in these perilous times. We are grateful for the many things you have done to give us military power second to none.

Therefore, Mr. Secretary, it is my distinct honor, on behalf of the 1,300,000 members of the VFW, to bestow on you the Veterans of Foreign Wars Americanism Award—the highest honor which it is within the power of the VFW to award to any American citizen.

ADDRESS BY SECRETARY OF DEFENSE THOMAS S. GATES, JR., BEFORE THE NATIONAL CONVENTION OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, AUGUST 22, 1960, DETROIT, MICH.

Commander in Chief Feldmann, fellow veterans, and friends, for this wonderful medal, and the generous words that go with it, I am grateful. I know that the award speaks for something more than one man's work. It speaks of your confidence in the state of our national defenses. It is, I am sure, a certificate of your trust in the devotion and competence of the men and women who maintain the watch for the rest of us in a time of conflict and peril.

I am here to talk about the Armed Forces of the United States which in power are second to none—just as they were when you served with them.

When veterans meet, we always have to resist the desire to look back. Man can never forget his own experiences—or the personal pronoun. The battles of the past grow bigger with the years and the telling, and they tend to dim the vision of a changing world. A large proportion of all living Americans have been born since World War II—and profound changes have placed that war in its proper perspective in history. When most of us here look back—and remember Omaha Beach, Anzio, the Slot, Okinawa, and the kamikazes, we ought to realize that these must be strange names to a whole new generation of Americans. Well, they were once strange to us also. Many of our generation stayed in those places. We had the determination and the will and we met our destiny.

Now the factors have changed. Hours seem to have become seconds. Science pushes research and research pays off. We seem to be coming to a point where we can do just about anything we can imagine. The important choices are not just between good and bad ideas, but often between scores of good ideas. So the great stories of our past—the flag on Iwo, the march from Normandy across the Rhine—are still great and proven records. But they are records of bygone days, and now we write a new kind of history almost daily.

History is crowding us once again. Its course is no longer to be taken for granted. Powerful outpourings are entering the stream from new and hostile sources on the darkened sides of the earth. At such a time, there is an advantage in having a long memory. We of the war generation have better reason than most to know that no good man can safely rest, no family can feel rightfully secure, no society can consider its duties fulfilled, when its freedom and its ideals are under threat.

We look, therefore, not to the past but to the present and the future. This is a fitting forum for a serious discussion of the military policies of our Government. All veterans have, in a real sense, a proprietary interest in national security.

We contend with ever changing circumstances. We can no longer develop our defense programs once a year. We must constantly review and change them whenever necessary, always exercising good judgment. The best brains of America and the devoted concentration of Congress, the press, the military, and our citizens are required if the proper balance is to be achieved and maintained. No issue in American life has been more thoroughly debated than that of defense. It is not without significance that during the current session of Congress the hard working and well-informed members of the appropriate committees, in their judgment of the sums needed, came within 1.5 percent of our own recommendations.

Money is, of course, important but the amount at any given moment only reflects decisions which must themselves respond to change. The needs of our national security must always come first. We have spent and will continue to spend whatever sums are needed in support of a foreign policy backed by great military strength.

There are two central questions that any Secretary of Defense must live with. First, have the policies that guide our defense programs been soundly conceived and competently executed? Second, what guidance do they supply from this point on?

Looking back across my 7 years in the Pentagon, I am struck by the fact that the broad outlines of our national objectives and the military policies designed to further them have not greatly changed during that time. This is not to say, however, that the national means have remained as they were. New and revolutionary weapon systems have emerged, and they have given rise to radically new military concepts. But these have been fitted to policy, and policy was prepared for them.

The reason for the steadiness of our national military policies should be clear. They have been steady because we recognized that the essential nature of the threat to us would not soon change. This judgment has proven correct. The grand design of Communist imperialism persists: To convert the entire world to the Communist way of life.

There have been shifts in tactics. The main weight of the attack swings from one arena to another, from the military to the political; from the political to the economic; from the economic to the psychological. But the attack never lets up for long. It is relentless. It is ruthless. It has no time schedule. It has become for Americans and for friendly people across the face of the earth the most important reality of our times.

Khrushchev tells us that communism is in no hurry; he thinks history is on his side. Let us never be in doubt of the outcome of the struggle into which we have been drawn. The desire for freedom lives on in the souls of men everywhere, including those behind the barbed wire fences of communism. The lesson of history, so dearly learned from the fall and rise of civilizations, teaches us that freedom is the true goal of man. We have the best of reasons for believing, if we persevere and endure, that the false doctrine of communism will in time fail, as earlier false doctrines have also failed.

Perseverance, endurance, and will—these are the qualities which the times demand of us. The struggle with communism is certain to be long and costly. Already it has lasted, with but brief respites, for more than four decades. With such a prospect, the only sensible national strategy for this Nation is one that gathers our resources with those of our allies for a prolonged test of endurance within the framework of our common beliefs. And that in fact is precisely what our strategy for the long pull is doing.

The idea of defense for the long pull grew in the minds of certain of our World War II leaders who foresaw the true character of the U.S.S.R. No one saw more clearly what was making up than did one of our greatest men, the late Secretary James Forrestal. In December 1950, only 2 weeks after Communist China entered the Korean war, another distinguished and honored predecessor in the Defense Department, the late General Marshall, also perceived what was coming. In a prophetic statement, he warned us that "a trial of endurance" had begun. The experience would be "new to the American people," and the "intensity" of the mobilization then underway would accordingly be governed by the realization that the effort would have to be sustained through "possible years of tension."

This new concept, however, was a long time penetrating the then existing military policies. Two years later, planning in the military services was still tied to the old D-day concept—a bending of effort toward achieving a condition of maximum readiness on a hypothetical date when the preparations of the adversary might approach a climax. This approach tended to generate artificial requirements and a false peaking of effort. As each successive D-day approached, it had to be arbitrarily pushed forward to a later date with consequent disturbances and instabilities in defense planss and operations.

It then fell to another soldier-statesman, Dwight D. Eisenhower, to harmonize the policy and the practice. In April 1953, after some 3 months in the Presidency, he placed into effect the long-pull strategy that became known as the new look in the national military posture. The D-day concept was being abandoned as the regulator of planning. In its place the President was installing a policy designed to provide what he described as "adequate protection to be projected as far into the future as the actions and apparent purposes of others may compel us." It was to be a durable policy, one the Nation could live with, as he put it, "over a period of years."

By now that policy has been vigorously in operation for more than 7 years. It has become central to our national military planning. Because the logic combines realism with prudence, it should continue to guide our strategy through the cold war as far as one can now foresee.

How well has this policy been carried out? How good are the forces? In the judgment of the President, in the judgment of the Joint Chiefs of Staff, and in my judgment, the Armed Forces of the United States are equal to the historic task which confronts them. This strength is real. It should inspire confidence in all our citizens and our friends abroad.

In fact, confidence in our Armed Forces is in itself the most important element of strength of the free world. It secures the prestige and dignity of our military stature. Let us be extremely careful that that confidence is not undermined by unjustifiable criticism. Constructive criticism of our methods is helpful and essential to the improvement of our defense program, but this should be within the boundaries, understanding, and belief that our defenses are strong and will be able to meet our heavy responsibilities. The determination of the free world to resist communism rests in large measure upon a shared confidence in the armed might of the United States.

And, most importantly, we must not inadvertently create a false impression of weakness that could induce a Communist miscalculation or adventure in aggression.

The cause of peace is well served by recognition of the true fact that the United States is the greatest power on earth and that this power is in the service of world law and justice.

My own feeling of confidence in our Armed Forces is based on years of close observations. The position of Secretary of Defense imposes a discipline all its own. It is not just a matter of dealing with papers, important as that is. It also means getting out of the Pentagon and getting into the factories, the laboratories, the missile test complexes, flying out to the carriers and checking on the readiness of our forces at home and overseas. What is to be seen is a strong country, a sense of urgency and conviction. To see these things and to put them together is to be proud.

One reason the forces are superb is that the Defense Department has been constantly reshaping forces and programs to take full advantage of the new technologies. The changes, as you well know, have been deep. But none has been so dramatic as the joining of the nuclear warhead and the ballistic missile. The Air Force's first-generation Atlas and Titan intercontinental ballistic missiles have already been overtaken by much-improved versions of the same species. They will be overtaken in turn by the Air Force's Minuteman solid-fuel ICBM, a more versatile weapon of equally great range.

The Navy has in the meantime married its Polaris solid-fuel missile to the deep-cruising nuclear submarine, to produce an utterly novel weapon system of immense significance. Polaris is the newest strategic system to enter the U.S. order of battle. It has fired the imagination of all who study it.

The submarine carries 16 missiles, and these can be launched from the submarine hidden below the surface. This system, like many others of importance today, was brought forward from a dream to reality during the span of 5 or 6 years. Along the way, technological problems of overpowering complexity were mastered. Polaris is a magnificent example of the unity of purpose prevailing among science, industry, and the military. And beyond all that, the system is unique, in a geographical sense, for the use it makes of the vastness of the oceans and of the concealment to be found in the ocean deep.

The combination of the nuclear submarine and the Polaris missile constitutes one more reason why the military power of the United States is unmatched.

I shall not dwell on the other retaliatory forces. You know them well. Their effectiveness is being increased. We are moving toward a faster reaction time, a wider dispersal, more hardening for some, more mobility for others, all toward the end of having our systems more nearly invulnerable. Our second generation missiles were conceived for these purposes.

I do want to say a few words about our limited war forces. They too are strong and ready. They include virtually our entire Armed Services excepting only a few single mission, single purpose weapons systems.

It is, of course, impossible for the United States alone to maintain tactical forces large enough to counter simultaneously all possible local Communist aggressions throughout the world. Thus we have chosen a course of collective security in company with other nations of the free world who stand with us. Through these arrangements, there has been mobilized across the world a formidable array of tactical military forces. These forces, aided by our military assistance programs and backed up by our own highly mobile land, sea, and air task forces, have been, and will be, able to deal effectively with local aggressions.

The effective VFW support of the military assistance program is a valuable contribution to the continued maintenance of these vital alliances. The United States must never abandon its forward strategy.

But sound policies, superior weapons and a worldwide system of bases and alliance would in themselves be meaningless without competence and devotion of the men and women of our armed services.

I have long held the belief that our Nation's most enduring military asset, its surest source of strength lies in our military personnel. I have seen them in battle. I have also worked with them in these days of troubled peace. From being with them in cold war and hot I know of their courage and patriotism. I can assure you that those in uniform today are worthy successors to you who, in your turn, served so well.

The young men you send us from your homes, your schools, your churches and synagogues, have the kind of spirit, intelligence, religious strength and courage that merits the trust our Nation places in them. They are superior to anything that communism could put against them.

Before leaving let me thank you on behalf of the Defense Department for your sustained and constructive interest in national security. You were quick to recognize the importance of a powerful strategic air force. You gave early and sturdy support to the Polaris program. Your appreciation of the value of the Joint Chiefs of Staff system, and of the need for the maintenance of powerful limited war forces have made for a better national understanding of the goals we all seek. There will always be an unbreakable bond between those of us who are now serving and you who have served and who wear the Cross of Malta.

I am glad and honored to have been with you.

A Chance To Undo Wage Bill Excesses

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, August 25, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Herald Tribune of August 24, 1960, entitled, "A Chance To Undo Wage Bill Excesses."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CHANCE TO UNDO WAGE BILL EXCESSES

If the minimum wage bill gets by its final House Rules Committee hurdle today and goes to Senate-House conference, we hope the House conferees will fight a good fight for their more moderate and sensible version.

The Senate last week gave candidate KENNEDY pretty much what he asked, which was too much. The House, which acted before the conventions, rejected a bill virtually the same as Senator KENNEDY'S. It adopted instead a considerably more modest substitute.

The escalator provision of the Senate bill—raising the minimum to $1.15 the first year, $1.20 the second, and $1.25 in 1963—is a tacit recognition of the pervasive impact the boost would have on the economy, and the dislocation a full 25-cent increase would have if made effective immediately. The House bill, more reasonably, raises the minimum to $1.15 effective January 1, and leaves to future Congresses the question of whether future increases are justified or desirable.

The Senate bill would extend coverage to an estimated 4 million additional workers, nearly all in retail and service fields. The House bill would bring in another 1.4 million. But the key difference is not in numbers, but in the criteria for coverage.

It is a question of whether Congress shall begin regulating wages in intrastate, as well as interstate, commerce. The Senate bill uses language so broad that, in effect, it scraps the whole interstate-commerce concept of congressional authority.

The Senate bill uses sales volume as the criterion for coverage of retail firms, arbitrarily including all that do $1 million or more business annually even if they operate in only a single city. The House bill respects the interstate-commerce concept by covering only those with five or more outlets in two or more States, regardless of sales volume.

Justice Hugo Black is one of the great bulwarks of liberalism on the Supreme Court. In 1937, as a Senator, he was among the sponsors of the original wage-hour bill. He said then on the floor of the Senate:

"I believe it was the prevailing sentiment of the committee, if not the unanimous sentiment of the committee, that businesses of a purely local type which serve a particular local community, and which do not send their products into the stream of interstate commerce, can better be regulated by the laws of the communities and of the States in which the business units operate."

This fundamental question of Federal-State relationships is now directly at issue between the Senate and the House.

Senator KENNEDY has put his name on a bill that makes a superficially attractive campaign issue. The House has passed a bill that makes better sense.

The Federal Mutual Savings Bank Act, H.R. 12913

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. MULTER. Mr. Speaker, on July 1, 1960, I introduced H.R. 12913 to authorize Federal mutual savings banks.

In that connection I commend to the attention of our colleagues the following letter dated August 12, 1960, addressed to me by William F. McKenna, together with the article referred to in Mr. McKenna's communication:

NATIONAL ASSOCIATION OF MUTUAL SAVINGS BANKS,
New York, N.Y., August 12, 1960.

Hon. ABRAHAM J. MULTER,
The House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MULTER: In view of your sponsorship of the Federal Mutual Savings Bank Act (H.R. 12913), you may be interested in the enclosed photocopy of the lead article on that subject appearing in the July 25, 1960, issue of the United States Investor. You will note that the article treats introduction of the legislation in a highly favorable manner. Among the attributes of mutual savings banks it mentions are a well-deserved reputation for strength and safety, their impressive record in the field of home financing, and the public-spirited record of mutual savings bank trustees. The article also refers to the fine body of seasoned State law affecting mutual savings banks that can serve as a guide for Federal consideration of the proposed legislation.

This article is the more encouraging since it represents an expression of views by a respected, independent member of the financial press that has no ties to the mutual savings bank industry.

Sincerely,

WILLIAM F. MCKENNA,
Director-Counsel.

FEDERAL MUTUAL SAVINGS BANKS

The news from Washington indicates that much progress has been made on a Federal mutual savings bank bill. The bill has now been introduced simultaneously in both branches of Congress. We do not need to point out to the readers of this paper how enthusiastic a good many of the savings banks are over a possible nationalization of their industry. So far, throughout its long history, the industry has depended upon individual States for its charters, its examinations and the scope of its activities. One of the results has been that some States have a good many savings banks, some have only a limited number and some have none at all. The impression has grown among savings bank men and it takes deeper root with the passing of years, that the industry would be better off if it operated in 50 States—even including Alaska and Hawaii—than in only 17. It is a very popular type of bank wherever it operates because it is able to treat depositors so handsomely and because it has so well deserved a reputation for strength and safety.

But it could have some great opportunities for popular service in the other 33 States and it would have more influence at Washington if more Congressmen knew mutual savings banks from a firsthand acquaintance with their ways and accomplishments. That is why so many savings bank men are glad to hear that the efforts to create Federal charters are taking tangible form. They feel that the old stalemate which has made them little known, outside of 17 States, can be done away with through such a law.

KEEN RIVALS

We are likely to discuss some elements of the proposed measure from time to time. Of course, it will be a bone of contention between the savings banks on the one hand—perhaps with savings and loan associations for their allies—and the commercial banks. Of course, the savings banks expect opposition from the latter. There are States where mutual savings banks and commercial banks operate in a considerable atmosphere of harmony, Massachusetts, Connecticut, and New Hampshire being fairly representative of such a condition, but by and large, the commercial banks and the mutual savings banks are keen rivals. It must not be supposed, however, that the commercial banks have any such preponderance of influence at Washington as some statistics might indicate. There are more national banks and more trust companies, by far, than the whole number of mutual savings banks in the 17 States combined. There are far more Congressmen coming from communities where national banks and trust companies operate than from communities where mutual savings banks exist. But Congress has never been disposed to leap into action at the call of either national banks or trust companies and it is likely, therefore, to listen as intently to the arguments of the savings banks as to those of the commercial banks.

In some respects, the savings banks' testimony for Congress to consider is exceptionally impressive. The record they have made in home mortgage financing provides an example. It is this record, as you know, which has made Senator SPARKMAN so good a friend of the mutual savings banks. He has not only urged them on in their purpose to obtain geographical extension but is now a sponsor of the bill and intends to keep up a sympathetic interest in its progress. There is a Republican sponsor for the bill in Senator BUSH of Connecticut and there are numerous sponsors for it in the House from both parties. Home mortgage financing is very close to Senator SPARKMAN'S heart and he admires what the mutual savings banks have been doing in this area.

MORTGAGE LENDING

Well he may, for FHA and VA mortgages held by savings banks are to be found in every State of the Union. The mutual savings banks receive their deposits at home offices and branches in 17 States only, but their mortgage lending—taking them as a whole—is national in its scope. Of their $25 billion of mortgages, some $5 billion is on properties outside the States where they operate. In some States in the West and the South this savings bank interest is a very important segment of home financing activity. The banks perform the useful function of spreading the concentrated savings of a portion of our country over a broader area where these are genuinely needed. One cannot help but believe that Congress will be impressed with the helpful use which the mutual savings banks have made of these several billion dollars of savings. We know that Senator SPARKMAN has been. It shows that the mutual savings banks have been qualifying for operation on a national scale before they have asked for the privilege of operating, deposit-wise on a more than purely local scale.

Of course, Congress will be interested, too, in the life story of mutual savings banks. We do not mean the record of the movement from 1816 to date, although that can be told with moving effect. We mean rather the story of how the typical savings bank came into being, how much its beginning partook of a community welfare movement, and how, all through the years, men have served it as trustees in the same spirit as they would serve the local hospital or the public schools. They had been working for the cause of thrift with little regard for personal advantage. There are plenty of Congressmen quite unaware that so much service is being given to millions of savers through mutual savings banks by public spirited men.

Calculated to make the listening Congressman open his eyes wider still is the story of the dividends paid to savers which such banks have made and of the remarkable degree of safety for funds which these banks afford. We shall not attempt to forecast the form in which these data will be presented. The record of the dividends can be presented in bulk figures or in the romance story contained between the covers of cherished old passbooks. Compound interest at a generous rate can produce astonishing results.

BANKING TROUBLES

As for the story of safety provided for funds, we have often wondered why somebody does not write a book on how the mutual savings banks came through those days of disaster which we associate with the banking troubles of the 1930's. That was a period when thousands of banks closed their doors and never reopened them. They had weakened themselves by too lavish distributions of interest to depositors and by investing in high coupon speculative bonds. The runs of frightened depositors brought the finishing touch of ruin to many of them. How did the savings banks fare? Thanks to wise State laws, they were kept away from these high coupon speculative bonds and their dividends paid to depositors were based on sound earnings. Their reputation for good conduct among savers spared most of them from runs. There were precious few savings bank doors that failed to reopen. In New York State, for example, not so much as one savings bank failed to do so. The total losses of patrons of mutual savings banks the country over, due to bank closings, scaling of deposits, and the like, were trivial in comparison with the general record. What a field day for the cause of Federal mutual savings banks can be the hearing in Washington, when the stories of 1929 and of the 1930's are presented for the committee's inspection.

PROVEN GOOD

The truth is that a good Federal law for chartering and for the government of mutual savings banks will represent primarily a selection of laws already proven good in State experience. There is a good deal of similarity among the laws of the States and the task of selection cannot have been extraordinarily difficult. The process by which the States have acquired these laws has not varied greatly as between the States. Each proposal for a new law has usually been born in actual savings bank experience. Then the proposal has had to run the gauntlet of approval by savings bank men, generally—usually involving action by the State savings bank association. Next, the proposal has had to earn the favor of the State bank commissioner. Only after this winnowing process does the proposal reach the legisnature for that body's exacting scrutiny. That the scrutiny is exacting anybody familiar with the legislative handling of new bank law will testify. The members of the legislature are too familiar with the record and the reputation of mutual savings banks to take any long chances with new laws for governing them. The final step, approval by the Governor, takes place in an equally exacting atmosphere. Congress can't help but be impressed with the quality of the State laws with which it will become familiar through this proposal for Federal mutual savings banks.

Boston Renaissance

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting broadcast delivered by Messrs. Paul G. O'Friel and James E. Allen, general managers of sta-

tions WBZ and WBZ–TV, in Boston, respectively. The presentation on Westinghouse stations WBZ and WBZ–TV is a part of the company policy of contributing to the public betterment and a fuller measure of information and understanding:

BOSTON RENAISSANCE

Those pessimists who have been preparing to bury Boston will have to put away their shovels. Events of the past few weeks have shown that there is abundant life in the old city still.

On the government level, approval seems assured for the all-important Prudential Center, which will renovate a large section of the Back Bay. There has also been agreement on the plans for the vast government center in the blighted Scollay Square section.

On the educational front, Boston University has unveiled plans for a $25 million new building program that will alter the skyline along the Charles River.

Two private development plans announced this month have tremendous significance, too. The New England Mutual Life Insurance Co. plans a $7,500,000 expansion that will more than double the size of its home office building in Copley Square. Finally, the Gillette Safety Razor Co. has announced a $6 million plant expansion and development program in South Boston. Here we have large business and manufacturing firms saying in the most meaningful way that they like the city and have faith in its future.

Add up the cost of all this construction and you get a figure close to $300 million. And it seems like only yesterday that ground was broken for the West End renewal project and plans were being announced for the new Harvard Medical Center here and the vast MIT development across the river in Cambridge. Even those and the other projects now underway are but a beginning.

The government center itself will not provide any new tax revenue for the city. But by elimination of the slums in the area additional private investment will be encouraged. More development is sure to follow around the Prudential Center, too.

Rebuilding an old city is a slow and painful process, and there are still many other problems that must be met. With the events of recent weeks, though, August 1960 may be remembered as the turning point in Boston's renaissance.

Stand Firm on Guantanamo, Our Vital U.S. Base in Cuba

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FULTON. Mr. Speaker, the House Foreign Affairs Committee, of which I am a member, has been working these past few days on social and economic aid for Latin America. We must also realize from the U.S. point of view, as the Truman administration failed to realize in South Korea, that this area needs the maintenance of strong military protection by the United States, even when we are working, through the Organization of American States, on the good-neighbor policy instituted under President Roosevelt and continued under President Eisenhower on a bipartisan basis.

There are many methods of carrying out a firm and patient U.S. policy toward Cuba suggested by all shades of American opinion. But there is one policy that as a Navy Reserve officer I believe all U.S. citizens should agree upon without question: The United States should firmly maintain its rights on the vital Guantanamo Bay base in Cuba and mince no words when it comes to the question of our decision to continue this vital base under all circumstances.

Having been a Navy officer in World War II, and having continued my service in the U.S. Navy Ready Reserve, I know what a strong base this is guarding the windward passage in the South Atlantic, the islands of the Caribbean, and being the major advanced base to protect the eastern approaches to the Panama Canal.

Having had sea duty on a guided missile ship within the past few years based at Guantanamo Bay, I believe I have personal knowledge to speak on the vital necessity of the United States retaining this giant and strong base.

I believe that the great mass of the Cuban people want the United States to maintain this base against outside aggression, and are pleased with the help it gives to the Cuban economy in Oriente Province. Most of the Cuban people have been our friends during the years, and as God-fearing Christian citizens, and largely members of the Catholic Church, oppose, as strongly as we do, the continued veering and danger-our drift to the left. We must maintain our U.S. stand on the Monroe Doctrine, and Guantanamo Bay is one of the chief supports of this policy for the protection of the entire Western Hemisphere.

I am calling to the attention of my colleagues in the Congress and the American people an article in the New York Times about Guantanamo.

The article follows:

CLOUDS OVER GUANTANAMO

(A military expert describes the mood of the Navy base in Castro's Cuba today, and explains why we cannot afford to lose it.)

(By Hanson W. Baldwin)

GUANTANAMO BAY, CUBA.—The floodtide of Fidel Castro's revolution surges around the 7-foot fence that marks this American enclave. Barbudos—or bearded ones—stand at the gates; militiamen in berets ride the fence line; handbills exhorting the Cuban workers of the naval base to "fulfill your duty for your country" are distributed at the northeast gate.

The U.S. naval base at Guantanamo Bay—more familiarly known as "Gitmo" to generations of bluejackets—has today acquired a new name, the "bird sanctuary." It is a closely guarded haven of quiet and stability in a tense and fearful island. The 45 square miles of the base are isolated from the rest of Cuba. For almost 2 years now the gates have been closed on the 5,600 Americans in the base and on the thousands of bluejackets and officers aboard visiting ships of the fleet. They may go to Jamaica or Haiti for leave and recreation but not into troubled Cuba. The fleet is in—but the rafters no longer ring at Pepe's Place in nearby Caimanera; the Arizona Bar in Guantanamo city is dark and dreary.

But despite the hate-America tirades from Havana, the base—a blend of Cuban scenery and Yankee energy—maintains the organized routine of the Navy, seemingly immune to the winds of change. The hot Caribbean sun shines down day after day on an arid reservation, on the great shining bay, and the mud-flats and the tumbled cactus-covered hills, on the fronds of royal palms waving gently in the humid breeze, on the flaming scarlet of the flamboyant trees, on jasmine and hibiscus and bougainvillaea.

It is a deceptive scene, for this beauty—with the stark Cuban hills as a kind of Hollywood backdrop—comprises a complex of power, a base for which Americans once fought and died and for which they are ready to fight again. Since 1898, when a battalion of marines accompanied by war correspondent Stephen Crane, the author of "The Red Badge of Courage," seized Guantanamo Bay from the Spanish as a coaling station for Admiral Sampson's fleet, the naval base has been developed into a $76 million investment, with some 1,400 buildings.

On the low western shore of the bay, the Leeward Point jet airstrip, 8,000 feet long, parallels the coastline—in places only a few yards from the craggy coral bluffs against which the sea thunders. On the eastern shore, beneath the steep hills and along the indented points which reach out into the bay like a many-fingered hand, stretches for miles the main part of the base. McCalla Field, a 5,000-foot strip for propeller-driven planes, and the headquarters of the naval air station, lies to seaward, near Fisherman's Point.

Off Sherman Avenue, the main thoroughfare, are ships' piers and machine shops, the administration building, fueling areas, a chapel, recreation fields, radio towers, fuel tanks, warehouses and repair shops, commissary and post exchange, a modern, finely equipped 100-bed hospital, marine barracks, and the frame or cinderblock houses of officers, enlisted men or civilian employees.

With all the venomous anti-Americanisms that are the stock in trade of the Cuban radio and press, there is very little anxiety or tension in Guantanamo Bay. The residents are, indeed, amused—though sometimes irritated—by the concern voiced in letters from home and by the alarmist articles printed in Cuban and some American newspapers.

But there is watchfulness. There are 246 officers and almost 2,700 enlisted men assigned to the base; the rest of the 5,600 Americans are civil service employees and dependents. Normally, there is an average of 4,000 to 5,000 more men aboard ships that are using Guantanamo's training facilities. But there are also 2,200 Cuban civil service employees (most of whom live in Caimanera, Guantanamo City, or other nearby points) who run the machine shops, operate powerplants and provide essential services both for the base and for visiting ships of the fleet. And there are 1,443 Cuban laborers and domestics (with non-civil-service ratings), of whom about 800 live on the base.

Under the old 1903 treaties with Cuba, reaffirmed in 1934, the United States was granted until it renounced the right, complete jurisdiction and control over the base. Ultimate sovereignty remains Cuban, but the exercise of this sovereignty over the base area in the United States hands, an arrangement that has been at least inferentially affirmed by the Cuban Supreme Court. The treaty provides for free access of ships through Guantanamo Bay to the small Cuban port towns of Caimanera and Boquerón, which lie in the upper bay outside the reservation.

The base has no fresh water; its water supply is piped from a pumping station on the Yateras River, more than 4 miles outside the fence. There are almost 10 miles of seacoast and some 24 miles of fence to be guarded.

These facts, plus the small army of Cuban workers who maintain the base and live on

it, make "Gitmo's" security problem a complex one. There is not much worry—or need to worry—about an all-out armed attack against the base. There is too much weight of metal on the U.S. side. And if anything develops that the local garrison cannot handle, reinforcements could be rushed in in a matter of hours from the States or from Roosevelt Roads in Puerto Rico.

But sabotage and terrorism would be more difficult to meet, since Cuban workers are all over the base. So far there has been none. If such a campaign were started, probably the only ultimate answer would be the exclusion of all Cubans from the base and their replacement by Seabees and workers brought from the States.

Demonstrations and minor harassment—all sporadic—have been the only evidence as far as "Gitmo" is concerned of the Cuban Government's hostility to most things American. Four Cuban workers, including the head of the base workers' union, have been fired for slanderous attacks upon the United States or their superiors. There have been no repercussions; in fact, the union head was virtually repudiated by his fellow workers.

Castro's militia have threatened, bullied, and bluffed the base workers to force them to change their dollars into pesos after they leave the reservation. A whole fleet of Cuban fishing boats, protected by an armed detail, tested the ban against fishing in the bay, but retreated when met with a firm stand by Rear Adm. F. W. Fenno, the base commander.

Girls from Guantanamo City, 28 miles distant, who—heavily chaperoned—used to attend the Saturday night dances on the base, have been dubbed "pro-American," arrested, maltreated, and threatened by Cuban militia and police. Minor officials and the Cuban press have breathed threats; a few have said, "The base is ours." Propaganda about American "imperialism" and "maltreatment" of workers fills the airwaves.

But the Castro government, despite all its threats and accusations against the United States and the base, has said it would honor the treaty unless the United States committed "aggression" against Cuba. Cuban Army officers and militiamen have visited the base. The Cuban All-Stars baseball team played a base team on July 4 (and lost). And the important water supply from the Yateras, which could be cut off at any time by Cuba, is still flowing into the reservation's tanks. (If it should be interrupted, "Gitmo" has plans to supply its needs by tanker ship.)

Given this mixed picture, the marines and sailors, with jeep and helicopter, patrol miles of fence and maintain sentry posts at key points. Police dogs help keep watch at night (and have reduced pilferage to an all-time low). Harbor police patrol the bay in speedboats. Workers' passes are carefully checked; spot searches of incoming and more thorough ones of outgoing workers are made. The magazine areas are off-bounds and closely guarded. Ships in port maintain armed anchor watches against boats, swimmers, and frogmen. Information about what is going on "outside" in Oriente Province is carefully collected, checked.

All of this effort invites the question: Is "Gitmo" worth it? What is the present importance of a base first acquired in the last century, when the lethal radius of naval weapons was measured in yards rather than in continents and our ships needed coaling stations in large numbers?

From the military point of view, Guantanamo Bay has threefold importance.

Both in peace and in war it has major value as a training base. Gunnery ranges and maneuvering areas lie close by, between the south coast of Cuba and Haiti and Jamaica. The weather is ideal for flying. Sometimes there are as many as 40 naval vessels in the harbor or at sea nearby, engaged in 3 to 10 weeks of shakedown or refresher training. The base's facilities are geared to this training; a fleet training group, under the commander in chief, Atlantic, aids the ships.

Guantanamo as a training base is, of course, replaceable. The facilities at Roosevelt Roads, built up during World War II, augment the Cuban base. Missile ships work out of the Puerto Rican base because of the longer firing ranges available rather than "Gitmo." But Guantanamo Bay, long established, has many station facilities which Roosevelt Roads lacks. They could be duplicated in Puerto Rico only at high cost.

In addition to its training and fleet-support roles, Guantanamo Bay has strategic and wartime value. Its geographical location, commanding the important Windward Passage from Atlantic to Caribbean, is a major asset. It is an outer sentry for the Panama Canal.

During World War II it was a convoy port—where Atlantic and Caribbean convoys made up and sortied. It is an important base for antisubmarine warfare operations by both surface ships and aircraft. It is the key link in a chain of bases guarding the Caribbean and its important oil, copper and bauxite traffic and extending from Key West to Trinidad. It is a staging base for fighters and troop and freight-carrying aircraft bound for Central or South America. It greatly simplifies the Navy's supply problem in the Caribbean.

For all these reasons it is highly important in any limited war—though probably not vital. We could do without it, but at the expense of greater costs and increased logistical and tactical difficulties.

For all-out nuclear war, Guantanamo Bay, with its present facilities, is useless. There are no missile bases there (though some could be built if needed). Its southern location away from the most direct route between the Soviet "heartland" and the United States, reduces still further its importance in missile-nuclear war.

But "Gitmo's" political and psychological importance transcends its military utility. The base stands today as a symbol of U.S. power and prestige. Its future is clearly linked with the future of other U.S. overseas bases—particularly with the future of the Panama Canal Zone and of Chaguaramas, our leased base in Trinidad. What we do in one will affect all. If we are bullied, bluffed, blackmailed or persuaded to abandon Guantanamo the effects will be apparent throughout the Caribbean and in Latin America; it would mark the ebb tide of American power.

The Communist grip upon Cuba probably has not yet been consolidated to the point of no return. Guantanamo Bay, with its $7,446,000 annual expenditures in Cuba for payroll and purchases, with its small broadcasting station, its Cuban workers, its long history of friendly relations with the people of Oriente Province, stands as one obstacle in the Communist path to power. If Cuba becomes a completely totalitarian Communist State, "Gitmo" under the U.S. flag will be even more important to American survival than it is now.

These are the positive aspects of Guantanamo Bay under the Stars and Stripes. The base also has value in the negative sense of what it denies a potential enemy. Suppose we abandoned "Gitmo" and turned it over to a Communist-oriented government in Cuba, or suppose Cuba leased Guantanamo—or some other Cuban site—to Russia?

Cuba, as such, could not hope to use the facilities of Guantanamo Bay effectively, even if the entire $76 million installation were turned over to Castro intact. The Cuban armed forces are too small and do not have the skills, training or equipment to justify such a base. But if the base were to serve, by proxy, for another power; if it were to become, in thin disguise, a Soviet base, "Gitmo" might be a cause for war.

Most of our strategists are agreed that we cannot afford to allow the Russians or the Chinese Communists to develop bases in the Western Hemisphere—much less in Cuba, only a few miles from our shores. The political and economic challenge to the Monroe Doctrine—which the Communists already are commencing to pose in Cuba—would then be supplemented by a blatant military threat.

This, we cannot possibly permit. The lease by Cuba of such a base as Guantanamo to the Russians would almost certainly mean armed U.S. intervention in Cuba—if possible, under the auspices of the Organization of American States; if not, by U.S. forces alone.

These are highly unlikely eventualities. There is no intention in either Pentagon or State Department to give up Guantanamo. There is apparently no present intention in Havana to lease bases—at least overt bases—to the Russians or other Communist powers.

But, starkly stated in these terms, the political, psychological and military importance of Guantanamo Bay—positively and negatively—becomes evident. "Gitmo" is a link in a chain of world power, and the chain is no stronger than its weakest link.

Ethics and the Politician

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Stephen K. Bailey as it appeared in the August 15, 1960, issue of the New Republic.

Stephen K. Bailey is a professor of political science at the Maxwell Graduate School, Syracuse University, and a consultant to the Fund for the Republic's Center for the Study of Democratic Institutions.

The article is as follows:

ETHICS AND THE POLITICIAN

(By Stephen K. Bailey)

Insofar as I refer specifically to experiences in Middletown, Conn., during the years when I was mayor of that city, I hope that friends there will show me the same charity that Huckleberry Finn showed Mark Twain. Referring to "The Adventures of Tom Sawyer," Huck commented, "That book was made by Mr. Mark Twain, and he told the truth, mainly. There was things which he stretched, but mainly, he told the truth. That is nothing. I never seen anybody but lied one time or another, without it was Aunt Polly * * *." And Huck Finn was perceptive in spotting the moral flaw in Aunt Polly and in her old maid sister, Miss Watson: a flaw of self-righteousness so hideous that when Huck learned that Miss Watson was living "so as to go to the good place," Huck could "see no advantage in going where she was going," so he made up his mind he wouldn't try for it.

I have worried far more about the ethical consequences of my decisions as mayor since leaving office than I ever did as an incumbent. And perhaps this is the first point to be made. Most elected executives find that there is an ethics of action which is normally far more compelling than the urge to balance with precision the ethical niceties of pressing public issues. There are times when the

good of the community demands firmness and decision at the expense of marginal injustice. Those who would make justice the sole criterion of the good society are not only, in my judgment, myopic in their ethical vision; they establish an impossible operating norm for administrators.

When the nicest people have rationalized their selfishness with a tactical deference to the public interest, elected political executives are often grateful that they are too preoccupied to be ethically astute. Even where venality seems clearest, as in the rare case of an attempt at straight bribery ("Mayor, here's $1,000 in $5 bills if you get that easement through the council"—the political version of "payola"), the ethical issues may not be self-evident. Let us make some assumptions: Suppose that the mayor knows that the easement will go through "on its merits" (begging what that slippery phrase means). Suppose further that the mayor knows that the party needs money not only to run the forthcoming election but to pay debts on the past election. Suppose the mayor knows further that the voting public has not responded favorably and positively to the appeal of the American Heritage Foundation for everyone to give to the party of his choice. Suppose finally that the mayor believes that a working two-party system is the Nation's and the community's greatest safeguard of democracy and freedom. If it could be proved to the mayor's satisfaction that the lack of $1,000 at the moment could do irreparable damage to the two-party system in the area, would it be a higher principle in a naughty world for the mayor to accept the money on behalf of the party, or to refuse the money?

Stated this way, the issue is still not very complex for most people. They've known what's right and wrong since they've been 10. You do not accept bribes, period; and you most certainly do not compound evil by cheating the briber. This is all very clear. But is it, really? There are ways of playing slight variations on this theme which would remove from the sternest Presbyterian moralist any burden of guilt. The briber has made a number of contributions to the party over the years. The latest thousand is simply another indication of his belief in the great principles of the party. On the easement question, every party member on the council, including the mayor, attempts to examine the issue on its merits. But a will to believe has set in—a subtle coloration of the problem. Good old Joe is a friend who provided all the favors for the party picnic. Isn't it fortunate the merits of the easements case are on his side?

And bribery can take so many forms: money, favors, flattery, help in time of trouble, influence in building status. To pretend that bribery is a simple and easily spotted phenomenon is naive. To pretend it takes place only in politics is silly. I have seen the egos of older university professors successfully bribed by astute and ambitious instructors; I have seen great institutions bribe men into conformity with promises of promotions or demotions. I have seen them kill, spiritually, those who resisted. I have received threats that unless such-and-such happened, I'd be voted out at the next election. Is this not attempted bribery? Is money any more a thing of value than power or status or reelection?

I was never asked to fix a traffic or parking ticket in Middletown; but I cannot swear that tickets were not occasionally fixed while I was mayor. And I am not sure that under certain circumstances (e.g., a hectic woman delayed in buying her six children school clothes) I would not have paid the dollar fine myself rather than penalize her for something beyond her effective control. Nothing is more unjust than unexceptional law except law that is all exceptions. Surely, one of the most difficult ethical problems in all governance is the drawing of lines between rules and exceptions. That the lines, to be moral, must be drawn near the rules end of the spectrum I do not question. But that exceptions are never warranted seems to me the most callous of all moral judgments.

IT COSTS MONEY

George Bernard Shaw once wrote what many politicians must at times have felt. Shaw learned that a Labor candidate named Joseph Burgess had refused to compromise on some issue and had thereby lost his seat in Parliament. Shaw commented bitterly: "When I think of my own unfortunate character, smirched with compromise, rotted with opportunism, mildewed by expediency—dragged through the mud of borough council and Battersea elections, stretched out of shape with wirepulling, putrefied by permeation, worn out by 25 years pushing to gain an inch here, or straining to stem a backrush, I do think Joe might have put up with just a speck or two on those white robes of his for the sake of the millions of poor devils who cannot afford any character at all because they have no friend in Parliament. Oh, these moral dandies; these spiritual toffs. * * * Who is Joe, anyhow, that he should not risk his soul occasionally like the rest of us?"

I was once confronted with a possible kickback on a firetruck purchase. The party representative reminded me that it costs money to run elections; that generosity from firetruck manufacturers to those who had the insight to see the need for public safety in their communities was rather standard, and that no one would really suffer. The gift would come as a preordained slice of the salesman's commission; he would give of his own income because "he believed in the principles of the Democratic Party." I drew myself up to my maximum height, stared at my good friend, and said in what I am sure must have been the most patronizing of tones, "If the party needs $400 or $500, I shall be happy to try to raise the money personally; but I shall not do it that way." I then went a step further. I called the poor firetruck salesman into the office and made him add about $400 worth of extra equipment to the firetruck at the bid price he had quoted. In a swift double blow I had proved my moral worth and defended the taxpayers' interests. I had proved that at least in one American community public office is a public trust.

I had also proved that it is easy to be moral when the pressure is not really on. Suppose the party coffers had been empty? Suppose my confident bluff to raise $400 or $500 for the party had been called? Suppose the alternative to a Democratic reelection was the election of a rather disreputable Republican gang who would have practiced "boodle" with more frequency and with infinitely less flair than the Democrats? What then? And why should we refuse to accept money for the imperative cause of political party machinery, almost regardless of source, when the so-called "good" people of the community would not be caught dead giving to their political party—to the system of options which does far more than the Constitution to guarantee freedom and democracy?

The only serious ethical struggle I had with party leaders in Middletown dealt with a request for a zoning exception. Here I was firm, morally aroused, and dogmatic, and would be to this day. A contractor, who had contributed liberally to both political parties locally, hired a leading Democratic lawyer to plead for a commercial spot zone in a strictly residential area. The people of the area were almost solidly opposed to the change. Even if they had not been, nothing can ruin the orderly and esthetic development of a growing city like politically inspired spot zoning in contravention of a general plan. The members of the zoning committee, to their credit, said to me, "Mayor, there is a lot we'll do for the party, but we won't do this." The final showdown on this case took place in the lawyer's office with all major party leaders present. I walked in swinging. I made it quite clear that if the plumbing broke down in city hall, I would hire a licensed Democratic plumber over a licensed Republican plumber any day of the week; that if the law did not force us to go to bid, I would buy insurance from a Democratic rather than a Republican insurance agent; but that when it came to what Edmund Burke once called "the permanent forces" in the community, I was ready to do battle. I suggested that although there was much in politics that one rendered to Caesar, almost without qualms, city planning was rendered only to God. A few party leaders were upset; but most of them were understanding; and the lawyer in question, who over the years has been one of the most brilliant as well as constructive forces in the community and State, had the grace to accept my position without rancor.

But contrary to what many people seem to believe, the hard ethical issues of public life rarely concern party politics. Party decisions tend to roll according to preset patterns. Every elected executive works out a few obvious benchmarks for relationships with political leaders (for example, "consult party leaders on all appointments, but solicit their help in trading little appointments to the party for big appointments to you"). In any case, to suggest that most party officials are frequently ethical "problems" is to distort their normal role beyond recognition. For every occasion when a party leader asked me for a favor that disturbed my conscience, I can think of a dozen times when the same party leader helped me defend the public interest against the importunities of nonparty pressure groups.

Upon reflection, it is my firm belief that insofar as party politics interferes with the pursuit of the public interest, it is largely a result of the necessities of campaign finance. Most venality in public life could be abolished or reduced to insignificance if the public would assume responsibility for broadly based campaign financing and would insist upon the public auditing and disclosure of all campaign gifts and expenditures. This would not eliminate corruption entirely, for wherever power and money converge some venality will be found. But our present method of financing political campaigns is, in my estimation, the single most corrupting factor in our political life—local, national, and especially, State.

OF PARKING LOTS AND PEACOCKS

Take 10 problems which faced me as mayor, and which are typical of perhaps 100 I faced in 2 years as an elected executive.

1. A peacock farm on the edge of town kept neighbors awake for a month or so a year during the peacock mating season. The city government was asked by the neighbors to see to it that the birds were quieted. Ethical question: Is a tempory irritation—including loss of sleep—for 10 families worth the destruction of a hobby and a partial livelihood for one person?

2. The best detective on the chronically underpaid police force is suspected of taking protection money from some local two-bit gamblers. The evidence is too vague and unsubstantial to stand in court. Ethical question: is the possibility of the evidence being correct important enough to warrant a substantial investigation, with a consequent probable loss in efficiency and morale in the police department during and long after the investigation, a certain loss in public confidence in the whole force, and the ever-present possibility that the rumor was planted by a crank? And out of the

many pressing issues coming across the mayor's desk, how much time and effort does such an investigation warrant from the mayor himself?

3. The whole scheme of volunteer fire departments is looked upon by the chief of the city's only paid department as wasteful, inefficient and dangerous to the public safety. The volunteers claim that their firefighting record is topnotch, that they save the taxpayers money. Ethical question: if neither side can be proved incorrect, how does one weigh the values of volunteer community endeavors against marginal inefficiencies in operation of a vital service?

4. Many years ago, one department store was farsighted enough to have bought up some land for off-street parking. This off-street parking gave the store quite a competitive advantage. The city, in a new municipal parking program, needed a portion of the private parking lot assembled by the department store years before. When established, the municipal lot might destroy the store's competitive advantage. Ethical question: at what point does the public interest demand that private farsightedness be penalized?

5. Two mayors in 4 years happened to have lived on Wyllys Avenue. Wyllys Avenue desperately needed repaving. But so did some other streets in the city. Ethical question: should Wyllys Avenue be paved, granted a heavy presumption that many citizens would claim that the mayor had "taken care of himself"?

6. A Federal grant-in-aid cut in half the city's welfare load, making a sinecure out of one of the two city welfare positions. The holder of the sinecure was a Negro appointed by the opposition party. Ethical question: should work somehow be made for the Negro, or should he be dropped? (For anyone who knows the problems of status, morale and upward mobility among Negroes in a largely white community, the political questions posed by this case are easy compared to the long-range ethical questions.)

7. The virulent opposition of a local printer publicist might be tamed on a few key issues with the proper placing of a few city printing contracts. Ethical question: obvious.

8. Buying of tires in wholesale lots would save the taxpayers $300 a year—about 1 cent per citizen per annum. A score of little Middletown tire merchants would lose $10 or more in income. Ethical question: how does one balance 1 cent each for 30,000 people versus $10 each for 20 merchants?

9. Parents concerned with the safety of their children on the way to and from school are constantly demanding increased police protection and more sidewalks. A more legitimate demand would be hard to imagine. But there are limits. Ethical question: granted that total safety never can be assured, what grounds beyond obvious necessity and "the squeaky wheel gets the grease" can be found for awarding or denying protection?

10. There is a likelihood that one of the major industries in town will have to close down a sizable slice of its operations. This may mean 2,000 unemployed. A steel company is looking for a New England site for a steel mill. It finds an ideal location in Middletown. That ideal location is a stretch of the Connecticut River which is unspoiled and is deeply treasured by small-boat owners and by nature lovers. Ethical question: is the provision of employment for 2,000 people worth the destruction forever of natural beauty?

If I should be asked today how I resolved, in my own mind, the ethical dilemmas posed in the previous paragraphs, I should not know how to answer. Most of the dilemmas were not mine to resolve alone. Other people shared official power with me, and many citizens without official power assumed substantial unofficial responsibility for community decisions. But insofar as I had to make up my mind by myself, or felt that my judgment might be determining in the minds of others, I did repair to two or three very general propositions for ethical guidance. In practice, the propositions were never articulated, but in retrospect I know that they were there. All of them had been woven into my life by parental, religious, and academic influences—in most cases by all three. My father, although never a minister, was a professor of religion and a firm believer in the social gospel. My studies at Oxford had brought me close to Immanuel Kant and Jean Jacques Rousseau. Ideas like "the categorical imperative" and "the general will" were connected in my mind with such Biblical injunctions as "Let justice roll down as waters; and righteousness as a mighty stream."

THE GARDEN OF VANITY

The most helpful single question I could ask myself seemed to be, "What do you want Middletown to be like 10 years from now?" Against this, many things fell into place. I wanted more beauty, fewer slums, less bigotry, more recreation, more community spirit, a more sustained sense of public responsibility, a more dynamic and prosperous economy, better education, a stronger and more truly competitive two-party system, and a heightened sense of personal dignity for all. These were some of the benchmarks against which specific ethical issues were measured or rationalized. They were not my marks. They were the marks of the civilization of which I was a minuscule reflection.

There are, perhaps, two other matters which ought to be touched upon. The first has to do with the effect of power upon personality. I remember one evening when I was returning with political friends from a television performance. For a half hour they told me what a brilliant performance mine had been. By the end of the half hour I was aware only that a new political star had been born on the horizon: namely, myself, and that I could not long deny the people of the State of Connecticut the chance to vote for me either for Governor or at the very least for U.S. Senator. It was not until I got home that my wife—with that wonderful sixth sense of a level-headed and thoughtful woman—reminded me that my performance had, in fact, been a little on the mediocre side—but that she was sure I had just had an off night. The most devastating traps of public office are the ones set to catch the ego. It is so easy to forget that the tribute is to the office, not to the person. Even a mayor stands out a little; fathers bring up their daughters to shake the mayor's hand; the mayor sits at head tables; he officiates; he is often the central figure in ceremony. All this inflates the sense of personal worth and waters the thirsty garden of vanity. The consequences are often pathetic, often silly, sometimes dangerous.

But Acton was wrong in suggesting that the only flowers in the garden of vanity are the weeds of corruption. Power may corrupt, but it also can ennoble. The sense that you, and the office you hold, are widely valued often creates a heightened sense of responsibility, a desire to live close to the public expectation, a wish to become a kind of community example. I have seen men utterly transformed by a judgeship. A politician—an old pro in western Connecticut—once confided to me that he hated all judges. "What are they but some hack lawyers who happened to know a politician?" And he went on, "After you've made 'em, what do they do? They turn around and kick you in the teeth. They draw their robes around them as though they were Solon or something. You can't touch them. Who the hell do they think they are?" The fact is that they think they are Solon; they suddenly realize that instead of petty politicians they are an essential part of the fabric of civilization—a fabric which can last only so long as there is a widespread public belief that judges in courts of law will try to be just. And what is true of judges is equally true of elected executives.

This brings me to my final point. All ethical questions ultimately revert to propositions about the nature of man. Perched precariously on a whirling planet, blind to his origins, blind to his reasons for being, beset by the terrors of nature and of his own creation, man wobbles drunkenly between a certainty that he is nothing and an occasional, blinding revelation that he has a transcendent dignity and perhaps destiny. When man feels alienated from his universe, he may huddle in fear with his fellow men; but he cannot reach them with that fullness of feeling, that intenseness of identity, which is suggested by the Christian concept of love, or by the civil concept of community. I am not a mystical person, but I sense strongly that my best moments as mayor came when I felt—in an almost religious way—that what we were attempting to do in Middletown had meaning beyond itself. I remember Fred Smith, the editor of the local paper, once writing me an intimate note when I was particularly discouraged about the public response to some issue. "Never," he wrote, "lose faith in your neighbors." And he went on to explain, not that they were perfect, but that he had known them for a long time, and that they would ultimately respond to the good if they could be shown the good.

Surely this is the ultimate ethical postulate in a democracy: not that man is good, but that he is capable of good; not that he is free from corruption, but that he is desperately sick of it; not that he has fashioned the good society, but that he has caught an unforgettable glimpse of it.

Once in a Century

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mrs. GREEN of Oregon. Mr. Speaker, this week the press of my State has spoken eloquently in tribute to an outstanding Oregon citizen—Gov. Oswald West, who died Monday.

"Once in a century" begins the leading editorial in a major Portland daily, describing the unique place Governor West has held in the hearts of Oregonians.

His multiple interests and contributions, and his vital, many-sided personality are recalled in other articles from the Portland newspapers.

Self-educated Os West began his career as a bank teller, a Klondike gold hunter, and later an attorney, State land agent, and a member of the State railroad commission. He was long known as an implacable foe of fraud and deceit, as well as for his pungent comment and piercing intellect.

The widespread reforms and improvements which he sponsored during his 4 years as Governor, and his many contributions as a historian of the Northwest are enduring evidence of the great contributions Os West made to the State of Oregon.

Under unanimous consent I insert the following newspaper comments on this great Oregonian to be printed at this point in the RECORD:

OS WEST—NEVER ANOTHER LIKE HIM

[From the Oregon Journal, Aug. 23, 1960]

Once in a century, perhaps, comes a man so colorful, so courageous, so wise in the ways of his fellows and so mindful of their welfare that the memory of his deeds and wit-spiced sayings stands out like a beacon in the history of his State.

Such a man was Os West, whose turbulent yet productive career ended quietly—ironically so—in his bed with his boots off—Monday morning. He was 87.

So much has been written and said about Os West, so many adjectives have been used to describe his characteristics and accomplishments, that one hardly knows where to begin in paying tribute to this man. Inimitable. Indomitable. Bizarre. Tragic. Heroic. Lovable. Great friend of the people. They all fit Os West and the Os West saga.

But to describe him adequately, his purple prose, his crusty exterior which partly concealed his abiding faith in his State and the eternal verities to which he clung, you have to judge him by his pet hates. They represented in reverse the things and people he admired, and loved, and fought for all his life.

For Os West, you see, devoted almost all of his career to fighting the stuffed shirts, the spoilers, the fakers, the racketeers, the hypocrites, and the all-around bums of his era.

Largely self-educated, from grammar school to his bar exams, he never forgot the tribulations of his youth—poverty, hardships, a drunken father, nor the inspiration of his sainted mother.

This accounts for his abiding hatred of liquor and the two promises he made his mother—never to drink, and some day to become Governor of Oregon.

These promises he kept. But the other promise he made in his youth, half serious, half jest—to shoot a bartender—he did not live to fulfill.

Oregon will remember Os West for the history-making term he served as Democratic Governor—4 hectic years in which he jammed widespread reforms through an unwilling Republican legislature.

And while Governor West always derided the do-gooders of his time, he became one of the really great do-gooders of Oregon history—prison reform, improvement of State institutions, saving Oregon's beaches for the people for all time, protection of women and children in industry, creation of the State board of control, the State game commission, and the office of State printer, to name a few.

And no one will forget his single-handed expose of the school land grabbers and the recovery for his State of almost a million acres of valuable timberland.

But we shall remember Os West as a friend who made history live, whose worldy wise advice and pithy comment inspired and enlivened our days. Like thousands of others, we are proud to have known Os West, the incomparable. There will never be another.

[From the Oregon Journal, Aug. 23, 1960]

OS WEST'S MARK FELT IN OREGON TODAY—EX-GOVERNOR HAD HAND IN ALL PHASES OF LIFE

Horse-loving, whisky-hating Oswald West, 14th Governor of Oregon, is dead at 87.

A lifelong Democrat, he was the State's chief executive from 1911 to 1915. Before his turbulent 4 years were over, West had pushed through legislative reforms which shaped State administration to this day.

In more recent years he was known for the torrent of articles, editorials, letters-to-editors and notes he wrote to friends. With both pen and tongue he was a master of language, withering his opponents with pungent comment and vitriolic criticism.

Although a reformer in matters of legislation, he was no pious do-gooder—in fact, he scorned that breed. Once he fulminated, "The professional uplifter has become more of a public nuisance than the earwig."

ADVISED SOCIETY

And in the winter of his life he felt compelled to advise society:

"Many men, as they approach old age, appear to grow virtuous and prayerful, but don't let them fool you. They are merely attempting to offer the leavings of the devil as a sacrifice on the altar of God."

His passion for progressive social legislation seemed to stem from early experiences as a bank teller, State land agent and railroad commissioner. He had little sympathy with the group he called "malefactors of great wealth."

He served only one term as Governor, quitting politics for law practice in Portland and declaring, "The good of the community demands that there should be someone with a little political experience who is willing to refrain from public office and who has the courage to tell the truth occasionally and shame the devil."

His telling and shaming were curtailed by a severe heart attack in 1945 and a few years later a stroke burdened his powers of speech, though it dimmed his piercing intellect no one whit.

Born in Guelph, Ontario, May 20, 1873, West attended public schools in Portland and Salem. His business career began at 15 when he gained a job at Asahel Bush's Ladd & Bush bank at Salem. This job came to him as winner of a penmanship contest.

In 1900 he went to the First National Bank of Astoria. Gov. George E. Chamberlain appointed him land agent in 1903, and West promptly created a furor by recovering 900,000 acres of fraudulently obtained Oregon school lands. From 1907 to 1910 he was on the railroad commission.

His influence as Governor preserved the beaches for public ownership and for that a State park along the ocean was named for him. He was a prime influence in prison reforms, strengthening of State institutions, and in creation of the game commission, highway commission, State board of control, industrial welfare measures including workmen's compensation and child labor laws.

West claimed to his death that "I was 50 years ahead of my time."

FOR PROHIBITION

Two of West's avowed ambitions never were fulfilled. One was to shoot a bartender (because he hated whiskey), and the other to outlive his wife, Mabel Hutton, whom he married in 1897. ("She'll be worrying about where I've gone if I go first.")

Disturbed when his beloved Democratic Party leaned toward repeal of prohibition in 1931, West counseled, "The Democratic Party should see to it that the Nation is provided with its daily bread—the individual can be depended on to rustle his own drinks."

And, at about the same time, "Victory is within our grasp, unless, being controlled by our party emblem, we make asses of ourselves."

But if he hated "booze", he also loved playing the horses and dogs, claiming, in later years that wagering was his "exercise."

Probably no other Oregon Governor was as brash or audacious. He once grabbed a rifle and personally hunted down an escaped prison trusty.

Another time he announced he would march personally to Copperfield, a tough mining town in Baker County, and close down vice and gambling by declaring martial law. When the Copperfielders allowed they'd shoot him on sight, West shrewdly sent his petite secretary, Miss Fern Hobbs, instead. The toughs of Copperfield stood dumbfounded as Miss Hobbs read her proclamation and cooly directed a half dozen National Guard men to burn all the gambling tables and seize all the booze.

Surviving West, besides his wife, are two daughters, Mrs. Helen West Stone and Mrs. Frank J. "Jean" McHugh Jr., both of Portland; three grandchildren and two great-grandchildren. J. P. Finley & Son Mortuary is in charge of funeral arrangements.

It isn't likely that "Os" West regretted going much. He resented the succession of illnesses that depleted his physical powers. On his 80th birthday he snapped:

"I don't figure what a man wants to hang around for, after his usefulness is gone."

[From the Portland Oregonian, Aug. 23, 1960]

EX-GOVERNOR "OS" WEST, 87, DIES IN SLEEP

Oswald West, whose single 4-year term as Governor (from 1911 to 1915) has been called the most colorful in Oregon's history, died Monday morning in his sleep at his home. He was 87 years of age.

West lived to see the legislation he sponsored, often with forceful pressure on the Legislature, and the policies and State agencies he helped create, become and remain a most important segment of the State's government.

And he lived to enjoy virtually every honor a grateful State and community could bestow on him.

It was Oswald West, who, with the help of railroad tycoon Samuel Hill, laid the plans for Oregon's present highways system. He appointed the State's first highway commission.

His most enduring monument, perhaps, is public ownership of Oregon's 400 miles of ocean beaches, a result of farsighted legislation for which he was responsible.

Less known, perhaps, is the important legislation which he authored as State land agent, before he became Governor, which reserves to State ownership the beds and the land which lies below the low water mark of streams.

He was responsible for such social legislation as the workmen's compensation law, the child welfare commission, the establishment of funds for institutions caring for homeless children and foundlings. As State land agent he obtained adoption of a State law setting aside school funds from the sale of public lands.

CONTROL BOARD CREATED

Creation of the State board of control (the overall administrative agency composed of Governor, secretary of state, and State treasurer), was one of Oswald West's accomplishments.

Oregon's 14th Governor, Oswald West was a lifelong Democrat. He quit active participation in politics at the end of his term as Governor, but not his active interest. A prolific writer of letters to the editors of newspapers almost to the end, he remained a vigorous and powerful influence in State affairs.

He leaves his widow, the former Mabel Hutton, of Salem, to whom he was married in 1897, and two daughters, Mrs. Helen West Stone, and Mrs. Frank McHugh, Jr., both of Portland.

Funeral services will be Wednesday at 11:30 a.m. in Finley's Morninglight Chapel, with Bishop Benjamin D. Dagwell officiating. Committal will be private.

[From the Portland Oregonian, Aug. 23, 1960]

SELF-EDUCATED "OS" WEST SAVED BEACHES FOR PUBLIC

Ex-Governor West died in his sleep Monday morning in his apartment at 636 Northwest

20th Avenue, leaving an heritage of some 57 years of outstanding service to his adopted State.

With a formal education halted midway in the eighth grade of the old East School in Salem, Oswald West, encouraged by his mother, educated himself as both banker and lawyer.

Born May 29, 1873, on a farm near Guelph, Ontario, Canada, the future Governor of Oregon came to Portland with his parents, John G. and Sarah McGregor West, in July 1877. Their first experience in the State was an unhappy one. The old Cosmopolitan Hotel on the waterfront, where they stopped, burned and they lost virtually everything they owned.

NAMED LAND AGENT

Young West was successively a messenger and teller at the old Ladd & Bush Bank in Salem, a sheepherder in the Spokane area, a Klondike gold hunter, and an employee of the First National Bank at Astoria.

From the latter job Governor George Chamberlain chose West for appointment as State land agent, with instructions "to clean out the old State school land ring and recover as many fraudulently acquired school land acres as possible."

This was the beginning of Oswald West's long career as the implacable foe of fraud and deceit. On the evidence he produced, a Marion County grand jury reported State certificates of sale outstanding covered around a million acres of fraudulently acquired school lands. The State land board canceled all the certificates and recovered the lands.

West also uncovered a scheme in which crooked school land operators had duplicated the State seal, had forged copies of land board certificates of sale and assignments, and the signatures of State officials. Some of the State's best timber had been sold in this manner.

West's next post was as a member of the newly created State railroad commission, which brought lower rates and better service to Oregon shippers. In 1910 the Democratic Party nominated him for Governor and, campaigning on such issues as the direct election of U.S. Senators, the initiative and referendum, and recall, he was elected by a majority of around 6,700 in a State that had a registration of more than 2 to 1 Republicans to Democrats.

West's campaign expenses totaled $8,804, to which he contributed $450. The story was told that Ben. W. Olcott, who had returned from the Yukon and Alaskan gold fields with better luck than had West, put up $1,500 toward the campaign. Olcott later became Republican Governor of Oregon.

West moved from Salem to Portland in 1915 after concluding his one term as Governor and resumed his law practice, continuing until a heart attack forced his retirement in 1945. He had declined to run for a second term of Governor and years later he said he had accomplished nearly everything he had wanted to do in that one term.

TOWN CLEANED UP

One thing he never got to do was to "shoot a bartender." He recalled that as a child he used to sit in front of a saloon waiting to be taken home. He was a lifelong foe of alcohol and was instrumental in bringing prohibition to Oregon.

One of his exploits was the taming of the little mining town of Copperfield, in Baker County, where he sent a detachment of National Guard troops and put his 90-pound secretary, Miss Fern Hobbs in charge, with instructions to "burn the gambling equipment and seize the booze."

West not only cleaned up Copperfield, but defended his actions in court when he was sued for $30,000 damages. He won the case in the Supreme Court.

As Governor, Oswald West was responsible for important contributions in the field of human resources. He instituted the honor system in the State prison, created the State parole board, had the indeterminate sentence laws modified, and brought about other prison reforms.

He also solved some prison problems with direct and forceful action and on one occasion he took a rifle and joined the warden in tracking down an escaped convict and bringing him back to the penitentiary.

Although he quit active politics when he left the Governor's office, West continued to fight for the laws he had helped put on the statute books, and others which he thought should be there. In 1953 he made a spirited protest against a proposal to amend his tidelands measure, and in 1957 he rebuked the Democratic house for its plan to abolish the State board of control.

"The new crowd of Democrats who are running the show can go plumb to hell," he said.

Throughout the years he was his party's severest critic when he thought criticism was necessary. On his 86th birthday he castigated the 1959 Oregon Legislature, the first to be controlled by Democrats in 80 years, with these words:

"They're all college graduates, but not one of them knows how to add or subtract."

Oswald West was regarded as an authoritative historian of the Pacific Northwest, a subject on which he had written extensively. In recent years he had been working on a history of Oregon banking.

Newspaper readers knew him as a prolific writer of letters to the editor, one of which written not too long ago, began thus: "I wish to offer some free but sound advice."

A Plan for Prosperity

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert some remarks recently made by David J. McDonald, president of United Steelworkers of America, entitled "A Plan for Prosperity":

A PLAN FOR PROSPERITY

(By David J. McDonald)

Automation, while a great boon to mankind, creates and contributes to troublesome problems requiring bold action and broad cooperation between many forces, primarily labor, management and government.

Because this is so axiomatic, it is indeed regrettable that so little attention is being given to widespread unemployment and denial of full-time work opportunities for major groups of industrial workers. The leaders of the steel industry spent much time last year demanding the right to reduce their work force and get more work out of the steelworker. I note that only last week these same leaders have launched a campaign to get rank and file steelworkers to understand their version of inflation and foreign competition, and their notions of what to do about them.

But regrettably, we do not find these steel industrialists addressing themselves to the problems caused by automation, unemployment and underemployment. These mighty men of steel seem determined to concentrate on new methods of satisfying their personal aggrandizement and piling up new record profits. They apparently mean to ignore the pressing economic problems of their employees and of the hard-pressed steel communities.

Meanwhile the leaders of government in most cases do not even acknowledge the existence of this great domestic problem. All eyes are still riveted on money management, not on the crying needs of millions of American wage earners.

This then is the backdrop against which I must of necessity discuss the issue of automation.

When a nation begins to act as if production is the ultimate goal and profits per se are the measure of economic health, we are in deep trouble. A free democratic private enterprise system must never lose sight of the central purpose of its economy—satisfying human needs. We measure progress in terms of how people live, of their economic security, of their ability to provide education for their children, of the degree to which production of goods contributes to a happier life and a more wholesome community.

There are three areas in which I think practical steps are needed to face up to the challenge of automation and other labor-saving developments.

First, the workers who man automatic equipment require proper protection. The elimination of back-breaking work and the substitution of machine skill for human skill must not be allowed to result in reduced living standards for those who work. We in the Steelworkers Union have been mindful of this problem for many years. The standard job evaluation systems and incentive pay methods when coupled with automation directly threaten pay scales. No one can convince us that it is just or wholesome for workers to suffer wage cuts when new technological production methods are introduced.

Our major steel contracts have made progress toward preventing such wage cutting. Our negotiated job evaluation system balances the factors of labor and skill on the one hand with responsibility for equipment, operations and materials on the other to such an extent that its application rarely results in any rate reductions and often leads to rate increases as new equipment is installed.

In steel, incentive pay is not cut when effort is reduced and production increased as a result of automation or other developments. No matter what engineering studies may suggest, our contracts forbid less earning opportunity as processes and equipment are changed.

These basic collective bargaining devices we commend to our colleagues in labor and to the leaders of industry as well. It is shortsighted to use devices which drastically increase production for purposes of decreasing workers' pay. Any concept of industrial engineering which dictates such a result is doomed because it is founded on injustice and on the notion that economic progress can be made by depressing living standards.

Second, we come to the simple fact that despite enormous increases in the amount of production, the shadow of unemployment is darkening our country and our industrial communities. If the present trend in the steel industry continues, we will see a degree of unemployment in our industry in the year 1960 which equals or even exceeds the depths of the 1957–58 recession. And this after the 116-day strike depleted inventories. Apparently the steel industry is on the road to becoming a 9-month industry.

There are men at this conference better qualified than I to tell the story of the auto industry, the coal industry, the electronics fields and many others. Throughout Amer-

ica, major groups of industrial workers are unable to look forward to steady year-around work. Half a loaf is better than none, but it is not good enough for the American worker in this year of 1960.

Labor has tried to approach this question in several ways. We have developed supplemental unemployment benefit plans in major industries, a giant step forward but one which is temporary and cannot solve the basic problem of chronic unemployment and lessening opportunities for full-time work in major industries.

We have improved pensions to make retirement more feasible. One result of the steel strike was a provision for a full pension for employees of 55 years of age with 20 years' service who permanently lose their jobs.

Longer vacations and breakthroughs toward a 3-month vacation periodically for industrial workers are steps we have taken toward creating more employment opportunities.

But we are the first to admit that, valuable as these steps are in their own right and as methods of increasing employment opportunities, they still are not adequate in the face of the rapid onrush of technological unemployment.

Our union and other great unions have sought a more comprehensive approach in recent years—a shorter workweek with no loss of pay. We have had no success because the industrial leaders with whom we deal have turned a deaf ear to our suggestions. I do not want to appear unduly pessimistic but realism on this issue is certainly in order. There is no sign that a negotiated shorter workweek in major industries is on the horizon. Perhaps the implications are too big for any one company or any one industry. The interdependence of costs and prices, and the competition within and between industries may be factors blocking such progress. But whatever the reason, it appears unlikely to say the least that any collective bargaining breakthrough is imminent to get us on the road to a shorter workweek.

The 40-hour week came into being as a result of the New Deal, first launched 27 years ago in the face of a critical unemployment problem. The 40-hour week has been established in the major industries for more than two decades. It came about as a result of legislation which required payment of overtime over 40 hours a week. It was introduced in stages, adapted to the varying needs of separate industries.

If we are to achieve a shorter workweek, I now believe that legislative action will be required. The laws that made sense in the 1930's do not fit the 1960's. This has been an era of unprecedented economic change and progress. The 40-hour week must give way to current needs and to the technology of modern America. If our industries employ more people 30 hours a week, maintain and advance their standard of living, and keep up a program of modernization and automation, America will be stronger than if we permit the current drift toward unemployment, declining incomes, depressed business communities, and low morale.

I propose that the Congress of the United States enact a new fair labor standards law reducing the workweek. I believe that either 30 or 32 hours a week should be the new figure. For many industries, a 30-hour week seems appropriate. For steel I would favor 32 hours so that a 4-day workweek can be instituted. This happens to make the most sense for an industry many of whose basic processes are necessarily continuous. In any event, I am certain that steelworkers would rather have that extra day off than fewer hours of work per day.

More practical questions will be posed. Is this too violent a step? Will the less prosperous companies be able to survive so sharp a reduction in the workweek? Let me just say that these same problems were present in the thirties; during the years of transition they were worked out. The steel industry is stronger than ever. The American economy is stronger than ever, if one measures strength by the prosperity of the companies. Employment has grown, not as fast as the population and not in line with the needs of a growing productive capacity, but grown it has nevertheless.

Labor, industry, and government have the know-how to work out the practical questions now as we did in the thirties, even before unions constituted so important a force in the basic industries. Stages for reduction of the workweek can be arranged to meet the practical needs of the industries involved. In fact, these stages need not necessarily be the same for every covered industry. All this we went through in achieving the 40-hour week. All this we can do again, and perhaps better.

It is my firm belief that this issue is not one that can be put off to some distant future. Unemployment and underemployment are with us now; the suffering and the depressive economic effects are with us now. The year 1960, a political year, is a good year for discussion of this urgent domestic issue. Early next year is a good time for enactment of legisaltion instituting a shorter workweek.

Our political leaders cannot avoid the issue of unemployment and I venture a prediction that the political action of members of organized labor, their families, and their fellow townspeople will be significantly influenced by this issue. You can be certain that members of the Steelworkers Union will expect candidates for office to speak out on the shorter workweek; I am certain that members of the other great unions in our Nation are no different than steelworkers in their concern for jobs and economic security.

Finally, I want to say a few words about general economic policy in America. As less people turn out more goods, it is apparent that more jobs must be made available and more human needs must be met. While the steps I have suggested above are urgent for today, in the long run they are not adequate because the prospects of labor displacement and automation promise truly fantastic production achievements. We cannot count on the demand for more and more autos, more and more TV sets, more and more suits of clothes being sufficient to keep America growing. Rather we must look elsewhere, toward the fields where human wants are not being satisfied and where great needs exist.

Look around you, in terms of your own communities. In every major city, people are inadequately housed. There are shortages of hospital facilities. There are too few schools and too few teachers. Recreational and vacation facilities are needed; transportation systems are antiquated. Cultural facilities are usually inadequate. These are shortages which keep us all poor. Even the rich are impoverished by these inadequacies. But every time a program is put forth to tackle these problems, we find that public funds are needed. And every time we look for more public funds, we find that the tax and public finance structure is such that it is to Washington you must turn because that is where the sources of taxation and public investment are centered. And then we are told, we cannot afford it. Public expenditure, we are told, is inflationary.

If we hope to adapt our Nation to the age of automation, this horse and buggy concept of economics must be eliminated. Expanded economic activity creates taxes. The people who work pay taxes. The companies that produce pay taxes. The stores that sell pay taxes. The higher degree of economic activity the more taxes are collected. I remember last year during the steel strike the newspapers carried stories almost daily about how the strike was reducing the Federal revenues and increasing the Federal operating deficit. Incidentally, I have not seen one single line in any newspaper which points to tax loss due to steel operations falling below 70 percent and steel unemployment rapidly rising. News reporting seems strangely selective in this news and editorial coverage.

But the fact is that Federal income does rise rapidly as economic activity rises. Therefore, as in all business activity, public investment results in increased revenue. And we are beginning to see that lack of adequate public investment means decreased tax revenues as the costs of unemployment and idleness rise.

Therefore, I suggest that we need a modern attitude toward public investment to get things done which need doing and which are not and cannot be done without Federal expenditure. I do not look on these activities as socialistic. If they were socialistic, I would oppose them vigorously and unflinchingly. We cannot serve our democracy by destroying it.

But when private contractors build houses, financed partially by Federal funds or backed by Federal credits, this creates tremendous new private investment and private employment. The man who buys a house and pays off the mortgage is a private enterpriser who is investing private funds to become just a little bit of a capitalist. This is capitalism—not socialism.

The schools, built by private builders, often financed by private capital paid out of school tax revenues to enable our children to be more useful citizens is not socialistic. If it were, then our public school system would be a threat to American democracy; no one really believes this.

Every device must be employed to build America, its economy and its communities. To the extent this requires public investment, let's have it. To the extent this requires effective collective bargaining—and I cannot conceive of a successful modern America without effective collective bargaining—this too must be encouraged and not fought. To the extent that this means wage levels which keep up with our growing productive capacity, this too must be accomplished. After all, only people can buy goods and only adequate wages enable people to be adequate consumers. To the extent that this means further introduction of automation and modern production facilities, this too should be encouraged and we of labor are fully prepared to continue our cooperation with industrial progress.

But to the extent that progress creates unemployment, the whole process is in danger. Therefore, I repeat that the next order of domestic political business must be Federal legislation instituting a shorter workweek. It is no longer practical to operate under the 40-hour week of the 1930's. The 1960's require a change in the law suited to the needs of this decade of automation and production know-how.

I sincerely hope that the managers of American industry will have the vision to face up to what I have proposed here. Perhaps individually they cannot handle the problem of the shorter workweek but collectively through Government they should welcome this giant step toward a stronger private enterprise economy.

As for the leaders of Government and those who strive for such leadership in this political year, now is the time to speak out. We seek their support for a shorter workweek in 1961, not in the sweet bye and bye. America needs courageous leadership and American workers will give great weight to this issue in judging the political needs of the Nation.

Recalls Two Apostles of Captive Nations

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. RODINO. Mr. Speaker, I should like to call attention to an article by Mr. John C. Sciranka, which appeared in the July 21 edition of the Advocate, which recalls the role of the two Slovak apostles, SS. Cyril and Methodius. As the author points out, their story is particularly appropriate in connection with Captive Nations Week, which we celebrated last month.

The article follows:

RECALLS TWO APOSTLES OF CAPTIVE NATIONS

During Captive Nations Week (July 17–23), our thoughts turn to the two apostles, SS. Cyril and Methodius, who are patrons of the Slavonic nations in general and the Slovaks in particular, because they brought Christianity in the middle of the ninth century to the nations of central Europe, now under the domination of Reds.

The Christian origin of the two apostles, whose feast day was observed on July 7, can be traced to their native city of Salonika (Thessalonica), which was visited by St. Paul on his apostolic journeys.

What appeals to us in their missionary journeys during this Captive Nations Week is their constant desire to free the captives instead of accepting rich gifts for their missionary sacrifices. For instance, after the successful but hazardous mission among the Khazars, a group of tribes in the Crimea on the Black Sea, Cyril refused gifts from Chief Kagan. Instead he pleaded for the release of Greek captives. His wish was granted and 200 captives were released.

It was, no doubt, this noble gesture and the missionary zeal of the two apostles, which prompted the Slovak ruler Rastislav to petition Emperor Michael of Constantinople to send the two brothers to his Great Moravian Kingdom (863 A.D.) which included Slovakia.

After 40 months in his kingdom, the two apostles departed for Constantinople with their new disciples, probably to have them validly ordained. Ruler Rastislav, pleased with their missionary work, showered upon them precious gifts, but again they refused them and pleaded for the release of the captives, which Ruler Rastislav reluctantly granted.

On their way home they stopped in Pannonia, then ruled by Kocel, who received them joyously in 867 at Blatnohrad. They remained guests of Kocel for about 6 months, preaching in Slovak. Upon their departure again they refused precious gifts and pleaded for the release of the captives. It is estimated that Rastislav and Kocel released more than 900 captives at their request.

These are but a few minor instances which prove their love for freedom and zeal for the liberation of captive nations.

St. Methodius, as Archbishop, was summoned in 871 to Ratisbon, Bavaria, where the Germans held him captive for 2½ years. Pope John VIII compelled the Germans to release him, and thus he returned to the missionary work among the Slavonic people.

It was Pope Hadrian who made Methodius archbishop of the Slavs after the death of St. Cyril in the Eternal City. The present Czechoslovakia, Hungary, and part of Yugoslavia were embraced in his archdiocese.

In 874, the Bohemian prince, Borivoj, received at Vclehrad baptism from Methodius. In Nitra, Slovakia, the oldest Christian church in central Europe was built in 833 A.D., by Pribina. In 966 the Poles received Christianity under Duke Miecislas at the behest of his Bohemian wife, Princess Dombrowka.

Everywhere the two apostles and their successors aided in freeing the captives in the countries now enslaved by the Communists.

Let us, therefore, offer our prayers and sacrifices in honor of SS. Cyril and Methodius, especially during this week for the liberation of the captive nations for they experienced the same trials and tribulations which fell 1,100 years later on their successors in the countries behind the Iron Curtain.

The American Slovaks, in honor of the two "captive nations apostles," will erect at the behest of the Holy See through the wishes of Cardinal Pizzardo a minor seminary in Rome, which will train priests for future missionary work in Slovakia in commemoration in 1963 of the 1,100th anniversary of the arrival of the two apostles in Slovakia.

Let us all honor these apostles in some special way, especially during this Captive Nations Week.

JOHN C. SCIRANKA.

PASSAIC.

J. Edgar Hoover Honored

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. SMITH of Mississippi. Mr. Speaker, on July 25 and 26, the Mississippi Law Enforcement Officers Association met in Biloxi, Miss., for their annual meeting. On the first day of their meeting, the association unanimously adopted a resolution expressing appreciation to Mr. J. Edgar Hoover and the FBI. The resolution so clearly expresses the close cooperation between the FBI and State law enforcement agencies that I am pleased, under unanimous consent, to include the resolution in the Appendix of the RECORD:

Whereas the Honorable J. Edgar Hoover, Director of the Federal Bureau of Investigation has dedicated 36 years unselfishly and unstintingly to the elevation of law enforcement to its rightful position as a respected and admired profession in America; and

Whereas the Honorable J. Edgar Hoover has extended to law enforcement the fingerprint identification facilities, the scientific technical laboratory facilities, and the extensive training facilities of the Federal Bureau of Investigation, in order that law enforcement in Mississippi and throughout America might efficiently and effectively discharge its responsibilities to the people of this State and of the United States; and

Whereas the Honorable J. Edgar Hoover has stood firm and resolute in the forefront in leading law enforcement in its relentless battle against the forces of lawlessness and crime in order that the great heritage of freedom and liberty in America might be safeguarded and perpetuated; and

Whereas the Honorable J. Edgar Hoover has through the facilities of the Federal Bureau of Investigation extended unqualified and unreserved cooperation and assistance to law enforcement officers in the State of Mississippi: Be it therefore

Resolved, That the Mississippi Law Enforcement Officers Association expresses its appreciation and the appreciation of its individual members to the Honorable J. Edgar Hoover and the Federal Bureau of Investigation for outstanding achievement in the furtherance of law enforcement as a profession, and for the cooperation and assistance of the FBI to the members of the Mississippi Law Enforcement Officers Association, and reaffirm support of the Honorable J. Edgar Hoover and the Federal Bureau of Investigation by the Mississippi Law Enforcement Officers Association.

In behalf of each and every member of the Mississippi Law Enforcement Officers Association, a copy of this resolution be furnished to the Honorable J. Edgar Hoover, and be included in the minutes of this association.

New England Council Opposed to Presidential Order Reducing Oil Import Quota

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement directed to the New England congressional delegation by the New England Council, regarding residual fuel oil imports:

THE NEW ENGLAND COUNCIL,
August 24, 1960.

To: The New England Congressional Delegation.
From: Gardner A. Caverly.

As you know, the Department of the Interior has established the year-end quota for residual oil imports at 415,000 barrels per day for regions 1–4, which includes New England. This figure is very close to the 400,000 barrels per day requested by the National Coal Policy Conference and is far short of the 560,000 barrels per day recommended by the Petroleum Industry Research Foundation.

We feel that this quota for the fourth quarter of the year is inadequate for the following reasons:

1. It is more than 20,000 barrels per day less than for the corresponding period in 1959. Imports last year were greater despite the steel strike which lasted from July 15 to November 11, and despite the fact that we had a very mild winter—6 percent warmer than normal.

2. The quota does not take into consideration the expanding industrial growth of regions 1–4. East coast residual fuel oil sales increased by about 7 percent in both 1958 and 1959. In fact, they have risen in all but one of the last 5 years.

3. Nor does this quota take into account the ever-lessening availability of residual oil from domestic sources. As U.S. refineries become more and more efficient they have less and less residual oil to offer. The resulting differential must be met through increased imports.

4. Present restrictions on imports have already been reflected in price increases of 15 cents per barrel, which will cost New Englanders about $10 million a year. Continued severe restrictions can only lead to higher prices.

Representatives of the Department of the Interior have repeatedly assured us that they will not permit a residual oil shortage to occur. They have promised to increase

quotas immediately should actual shortages develop. However, to remedy such shortages would require the sudden mobilization of importation facilities on an unplanned and disorderly basis. An emergency movement of this nature obviously entails considerable cost and could but result in even higher fuel prices in New England.

We wish to reemphasize the seriousness of this problem to the New England economy and hope you will bend every effort to assist us in seeking a satisfactory solution. We will keep you advised as developments occur.

Army Sport Parachuting

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the appendix of the RECORD, I include therewith two most interesting articles on our U.S. sport parachute team. These men come from the great airborne parachute teams at Fort Bragg, N.C.

Mr. Speaker, this world prize-winning team is scheduled to appear at the Rockville (Md.) Airport at 2 o'clock on Saturday, August 27.

The articles follow:

A BRIEF HISTORY OF ARMY SPORT PARACHUTING UNTIL MAY, 1960

(By Sgt. Don Kidd)

Three years after Columbus discovered America, one of the many prophets of today's air age, Leonardo da Vinci described a parachute. "If a man have a tent roof of calked linen 12 braccia broad and 12 braccia high, he will be able to let himself fall from any height without danger to himself."

For nearly 5 centuries, men have been designing and testing air umbrellas, but not until the closing decades of the 18th century did the practical use of the parachute become apparent. Then it was pressed into service to save the lives of aeronauts experimenting with balloons. It has taken almost 500 years for the parachute to become a piece of sporting equipment as well as a lifesaving device.

Parachuting as a sport in the United States began about 5 years ago and today has been considered for inclusion in the Olympics. In early 1958, the U.S. Army officially recognized sport parachuting and published a regulation authorizing active duty personnel to participate in competitive and exhibition parachute jumping activities. It outlined responsibilities, governing rules and regulations, equipment to be used, and authorized the establishment of parachute clubs. Almost immediately clubs began to spring up within the Army Establishment supervised by experienced parachutists. Some former civilian sky divers joined in and soon competition between individuals and clubs began. Many colleges and universities across the country had already organized sky diving clubs and almost every airport around the country had its group of enthusiasts.

Many European countries consider it a major sport and all world championship meets have been held there. A few Americans have entered international competition but until the summer of 1959, when a team of sky diving Army paratroopers journeyed to the little resort town of Tivat, Yugoslavia, did not begin to jump in the same league with European parachutists. The event held at Tivat was the Adriatic Parachuting Cup Meet and the paratroopers were from the Strategic Army Corps (STRAC). They came home with second place behind Bulgaria. Nine other European countries competed in the meet and it marked the first time that the United States made a creditable showing in an international parachute meet.

In April 1960, Parachute Club of America (PCA) conducted tryouts at Fort Bragg, N.C., to select members for the 1960 U.S. parachute team. The team will go to Sofia, Bulgaria, in August 1960 to compete in the fifth world championship of parachuting. Some 50 of the best military and civilian sport parachutists in the United States vied for places on the team. The Army made a clean sweep of the tryouts capturing the first 11 places. The top seven were selected for further training and only five of them will actually go to Bulgaria for the world championship meet.

All seven of those selected for further training are members of the newly redesignated, U.S. Army Sport Parachute Team. It had formerly been called the STRAC Sport Parachute Team. Now, for the second time in the history of American sport parachuting, the United States will be represented by an all-Army team of sky divers in an international meet. This time to decide the world's champion.

Top scorer in the tryouts at Fort Bragg was Sp4 Loy B. Brydon. Winning the top spot places Brydon as America's No. 1 sky diver. He had been a civilian sky diver before entering the Army and has continually placed high in national and international parachute competition. He took second place in the Adriatic Parachuting Cup meet last summer.

It seems significant indeed, that the members of the 1960 U.S. sport parachute team also happen to be members of the U.S. Army sport parachute team.

With the redesignation of the STRAC team to the U.S. Army team, membership will not be limited to members of the Strategic Army Corps. The U.S. Army sport parachute team will be just what its name implies and qualified jumpers throughout the Army will be eligible to try out for the team.

The new U.S. Army sport parachute team is available for demonstrations of sky diving acrobatics throughout the United States in support of the Army's recruiting mission. Requests for the team should be routed through channels to TAC, Department of the Army, Washington, D.C.

XVIII AIRBORNE CORPS AND FORT BRAGG

(By Pfc. Patti George)

FORT BRAGG, N.C.—The United States can well be proud of the U.S. Sport Parachute team as its members returned to Fort Bragg Thursday with individual and team honors from the fifth world championship of parachuting at Sofia, Bulgaria.

Deplaning at Pope Air Force Base adjacent to Fort Bragg, the team was greeted by a crowd of happy wives, children and friends as the 440th U.S. Army Band played in the background.

Sport parachuting is a relatively new sport in the United States as compared to some of the individuals and teams abroad. The achievements of the individual members and the team as a whole at the meet indicates the degree of professional ability achieved in the new sport.

The United States and Fort Bragg's Sp4 Jim L. Arender took first place and a gold medal in the third event to become the world champion style sport parachutist.

The third event was the individual style jump. Arender, 82d Airborne Division, competed against 45 men from 12 countries. Distaff competition included 24 women. Judged on two jumps, the event was held from 2,000 meters and consisted of a series of five turns and a backward loop performed within 20 seconds prior to opening the parachute. The parachute was opened between 23 and 30 seconds after exiting the aircraft.

Sp5c. Richard T. Fortenberry, Quartermaster Detachment, 7th Special Forces Group (Airborne), took a silver medal as the second high individual jumper overall.

The U.S. team placed fourth in the second event. The second event consisted of a team jump for accuracy from 2,000 meters with a 23–30 second delay. Each jumper exited one behind the other. The team made four jumps and the average of the best three jumps of the members was computed for the team score.

Specialist Fortenberry placed fourth in the first event, individual jumps for accuracy from 2,000 meters with a 23 to 30 second delay. Each jumper made four jumps with the best three counting.

Fortenberry dislocated his right elbow on August 12 in his third jump in the event. He scored a direct hit on his second jump, landing in the center of the target jumping circle in the individual accuracy event. He is believed to be the first man in the history of world competition to have achieved such a feat.

Miss Sherrie Buck, member of the Rumbleseat Sky Divers of Hollywood, Calif., and only civilian member of the U.S. team, placed 10th in the women's division of the individual accuracy event.

A surprise greeted well-wishers as Capt. Barbara D. Gray, physical therapist at Fort Bragg's Womack Army Hospital, returned with a broken leg. Contrary to reports received, Captain Gray, rather than Miss Buck, broke her leg during the second jump of the team accuracy event.

"Peace and friendship through parachuting" was exemplified through the tremendous hospitality shown the U.S. team during the meet, according to Col. William P. Greives, team leader, and Maj. Merrill L. Shepard, assistant team leader.

Other members of the team are Sp4c. Loy B. Brydon, XVIII Airborne Corps Artillery; Sfc. Harry E. Arter, 618th Engineer Co.; 2d Lt. James P. Pearson, 82d Airborne Division, alternate, and Capt. Henry Rust, pilot, all of Fort Bragg.

The Church-State Issue

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Joseph Breig as it appeared in the Hawaii Catholic Herald of July 15, 1960:

THE CHURCH-STATE ISSUE

(By Joseph Breig)

If Catholics, Protestants, and Jews are not to be forever talking at cross-purposes, one thing that must be clarified is church-state separation.

Specifically, Jews and Protestants must realize that Catholics do not oppose church-state separation, but favor it.

Indeed the history of the Catholic Church is in large part a recital of the church's agonizing struggle to free religion from the grip of political rulers—to give to Caesar

only what belongs to Caesar, so that to God can be given what belongs to God.

POAU SAYS SO

The idea that Catholics oppose church-state separation has been carefully cultivated in recent years in the propaganda of POAU—Protestants and Other Americans United for Separation of Church and State.

But POAU is all wrong.

Two things about POAU should be kept carefully in mind.

First, POAU does not represent most American Protestants. Second, what POAU says about Catholic attitudes is almost invariably in error.

AGREEMENT

When the truth is known, Catholics, Protestants and Jews find themselves in general agreement on separation of church and state.

Nobody wants church-state union.

Nobody, on the other hand, wants hostility between government and religion.

What every sensible person wants is mutually helpful cooperation between the two, each keeping to its proper sphere.

Questions do arise about spheres. But reasonable citizens can hammer out the right answers on the anvil of calm discussion.

SOUTH AFRICAN STATEMENT

The best single statement I have seen of this whole problem recently came from the Catholic archbishop of Durban, South Africa.

Archbishop Denis E. Hurley, in a sermon in his cathedral, said that the division of authority between church and state is human liberty's greatest safeguard. He put the matter in these words:

"The spiritual ruler is denied political force, so he must rule by moral persuasion.

"The political ruler is denied spiritual sovereignty, so he must bow his head to a law higher than his own.

"Political rulers have often found this a frustrating business, and many an honest man has gone to the gallows because in the name of God he had dared to say to his prince: 'Thou shalt not.'

"Spiritual leaders have sometimes yielded to the temptation to usurp and absorb the political kingdom * * * [Then] the spiritual leader who had hoped to run the political kingdom like a priest ended up by running the Kingdom of God like a politician.

"The [church-state] duality is, without doubt, the greatest safeguard of human liberty, although God knows it is not easy to observe it faithfully in every detail, to give the proper balance of loyalty to the city of God and the city of man."

CAN BE DONE

No, it is not easy; but certainly the Founding Fathers of America created a marvellous working arrangement under which the proper balance can be sought with confident hope that it will, in each particular case, be found.

In seeking that right balance, Catholics, Protestants, and Jews must work together. Otherwise, they leave open the way for secularism and irreligion to reign.

Canada, too, has developed some splendid insights in this matter, and there is much that Americans can learn from our northern neighbor.

Archbishop Hurley concluded by saying that justice requires "that we give every man his due; respect his life and all its powers and expressions, his right to worship, to eat, to earn, to own, to marry and beget and educate, to enjoy liberty of sojourn, movement and association."

INCLUDE LOVE

But, Archbishop Hurley added, justice alone is not enough. Something else is necessary to make happy harmony possible in any nation—that something being charity, love. And this love is "the peculiar quality of the city of God" and "must be vividly reflected in the political community."

To show forth that love is a prime duty of every religious person.

Platform Committees Hear Federation of Independent Business Goals

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. GROSS. Mr. Speaker, more and more small businessmen throughout the country are coming to realize that they must make their voices heard in the shaping of Government policies affecting their independent enterprises.

This is entirely proper. In fact it is necessary, for many small and independent businessmen are engaged in a critical struggle for survival.

In this connection, I call attention to the following statement made by Mr. George J. Burger, vice president of the National Federation of Independent Business, when he appeared before the Platform Committees of the Republican and Democratic National Conventions a few weeks ago:

Our appeals in behalf of independent business enterprise are not made with a selfish desire to obtain any special favors or special privileges for any group in our economy. What we are asking for is equal opportunity under our natural laws, based in great part on the individual rights that are rooted in our Constitution, to acquire, hold, and use private property with all due regard for the rights of others.

By seeking fair consideration, fair play, equitable tax treatment, a minimum of Government competition and interference, we are asking only that the independent enterpriser be given a chance to stand on his own feet, and be protected from forces in our society with which no individual can contend.

Small businessmen and their friends have taken heart from the fact that both parties honored 12 of the 18 pledges made during the 1956 presidential campaign, but new problems have risen, and the failure to carry out all pledges has left small business far behind in the race for survival.

As a means of securing independent business opportunities in the years ahead, we recommend:

All manufacturers who sell through both independent and their own outlets, be required to grant their independent customers the same price charged their own stores. This will tend to slow down the present slaughter of many small businesses by their own suppliers.

The direct income-tax load on smaller corporations and small business should be reduced, which would provide more funds for improvements, and there should be a fast tax chargeoff on purchases of used equipment as well as new.

Multimillion-dollar Federal subsidies are enjoyed by big business and big farmers, which should be greatly reduced, and it is time we cut down on and/or eliminate subsidies to foreign nations which are able to stand on their own feet.

Ability of small business to compete for defense contracts has long been a subject of discussion and investigation, and it is time that smaller companies seeking defense contracts be given equal opoprtunity with their bigger competitors. The Small Business Administration has done an admirable job in this direction, and so have the House and Senate Small Business Committees, but much more work will have to come before this problem is solved.

Our organization has long advocated adoption of the Hoover report's recomemndations, that the paperwork piled on small business (creating burdens many are unable to carry) be lessened in every way possible. Small business, and, yes, bigger business, too, is having to add much to the price of goods and services to take care of Government reports, which are becoming a virtual Frankenstein.

Many of our members have come up from the ranks of labor, but have voted overwhelmingly for laws that will restrict bargaining to the local level wherever practical and possible; that unions be limited to picketing businesses that are on strike, and that no business can be picketed unless at least one-third of the employees are supporting the union.

Entire lines are now suffering the ravages of low wage foreign competition, and indications are that the situation is growing worse. Certainly, the movement of giant U.S. firms to set up subsidiaries in foreign lands, and ship products back to this country at prices that destroy our jobs and businesses, is suicidal, to say the least. One answer would be to tie tariff rates to foreign wage levels, reducing the rate as wages rise in foreign countries.

Is Free Economy Failure?

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Union Financial News, August 5, 1960:

IS FREE ECONOMY FAILURE?—HERE'S ACCOLADE TO BUSINESSMAN

(By Carl W. Ritter)

During the presidential campaign just now moving into high gear, a principal topic will be economic growth.

The general question of such growth can be expected to resolve itself into simply this: "Do the American people have confidence in a free economy?"

One of the candidates has indicated belief that big government can spur the national economy to continuous growth at boom pace, without the periodical letup for consolidation of gains that a free economy demands.

His philosophy calls for a vast buildup in government spending and all but overlooks the fact the Nation has been propelled to greatness by private business and private citizens.

If this political aspirant to the world's highest elective office has any genuine confidence in the American businessman, it has been well concealed.

There is little reason to doubt that he would keep the U.S. businessman under a fat and expanding Federal thumb.

The question here then is whether free enterprise, as exemplified in at least one very important way by individual business initiative, has failed this country. If it has, our history certainly has failed to record it.

The businessman, who in essence is everyone in avenues of industry, trade, and commerce, has risen to each major challenge in war and peace.

CHARACTER SEEMS AS STRONG AS BEFORE

It is doubtful that this composite's progressive character is deteriorating at this stage of the game.

Looking ahead, it is apparent that the main problem for the businessman in the decade ahead will be different from that of the 1950's. Essentially, it will be one of marketing rather than of producing. But is there any better marketer in the world than the American businessman, left to his own ingenuity?

If there is, again history has failed to record it.

To sell the American businessman short now—as the candidate in question seems to be doing—is close to a personal affront directed toward every American citizen taking pride in free personal enterprise.

Growth? The American businessman has been vitally absorbed with growth ever since he came into complete being when this Nation's early planners declared themselves for freedom.

SURVIVAL DEPENDS ON STRONG POINTS

He has had to be energetic, courageous, resourceful, and expansion minded to survive. Competition and other demanding problems are part of his day-in-day-out existence. He not only lives with these problems but he solves them—or he and his business are passed by.

The 100 largest American manufacturers more than doubled their assets and sales during the decade ended with 1959. The number of manufacturers with assets exceeding a billion dollars also increased more than 100 percent—from 12 to 27.

Thousands of smaller businesses did even better than these companies in rate of growth.

The top officeseeker who cocks a ready ear toward Walter Reuther and implies that the American economy, operating freely, leaves a lot to be desired would seem to be much better suspect than the American businessman.

Our Air Reserve Forces

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an excellent article by Gen. Thomas D. White, Chief of Staff of our U.S. Air Force, entitled "Citizen Soldiers in Aerospace," published in the Air Force and Space Digest for July 1960.

General White's views on this most important aspect of our national defense system are well worth reading:

CITIZEN SOLDIERS IN AEROSPACE

(By Gen. Thomas D. White, Chief of Staff, U.S. Air Force)

Traditionally, the reserve forces of the United States have comprised a pool of military manpower and units available to expand our forces rapidly toward required wartime strength. In every war in which the United States has been involved, these "citizen soldiers" have been a most important factor in achieving our national security objectives.

Nevertheless, in recent years it has become apparent to the Air Force that something more than a pool type of reserve force would be required in the event of future wars. To be truly effective in the modern era of ballistic missiles, supersonic aircraft, and nuclear weapons, our air reserve forces must be an in being part of Air Force combat and support capabilities—comparable in effectiveness and readiness to our first-line active units.

Today, our air reserve forces do comprise a significant portion of this Nation's overall aerospace capability. An idea of the current importance of our air reserve forces in terms of total force can be gained for the fact that two-thirds of the tactical reconnaisance units, nearly half of the tactical fighter units, and more than three-fourths of the troop carrier units available to the Tactical Air Command in an emergency are contained in the Air National Guard and Air Force Reserve. In addition, a considerable portion of our interceptor fighter defense capability is in the Air National Guard.

Despite these substantial contributions, it has become apparent, through comprehensive study of the possible uses of the air reserve forces, that there is additional potential in these forces—a potential which if efficiently managed would result in better utilization of our total Air Force resources—both in wartime and in peacetime. Consequently, the Air Force approved a new plan for the management of the air reserve forces—a plan generated in response to several factors. These included: The necessary and vital role that the Air National Guard and Air Force Reserve play in our present-day overall aerospace power; their proven capability to perform wartime missions; the desire to find more useful missions that the reserve forces could effectively and economically accomplish; and the requirement to gear the combat and support units to a much higher degree of operational readiness.

The high cost of maintaining aerospace power and the comparatively lower cost of using reserve forces to perform some of the necessary functions of the Air Force mission clearly indicate the desirability of assigning to the air reserve forces greater responsibilities in certain areas. In many cases these forces already have demonstrated their capability to assume such responsibilities.

Fine as the record of the air reserve forces has been, the Air Force and members of the air reserve forces must jointly continue to exert every effort toward improving the value and usefulness of the reserves. In this respect, the new management plan for the air reserve forces provides for a closer integration of the reserves into the active establishment than ever before. It accomplishes this by placing the responsibility for peacetime supervision of training and for the measurement of training progress and capability of reserve force units in the hands of the Air Force commands which would have operational control over these units in an emergency.

The new plan also puts the vast and virtually untapped reservoir of planning and management ability in the reserve forces to work by providing for much of the management of the Air Force Reserve program to be done by reservists themselves—in region headquarters as well as in local units.

The plan also provides—in addition to the specific new missions—for the assignment of additional missions to the reserve forces whenever such missions will improve the Air Force's overall capabilities.

I am confident that implementation of this plan will result in greater contributions by the air reserve forces to the overall Air Force mission and will permit more effective and economical utilization of our total Air Force resources. This, in turn, will enable the Air Force to perform its share of the total national defense task more efficiently.

Modernize and Expand our Transportation Systems

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a very thoughtful and provocative letter recently sent me by my dear friend and constituent, Hon. Joseph D. Ward, distinguished secretary of the Commonwealth of Massachusetts, Democratic convention nominee for Governor in my State, urging the support of S. 3278, recently passed in the other body.

S. 3278 provides for grants to the several States, municipalities, and other local governments for planning of various solutions to the serious problems of mass transportation, and for low-interest loans to State and local governments of not more than $100 million to finance equipment purchases and integrate the forms of public transportation.

Several similar measures are pending in the House and, as Secretary Ward so ably and aptly points out, over 100 million people reside in our great metropolitan districts, of which 16 million people are totally dependent on public transportation and 40 million people frequently use it.

While the Congress has recognized, from time to time, the seriousness and urgency of our local, State and National transportation problems, and has taken action in the past to grapple with these problems, this is the first time that broad, enabling legislation has been proposed for comprehensive, rationalized planning and, where necessary, selective integration of transportation facilities.

That adequate, streamlined, modernized transportation is imperative to the economic, social, and cultural life of the Nation and essential to the convenience and well-being of our fellow citizens is a demonstrated fact. The shocking deterioration of our transportation system, nationally, locally, and statewise can no longer be neglected.

Primary responsibility for the solution of these problems lies with private management and the State and local subdivisions of government. But it is clear to me, as I have evidenced time and time again, and as the Congress has frequently emphasized by concrete action, that in the public interest we can no longer afford to delay proper, effective solutions of the critical problems of this industry which is so vital to the lives, interests, and well-being of our people.

The gravity of our interstate, intrastate, and local transportation problems compels the deep concern and effective action of the Congress, and I hope and

urge that the House may not only extend early consideration to S. 3278, but that it move on a sweeping front to promote adequate planning and to support and strengthen in every way that we can, consistent with our constitutional mandate, the great transportation systems which serve the American people.

I commend my able and distinguished friend, Secretary Ward, for his timely recognition of these problems and for his efforts to advance and consummate expeditious and fitting solutions.

Let us pass S. 3278 without further dalliance or delay, and then let us move on a much broader front to rehabilitate our great transportation facilities that have been riddled and shattered by lack of vision and leadership. Let us with all speed restore, modernize, and expand those facilities so they may adequately serve the American economy and the American people.

The letter follows:

THE COMMONWEALTH
OF MASSACHUSETTS,
OFFICE OF THE SECRETARY,
Boston, August 22, 1960.

DEAR CONGRESSMAN PHILBIN: I would like to take the liberty of calling to your attention important legislation now before the House concerning Federal assistance to State and local government toward the improvement of mass transportation facilities.

The Senate has passed S. 3278 which would: (1) authorize the Housing and Home Finance Agency to make grants to States, municipalities, and other local governmental agencies for adequate and comprehensive planning of solutions to the vexatious problem of mass transportation; and (2) would authorize the Housing and Home Finance Agency to make low interest loans to State and local governments up to a total of $100 million to finance equipment acquisitions and integrate the varying forms of public transportation.

Legislation similar to S. 3278 has been introduced by Congressman DWYER, of New Jersey (H.R. 12746), Congressman IRWIN, of Connecticut (H.R. 12606), Congressman NIX, of Pennsylvania (H.R. 12181), and Congressman THOMPSON of New Jersey (H.R. 11923).

Over 100 million people now live in metropolitan areas in the United States. Sixteen million people are totally dependent on public transportation, 40 million people use public transportation frequently if not always, and many millions should be converted to use of public transportation if our cities are to avoid perishing of transit arteriosclerosis. Transportation is a problem of increasing national gravity and as one authority on urban affairs, Luther Gulick, has written, "So central to metropolitan life is this problem of physical circulation of men and goods that it might be said that all the rest of our metropolitan problems would become tractable if only we could find out how to solve the transportation problem."

If the problem is grave on a national level, it is already critical in Massachusetts. Rail passenger service from Boston to the South has died—toward the west we can hear the death rattle and toward the north the symptoms are ominous.

Our answer thus far has been to build roads. This is neither the economic nor the sound answer. Roads cost billions where mass transportation costs millions. They gobble up land that could be otherwise productive. And when all the money has been spent and the homes and businesses dislocated, roads cannot carry the necessary volume, and the cities cannot accommodate the cars. Surely this has been the lesson Los Angeles can teach us. On the other hand, in Massachusetts we have existing rail rights-of-way and roadbeds which can be wisely used if proper planning is done.

Even without comprehensive planning, the experiment of the Meteropolitan Transit Authority on the Highland branch has proved an exciting success. Road traffic has been eased, peak traffic congestion in downtown Boston has been reduced by 7 percent and 1,300 downtown parking spaces freed. And the people who use it like it.

Cities are our major wealth producing centers. Congress has recognized that urban revival is a major Federal concern. I urge you to do all in your power to forward the passage of this legislation before the House designed to help tackle the problem of public mass transportation—a problem so central to municipal existence.

Respectfully yours,
JOSEPH D. WARD,
Secretary of the Commonwealth
of Massachusetts.

U.S. Space Triumphs Set the 1960 Pace

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. FORD. Mr. Speaker, every American has been impressed, and I am sure gratified, by the record which our country is achieving in space exploration. Those who have felt that the Russians were making the major contribution have seen the United States push forward in recent months. All of us are confident that the work done by our scientists and technicians will result in increased knowledge and the purposeful uses of space in the cause of peace.

An editorial in the Grand Rapids (Mich.) Press of August 19, 1960, pointed up some of the implications of our recent success. Under leave to extend my remarks, I include the editorial which is entitled, "U.S. Space Triumphs Set the 1960 Pace":

U.S. SPACE TRIUMPHS SET THE 1960 PACE

Since the launching of the Russian sputnik nearly 3 years ago there has been an easy assumption in the minds of many disparagers that America is badly outdistanced in the space race. But in 1960 the scales are heavily weighted on the side of American achievement.

Echo I, the huge balloon sent into orbit for experimentation in communications, is but one of a series of triumphs counted by the United States. Simultaneously with the Echo launching came word of the first recovery from a planned ejection of an instrumented nose cone from the Discoverer XIII and a record-high space flight by the X15, which followed a new world speed record by the same plane a few days earlier.

Last April the United States launched the first reconnaissance satellite, the Tiros I, which sent back thousands of pictures of the earth's surface, giving immediate promise of long range weather forecasting. Two weeks later the Transit IB, a satellite which might be used as a navigational aid, was launched.

Also chalked up for 1960 was a record shot by an American ICBM and the first successful launching of the Polaris missile from a submarine.

All these are American "firsts." It is not less significant that several of these were designed for peaceful purposes rather than military. The Tiros, Transit, and Echo satellites all hold possibilities for useful and peaceful research. The world may judge for itself whether American space exploration is foremost in peaceful conquest of space.

Meanwhile Russia has been strangely silent. Perhaps it is planning a major spectacular thrust, but to date it has contributed far less to scientific knowledge than the American effort.

Summer Commencement Address of Dr. Harold C. Case, President of Boston University

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, Dr. Harold C. Case, president of Boston University, delivered the commencement address at the university's annual summer commencement exercises on August 20, 1960.

In extension of my remarks I include his excellent address, as follows:

VITALITIES TO BE MASTERED

Exupery, writing about the agony of France during World War II, said, "If a man is to strive with all his heart, the significance of his striving must be unmistakable. The ashes of his village must be as telling as the significance of the village itself."

This is the critical issue of our generation. Unless we know why we are striving, we will not practice stern self-discipline, nor accept great goals as our own. Lacking these, we will deteriorate into insignificance.

The forces now let loose in our world contain unprecedented energy. The effect of these forces will determine the nature of the future of man.

With bombs 100,000 times as destructive as those dropped on Hiroshima, the inspection of arms, reduction of missiles, and use of peaceful alternative to war are not fine theories to be proclaimed from public platforms, but practical policies to be implemented for the saving of civilization.

With revolutionary forces dynamic enough in the hands of a small island government official to embarrass the world's most powerful nation, and with the voice of emerging peoples dramatic enough in the throat of an inexperienced Congolese Premier to necessitate, on his daily whim, the reconvening of the Security Council, human energies are mobilized for changes of status hardly known a decade ago.

Fate has delivered a commanding challenge. Are we able to unite nobly only when disaster threatens? Is luxury more cherished among us than self-discipline? Is complacency to replace intelligent concern among us regarding honesty, efficiency, and economy in government?

If we defer decisions on these and other important problems, until our cities are ablaze against a dawn sky and our liberties are obscured by the excesses of libertines, it will be too late.

Nothing less than ample, precise knowledge, hard won by all-out effort, can prove adequate in the race for space. Only by emerging from the tawdry to the timeless, from comfort to courage, and from irrespon-

sibility to commitment, can we match challenge with greater challenge.

"Where there is no vision, the people perish."

Civilization is a series of homely customs, a composite of folk wisdom, a complex of institutions, a set of rules, and an assortment of promises. Its roots are in cultural commitments, moral convictions, mental discoveries, and religious dedications. These vitalities give meaning to existence and magnificence to society.

How can I impress on you the greatness of our task, or what can I say to convince you that these are vitalities to be mastered, not merely mimicked?

Our job is a demanding one. Education is asked to convey live knowledge to the next generation, to create an atmosphere in which learning is cherished, and to breathe a new inspiration into our Nation's people.

Parents are asked to rear their children in the midst of unprecedented labor-saving conveniences, and yet to create in them a love of hard work.

Teachers are asked to relay more subject matter to the oncoming generation than the past has known, and, at the same time, to initiate original and creative quests for knowledge on the part of students.

Religious leaders are asked to come to terms with social problems without losing the sense of the mystical.

Freedom is an atmosphere in which enticing opportunities for human development are abundant, integrity is so sacred as to forbid betrayal, and self-giving inspires greater effort than self-getting.

In the midst of the reports of rioting and the delicate problem of maintaining peace in the Congo, an American citizen who lives in Leopoldville, who owns a shirt factory employing more than 350 Congolese, and who operates an important art school and center in the capital city of the Congo, Maurice Alhadeff, wrote me from that strife-torn community. His letter is dated August 9:

"We hope that all the difficult times which we are going through will be of short duration and that a brilliant and prosperous future is in store for us. The actual difficulties are inherent in all the young states and are difficulties of growth; they are less serious than the outsider would think."

This is the long-range faith to which we must give our loyalty. Then, and only then, can we maintain poise in the midst of the prevailing confusion.

Genuine love of learning is the first vitality I want to underscore. We must be done with slavish acceptance of assignment as boring necessities, and lay hold of creative dedication to knowledge with depth.

Jacques Barzun in "Teacher in America" says: "Every college * * * should * * * be dedicated to intellect, not in the sense of pedantry or verbalism, or highbrow superiority, but in the sense of mind, free and restless in its desire to experience, comprehend and use reality."

The unifying element in all of our diversity is quality. Today no person, institution, agency, profession, enterprise, or organization can afford to countenance shoddiness in its philosophy, goals, program, or membership. The artisan and the artist alike must be nurtured in the same high tradition of excellence.

Each one of us should reexamine our relationship to quality of effort and outcome.

Informed minds will decide future issues. If we have the will to achieve self-knowledge and self-learning, we can prevail. If not, we shall lack mental vitality, to our sorrow.

Still, reason and logic are not the only vitalities, nor are they ample to provide proper direction for Western civilization.

Reason may be outmatched in its struggle with instinct. Unless, that is, there are other vitalities to be summoned to aid us.

Consider fear. It is not wholly to be despised. It protects cautious men from disastrous accidents. Recently it has accomplished in international affairs, dealing with the Soviet, what could not have been otherwise achieved. Together with Nazi philosophy and policy, these new energies have provided a mirror of forces in these United States. The nationalism which became a horror of blood and death under Hitler lives in a less violent form in the democracies. The confidence in solutions of local problems by governmental action; the glorification of technology as the new messiah, of science as the sure answer to social ills; the subordination of law to mass interests—all of which are dramatically illustrated in Soviet society—have appeared in the West with enough stress to cause the individual citizen to feel helpless or frustrated before the well-financed smooth efforts of the "organization man," from school board members to presidential candidates, or to lose hope for municipal or State government, in the presence of public and private bureaucracy.

Fear is an excellent barometer. It warns of storms to come. It is not a preventative. It never builds shelters from the raging elements.

The West, with its wealth, will prove more vulnerable to the thrusts of hate and the energies of the frenzied than any other nations, if it abandons the pursuit of ideals and visions. More than any other society, it is the product, not of favorable climate, abundant resources, or friendly racial groups, but of the shaping, molding power of the human spirit.

Because of our people's vision of man, high and lifted up, idealistic and capable of dedication, we have developed schools and colleges to enlist all-out effort for fullest development of individual abilities. We have sought and found instruments for physical mastery, comfort, and well-being.

"Man is not master of the universe because he can split the atom. He has split the atom because he first believed in his own unique value. Faith led to the material achievement, not the achievement to faith" (Barbara Ward, "Faith and Freedom," p. 265).

An audacious view of man as a worthy creature, produced adventurous enterprises for fulfilling mankind. Loss of such a view, and its replacement by a concept of accidental birth, unfortunate existence, meaningless years, and on to the fatality of death, and man is ready for a slave state without protest.

Speaking of faith as the vitality we require, I am not referring to sectarian creeds of any sort. Rather, I am referring to confidence in existence as being meaningful, and in God as the supreme fact of this vast life.

Such faith will not be restored in the West because people believe it to be useful, but only because they believe it to be true.

Echo I, performing on schedule, is convincing evidence of the reliability of the physical universe. Goodness, appearing again and again in indistinct corners or in top headlines, compels acknowledgment of values outside of physical characterization.

Here is the root of Western freedom—the infinite value of every person, an intelligently managed physical universe, every person's responsibility to leave society better than he found it.

No one can forecast the hour or place of the mastery of these vitalities. One may say that in human history, often times of greatest tribulation and deepest despair have been preludes to times of enlightenment. Today, the uneasiness and the premonition of doom—if we succumb to violence as the arbiter of our fate—may become the powerful prompting to seek another route.

Let us remember, however, that only the seekers truly find; only to those who ask shall it be given, and only to the bold who stand at doors and knock shall portals be reopened to creativity, freedom, and fulfillment.

Resolutions Adopted by the Polish American Congress, Central and Northern New York State District

---

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks I include resolutions adopted recently at a meeting of the Polish American Congress, central and northern New York State district. I believe these thoughtful resolutions deserve the earnest consideration of every Member of this House:

The delegates to the Polish American Congress, central and northern New York State district, in their regional meeting assembled at the Polish American Community Club, Columbia Street, in the city of Utica, on Sunday, June 26, 1960, have unanimously adopted the following resolution:

"With faith in our belief that God created man to his own image and breathed into him the breath of divine life:

"We stand vigilant in the defense of our United States of America, our American way of life and our American institutions—thereby upholding the dignity of man—the individual: all of which root and stem and sprung to life and continue to grow—from that faith and belief.

"On this occasion we greet all our fellow Americans and we wholeheartedly support our Government in its efforts to seek a just and lasting peace and we have full faith in our sincere and courageous leader, the President of the United States, Dwight D. Eisenhower.

"We urge our Government to stand ready and always prepared to defend our country.

"We hereby express our gratitude and sincere thanks to our spiritual leader, our chaplain, the Reverend Ladislaus Ouzielek, who for so many years devotedly has contributed so much to our organization by his advice, counsel, and active participation.

"We note with much satisfaction, for their valued, faithful, and untiring service, the raising to the dignity of Prothonotary Apostolic, the Right Reverend Monsignor Casimir S. Piejda; to the dignity of Domestic Prelates, the Right Reverend Monsignor Bernard A. Janczewski and the Right Reverend Monsignor John A. Kociela; and we note the 25th year anniversary of fruitful service rendered to God as a priest by the Reverend Edmund Stankiewicz, pastor of St. Stanislaus parish. To all these right reverend and reverend fathers we send greetings and we offer our wholehearted congratulations and best wishes: Szcześć Jem Boże.

"We call upon all our fellow citizens to support the Polish American Congress; the Alliance College; the Catholic League; the Kosciuszko Foundation; the Orchard Lake Seminary; the Paderewski Foundation; the Polish Immigration Committee; the Pulaski Foundation; and all the other noteworthy charitable and humanitarian organizations.

"We call upon all Americans to act, initiate, and organize committees for the purpose of drawing up programs to appropriately observe:

"1. The 1,000-year anniversary of the acceptance of Christianity by the Polish Nation, noting its myriad contributions to Europe, Christianity, civilization and the world.

"2. The 100-year anniversary of the birth of Ignace Jan Paderewski, champion of freedom and world-renowned maestro of the piano and musical composer.

"3. The refugee year in which the nations of the world have and are participating and which is so proclaimed by our President or the United States, Dwight D. Eisenhower, whereby help and aid is given to the refugees cast and strewn all over the world and particularly those of Polish descent who are calling for our aid and help and on whose behalf our great leader, the Right Reverend Monsignor Colonel Felix F. Burant, through our Polish immigration committee, is appealing to us.

"4. In memory of one of the greatest fighters for freedom, that brave American Revolutionary War hero, a contemporary and colleague of our Founding Fathers and of George Washington, Gen. Casimir Pulaski.

"We call upon our brethren, the Americans of Polish descent, not to forget, but to dignify them by appropriate testimonial ceremonies for their well deserved contributions made to their Polonais, those elder statesmen, the pioneers and builders, the seniors of our Polonais who have spent a lifetime in building those communities which include churches, schools and community homes wherein the best of Polish culture is expressed to add to the beauty of the American landscape; whereby they will be made to feel that their life's work for the community is appreciated.

"And at this time we hail Konstanty Sarnowski, one of the senior builders of the Schenectady community.

"We urge our Governor, The Honorable Nelson A. Rockefeller, and the honorable mayors in our district to proclaim Paderewski Day to be observed on November 7, 1960 in honor of the 100-year anniversary of the birth of that champion of freedom and to proclaim Gen. Casimir Pulaski Day on October 11, 1960 to commemorate that great patriot's memory.

"We send brotherly greetings to the people of Poland in their continuing fight for freedom and democracy and we assure them of our continued support in their efforts and in their struggle.

"We bow our heads in reverence to His Eminence, Cardinal Stefan Wyszynski, the primate of Poland, and we assure him of our support in his cause.

"And together, as we ascend to the various summits confronting our national and international life may the blessing of the Lord be upon us."

The Polish American Congress, Central and Northern New York State District: Rev. Ladislaus Guziolek, Chaplain; Mr. Stephen Obremski, President; Dr. W. Kotwas, Vice President; Mrs. Ann Szczepanska, Vice President; Mrs. Sophia Czachowska, Vice President; Mr. Stanley Zabek, Financial Secretary; Mrs. Violet Michalska, Secretary; Mr. Robert J. Pietruszka, Assistant to the President; Mr. Anthony Sawicki, Sergeant-at-Arms; Mr. Joseph Dylong, Treasurer.

National Police Hall of Fame

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. ROGERS of Florida. Mr. Speaker, a National Police Hall of Fame will be dedicated on October 15 at Port Charlotte, Fla., to the memory of all police officers in the United States who have given their lives in the line of duty to protect our citizens.

The hall of fame will consist of a beautiful modern building containing typical equipment used in police departments, as well as a memorial listing the names of all law enforcement officers who have been killed in the line of duty.

The memorial is being built by the National Police Officers Association of America and will be open to the public year round without charge. This nonprofit association, the largest of its kind in the United States, has chosen Port Charlotte as its retirement city. Floridians are happy to have these dedicated public servants come to Florida, and take pride in the National Police Hall of Fame being located in our State.

The law enforcement officer is one of the most important, yet often neglected member of our community. He strives to give us and our families the protection that we need and expect. Personal sacrifice is often the result of the police officers' devotion to duty—too often this sacrifice is his own life. Forty-eight officers lost their lives in 1959 while giving us that protection we frequently take for granted.

The National Police Hall of Fame has been designed to commemorate these sacrifices in the war against crime. It will be maintained by the National Police Officers Association of America membership, but will be dedicated to all law officers throughout America, regardless of their membership or nonmembership in the organization.

Because this project is national in scope and will represent the fine police men and women in every community, it should be of interest to all Members of Congress and citizens interested in law enforcement.

Chief G. S. Aremberg, executive director of the hall of fame has asked local police officials who have not yet done so to contact him about their own men and women who should be represented in this national memorial. The hall of fame will be dedicated at 2 p.m. October 15, and the Police Officers Association, through President Frank Schira, has invited the public to attend at that time, or any day thereafter.

It's Time To Give the Railroads a Tax Break

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. STRATTON. Mr. Speaker, it is high time we gave the railroads a tax break. Some months ago I introduced legislation to provide such a break by authorizing a faster depreciation allowance on railroad rolling stock, H.R. 7927.

In spite of the fact that my bill received a favorable report from the Interstate Commerce Commission it has not yet been favorably reported by the Committee on Ways and Means. The urgency of this need, however, was recently pointed up in an item that appeared in Railway Age for August 8, 1960. Under leave to extend my remarks I include the article:

Depreciation: A fellow was telling me the other day about a trucking company that fully depreciates its tractors in 4 years. With such a depreciation practice, a company never lacks untaxed money to provide replacements—and inflation doesn't have time in 4 years to raise the price too much.

Because of the slow depreciation of railroad equipment, the inflow of cash is modest—and replacements may well cost three or four times as much as the property written off.

Most businesses are hollering about the Government's inadequate depreciation allowances—but railroads have a right to a bigger beef than anybody. Not only are their depreciation rates much lower than average, but they have such poor net earnings out of which to make up the difference between depreciation charges and the cost of replacements. The setup is just plain murder for the railroads—and also for their suppliers.

Realities of the Space Age

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. WOLF. Mr. Speaker, northeastern Iowa had the privilege and honor of receiving into its midst on June 26 an outstanding officer of the U.S. Air Force, Col. W. W. Woodard, who spoke at a flight breakfast at the Oelwein, Iowa, airport. Colonel Woodard is Chief of the Engineering Division, Headquarters, Air Research and Development Command, Andrews Air Force Base, Washington, D.C. He has outlined very succintly the realities of the space age, and I commend his message to all Americans:

We often hear the view expressed, that a military organization is concerned solely with destruction—and that it therefore has little to offer in the way of intellectual or spiritual enrichment. This attitude is a holdover from an earlier era, when the soldier—belonging to a caste apart—was dedicated solely to the profession of war.

Though I address you as a military man, I am concerned—deeply concerned—with the same problems—economic, social, political, and most of all moral—that trouble all our people across the length and breadth of our Nation. Airmen, soldiers, and sailors in our country are very much like other citizens—like businessmen, farmers, lawyers, or teachers. They want the same things other people want—a life of peace, progress, and prosperity for their families.

Unfortunately—yes, even tragically—war is a factor in human existence that cannot be ignored. The threat of war is always with us, especially in this period, which includes most of the years the majority of us here have lived. Since the end of World War II, we have been involved in a conflict of cold war. It is an insidious, deadly, and disarming kind of war. It is one in which the opponents, up to now, have not engaged in full-scale hostilities, with the weapons of destruction which they possess.

If I were to leave only one message with you, the opportunity to talk with you would

be most worthwhile, that is, the cold war conflict is a very real war. It is being waged relentlessly and continuously, by the Communists everywhere in the world,—against our allies and against the so-called neutral nations.

One of the characteristics of communism, is its insatiable desire to impose its will on others. In the last 15 years, we have seen the two greatest Communist powers—the Soviet Union and Red China—engaged in a ruthless drive toward world domination—even though their territories already are among the largest on earth, and are still far from being fully developed.

The Communists follow this course because they know that so long as freedom endures anywhere in the world—so long as there exists a single nation which has faith in God, and believes in the dignity of man—their own power is limited and insecure.

Any nation, founded on the principles of freedom for the individual citizen—freedom of religion, freedom of speech, and freedom of the press, is a major obstacle to the ambitions of communism. Ours is such a nation. The compelling urge of communism, therefore, is to see it destroyed.

During the past 20 years, national strengths have been augmented by the two most powerful physical forces ever placed in the hands of human beings. One is the release of energy from the atom—the same type of energy generated by the sun, sustaining all the life on our globe. The other force is the development of rocket propulsion. It has given men the power to overcome the universal force of gravitation—to launch vehicles into space where they can travel the outer reaches almost indefinitely.

When these two forces are joined together, we have a rocket-powered vehicle capable of carrying an atomic warhead vast distances. The significance of the intercontinental ballistic missile, in terms of the worldwide conflict between communism and freedom, is that it has lifted the struggle for man's mind and spirit beyond the confines of any single territory or continent, and given it global dimensions.

The ballistic missile transcends any barrier that human beings may interpose on the ground or in the air. It travels through space at the speed of an interplanetary body. It strikes with little or no warning. The missile, therefore, is the ideal weapon of surprise attack.

What does all this mean to you and to me? It means that in the missile era—in which we all now must live—our traditional concepts of defense have become outmoded and meaningless. In the past we felt secure behind the oceans that separate us from Europe, Africa, and Asia. In fact, we relied on these ocean barriers to give us time in which to mobilize our vast productive capacity, so that we might overcome the initial advantage secured by a powerful aggressor. The oceans are no barrier for the ICBM. It traverses them with ease, in half an hour or less.

So, today, when missiles could destroy our industrial base in a matter of minutes, there is no time to assemble our industrial resources.

We must be prepared in advance for any attack that may be coming.

You will find in your everyday affairs that you are inevitably enrolled as a combatant in the cold war, on the side of freedom, whether or not you wear a uniform as I do. In a struggle whose dimensions are as vast as these, there must be the closest possible integration of the military and civilian effort. The depth of your understanding of the challenge posed by the missile and space age—and the way in which you meet it—will in no small measure determine the future of human freedom at home and abroad.

These are the unpleasant, yet undeniable facts about the age in which we live—the age of the cold war, of the intercontinental missile, and of space. No amount of rationalization will make these facts go away.

But there is also an encouraging facet to the age in which we live, for if it is a time of peril, it also is a time of great promise. Strange as it may seem, this promise springs from the very forces which have placed our lives and our well-being in such danger—from the vast horizons of scientific and technological promise opened up by rocket propulsion and the energy in the atom. Let me try to define these implications for you.

First of all, these discoveries offer to all mankind the prospect of an almost unlimited source of power. The energy in the atom already is beginning to provide a new and nearly inexhaustible supply of fuel for generators, for machines, for engines in vehicles of many kinds. The energy in rocket propulsion gives us the means to venture into space. There, at the very least, we will add immeasurably to our fundamental knowledge. We may even find a way to exercise some measure of control over the environment in which we live.

In the years of intensive research since the last world war, these two scientific advances have touched off what may be called a technological revolution. They have led to many new concepts, new techniques, new instruments—and even to a vast complex of new industries in the fields of electronics and the chemistry of fuels. If we use these new reserves of technical accomplishment wisely, we can look for impressive advances in the material welfare and the spiritual strength of mankind over the years ahead.

The military have been far from idle in meeting the challenge of the space age. Though we started some time after the Soviet Union on building a missile force to deter aggression, our Nation today is second to none in the development of these weapons. Just 5 years after the Air Force began working intensively on our first intercontinental ballistic missile, the Atlas was placed in the operational inventory of the Strategic Air Command.

Similarly, the intermediate-range missile, Thor and Jupiter, now have been made available to our allies. They are being deployed at bases in the United Kingdom and Italy, where they will be manned by British and Italian personnel.

Another ICBM, the Titan, will reinforce the Atlas within the next year or so.

We have a much more advanced ICBM coming along in the Minuteman. It is lighter, more compact, and easier to handle than either Atlas or Titan—and yet powerful enough to do any job we may have to ask of it. Minuteman has two advantages of great economic and military significance. First, it is relatively cheap to build and operate. Its economy means that we can have a large and flexible force of these weapons. Second, it can be launched from mobile platforms to avoid detection, as well as from fixed sites in concrete silos, deep underground. This achievement is a breakthrough of the utmost importance in missile technology.

To give our missiles and long-range aircraft the utmost speed in reacting to any threat of aggression—and also to provide the maximum protection for our civil population—we are preparing to establish a new kind of warning system known as Midas. The new system will be carried in satellite vehicles circling high above the earth. It will be able to detect hostile missiles immediatey after they have been launched.

Hence, our warning of a ballistic missile attack will be extended to about 30 minutes from a period of no warning at all today. Thirty minutes is the best alert we can expect in the space age. Obviously, our communication systems will have to relay this quick warning swiftly and reliably.

We are developing satellite systems for this purpose too. They will be able to communicate immediately with our missile and air forces deployed around the globe. Still another satellite system called Samos will provide us with valuable information.

These are all passive aids to our deterrent postures. None of the systems I have been describing represents a threat of aggression of any kind on our part. It has been clearly demonstrated to the world that our national policy rules out any use of our military strength, unless we are attacked. But in the missile era—as I have remarked already—no traditional defensive system will secure us from a surprise attack—and no time will be allowed us, as in previous wars, to marshal our industrial and military strength. Our only safety now is in having a strength so great, and in such a state of readiness, that no sane antagonist will provoke us into using it.

Wise men of all ages have taught us that there is no virtue in being weak. Virtue lies in strength, provided the strength is held in proper check. Men of good will and good sense arm themselves with the most effective weapons available. They use their weapons only as a last resort against the forces of an unprincipled adversary.

The military carries out its assigned mission of service to the Nation by providing the deterrent strength necessary to prevent aggression. The task of finding the overall solution to our cold war problem is one for the constructive forces of education, diplomacy, and free business enterprise. You people here are personal representatives of these forces.

In this critical time when the going is tough, we can see that the years ahead will be difficult. They will require that we exercise great courage, great patience, and great singleness of purpose to meet Communist aggression with superior civil and military strength. We must measure up to this obligation. We can, and, we will.

Recognize the Veterans of World War I for Certain Pension Benefits

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. MOORE. Under leave to extend my remarks in the RECORD I include the following resolution adopted by the La Societe des 40 Hommes et 8 Chevaux urging the Congress to recognize the veterans of World War I for certain pension benefits:

Whereas World War I has been over for more than 40 years; and

Whereas the Veterans of World War I are the only veterans of the United States of America who have not been recognized as a body for pension benefits: Now, therefore be it

Resolved by the Grande Voiture de West Virginia, That La Societe des Quarante Hommes et Huit Chevaux, in Grande Promenade duly assembled on this 20th day of August, 1960, in the city of Morgantown, W. Va., do urge the Congress of the United States of America to recognize the Veterans of World War I as a class for pension bene-

fits comparable to those now being paid to the Veterans of the Spanish American War; and finally be it

Resolved, That copies of this resolution be sent to our representatives in Congress and the United States Senate for their consideration and action.

CHARLES W. MORRIS,
Grand Chief De Gare, 1960.

Attest:

RICHARD D. BENTEL,
Grand Correspondant, 1960.

A Revolutionary Shrine in Montgomery County, N.Y., the Grave of William McConkey, Owner of the Ferry on Which Washington Crossed the Delaware

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. STRATTON. Mr. Speaker, as the Member of this body who has the honor to represent the 32d District of New York, an area rich in historical shrines and memories, I am frequently surprised and delighted to read of new discoveries that link our great area with major events in the history of our Nation, from its inception right down to the present time. No event perhaps has had greater significance or greater recognition in our Nation's early fight for its independence than Washington's timely and courageous crossing of the Delaware River to take the British soldiers in Trenton by surprise on Christmas, leading to a great victory. The grave of the man who made that trip possible is located in the town of Charleston, Montgomery County, in my district. Under leave to extend my remarks I include an article that appeared in the Amsterdam Evening Recorder on July 30, 1960, written by my good friend Richard Hency, describing this shrine and the events surrounding his important place in history:

WASHINGTON'S PILOT ACROSS DELAWARE RESTS UNNOTICED BENEATH CHARLESTON'S SOIL

(By Richard Hency)

Cars swish by a couple of State historical markers on Route 30A in the town of Charleston, unaware of what they read and of the fact that a little cemetery is buried back among some wild apple trees, with grasses growing in wild profusion brushing against the worn stones. Buried here is a man who played a leading role in a turning point in the career of George Washington during the blacker days of the Revolutionary War.

Those who wade through the grass and weeds will find several weatherbeaten stones and several American flags placed there each year to honor those who served their country. Among these stones one will find a stone which reads, "William McConkey, died September 10, 1825, aged 81 years, 7 months, and 15 days."

GUIDED WASHINGTON

Little is found here to note that this is the grave of the man who guided General Washington and his troops across the Delaware River on Christmas night, December 25, 1776, to their famous attack on Trenton and the capture of that city from the Hessian troops.

William McConkey was born in County Tyrone, Ireland, on January 22, 1744, the 15th generation from Donnachaide Reimhar MacAonghus of Scotland. With a thousand others he despaired of living conditions there and listened longingly to the tales of America and her opportunities. Finally he embarked and arrived in New York. He journeyed to New Jersey and settled 9 miles north of Trenton on the banks of the Delaware River.

Later a road was built to the spot and McConkey built a ferry and docks. He earned a comfortable living from the farthings and half-crowns charged for crossing the river in his ferry.

McConkey settled down to raise a family and built a large stone house near the banks of the river. The river became his great interest, and he studied each mood of the river, learning the shifts in the currents and whirlpools between the high waters and the low until he had satisfied himself that he could outguess the Delaware under any conditions.

SYMPATHIES WITH COLONIALS

The outbreak of the war reached his ferry and his sympathies lay with the Colonials, but enlistment was out of the question. Ferrying was too heavy work for Mrs. McConkey, and the oldest child was only 5 and another was coming.

The Colonial forces had been forced to retreat down from New England and New York, and had settled in Pennsylvania. The King's Hessians with braggadocio manners settled in Trenton.

On the Pennsylvania side McConkey talked with groups of Colonial scouts, uniforms nondescript, ragged, some with feet bound in rags. Early in December, Colonial staff officers approached McConkey to learn if he might be trusted to take men across the river for an attack on Trenton.

McConkey agreed, and with Patrick Colvin collected boats during the following week and hid them in the woods which bordered the river. On December 24 at a council of war it was decided that Colonel Cadwalder should cross the river at Dunk's Ferry to Curlington on Christmas night and tackle the British at Mount Holly, Columbus, and Bordentown. General Washington on the same night would take a detachment of 2,400 men and 18 pieces of artillery and make a direct attack on the 1,200 Hessians at Trenton.

POSSIBILITY OF DISASTER

Preparations for the move continued on through the Christmas night, with hail and snow falling on the area. Washington paced back and forth near the ferry wondering. There had been few successes under his leadership to date. Defeat at Trenton might lead to his resignation, wholesale desertion of his troops, and the possible end of a Nation not yet 6 months old.

McConkey worked all night leading the string of boats acros sthe ice-filled river. Washington himself rode with McConkey on one of these trips. Daylight was breaking before the last crossing was made. Many officers advocated abandonment of the attack. They had depended upon surprising the Hessians under the cover of darkness. Furthermore, the ammunition of many of the men was wet, others dropped by the road, unable to walk further on their bleeding feet. The whte snow everywhere was tinged with the blood from the poorly clad Colonial troops.

EASILY TAKEN

Then, with the first streaks of sunlight, Washington bade that the men arise. His plan was wise as history has shown. The Germans had indulged in intoxicants to excess the night before, celebrating Christmas, and were unfit for battle, and Trenton was easily taken.

Following this the life of the ferryman returned to normal and he continued to operate until the end of the war when he sold it and was paid in Continental script. He found out later that the money was worthless.

With his wife and children he migrated to New York State, settling in the town of Charleston, and was said to have built the first hotel in the hamlet of Glen. This building was used as a hotel until 1870 when it was run by the Saltsman family.

When McConkey died in 1825 he was buried alongside his wife in the small cemetery known as the old Wykofite churchyard. McConkey had one grandson, Marcus D. L. Simpson, who became a professional soldier, graduating from West Point and rising to the rank of brigadier general.

Today one can search the maps in vain for McConkey's Crossing, as the town has been renamed Washington's Crossing and is called this on both sides of the river in New Jersey and Pennsylvania. The site is also marked by Washington Crossing State parks.

Today few people, even students of history, remember the man who, with his great knowledge of the Delaware River, made the historic crossing possible even though the river was choked with floating ice and dangerous swift currents.

Our Strategic Planning Process

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. CHAMBERLAIN. Mr. Speaker, for some time there has been a discernible requirement for improvement in our strategic planning process. The present techniques are effective, but the advent of the ballistic missile and the Polaris submarine is resulting in significant changes in our strategic retaliatory capabilities. Therefore, it was with considerable satisfaction that I note the decision, announced Wednesday, August 17, by Secretary of Defense Thomas S. Gates, Jr., establishing a centralized system for strategic operational planning which will insure the integrated employment of our military forces for strategic retaliation.

As Members of this House are aware, this matter of strategic retaliatory planning is an extremely complex one. For that reason, the Secretary of Defense merits commendation for the sensible and sound manner in which he has provided a solution to this problem.

His plan rejects—and I believe very properly so—the proposal for an overall strategic command. The grounds for rejecting such a command are obvious. It would simply add a delaying layer in the command structure, and it would be extremely vulnerable in event of a sudden surprise attack.

Also, the decision of the Secretary to make the Director of the Strategic Target Planning a direct subordinate of the Joint Chiefs of Staff is indeed sound.

We have, during the tenure of Secretary Gates, seen the Joint Chiefs of Staff brought to an impressive point of efficiency and effectiveness. Placing the

Strategic Target Planning organization directly under the Joint Chiefs of Staff further strengthens our Joint Chiefs of Staff system. This, of course, is in complete accord with the intent and philosophy of the Defense Reorganization Act of 1958.

I believe it important to emphasize that the Director of Strategic Target Planning performs this assignment distinctly and separately from his other position as Commander of the Strategic Air Command. The utilization of the extensive facilities of the Strategic Air Command for the purposes of the new Strategic Target Planning organization is a sensible decision in order to eliminate the unnecessary waste that would be involved in duplicating the SAC establishment.

This recent decision by Secretary Gates should be the source of reassurance and confidence in the manner in which the Department of Defense is being directed in these times of international tension. This is another in the long list of worthy accomplishments which have characterized the actions of Thomas S. Gates, Jr., as Secretary of Defense.

One of the clearest explanations of the new strategic target planning was printed in the Baltimore Sun of Thursday, August 18, and was written by Mark S. Watson, the distinguished military correspondent of the Sun. I include it in my remarks at this time, and recommend it to the attention of the House:

GATES ENDS DISPUTE, SETS UP DEFENSE UNIT TO FIX WAR TARGETS—REJECTS AIR FORCE'S IDEA OF NEW STRATEGIC COMMAND

(By Mark S. Watson)

WASHINGTON, August 17.—By what Thomas S. Gates, Jr., Defense Secretary, termed "the most important military decision since coming to the Pentagon in 1953," the Defense chief today ended a serious dispute between the Navy and Air Force, affecting the control of the Polaris submarine missiles.

Gates rejected altogether the concept, urged by the Air Force, of a new strategic command which would exercise control of both the planes and missiles of the Strategic Air Command and those of the Navy—chiefly of the Navy's treasured Polaris, now coming to reality.

WILL SUBMIT PLAN

Instead, the Secretary, with complete approval of the Joint Chiefs of Staff and all the unified theater commanders as well, has created a new planning section (as distinguished from a new command), to be set up at Omaha, Nebr.

This planning office, whose first chief will be Gen. Thomas S. Power, of the Air Force, with a deputy chosen from the Navy and a considerable staff from all services, will do the strategic target planning, submitting each plan and its revision to the Joint Chiefs of Staff.

The Joint Chiefs will study and accept or revise the plan, and make the indicated distribution of forces throughout the world.

Execution of that plan will, as now, be by the designated service, but under the overall command from the Defense Department itself, via the Joint Chiefs.

This newly created planning staff will do its work at the Strategic Air Command headquarters at Omaha, of which General Power is and will continue commander, thereby "wearing two hats," in Pentagon lingo, precisely as do the North Atlantic Treaty Organization commander in Europe, the NATO commander in the Atlantic, the Far East commander, and others.

MOST ECONOMICAL USE SEEN

The selection of the Omaha headquarters permits most economical use of the very large resources at that important center, not only of people, knowledge, and experience but also of the immense computing machinery complex set up there.

Machinery's importance in the planning of execution of modern warfare is difficult for the layman to grasp.

In this case it is most easily understood if one first faces the problem of:

1. Determining the enemy targets to be attacked in retaliation once the enemy has opened an assault on the West.

2. Designating the exact American force which will conduct its retaliatory action against each enemy target.

PRECISE CALCULATION

It can be seen that in the case of intercontinental ballistic missiles, or intermediate range ballistic missiles whether land or air based, this calls for the most precise calculation of the exact missile trajectory which will place a particular missile on a particular target 1,000 or more miles away.

In the case of a mobile launcher, this calls for a computation of a great many trajectories. In the case of duplicated missions (in case some of our launchers are out of business), again there is need for more than one computation.

The total of computations is so immense that they can be arrived at only through the "magic" of such huge electronic machines as are set up at various places in the United States.

One of the most efficient, it is obvious, must be that at Omaha hence the selection of that complex for the headquarters.

Hence, too, presumably the selection of General Power, who is head of the Strategic Air Command, as the first director of planning. It seems pretty clear that at present and for the immediate future SAC is sure to possess the Nation's most potent long-range retaliatory power.

How long this directorship will lodge with the Air Force is speculative. SAC will acquire even more power through the multiplication of Atlas and Titan missiles and the arrival in 1962 of the Minuteman missile.

FLEXIBILITY OF STAFF

But beginning in a few weeks the Navy's first Polaris sub will become operational, and within about a year four other and larger Polaris subs will join it, with three or four more coming annually.

It is quite possible that in time the Navy will be regarded as having the greater powers of deterrence through massive weapons. Hence the flexibility of the new planning staff.

While the Air Force and Navy are providing the mass of today's deterrent and retaliatory weapons, they are not alone. The Army's oversea forces have some in that category, and so—most significantly—have certain allies of the United States.

HOLDS EXTENDED CONFERENCE

It must be remembered that every plan affecting allies is adopted only after study and approval of those allies. This will apply to whatever plans are worked out by the new staff before the Joint Chiefs at the Pentagon give their own approval.

Gates, with Gen. Nathan F. Twining, Joint Chiefs Chairman, beside him, announced his decision late this afternoon after an extended conference with the eight unified and specified commanders who assemble periodically at the Pentagon.

IMPROVED ARRANGEMENTS

All eight commanders—from Europe, the Pacific, Atlantic, Eastern Atlantic, Caribbean, Alaska, SAC, and Continental Air Defense—were here, save for the last who sent his deputy.

All supported the Secretary's plan as wholeheartedly as have the Joint Chiefs themselves.

"In conjunction with the Joint Chiefs," Gates said, "I have been working on plans to insure the most effective balance of the missile bomber force and to insure that we can properly integrate these various forces if it ever becomes necessary to use them.

We have improved our arrangements. The actions do not represent any change in established national military policy or in our relations with our allies."

Simple as today's solution may seem, it called for several months of study necessitated by the Air Force's strong pressure for a new command of all long-range plane and missile forces, rather than a planning section only, and by the Navy's equally stout resistance to any loss of command of its unique elements.

The Department's conviction is that the new plan is better than any of the substitute proposals in that it assures more flexibility and swifter adjustment of the Nation's immense resources to either an emergency or a new situation.

May I also call attention to the article appearing in the August 29 edition of U.S. News & World Report entitled "On 15 Minutes' Notice: How the United States Plans To Strike Back" and commend it equally as worthy of examination by my colleagues:

ON 15 MINUTES' NOTICE: HOW THE UNITED STATES PLANS TO STRIKE BACK

A quick, devastating counterpunch to any surprise attack from Russia is being set up.

U.S. weapons—land, sea, air—will be pointed at Soviet targets, ready to fire on short notice at a single command.

For the first time, this country is to have a unified master plan to strike back at Russian targets in nuclear war.

The United States will be provided with this overall blueprint for retaliation by an interservice brain trust established by the Pentagon on August 17. A new job, Director of Strategic Target Planning, was created on that day and given to Gen. Thomas S. Power, Commander of the Strategic Air Command.

The aim is to gear all of America's retaliatory weapons to fire at previously earmarked targets within 15 minutes after warning of attack. The new strategy is to guarantee that the Navy's Polaris submarines and carrier aircraft are tightly integrated with Air Force bombers and missile forces.

At a time when Soviet strength is great and Soviet threats are growing, urgent need is seen for closer cooperation among U.S. military services. The Power agency is designed with this in mind.

MACHINES AND MEN

The new strategy for attack against Communist targets is to be made by 40 officers drawn from all services. They will work under General Power's direction at SAC headquarters in Omaha, Nebr. Elaborate electronic computers now used by SAC will help pinpoint targets that are to be destroyed once an enemy has launched a first strike.

The new central agency will designate the exact U.S. force to strike back. In some cases it also will name the weapon—B–47 or B–52 bombers, Atlas or Polaris missiles, fighter-bombers based abroad, or the Air Force's Titan and Minuteman missiles of the future. Timing of the attacks will be assigend. Other targeting information will be given.

This U.S. master plan will be ready December 1. Until then, target plans now existing will be kept in force. These existing plans were drawn up by U.S. theater commanders overseas and at home and coordi-

nated at annual meetings in Washington. Some Pentagon authorities say this method failed to provide effective overall strategy for answering Soviet aggression.

Authorities explain the need for the new system this way: In a period when weapons are more complex and available in greater variety, and when the Soviets have just reorganized their own nuclear rocket forces, old ways of planning war are no longer good enough.

Under this new system, General Power and his staff will prepare integrated target plans. These will be reviewed by the Joint Chiefs of Staff. Standby orders for action will go out to U.S. commanders around the world.

Target: targets. How to make the target assignments will be the big job.

Targeting—backbone of strategic warfare—is a complicated process in the missile era. It requires knowledge of enemy locations, their defenses, what weapons are needed to destroy them, proper timing for attacks, computations for missile trajectories, where to place forces so they may strike on short notice.

How will the process work? How will it be decided who gets what target?

Here is a hypothetical case: Say, for example, that General Power's staff has learned that the big naval base of Vladivostok on the Soviet's Pacific Coast includes deep submarine pens, "hardened" against aerial attack. In the city itself are important railway yards. Thousands of troops are garrisoned 30 miles from the city. Seventy miles away is a deeply entrenched Russian missile complex.

The central agency in Omaha goes to work. Assignments are quickly made, approved by the Joint Chiefs of Staff and, in this example, relayed through the U.S. Pacific Command. The moment there was sure knowledge this country had been attacked, this would happen:

1. A B-47 bomber of SAC leaves Guam with a multimegaton bomb powerful enough to penetrate and destroy the naval base and its submarine pens.

2. A Polaris submarine far off the coast pinpoints the railways yards with a half-megaton warhead. The bomber and submarine have also wiped out the city itself.

3. Navy carrier planes, with still lighter atomic loads, go after the troop concentration far outside the city.

4. An Atlas missile is launched on a preset course from Cheyenne, Wyo., and in 30 minutes has traveled from its U.S. base to the Soviet missile site. The Atlas carries the required 4-megaton punch.

No "overkill." That example, imprecise for security reasons, indicates the need for central planning. Under present arrangements, one of the targets in the Vladivostok area might have been "overkilled" while the others were left undamaged.

Now targeting is to be taken from individual services. Know-how is to be pooled. The result is to be America's first truly unified plan for atomic war and, for Russia, new evidence of U.S. determination to strike back hard if attacked.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Burdick, Dworshak, Kuchel, Goldwater, Allott, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Burdick, Goldwater, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Young.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Martin.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Live-Virus Polio Vaccine Approved for Use in United States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the New York Times of Thursday, August 25, 1960, as well as a feature from the same edition on Dr. Albert Bruce Sabin:

LIVE-VIRUS POLIO VACCINE APPROVED FOR USE IN UNITED STATES—PUBLIC HEALTH SERVICE ENDS DISPUTE BY SELECTING SABIN COMPOUNDS—DRUG HOUSES TO SPUR OUTPUT

(By Bess Furman)

WASHINGTON, August 24.—Live poliomyelitis vaccine was approved today as suitable for use in the United States.

The announcement, ending a long controversy, was made by Dr. Leroy E. Burney, Surgeon General of the Public Health Service.

Simultaneously, he laid down exacting rules under which the live vaccine will be licensed for commercial use in this country. His timetable calls for this to take place next spring. He predicted large supplies by the fall of 1961. He said the winter months were best for live polio vaccinations.

The live vaccine, given by mouth, has already been used to immunize millions of persons in the Soviet Union, South America, and other parts of the world. It is a virus so weakened as not to cause the disease, but still alive enough to produce antibodies.

In manufacture of the Salk killed vaccine, used in this country since 1955, the virus is heat-killed to a point where it will not cause disease, but still will produce antibodies. It is given by injection. Dr. Burney predicted today that the live vaccine would not replace the Salk variety, but that each would complement the other. For instance, live virus might be used as "booster" shots for the Salk vaccine.

The rules laid down today permit initial commercial production of only the Sabin types of vaccine—types I, II, and III, developed by Dr. Albert B. Sabin of Cincinnati to protect against the three polio strains.

Ruled out were two other types of live polio vaccines—that developed by Dr. Herald R. Cox, at the Lederle Laboratories in Pearl River, N.Y., and that developed by Dr. Hilary Koprowski, at the Wistar Institute in Philadelphia.

Dr. Burney praised both these scientists for their "great contributions." He said that large-scale field trials of both the Cox and Koprowski vaccines had shown "the hazards to man to be very, very slight."

But he concluded that the Public Health Service had to apply a monkey test for safety in licensing a vaccine—and that the Sabin strains showed least virulence when injected into the brains, spinal cords, and muscles of monkeys. Sabine strain No. 1, the least virulent, was made the laboratory measuring stick for all other strains.

STRAINS AVAILABLE TO ALL

Since the Sabin strains were developed with funds furnished by the National Foundation, Dr. Burney added, they will be available to all the drug manufacturers that wish to produce live polio vaccine.

Dr. Burney said he did not know what the cost of the live-virus vaccine would be as compared with that of the Salk vaccine. The Salk vaccine now costs about 45 cents a dose, plus the doctor's charge for its injection.

Dr. Burney also said he thought that three or four doses of live virus would be required. This is similar to the Salk vaccine which ideally is given in three injections with a later booster shot.

There is still some difference of opinion whether the live-virus vaccine confers greater immunity. However, some believe it does because with its passage through the intestine it stimulates formation of more antibodies. Another advantage is that through contact between persons the live virus is spread and immunity may be developed in persons who have not taken vaccine themselves.

Drug companies already in experimental production of the Sabin vaccine include Wyeth Laboratories of Philadelphia; Pitman-Moore of Indianapolis, and Chas. Pfizer & Co. of Brooklyn.

The American Cyanamid Co., under which the Lederle Laboratories operate, immediately issued a statement that Lederle would start manufacture of the approved strains as soon as all the Public Health Service requirements were met. The company said it had already invested 14 years and $13 million in its faith in the superiority of live polio vaccine.

Other drug companies sending experts to the live-virus conference held here last week were the Eli Lilly Co. of Indianapolis; Parke, Davis, of Detroit, and Merck Sharp & Dohme, of Rahway, N.J. Attending as observers were scientists from Connaught Laboratories at the University of Toronto in Canada, where live vaccine is now being produced, and from Chas. Pfizer Laboratories of Kent, England.

The Surgeon General defended his long delay in endorsing the live vaccine by saying: "It has been stated that we have been ultraconservative. I have no apologies to make for conservatism, which is justified in an issue as important as this."

EVIDENCE EVALUATED

Dr. Burney said that today's endorsement of the live vaccine resulted from scientific evidence presented at a meeting on polio in Moscow in May; the Pan-American Health Organization-World Health Organization meeting in Washington in June; and the International Congress on Poliomyelitis last month. The final evaluation was made last Saturday by the six-member Public Health Service Committee on Live Polio Virus Vaccine.

Dr. Roderick Murray, Chairman of that Committee and head of the Division of Biologics Standards that will license the vaccine, stressed these points today:

To minimize the possible danger from a wild virus that might develop after repeated trips through the human intestinal tract, use of live virus vaccine should be on a communitywide rather than individual basis.

The claim for immunization through a single dose of live virus has not been borne out by recent experience. Repeated doses must be given at intervals, whether single strain or polyvalent vaccine is used.

Laboratories must be isolated and other special precautions instituted, including tests of both the persons who make the vaccine and the monkeys used in testing it.

The product must be kept under 30 degree centigrade in manufacture, and under refrigeration pending use.

The production regulations will be published in the Federal Register about November 1 and again in late November.

FOUNDATION IS PLEASED

The National Foundation hailed Dr. Burney's announcement as another milestone in the organization's fight against polio.

Basil O'Connor, the foundation president, said here that it had awarded $1,198,000 to Dr. Sabin since 1940 for research that led to his development of the live polio virus vaccine.

WARRIOR AGAINST POLIO—ALBERT BRUCE SABIN

Another breakthrough was marked yesterday by mild-mannered Dr. Albert Bruce Sabin, who delights in using military terms in his nonstop warfare against viruses. The formal approval of vaccine made from his strains of live polio virus by the U.S. Public Health Service may well revolutionize vaccination methods in this country in the next year or so. But the white-haired scientist already has his next aggression mapped out. He and his fellow workers will turn their attention to cancer next year. For the last 25 years he has concentrated on the battle against poliomyelitis.

In his office at the University of Cincinnati, where he is professor of research pediatrics, he celebrated the American breakthrough yesterday with champagne.

It is a strange twist of circumstances that he had already broken through in startling fashion in the Soviet Union.

Dr. Sabin was born in Bialystok, now Polish, but then a part of czarist Russia. His family was permitted to leave in 1921 when he was 15 years of age. They emigrated to the United States, and he has been a U.S. citizen since 1930.

TESTED IN SOVIET UNION

While the United States has been concentrating on the Salk vaccine, the Soviet Union has made a massive test of his type which can be taken orally. In the last year the Russians have given the vaccine in the form of candy balls or liquid to 77 million persons. Extensive tests have also been made in Mexico, Poland, Malaya, and other countries.

Bespectacled and scholarly looking, Dr. Sabin remarks that his use of military terms dates from his 30-year connection in one capacity or another with the Surgeon General's Office.

Although he once remarked that his intensive work was also his hobby, he said yesterday that "his principal achievements were his 2 daughters, Deborah, 10, and Amy, 8. He loves symphonic music and travel.

Music, he says, helps him "to recharge the mental batteries." And he enjoys meeting many different kinds of people on his travels. He has been in the Soviet Union four times since 1956, most recently in May. And in 1958 he was official guest of Poland.

The Sabin family, after coming to this country, first lived in Paterson, N.J. Young

Albert Savin attended Paterson High School, where he was a member of the literary and debating societies.

Then he worked at odd jobs to obtain money for his undergraduate and medical education at New York University. But he was nearly steered far afield from the future battle with poliomyelitis by an uncle, who offered to pay his tuition if he would become a dentist.

In fact he attended the university's school of dentistry for 2 years. But he relates that the reading of Paul de Kruif's book, "Microbe Hunters" gave him the desire to turn to research.

As an undergraduate he impressed the famous microbiologist, William H. Park, then a professor at New York University, by asking quietly if he might work in a corner of the laboratory.

For many years thereafter Dr. Sabin worked on various projects suggested by Dr. Park. "I owe him more than any man can ever repay," Dr. Sabin has said.

It was after being appointed to the Rockefeller Institute in 1935 that he began the long war of attenuating, or taking the sting out of, live polio viruses—the work that led to the vaccine.

During World War II he served in the Army Medical Corps and developed vaccines against dengue fever and Japanese encephalitis. He was discharged with the rank of lieutenant colonel. He was awarded the Legion of Merit.

By 1955 he was ready to test his vaccine on human beings. Twenty-six volunteers at the Federal reformatory in Chillicothe, Ohio, participated in the successful experiment.

His connection with the University of Cincinnati goes back to 1939.

U.S. Policy in the Middle East

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, August 26, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Maj. Gen. Julius Klein, retired, delegate at large from Illinois to the Republican National Convention, 1960, to the platform committee of the Republican National Convention.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON U.S. POLICY IN THE MIDDLE EAST TO THE PLATFORM COMMITTEE OF THE REPUBLICAN NATIONAL CONVENTION BY MAJ. GEN. JULIUS KLEIN, RETIRED, DELEGATE AT LARGE FROM ILLINOIS TO THE REPUBLICAN NATIONAL CONVENTION, 1960

Ladies and gentlemen, my name is Julius Klein. I appear before you as a lifelong member of the Republican Party, a veteran of both World Wars, and one who has had the privilege of serving committees of the United States Senate in study missions abroad relating to the conduct of American policy in foreign military and economic aid. I am also privileged to be a member of the Illinois delegation to this convention.

The Honorable JACOB K. JAVITS, the very distinguished Senator from New York, who is known throughout the land for his comprehensive knowledge and understanding of international problems, has submitted a plank on the Middle East for inclusion in our party platform. I should like to take this opportunity to voice my complete support for this very eloquent statement of principles and to urge its adoption for our party program.

Two weeks ago I returned from an extended visit to Europe and the Middle East. I arrived in Europe on the eve of the betrayal by Soviet Premier Khrushchev of the hopes reposed by mankind in the aborted summit conference. During my journeys through Europe, I had the opportunity to renew old friendships among many of the leading political figures of our Western allies. They were united in the view that Mr. Khrushchev's vulgar display in Paris marked the opening of a new period of political aggression that could be expected to reach into every corner of the world. As we now know, the Soviets' brutal rejection of peaceful negotiations in Paris was swiftly followed by fresh upheavals in Havana and Russian and Chinese Communist intrusion in the unhappy island 90 miles to the south of our Florida coast.

There is a direct and ominous relationship between these events and the subject of my statement to this committee.

A little more than a week ago, the Soviet Union announced its intention to continue large-scale shipments of arms to the Arab States. Mr. Khrushchev made no secret of his motives. He made it plain that he considers it to be in the Soviets' national interest to nourish Arab hostility toward Israel and to keep the Middle East smoldering with tension and unrest. Against this naked incitement to armed aggression in the Middle East, the Western nations, and particularly the United States, have sought to walk a middle course that is growing ever narrower and increasingly untenable.

In the course of several weeks stay in Israel, I had the opportunity to talk with that country's highest political leaders and military figures. The burning determination of this small country to achieve a secure and self-reliant democracy cannot be doubted. I found also a genuine desire by the leaders and people of Israel to reach a peaceful settlement of differences with the Arab States. It is not for lack of any will on the part of the Israelis that the Arabs have refused to enter into peaceful negotiations. And there can be no doubt whatever that as long as the Soviets provide aggressive leadership in the direction of continuing Arab hostility towards Israel, the Middle East will continue to live in a state of tension and ferment. Moreover, it will remain one of the world's most inflammable areas if it is not fire-proofed by decisive and united action by the nations of the free world.

I am convinced that we are close to a point of no return in the Middle East. Some of our friends in the West have perceived this somewhat more clearly than we. France long ago recognized the urgent necessity for helping Israel to keep within range of arms equality with her hostile neighbors who have been the beneficiaries of military giveaway programs by the Soviets. Under one of the great statesmen of our time, Konrad Adenauer, free Germany has been a vital factor in aiding Israel's economy. Not only the Government of the Federal Republic of Germany, but private industrial enterprises, have come to Israel's aid, despite threats of Arab boycotts and actual blacklisting by the Arab States.

I would not for a moment question the deep sense of awareness shown by our own Government under the leadership of President Eisenhower that the Middle East and its people are of vital concern to the national interests of the United States. Certainly, President Eisenhower's forthright decision to throw the full weight of the United States behind the protection of Lebanon's independence was a clear and unmistakable signal to international communism that our country will not flinch from its duty to help safeguard human freedom.

Nevertheless, I think we can agree that in dealing with as fluid and complex a set of problems as exist in the Middle East, there is a need for constant reassessment of our national policies.

Our party has long recognized that animosities prevailing in the Middle East are a major threat to internationl peace. Our platform in 1956 took note of the conflict between Israel and the Arab States and properly condemned the Soviet bloc for hampering a peaceful settlement by its arms shipments to the Arab States.

We pledged ourselves to the preservation of the independence and integrity of the several states of the Middle East, naming both Israel and her Arab neighbors in that commitment.

We pledged our continuing efforts to encourage the Arab States and Israel to negotiate a peaceful solution of their differences.

We promised our good offices to bring about an end to boycotts, blockades, and restrictions on the use of international waterways.

We pledged assistance to the rehabilitation and permanent resettlement of the Arab refugees on the basis that would "give Israel that assurance of national security which the situation and our national interests require."

We approved appropriate action to oppose the imposition by foreign governments of discrimination against U.S. citizens, based on their religion or race and we noted that "we shall do all we can to bring an end to these deplorable practices."

A good many of these pledges have been kept. We have indeed acted to preserve the independence and integrity of the nations of the Middle East.

We have sought to persuade both sides to enter into negotiations looking toward a peaceful resolution of their differences.

We have voiced our concern over Arab refusal to lift the Suez Canal blockade on Israeli shipping.

We have expressed our abhorrence for discriminatory practices aimed at U.S. citizens because of racial or religious considerations.

We must, however, face the hard truth that despite these expressions, the evils at which they were aimed have continued. In the United Arab Republic, Nasser has found it more expedient to accept the moral and, in many cases, physical support of the Soviet bloc than to contemplate roads to a peaceful settlement with Israel. The Suez remains closed to Israeli shipping in violation of an established international convention and a decision of the Security Council and the pledge of Egypt to comply with the six principles adopted and with the Security Council in 1956. Persons and firms of many nations are boycotted and blacklisted for doing business with Israel. Arab Governments receiving United States aid are boycotting American firms and refusing to honor the passports of American citizens for no other disqualification than their religious faith. Arab States are excluding American citizens of Jewish faith from U.S. Government civilian and military posts and from employment on U.S. defense contracts in Arab countries. We find ourselves, therefore, in the incredible position of maintaining friendly relations with governments that do not hesitate to impose second-class citizenship on our own nationals.

In 1956, the Senate of the United States unanimously adopted Senate Resolution 323 condemning attempts by foreign nations to create religious distinctions among our citizens in the granting of personal or commercial access of any other rights otherwise available to American citizens generally. Much

the same principle was expressed in an amendment to the Mutual Security Appropriations bill enacted in 1959.

Admittedly, the problem of dealing with Arab Governments on a basis that will safeguard military and economic relations important to our national interests is complex and prohibitive of any pat solution. But if events since the outbreak of World War II have taught us anything, it must be obvious by now that it is profitless to temporize with dictatorship, no matter what its guise and no matter how small the land in which it takes root.

As a businessman, I am conscious of the vast investment stake we have established in the Middle East. But I cannot persuade myself that any true long-range advantage can accrue to us if we permit the rights of our citizens to be subordinated to the expediency of international bargaining.

We must, of course, put forward our best efforts to persuade the nations of the Middle East to reach a peaceful settlement of their differences. Indeed, it would be my hope that we would signify our intention of giving this area of the world a high priority on our foreign policy agenda, and that we would exercise the leadership which I believe the nations of that community and our friends in the West would welcome. I would hope that we could move in this area in full concert with our Western friends, all of whom have as crucial a stake in the area as we have. Among them is to be found a great fund of skills and experience which would serve us well if they were put to coordinated use. And among them, as I have noted, are countries which have already made plain their intentions of standing firm by the democracy of Israel. I saw no signs that these countries are faring badly at the hands of the Arabs despite the efforts to dissuade them from their course. I would have no fears that any worse fate would befall our own country if we were to move anew in the direction of restoring the Middle East community to stability and reducing frictions.

I would regard it as essential that our point of departure take the form of an invitation to all the states of the area to meet with us and our friends for the purpose of examining a full range of economic and social measures by which the Western nations can begin at once to make a meaningful contribution to the raising of living standards in the area. High on such an agenda would be the question of rehabilitating and resettling the refugees. Equally prominent would be a solemn assurance to these states that we continue to respect their sovereignty and integrity and that our sole interest in asking them to meet jointly with us is to ascertain how we can best move toward helping them to achieve national self-reliance. As to the differences that now obtain between the Arab States and Israel, we should make it plain at the outset that we are prepared to serve as friends of both parties to bring direct negotiations with them. At all events, we must make it plain that an essential factor in our relations with the area is the readiness of others to accord our country and our people the same degree of respect we give to them.

The steps I suggest may well touch off new torrents of propaganda abuse from the Communists. To what extent this will make itself felt in Arab lands can only be surmised. But one thing is clear: our national interest requires that we assert President Eisenhower's call for peace with justice through a program that will give fresh meaning to this idea. We must make it plain that we are prepared to give practical and effective support to those nations of the Middle East that are genuinely interested in the peaceful development of their lands and in peaceful relations with their neighbors. This excludes any inference of intrusion into the internal affairs of these countries. It is for them to decide their own destinies. To the extent that they contribute to the peace and stability of their area they are entitled, and should be assured they will receive, the fullest support possible within the range of our international commitments.

For this, we are entitled to, and should receive, assurances that established principles of international law will be respected. We must make sure that the patience manifested toward Fidel Castro is not misread. If we sometimes seem to ignore our friends while rewarding our enemies, let none who follow in Castro's path be deluded into thinking that we have any higher regard for appeasement today than we did in the time of Hitler.

I respectfully submit that, given the benefit of a superb candidate for the Presidency of the United States in the person of Vice President RICHARD NIXON, it is of the greatest urgency that our party platform assert a policy that will make plain our determination to pursue the establishment of genuine peace and cooperation in the Middle East with renewed vigor and enterprise.

Appeal by Employees of the Government Printing Office Composing Division

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the brief filed by the employees of the Government Printing Office Composing Division with the Joint Committee on Printing. The 1,400 members of the composing division are the ones who are primarily responsible for the CONGRESSIONAL RECORD, bills, reports, hearings, Federal Register, and so forth. Evidence of the efficiency of these compositors are all around us attesting to the fact that we have the best printing establishment in the world. Yet in terms of wages, hours, and so forth, we are apparently lagging behind the industry in the major printing centers of the country.

I commend the points raised in this bill to the sympathetic attention of the Joint Committee on Printing. Unfortunately, the move toward early adjournment may preclude a hearing this year. However, I hope that when the 87th Congress convenes the Joint Committee will thoroughly analyze these grievances and correct the inequities which are set forth in this brief:

BRIEF IN SUPPORT OF AN APPEAL BY THE EMPLOYEES OF THE GOVERNMENT PRINTING OFFICE COMPOSING DIVISION FROM THE DECISION AND OFFER OF THE PUBLIC PRINTER RELATING TO WAGE ADJUSTMENTS AND OTHER MATTERS TO THE JOINT COMMITTEE ON PRINTING, 86TH CONGRESS, AUGUST 19, 1960

A. JURISDICTION

The Kiess Act (44 U.S.C.A. 40) provides that "the rate of wages, including compensation for night and overtime work for more than 10 employees of the same occupation shall be determined by a conference between the Public Printer and a committee selected by the trades affected."

The said act further provides:

"If the Public Printer and the committee representing any trade fail to agree as to wages, salaries, and compensation, either party is granted the right of appeal to the Joint Committee on Printing."

The Composing Division, Government Printing Office, consists of approximately 1,300 employees and represents "employees of the same occupation" (printing) within the meaning of the aforesaid statutory language.

The scale committee of the Composing Division (hereinafter referred to as "the scale committee") consists of five members who were selected by the Composing Division on February 3–4, 1960, and the committee has been vested with authority to enter this appeal by the employees of said Composing Division.

B. BACKGROUND

On July 26, 1960, the Public Printer presented to the scale committee his preliminary thinking on matters likely to be considered at the formal wage conference scheduled for August 8, 1960.

On July 27, 1960, the scale committee submitted to the Public Printer the proposals of the Composing Division for the year beginning August 18, 1960.

On August 5, 1960, the chairman of the scale committee replied to the Public Printer's preliminary thinking letter of July 26, 1960, in which the scale committee recommended four changes in the weighted average formula if such formula is to be continued. In addition the scale committee recommended that its counsel be permitted to attend the formal wage conference and that a verbatim transcript be taken of the conference.

On August 8, 1960, the Public Printer discussed the proposals of the Composing Division in a formal conference with the scale committee.

On August 8 Mr. F. E. Christofane, Comptroller of the Government Printing Office, advised the scale committee's counsel, John C. Williamson, Esq., that because the Kiess Act did not specifically provide for attendance of counsel, such attendance would not be authorized. In the same letter the request for a verbatim transcript of the formal wage conference was rejected because:

"The Kiess Act does not make provision for recording a wage conference or for furnishing transcripts of the proceedings of such a conference."

On August 9, 1960, the Public Printer advised the scale committee that he was rejecting all of the several proposals made by the scale committee and that in lieu thereof he would "reluctantly agree to recommend continuation of another year of the present formula, and the compositors' pay in the Government Printing Office be raised by 9 cents per hour—from $3.34 to $3.43 per hour—for the coming year; continuation of the 15-percent night differential; time and one-half for hours worked in excess of 40 in any workweek; and for holidays, in addition to gratuity pay, 1½ times the regular hourly rate for all hours worked."

The Public Printer's reply of August 9 failed to comment on the four changes in the weighted average formula recommended by the scale committee in its letter of August 5.

On August 10, 1960, the chairman of the scale committee urged the Public Printer to reconsider his decision of August 9 in view of his apparent disregard of the four recommended changes in the weighted average formula.

On August 12, 1960, the Public Printer advised that the four changes in the formula were rejected.

On August 15–16, 1960, the employees of the Composing Division rejected the Public Printer's offer by a vote of 831–148.

C. DISCUSSION OF THE SUBSTANTIVE ISSUES RAISED BY THIS APPEAL

1. The weighted average formula:

This formula which seeks to arrive at a minimum hourly rate by taking a weighted average (weighted toward the cities with more employees) of compositors in 25 major cities has been in use for 12 years. The composing division employees' dissatisfaction with the formula has been repeatedly expressed to the Public Printer. The Public Printer's dissatisfaction with the formula is underscored in his decision of August 9 to "reluctantly agree" to its continuation for another year.

A formula which both parties find distasteful must be reexamined and either rejected or modified in order for it to provide an equitable basis for negotiation.

The scale committee receded from its prior insistence that the formula be abandoned and the Government Printing Office accept the highest minimum hourly rate. (San Francisco, Calif.; $3.92 per hour.) Instead the scale committee proposed that if the weighted average formula be continued it be modified so as to remove four defects, defects which the scale committee insists makes the weighted average a biased average.

These four changes are as follows:

(a) Night employees in the applicable cities should be included in determining the average.

All day and night employees are paid the minimum hourly rate. (The night differential which is applied to the minimum rate is not in issue and has no bearing on this argument.)

The present formula by including only the day workers causes the final average not to reflect the higher rates in the cities which have large numbers of night employees.

For example, assume two cities as follows:

City A: Day, 1,000; night, 1,000; hourly rate, $3.

City B: Day 500; night 50; hourly rate $2.50.

By including only the day employees the weighted average is $2.83.

By including the day and night employees (all of whom are subject to the rate) the weighted average is $2.89.

The conclusion is inescapable that excluding the night employees represents a fundamental defect in the weighted average formula.

(b) A percentage of newspaper employees in the applicable cities should be included as a component part of the weighted average formula.

The weighted average formula includes only day employees of commercial book and job establishments. (Reference has already been made to the arbitrary exclusion of night employees.) The weighted average formula excludes newspaper employees in the cities used presumably because the Public Printer has determined that the nature of the work of the GPO Composing Division is purely commercial-book-and-job type to the exclusion of newspaper-type work. This the scale committee insists is an error on the part of the Public Printer. A substantial percentage of the Composing Division's work relates to the CONGRESSIONAL RECORD, committee reports, bills and hearings, the Federal Register, and several nondaily periodicals all of which reflect newspaper-type deadlines.

It is significant that on August 11, 1960, the Deputy Public Printer expressed his opinion to the scale committee that 10 percent of the Composing Division's work was newspaper type. This concedes the principle sought here, although an examination of the work of the Composing Division will reveal a larger percentage figure.

The scale committee believes that at least 25 percent of the work of the Composing Division is sufficiently related to newspaper work to dictate that at least 25 percent of the newspaper employees in the cities used be added as a component part of the weighted average formula.

(c) Contributions to vested pension and profit-sharing plans in the applicable cities should be considered in applying the weighted average formula.

Many wage negotiations in the printing industry include contributions (or increases in existing contributions) to pension, profit sharing, and other welfare programs in lieu of, but still part of, equivalent wage increases. This is attractive to the employees because the latter does not have to include the contribution as income for tax purposes, and, more important, the pension and profit-sharing plans are required by the Internal Revenue Code to provide for immediate or partial vesting. "Vesting" means that the employee has a contractual right to that part of the fund attributable to the contribution even if the employee leaves before retirement, or dies.

The announced minimum hourly rates in the cities concerned, which are used by the Public Printer, do not reflect these contributions, yet they are essentially compensation.

The scale committee recommends, therefore, that a percentage differential be determined (by negotiation with the Public Printer) and be applied to the minimum hourly rate in the cities where the Secretary of Labor determines that vested pension or profit-sharing plans are prevalent and customary.

(d) The number of cities used in the weighted average formula should be reduced to the five major printing centers as determined by the Bureau of the Census.

The existing number of 25 cities used in the formula has no basis other than precedent. The scale committee believes that the smaller number of cities recommended herein would contribute to a more equitable formula.

On May 13, 1955, the chairman of the Joint Committee on Printing, the Honorable CARL HAYDEN, expressed himself most eloquently on the subject of the weighted average formula in these words:

"The Joint Committee on Printing, therefore, approved the weighted average formula but there was no understanding that it would remain unchanged for all time to come.

"It was the committee's opinion that while the weighted average has apparently served a very good purpose, it was by no means infallible and should any alternate plan be agreed upon that would, in the interest of all concerned, be more applicable, then consideration should be given to its use."

The scale committee believes that if the Public Printer makes use of the weighted average formula he has the solemn duty of applying it with a zealous regard for the propriety of its component parts. A formula is valid only if all its components are valid.

2. The Public Printer's rejection of the proposed overtime rates is arbitrary because in so doing he rejects a formula which has been accepted overwhelmingly in the printing industry.

The scale committee recommended that overtime compensation shall be 1½ times the regular rate for the first 4 hours of overtime; two times the regular rate thereafter, and two times the regular rate for Sundays. The present formula is 1½ times the regular rate regardless of the amount of overtime or Sundays.

3. The Public Printer's rejection of the proposed shorter workweek is arbitrary because in so doing he rejects a workweek which has been overwhelmingly accepted in the printing industry.

The scale committee recommended a 37½-hour week. The Bureau of Labor Statistics reports the average workweek in the printing industry to be 36.7 hours. Of 43,334 printers employed in 25 large cities, 43,038, or 99.99 percent, work less than 40 hours per week, the present GPO workweek.

The Public Printer admits that he is influenced in his decision by the Civil Service Commission. This is an abdication of the Public Printer's responsibility. A decision should be based on custom in the printing industry as are other decisions affecting wages and so forth in the Government Printing Office.

D. DISCUSSION OF THE PROCEDURAL ISSUES RAISED BY THIS APPEAL

The scale committee recognizes that the Kiess Act limits the scope of the appeal to "wages, salaries, and compensation."

The Attorney General (vol. 41, Opinion No. 38) has rendered this opinion:

"The establishment of regular hours of work and the regular workweek is generally recognized as part of wage negotiations and the Public Printer is required to conduct such negotiations."

The scale committee regrets that the Public Printer's approach to the conference table is not in the traditional spirit of the "collective bargaining" process. For this reason the scale committee urges that the Joint Committee on Printing take cognizance of the Public Printer's procedures under the Kiess Act.

The scale committee respectfully submits that the procedural approach of the Public Printer to the letter and spirit of the Kiess Act is not conducive to a just determination of the issues.

House Report 412, 68th Congress, to H.R. 7996 (the Kiess Act) expresses the intent of Congress in this manner:

"The wages and compensation for these various groups ought to be determined in the same manner as any large industrial concern negotiates with its employees."

How does the Public Printer react to this expression of intent by the Congress?

1. The Public Printer refused to permit counsel for the scale committee to attend the formal wage conference. The Public Printer advised, through his counsel, that the Kiess Act "does not authorize or provide for the scale committee to have a counsel" at such proceedings. This is a patent violation of a fundamental right.

2. The Public Printer refused to permit a verbatim transcript to be taken of the formal wage conference. He advised through his counsel that "The Kiess Act does not make provision for recording a wage conference or for furnishing transcripts of the proceedings." Apparently, the Public Printer believes that nothing so fundamental as the right of counsel or a record may be implied in a statute which confers a right.

This is truly the reductio ad absurdum of strict construction of the letter of the law.

The Public Printer's approach to both the substantive and procedural aspects of the formal wage conference of August 8th is reflected in the following statement in his letter of August 9th referred to above:

"Although I have found your committee ready to accept any compromise which would have the tendency to increase rates, I have not found you at all willing to accept any proposals which might have the effect of reducing some rates."

E. RECOMMENDATIONS

The scale committee trusts that the Joint Committee on Printing in evaluating these arguments will reject the concept expressed by the Public Printer as to the nature and meaning of this appeal. On August 8, 1960, speaking through counsel the Public Printer stated that an appeal would be only from the "conclusion" as to wages, salaries, and compensation, and "not on the record, the procedure, or the method or basis used in determining the conclusion." The scale committee believes that congressional inquiry into "procedure," "methods," and "basis" for arriving at decisions is fundamental to the American concept of law and equity.

The scale committee therefore recommends that the Joint Committee on Printing, in light of the facts presented herein and to be supplemented by oral presentation, direct:

1. That the Public Printer resume negotiations with the scale committee with the end in view of correcting the four defects in the weighted average formula as presented herein.

2. That the Public Printer pay overtime compensation as follows: 1½ times the regular rate for the first 4 hours and 2 times the regular rate thereafter; all Sunday work to be at 2 times the regular rate.

3. That the Public Printer initiate a workweek as follows: 7½ hours per day or per night for 5 days or 5 nights, Monday through Friday.

4. That the Public Printer permit counsel for the scale committee to participate in formal wage negotiation conferences held under the authority of the Kiess Act.

5. That the Public Printer, upon request of the scale committee, provide for a verbatim transcript of formal wage conferences under the Kiess Act and to make a transcript available to the scale committee.

Respectfully submitted.

For the Composing Division Scale Committee, Government Printing Office:

BURL I. PALMER,
Chairman.
RALPH A. MEYER,
Secretary.
HUBERT P. HOY.
JOHN W. REID.
EARL D. THOMPSON.

Tribute to Mr. and Mrs. Richard L. Barnsley

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a column which appeared in the August 10, 1960, issue of the Manila Times, regarding an employee of the U.S. Information Service, Richard L. Barnsley, who is completing a tour of duty as public affairs officer in the Philippine Islands.

In view of the criticism which, fairly or unfairly, is often leveled at the deportment of U.S. Government representatives abroad, it is gratifying, indeed, to read such glowing accounts in the foreign press as that accorded Mr. and Mrs. Barnsley.

This fine family deserves great credit for the distinguished representation they have given our country, and I am very pleased to invite this complimentary item to the attention of the American public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUNDRIES
(By Lina Flor)

Despedidas for Mr. and Mrs. Richard Barnsley continue to gain momentum as the date of their departure (August 31), approaches. There's another one slated for tonight, with Mr. and Mrs. Go Puan Seng as hosts, at Peking House of Hotel Mabuhay.

What was it that Scarlett O'Hara said toward the ending of the book, "Gone With the Wind," of course, when, faced by the worst crisis in her life after Rhett Butler had said, "I don't give a damn what you do," and left her? She said, "I won't think about it now * * * I'll think about it tomorrow."

To the generation that avidly perused the Mitchell novel and the succeeding generation that shared with the first the thrill of seeing it come to life on the screen, the phrase and the attitude it signifies (putting off the unpleasant and unwanted things for as long as possible) are easily recognizable in the term, "doing a Scarlett O'Hara."

Well, this columnist has been doing a Scarlett O'Hara with regards to the impending departure of Dick and Doris Barnsley. Since it had been made known as early as last January that their tour of duty would be ending around July and not later than August, we—that is, myself and many others—have chosen to ignore. For a while, there was wishful thinking: perhaps it would be just another homeleave and they'd be reassigned again here for another term. Even after this was declared as most unlikely and it had been verified by Washington (the home office of the USIS) that there would indeed be a new Public Affairs Officer to replace Mr. Richard L. Barnsley, we still refused to think about it. We were not going to think about it till the tomorrow when it would no longer be possible to avoid doing so.

It is not surprising that this sentiment should be shared by many, many others. During the almost 5 years they've been here (Dick first came as Deputy Public Affairs Officer before he made Chief after the first tour of duty), the Barnsleys have become one of the most popular and well-loved couples of the U.S. Embassy-USIS setup, their circle of friends not confined to the diplomatic and press groups but extending widely to those of other and varied interests.

And it is not surprising, either, that this should be so, for in the Barnsleys, together and individually, are all the elements for popularity anywhere and, perhaps, particularly here in the Philippines. They are both young and good-looking, well-dressed but not showy, friendly without the exuberance of the Dale Carnegie type, intelligent without being pedantic, interested (in local and personal affairs) without seeming to pry, understanding without being meddlesome and, best of all, imbued with keen sense of humor and devoid of that subtle air of condescension that we Orientals inutitively sense in most apparently friendly Americans, particularly those of the Foreign Service.

They are good sports and good at sports—tennis, badminton, bowling, golf. In the last mentioned, they are not only good but excellent; in Dick's case, outstanding. They entertain well and with good taste, but never lavishly or ostentatiously. They are good dancers in the conservative way but enjoy watching the experits of really fashionable dances.

In addition—and in certain local circles this would be the foremost factor—they are Catholics and, Doris specially, have become active in semireligious charity organizations since they resided in San Lorenzo village. They have been among the most ardent members of the CFM (Christian Family Movement) unit in their district since its establishment.

I could go on and on about the Barnsleys and if I seem biased, then so are countless others who have become their friends here. And, anyway, we—that is, again, I and those others—have been doing the Scarlett O'Hara long enough to make it excusable now to let go.

Military Cemeteries Overseas—Part 2

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. DULSKI. Mr. Speaker, I wish to include the remainder of the military cemetery dedications overseas which I attended last month.

The Ardennes Cemetery is located near the edge of Neuville-en-Condroz, near the city of Liege. It is 50½ acres in extent and contains the graves of 5,250 of our military dead who died also in the Battle of the Bulge. The headstones are alined in straight rows which take the form of a huge Greek cross on the grass, framed by masses of trees.

Near the entrance, to the south of the burial area, is the memorial—a rectangular gray stone structure containing a small chapel, 3 large maps of inlaid marble, 24 panels depicting combat and supply activities, and other ornamental features including the insignia of the major American units in northwest Europe. Two of the maps depict operations of the American Armed Forces, and the third commemorates the services of supply in the European theater. On the exterior is a large scale sculpture. Along the sides, inscribed in granite slabs, are the names of 462 missing who lie in unknown graves.

Those addressing the dedication ceremony were the Honorable William A. M. Burden, American Ambassador to Belgium; the Honorable John J. McCloy, representing the President of the United States; the Honorable Gaston Eyskens, Prime Minister of Belgium; the Honorable Thomas E. Martin, U.S. Senate.

On July 16, the Commission dedicated the American Naval Memorial, at Brest, France. This memorial was erected on the ramparts of the city overlooking the harbor which was a major base of operations for American naval vessels during World War I. The original monument built on this site, commemorating the achievements of the United States Navy during World War I, was destroyed by the enemy on July 4, 1941, prior to our entry into World War II. The present structure was completed in 1958, and is a replica of the original. The monument is a rectangular rose-granite shaft rising 145 feet above the lower terrace, and 100 feet above the Cours d'Ajot. All four sides are ornamented by sculpture of nautical interest. The surrounding area has been developed by the U.S. Government into an attractive park.

The following made addresses at the dedication: the Honorable Amory Houghton, American Ambassador to France; Monsieur Georges Lombard, Député-Maire of Brest; the Honorable William B. Franke, Secretary of the Navy; and the Honorable Michel Debré, Prime Minister of France.

The band played the French national anthem, "La Marseillaise," which was followed by the "Star Spangled Banner."

On July 19, the Lorraine Cemetery, located in the little town of St. Avold, was dedicated. This ceremony covers 113½ acres and contains the largest number of graves of our military dead in World War II in Europe—a total of 10,489. The headstones are arranged in a generally elliptical design, in nine plots, extending over the beautiful rolling terrain of eastern Lorraine and culminating in a prominent overlook feature.

The memorial, containing maps in ceramic and service flags, as well as the chapel with five sculptured figures above the altar, stands on a plateau to the west of the burial area. High on its exterior wall is the large figure of Saint Avold, the martyred Roman soldier who overlooks the silent host. On each side of the memorial and parallel to its front, stretch the walls with the names of 444 Americans missing whose remains were never recovered or identified.

The dedication address was made by Gen. Charles D. Palmer, deputy commander in chief, headquarters European command. Others addressing the gathering were the Honorable Amory Houghton, American Ambassador to France; the Honorable Charles E. Potter, member of the American Battle Monuments Commission; the Honorable John J. McCloy, representing the President of the United States; Mr. Emile Schilling, Maire-Adjoint, Saint Avold; and the Honorable Raymond Triboulet, French Minister of Veterans Affairs.

The band played the French national anthem, "La Marseillaise," which was followed by the "Star Spangled Banner."

At each dedication ceremony, prayers were offered by chaplains of the Catholic, Protestant, and Jewish faiths, of the American Armed Forces. Floral tributes were placed at each memorial, which was followed by volleys and taps.

The entrance to each cemetery is similar to the entrance to a large park—the road is lined with beautiful shrubbery and evergreens of every description. The grounds around the cemeteries are beautifully kept.

The sites were selected with a view of their accessibility, aspect, and drainage. Tiles around the cemeteries carry off the water in seasons of heavy rainfall. Each cemetery has water storage reservoirs and a high pressure sprinkling system for use during dry seasons and real drought conditions.

Fourteen outstanding architects, each to design one of the cemeteries, were selected by the American Battle Monuments Commission. Each plot has a devotional chapel, inscription of the names and particulars of the missing in the region, and a graphic map—in permanent form—of the services of our troops.

In most of these cemeteries, the children in the vicinity place small American flags on each grave on such national holidays as Veterans Day, Memorial Day, and so forth.

The grass is kept at a 1½-inch level and looks like a green carpet. The supervision of the maintenance of these cemeteries is under an American, and I am unable to find sufficient words of praise to compliment the people who take care of these cemeteries.

Gen. Jacob L. Devers is the Chairman of the American Battle Monuments Commission, and Adm. Thomas C. Kinkaid is Vice Chairman. Others serving on the Commission are Mr. Leslie F. Biffle, Mr. Alexander A. Vandegrift, former Senator Charles E. Potter, Mr. John Philips, Mrs. Theodore Roosevelt, Mrs. Wendell L. Willkie, Gen. Carl Spaatz, Maj. Gen. Benjamin O. Davis, Hon. Forest A. Harness, and Gen. Thomas North.

Putting the Brakes on Spending

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Putting the Brakes on Spending," written by Mr. David Lawrence, and published in a recent issue of the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUTTING THE BRAKES ON SPENDING—SENATE ACTION ON AGED CARE BILL CALLED BIGGEST NEWS OF CAMPAIGN

(By David Lawrence)

The biggest news of the presidential campaign happened Tuesday night in Congress. A coalition of Democrats and Republicans in the Senate applied the brakes on unnecessary spending. Even though, for political purposes, the candidates of both parties wanted other legislation, the majority stuck to the fundamental principle that, irrespective of party, the most important duty today is to prevent inflation and excessive governmental spending.

For many years now the Democrats have had majority control of Congress. But the Democratic Party is split. Approximately 20 Democrats who are against inflationary spending usually join with 31 or more Republicans to make a majority against the spenders.

Although this has happened several times, the most significant vote of all has just come on medical care legislation. Because of its political importance, it was assumed that the Democrats would uphold Senator KENNEDY's position. Despite the fact that the presidential candidate of their party was directly involved and that nearly all the Democratic Senators have publicly stated their intentions to vote for the Kennedy-Johnson ticket, the so-called conservative group adhered to its principles and brushed aside partisan politics.

This means a good deal to the Nation and especially to those voters who had begun to fear that, if a change in administration should occur in January, there would be a spending orgy.

There were two proposals offered to the Senate as substitutes for the Senate Finance Committee bill. One, sponsored by a Republican group, wanted to provide a larger program of medical care but outside the social security system. The cost would have been paid on a 50-50 arrangement between the States and the Federal Government. This aid would have been made available on a voluntary basis to persons over 65 with incomes of less than $3,000 for an individual or $4,500 for a couple, with beneficiaries paying not less than 10 percent of the cost. It was estimated the bill would have cost the Federal Treasury $450 million a year. This was rejected.

The other proposal, sponsored by Senator KENNEDY, would have required an increase in the social security tax. Everyone retired under social security would be eligible for medical benefits at age 68, with no distinction made between those who need and those who don't need such benefits. The cost was figured at about $700 million annually, but it was estimated that the additional tax on everybody's paycheck would total around $1 billion a year.

The Senate, after rejecting both substitute plans, finally passed the Finance Committee bill requiring an estimated $320 million a year from the Federal Government, though some argued that the cost would eventually be higher. The benefits would go only to needy persons over 65 years of age and those on old-age assistance. The States would determine who would be eligible and how big a program would be needed.

There is involved in the issue not only the problem of excessive Government spending but the question of self-reliance and the aid that relatives can give. To transfer to the Federal Government the whole burden of medical care for the aged didn't seem to the majority in the Senate to be wise. It appears the House will take the same view in adjusting in conference the differences between the Senate bill and a somewhat similar measure already passed by the House calling for a smaller total of Federal funds.

It might have been thought that, during a political campaign, the Democrats would take a chance and pass any bill their candidate wanted and then let the blame fall on President Eisenhower, who, it is known, planned to veto any extreme measures. But the Democrats who joined with the Republicans in voting against the Kennedy measure had to look beyond the political game on the national front and face their own constituents who are opposed to governmental paternalism and unnecessary spending.

Does all this represent a setback for Senator KENNEDY, who took his position squarely on the Democratic platform adopted at Los Angeles? He said immediately after the Senate action this week:

"This vote demonstrates that if we're going to have effective legislation in this and other fields, we're going to have to have an administration that will provide leadership and a Congress that will act."

But most of the conservative Democrats are from the South and are either assured of victory in their States this autumn or do not come up this year for reelection. So it is difficult to see how the election of a persidential candidate on the Democratic ticket can change the situation. In fact, the conservative coalition seems here to stay and to vote against inflation whatever the outcome of the presidential contest this year. This is the most important development thus far in the whole campaign.

General of the Armies John J. Pershing

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. HULL. Mr. Speaker, on June 1 the President approved House Joint Resolution 640 proclaiming September 13 as a day for all Americans to pay proper homage to General of the Armies John

J. Pershing and to the men who served under him.

General Pershing was born on that date 100 years ago in Laclede, Mo., which is within the congressional district which I am honored to represent.

Under leave to extend my remarks, I call attention of my colleagues to an editorial honoring this great soldier which will appear in the September issue of Army, the magazine of the Association of the U.S. Army.

The editorial follows:

GENERAL OF THE ARMIES JOHN J. PERSHING

Newton D. Baker once observed that the one thing he couldn't understand about John J. Pershing was how a man who had such breadth of vision could become so concerned about the brass on a soldier's buttons. The answer is really simple. Pershing was the product of a versatile army. Most of us think that versatility and breadth of view are new to the U.S. Army; a necessary response to global war and the worldwide menace of communism. This is not entirely true. As Harvey DeWeerd has pointed out, Pershing had a diversity of service before he became commander of the American Expeditionary Forces. "Pershing," DeWeerd wrote:

"Served against the Indians; he taught in the Reserve Officers Training Corps at the University of Nebraska—taking a law degree at the same time. He instructed at West Point, fought in the Spanish-American War, held a post of wide responsibility in the Moro country of the Philippines, studied at the Army War College, and witnessed big-scale war in Manchuria. He went on a mission investigating European armies and led an expedition into Mexico in a state of affairs that was neither war nor peace."

A young brigadier with that kind of education and experience would be considered a singularly well equipped soldier today, just as Pershing certainly was. As for his interest in buttons, it was this obsession with the details of soldiering that made the American Expeditionary Forces the professional fighting force it became in 1918. It was another facet of his soldierly insistence on individual marksmanship and a high standard of discipline. The significance of Pershing today, as we commemorate his 100th birthday, is that he professionalized the command and staff systems, set the Army school system on the way to becoming the finest in the world, and through example set the highest of standards for the leaders of our World War II armies and air forces. Those standards remain in force; they are the measure by which today's officers of the Army and Air Force are judged.

The White Cane as a Right-of-Way and Safety Device for the Blind

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, August 26, 1960

Mr. HILL. Mr. President, in a recent letter to me, Maj. Gen. Melvin J. Maas, U.S. Marine Corps Reserve, retired, Chairman of the President's Committee on Employment of the Physically Handicapped, set forth his views on the use of the white cane as a right-of-way and safety device for the blind pedestrian. I have had the privilege of knowing General Maas for a number of years. We served together in the House. I know that he speaks with authority and with deep sympathy concerning the problems of the blind. He has done an outstanding job as Chairman of the President's Committee.

The particular problem about which General Maas writes me at this time has been the subject of considerable discussion in recent weeks, and in the belief that it will be helpful to my colleagues and to others interested in the problems of the handicapped, I ask unanimous consent that the letter from General Maas be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 10, 1960.

Hon. LISTER HILL,
U.S. Senate,
Washington, D.C.

DEAR LISTER: As you know, the President's committee has had, since its formation, a special concern for the removal of all obstacles which arbitrarily restrict opportunities in preparing for employment and in engaging in suitable occupations by persons with all types of physical handicaps, including the blind. This committee accepts as its responsibility the development and carrying out of educational and promotional activities with the above objective in mind.

The committee has consistently included the blind in its program bearing in mind that the employment problems of persons with all types of handicaps will require some special attention. In recent months some efforts have been noted urging publicizing the use of the white cane as a signaling device to give the blind the right-of-way in crossing streets and highways.

As you may know, I have been blind for the past 9 years, after a very busy life in business, military service in three wars, and in eight terms in the Congress. Shortly after I became blind I took the orientation course for the blind, given by the Veterans' Administration at Hines Hospital in Chicago. There I learned to use the "long cane" technique for travel and acquired considerable proficiency in getting about on crowded streets, at crossings and in buildings. The long cane is a very useful guide when properly used to locate obstacles, follow sidewalk contours, locate and follow steps and determine the characteristics of the terrain over which I am walking. I am seriously concerned that using the cane for any other purpose would be confusing and dangerous for the blind person and for others, including drivers of vehicles.

To be any value as a signal device the cane would need to be elevated to the horizontal level at least. This would present a real hazard to oncoming pedestrians and would remove the cane from the area before the user where it is of greatest value thus making it unsafe for the blind person. Also, the cane would need to be of such size and shape as to be readily discernible by drivers of vehicles.

For the reasons just cited I am not convinced that the white cane law giving the right-of-way on street crossings and highways to the blind users is now good legislation. If it were, there are channels of communication which are open to use by proper authorities to inform drivers of the existence of the law. The State Motor Vehicle Departments of every State have two channels which could be used. I refer to the driver license renewal procedures, and to the motor vehicle license tag renewals. Drivers licenses are generally renewed at least every 2 or 3 years and vehicle tags are renewed or replaced each year. Messages to recipients could be sent through these channels and would reach everyone concerned.

When white cane laws were first enacted 30 years ago, traffic conditions were substantially different than the conditions of today. The volume and speed of traffic now would make reliance on identification of the white cane hazardous for the blind. I have talked to many white cane users recently and all have indicated they are quite unwilling to trust their safety to the color of a cane on the street crossings and highways of our country today. You might be further interested to know that many cane users do not use white canes, but use collapsible or rigid metallic ones.

In the hundreds of thousands of miles which I have traveled in this country and in some foreign nations, since I first lost my sight, I have never had an accident. I attribute my safe experience to the training which I received in the use of the cane and not to the color of the cane which I am using. It is my firm conviction that high quality orientation training in the use of the cane is one effective answer to the problem although not the only one. Driving care by vehicle operators will always be an important factor in safety for the blind as well as all other pedestrians. The sole reliance on a white cane for protection in traffic could be disastrous to a user.

Even though this proposal for wider acceptance of the white cane laws for the blind is well intentioned, I am not convinced that the real objective of safe travel will be accomplished.

Cordially,

MELVIN J. MASS,
Chairman.

Let's Face the Truth About Gas and Germ Weapons

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under permission to extend my remarks, I offer the text of an article entitled, "Let's Face the Truth About Gas and Germ Weapons," by John G. Hubbell, appearing in the August issue of Reader's Digest. In the article, reference is made to the hearings and report of the House Committee on Science and Astronautics which studied the problems of chemical and biological warfare during 1959. I call this article to the attention of Members of Congress because the grave problems which our committee exposed last year are just as real, just as pressing today. There is an urgent need for awareness of the size of the threat we face from these weapons in the hands of the Communist powers. Only strong defenses, adequate training in protective measures, and a powerful counter capability to deter the use of these weapons against us or other free world countries is likely to save us from a disastrous blow at some indeterminate time in the future. Nuclear weapons may be a better known threat, but preoccupation with the nuclear threat should not close our eyes to the potentialities of chemical and bio-

logical weapons. The article is as follows:

LET'S FACE THE TRUTH ABOUT GAS AND GERM WEAPONS—CHEMICAL WEAPONS FORM AN ESSENTIAL PART OF THE SOVIET ARSENAL, AND BIOLOGICAL WEAPONS ARE ON THE WAY; ARE WE PREPARED TO COPE WITH THEM AND, IF NECESSARY TO RETALIATE? HERE ARE GRIM FACTS—BUT FACTS WHICH CANNOT BE IGNORED

(By John G. Hubbell)

When the Allied forces invaded Germany in World War II they discovered something, that, had they known of it earlier, might well have altered our invasion plans. Stored in warehouses, they found, were tons of a new and diabolical gas—a colorless and almost odorless killer called Tabun. It attacked the human nervous system through the lungs or eyes, causing death within 1 to 5 minutes. If the eyes and lungs were protected, liquid droplets of Tabun would rapidly penetrate clothing and be absorbed by the skin, bringing death within 10 minutes to 2 hours. There was then no effective antidote.

The maniacal Hitler had clearly intended to us this terrifying new weapon on a massive scale to stop the invasion. What prevented him? Only the fact that the Allies, suspecting that Hitler might resort to chemical warfare, warned that they were prepared to retaliate overwhelmingly. Though the Allies did not possess a comparable lethal nerve gas, German intelligence was unaware of this. Hence, Hitler's huge stockpiles of Tabun remained untouched while the Allies swept across Europe.

But the story, unhappily, does not end here. When we found the gas, the United States and Britain took most of their share out to sea, and dropped it. The Soviets took their share home, along with the dismantled laboratories where the stuff had been made and the scientists who had made it. They have kept on producing it ever since.

Nor have the Soviets confined their work in the military chemicals field to nerve gas. Intelligence estimates indicate that they have scored breakthroughs across a whole new spectrum of chemical and biological weaponry (CBW).

Soviet leaders have made it clear that in another war they have every intention of using these weapons. In November 1957 Khrushchev told American reporters, "All means, intercontinental ballistic missiles, submarine missiles and other means which now exist, will be used in case of armed conflict. This is the logic of war, the logic of struggle." A few days later Defense Minister Malinovsky reported publicly that Soviet forces were being intensively trained in the use of chemical weapons. And it is now known that the Soviets have invested about 15 percent of their armed strength in Eastern Europe in such weapons.

Every Soviet soldier carries in his medical kit a hypodermic filled with 2 milligrams of atropine, the only known and even partially effective antidote for nerve gas. "The Russians know we don't equip our troops to use nerve gas," says Lt. Gen. Arthur G. Trudeau, U.S. Army Chief of Research and Development. "They carry these syrettes to protect themselves against their own gas."

Since the middle of the Korean war, the Red propaganda machine has been flooding the world with detailed reports—all utterly untrue—of how U.S. forces used germ weapons in North Korea. New stories are concocted continuously. Why this barrage of untruth, this singular preoccupation with CBW?

"They may be conditioning their people and as many of the world's uninformed as they can reach to the use of such weapons," says Dr. Howard Wilcox, former Deputy Director of Research and Engineering for the Department of Defense.

"They seem to be working hard at putting themselves in a position from which they could use these weapons without incurring the censure of world opinion. They may intend to use CB weapons, and then say they were forced to use them in self-defense."

The truth is that since World War I neither the United States nor any of its allies have ever used toxic gas or germ weapons, even in training. CB weaponry is regarded in the United States as unthinkably barbaric—something we would never use except in retaliation.

This point of view is perhaps reasonable—if we have weapons to retaliate with. But public repugnance to CB warfare has been so great as to prevent even the research necessary to make our soldiers effective in chemical-biological combat. For years the U.S. Army Chemical Corps has skimped along on a meager budget, unable to do more than develop prototypes of the kind of equipment our men would need.

"While the Reds are hoodwinking much of the world with lies about our activity in the CB field, we have hoodwinked ourselves with our own propaganda," says Maj. Gen. Marshall Stubbs, Chief of the Army Chemical Corps. "We were horrified—and we made sure the rest of the world was properly horrified—when the Germans introduced mustard gas in World War I. We have allowed the myth to develop that few men who were gassed survived, and that few who survived ever recovered their health. The facts don't support this."

To be sure, the effects of mustard gas were ugly. But, according to U.S. Army medical records, of some 73,000 American gas casualties, only 2 percent died; only 7 percent were discharged as disabled. The rest—nearly 67,000—recovered fully. By contrast, 25 percent of our wounded died and tens of thousands were maimed for life.

Nevertheless, U.S. public opinion, which in the final analysis determines how U.S. defense dollars are spent, has been permitted to remain opposed to the very idea of CB warfare. Letters continually flow into the White House, Congress, and the Pentagon from outraged citizens astounded to learn that the Army even has a Chemical Corps. As a result, says General Trudeau, "We do not have a counteroffensive ability to meet a Soviet challenge in the CB warfare field."

Why has the public been allowed to persist in its ignorance concerning CB weaponry? One good reason, perhaps, is that the State Department and Department of Defense have not wanted to release any information which might seem to lend the slightest credence to Soviet propaganda about our CB activity. Another reason, not so good, has been the fear that to tell the American people what can and should be done in the CB field might frighten them too much.

On June 16, 1959, the House Committee on Science and Astronautics, its curiosity aroused by a magazine article written by Maj. Gen. William M. Creasy, retired Chief of the Chemical Corps, summoned Creasy, Stubbs and other top-ranking Chemical Corps officers and scientists. In demonstrations staged with cats and dogs, and also with human beings—Army volunteers who have passed rigid physical and mental screenings—members of the committee observed some of the effects that the new chemicals can achieve.

Afterward the committee recommended that U.S. representatives to disarmament talks bear in mind the great potential of CB weaponry. It suggested that the Chemical Corps research budget of $40 million be increased and that the American people be taken into confidence on the growing threat of CB warfare.

Exactly what, then, are these new weapons, and what are the defenses against them?

The newest chemical agents under study are those which do not kill or make men even mildly uncomfortable, but which can, with lightning speed, destroy men's ability to function. One group of them—the psychochemicals—can cause strong men to grow timid, or can create a languorous apathy which renders men utterly unresponsive to the most urgent stimulus, such as attack by an enemy or other danger. A second group incapacitates men physically, without pain. A man's ability to integrate time and distance can be so blocked by a third group of chemical agents that it becomes impossible for him to drive a vehicle or operate a weapon. Or a long, deep sleep can be induced; or the victim can temporarily be made paralyzed or blind or deaf.

Unless administered in unrealistically huge doses, none of these new chemicals is fatal. They are odorless and colorless. Some of the human volunteers did not even know they had been attacked. They recovered within 2 days.

The deadliest chemicals are the nerve and blood gases. Tabun is believed to be the standard Soviet nerve gas. The U.S. nerve gas is Sarin, which is odorless and more potent. This is how it works:

Normally, the muscles of the body are continually tightening and relaxing—expanding and contracting, as though breathing. The tightening process is caused by a substance called acetylcholine and the relaxation by a protein called cholinesterase, which destroys the acetylcholine. Sarin blocks the functioning of the body's cholinesterase so that all the body's muscular systems, including those affecting the heart and lungs, continue to tighten into rigid paralysis. It can be delivered by shells, bombs, rockets, or spraying devices. It can be dispersed either as a vapor, to be inhaled; or as an aerosol—colorless, microscopically small liquid particles—which can either be inhaled or pass through ordinary clothing to be absorbed by the skin.

Two blood gases, hydrogen cyanide and cyanogen chloride, act about as quickly as the nerve gases. These, too, are colorless, but have a peachlike odor. They can be delivered by the same types of munitions and also by the individual soldier using a hand grenade. They literally suffocate the body within 15 minutes of inhalation of a lethal dose by locking oxygen in the bloodstream, preventing its transfer to body tissues.

A third blood gas is arsine, also colorless, but with a mildly garliclike odor. This is a delayed-action gas which destroys the kidneys and liver by robbing them of blood. Depending on the concentration, it may kill within 2 hours or it may take as long as 11 days.

Still another group of gases are the blister agents—distilled mustard, nitrogen mustard, and lewisite. These agents are rapidly absorbed through unprotected skin, and if inhaled will fry the respiratory and digestive tracts, lung tissue, and any other internal organs they reach. They are easily recognized: Distilled mustard smells like garlic and sometimes can be seen as a palish yellow vapor; nitrogen mustard has a fishy odor; lewisite smells like geraniums, and both are dark in color.

The choking gases of World War I—phosgene and diphosgene—still are considered important. Both are colorless and have the same distinctive, new-mown-hay odor. Both burn into the lungs and throat, making men violently, retchingly ill. Though ordinarily victims recover, a heavy dosage can be fatal.

Such are the main combat chemicals. Now let's look at some biological weapons:

Bacteria can infect men with anthrax, bacillary dysentery, undulant fever, cholera, diphtheria, tularemia (rabbit fever), bubonic or pneumonic plague, typhoid fever, tuberculosis. The rickettsiae—bacterialike microorganisms usually carired by lice and ticks—

can induce various kinds of typhus and Rocky Mountain spotted fever; there are viruses which cause several different types of encephalitis, smallpox, yellow fever, dengue fever, hepatitis. A botulinum toxin causes botulism, a painful, paralytic, and usually fatal disease.

Such weapons can be ground into fine, cloudlike mists, powders, or dusts and sprayed out into favorable winds. They can be carried in adapted conventional munitions. Many can be introduced in streams where men would bathe or obtain drinking water. Infected animal life—rodents, ticks, lice—can be parachuted, ballooned, or carried clandestinely deep into enemy territory. While chemical agents create casualties quickly and seldom hang on in an area more than a week, biological weapons which cannot be seen, smelled, tasted, or felt take longer to act, but some can stay alive and potent for years.

The U.S.S.R. is undoubtedly aware that CB weaponry has distinct military advantages over conventional and nuclear weaponry. The user is spared the enormous expense of rebuilding target areas, rehabilitating populations. It offers a wide choice of effects—unprotected troops can be destroyed, or temporarily incapacitated, or made ill. CB weapons can attack targets over wide areas, penetrating fortifications and, since most of the agents used are heavier than air, sinking into foxholes and bomb shelters. And CB warfare can probably be waged much more cheaply than standard warfare.

In World War I, the belligerent nations developed means by which most of the soldiers could survive and fight in a chemically toxic environment. This situation probably still holds true today.

The Army Chemical Corps has developed a lightweight mask that will protect a man aaginst CB agents entering through the eyes, nose, or mouth. An atropine hypodermic for field use by the individual GI is nearing readiness. Should a man lose his hypodermic or fail to make the injection in time, he might still be saved by a new battlefield resuscitator with which one medic can apply artificial respiration simultaneously to a dozen men. A fiber diffusion board is being developed for protection in foxholes and bomb shelters: Charcoal and other filtering materials screen out from the air the tiniest aerosol particles, liquid droplets or toxic vapors. Working together, the Chemical Corps and the Quartermaster Corps have developed some practical items of protective clothing.

Men can be made immune to many of the biological agents. Indeed, the Soviets—who have not been secretive with their people about CB warfare possibilities—not only have immunized their armies but also are embarked on a massive immunization program for their civilians. Already, millions of Russians have walked slowly through rooms sprayed with aerosols of attenuated—that is, live but weakened—biological agents. Several deep breaths immunize a person to the diseases caused by these agents.

For protection against toxic chemicals, one can buy an excellent gas mask in the Soviet Union for about $14. And every citizen is now compelled to take 20 hours of intensive anti-CB-warfare training.

The rumor, nourished by ill-informed press reports, that a few ounces of certain chemicals could kill millions of people, that biological weapons could induce raging epidemics in populated areas, is sheer nonsense It is no more possible to kill millions with a few ounces of any chemical than it is to distribute a few ounces of water among millions.

No known CB agent is fatal if treated quickly and properly, and troops ready for a CB attack can survive it. CB weapons do not take the place of nuclear or conventional weapons: they are an adjunct.

We can no longer afford the luxury of ignoring such weaponry. It is a hard, real fact of military life. We must learn to live with it and see to it that such weapons never are used against us. Says General Stubbs, "The surest way to deter anyone from using them on us is to develop a CB arsenal so strong no one will dare force retaliation."

Congratulations to Janesville (Wis.) Gazette on 115th Birthday

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. WILEY. Mr. President, on Monday, August 14, the Janesville Daily Gazette, of Janesville, Wis., celebrated its 115th birthday.

Founded in 1845, the Gazette—through the years—has been a messenger of information, news, features, commentary, sports, and other information and entertainment essential to an informed people.

During its 115 years lifetime, the Gazette has covered the wars of the times, including the Civil, Spanish American, World War I and World War II. Of even greater importance, however, this fine publication has made a fine contribution to the peaceful progress of our people and Nation.

Editorially, the Gazette—although I have the pleasure of knowing its present publishers personally—has not always agreed with the senior Senator from Wisconsin; nor has the Senator always agreed with its editorials.

However, this is a "credit mark" for, not against, the way of life in America—providing for freedom of thought and press.

Moreover, I have been happy, in many instances, to agree in principle and purpose with the public policy of the Gazette—as well as upon ways and means for achieving goals in the public interest.

In my judgment, Jaynesville, Wis., and its surrounding communities, are better places in which to live because of the long, outstanding service of the Gazette—now beginning its 116th year of publication.

Reflecting progress of a publication that is creatively carrying forward the fine traditions of journalism in our country, I ask unanimous consent to have an editorial from the Gazette on its anniversary printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEGINNING OUR 116TH YEAR

Beginning Monday, Janesville Gazette readers will find as a part of the masthead of this newspaper the notation "Vol. 116, No. 1—116th year."

Meanwhile, on Sunday, the Gazette will have a birthday. It was founded August 14, 1845, and through economic ups and downs, in war and peace, has been published without interruption since that time. Since 1883, the newspaper has been in the Bliss family, and since 1909 the newspaper has been issued daily from its building at East Milwaukee Street and South Parker Drive. It is the oldest business enterprise in Janesville.

The Gazette centennial was obscured in 1945 when the 100th birthday fell on V–J Day. The end of the war in the Pacific took the big headlines that day.

But the end of that war was only one such incident recorded in the files of the Gazette. It was already 20 years old when it printed the news of the end of the Civil War and shortly thereafter, the assassination of Lincoln. It was 53 years old when Cuba, the *Maine*, and the Spanish-American War were in the news, and nearing its diamond jubilee when World War I ended in defeat of Germany.

Some Janesville families have been readers for three or four generations, and it is this continued public acceptance of the Gazette day by day that has resulted in the 115 years of continuous publication. The publishers and staff are fully conscious of the dependence the public community places upon them and are resolved to justify expectations as the 116th year is launched.

The Crisis on the Commuter Railroads—No. 11

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. IRWIN. Mr. Speaker, in recent years there have been scores of proposals for improvement of deteriorating railroad commuter and mass transit systems but few have been adopted with any degree of success and certainly none has produced a practical solution in the New York metropolitan region. A week ago a new proposal was put forth and has earned considerably more attention than most of its predecessors. This is due to a number of factors including economic aspects of the region's commuter problems, feasibility of the proposal, and the steadily deteriorating conditions on the region's commuter systems. As another addition in the series of insertions I have made in the RECORD on the current commuter crisis, and pursuant to permission previously granted, I include three editorials commenting on the latest proposal. The first is from the Bridgeport (Conn.) Post of August 18, and the second is from the New York Times of the same date. The third is from the Bridgeport Sunday Herald of August 21.

The editorials:

[From the Bridgeport (Conn.) Post, Aug. 18, 1960]

PLAN DESERVES STUDY

In an effort to solve one of our most pressing problems—commuter service in the metropolitan area—Col. Sidney H. Bingham, noted transportation expert, has developed a practical plan which he has submitted to the Governors of Connecticut, New York, and New Jersey.

An engineer of long experience specializing in railroads, he is thoroughly familiar with the complex commuter problem. Many remedies have been offered in recent years, but these have not been satisfactory and most of them have been shelved, either because they were too impractical, too visionary, or too costly.

Colonel Bingham's proposal would use existing railroad trackage to provide a tri-State high-speed commuter system in the three States. This would involve a minimum of new construction; the adoption of new lightweight air-conditioned and comfortable equipment—the commuters' dream.

The cost of this project would be, in the engineer's estimate, $210 million plus $107 million if the system is extended under the East River to Long Island. Vastly different from the billion dollars hitherto believed necessary to construct a modern rapid transit system to replace the present outmoded facilities.

The venture would be a success, Colonel Bingham believes, because it would bring thousands of commuters back to the rails, abandoning buses and private cars for the daily trip to and from New York City.

We believe the governors should give this proposal immediate attention, or at least name technical and financial commissions to make a careful study of it.

New Jersey's Governor Meyner, after a perusal of the proposal outlined by Colonel Bingham, appeared to give it something of a brushoff on the ground that no adequate plan for paying for the new system had been worked out. But the first stage, we believe, is a study of the merits of the plan, to determine whether or not it will solve the problem. Financing would be another phase. Governor Meyner suggested a campaign to learn whether commuters want such a system. That goes without saying, for there would be no sense in the development whatever if the commuters in one loud voice said they would prefer present difficulties and congested highways to a new high-speed rail system.

The proposal was made by Colonel Bingham as a public service. The Governors should welcome it as such and give it immediate attention. If they do not, they may be overlooking one of the most progressive moves of our time—a solution of the railroads' financial problem and a boon to the thousands of persons who work in New York and live in Connecticut, Westchester, Long Island, and New Jersey.

[From the New York Times, Aug. 18, 1960]

A TRISTATE RAILROAD?

We suppose that, like most dreams of passenger transportation cooperation that involve unified action by Connecticut, New York, and New Jersey, Sidney H. Bingham's plan for a high-speed tristate commuter system will be dismissed by some as visionary.

As the former chairman of the New York City transit system, now a consultant engineer, Mr. Bingham developed his plan and volunteered it to the three Governors as a labor of love. It may possibly have occurred to him, however, that if the plan caught on he might be called in to help. Worse things could happen; Mr. Bingham is a transportation enthusiast, with sound planning and operational background. In the old days here, beset by the insistent problems of things as they were—a wornout, impoverished subway system—he was always yearning for what might be if the best of what was new in technological minds could be installed.

Mr. Bingham is probably right, or near enough right, when he says: "It is reasonable to assume that if a high-speed, air-conditioned, comfortable ride could be made available to the commuter, which would take him to his destination within the city with a distinct saving in elapsed time, he could be weaned away from his automobile or bus on the crowded highway and street." He would do this with creation of a tristate agency, to own or lease and operate a railroad network that used new, lightweight equipment, ran almost automatically with the most modern signal system, had train car entrance flush with the station platforms, delivered passengers nearer to where they wanted to be in midtown, downtown, and elsewhere. It would combine commuter facilities of most present railroads, but not the New York City transit system. It involves a minimum of new construction of right-of-way; it emphasizes modernization for speed, comfort, and convenience. Even if the cost figures are impractically low, or the political prospects of tristate cooperation dim, this is a fresh approach and it deserves openminded appraisal by the Governors and their staffs.

[From the Bridgeport Sunday Herald, Aug. 21, 1960]

STREAMLINED COMMUTER PLAN DEMANDS OUR SERIOUS STUDY

A tristate commuter transit system, operated with speedy, lightweight, air-conditioned trains, tying together Connecticut, New York, and New Jersey, is the quick summary of a plan formulated by Sidney H. Bingham, consulting engineer and former executive director of the New York City Transit Authority.

Tracks would be leased from existing railroads and a tristate authority would supervise and direct the new network. It may seem dreamlike, but vision is required to unsnarl commuter problems, which the New Haven and other railroads seem unable to do, and while struggling with them claim they are being driven into bankruptcy.

Gov. Abe Ribicoff's interest in the proposal has hopeful possibilities. He has invited Bingham to confer with him and the meeting will be held when the engineer returns from a projected South American trip.

On the Governor's instruction, the Bingham proposals, as they relate to the New Haven Road, will be studied by Eugene Loughlin, chairman of the Connecticut Public Utilities Commission.

The plan is too technical to be commented on here, but it doesn't require a transportation expert to agree with Governor Ribicoff, who described it as having appealing and challenging aspects.

Agreement also is not hard to come by with the motivating thinking on Bingham's part, who said: "It is reasonable to assume that if a high-speed, air-conditioned, comfortable ride could be made available to the commuter, which would take him to his destination within the city with a distinct saving in elapsed time, he could be weaned away from his automobile or bus on the crowded highway and street."

If Fairfield County is to share the growth, which has bloomed in the commuting areas of Westchester County, Long Island, and New Jersey, the problem of commuter transportation, now confounding the New Haven and harassing it, will have to be solved by some plan similar to that evolved by Bingham.

Positions of the Presidential Candidates on the TVA and Public Power

---

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 26, 1960

Mr. KEFAUVER. Mr. President, the Tennessee Valley Authority is a living example of development of our natural resources which the Nation and Tennessee are proud to display to the world. It has meant untold economic growth to my State and the entire region.

Mr. Lois Laycook has written a perceptive interpretive story, published in the Nashville Tennessean, concerning the positions of the two presidential candidates over the years on the TVA and public power.

Mr. Laycook and his outstanding newspaper have long been champions of our TVA, and I feel that this article is particularly timely as a commentary on one of the important issues which will be debated during the coming campaign.

I ask unanimous consent that Mr. Laycook's excellent analysis be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nashville Tennessean, Aug. 21, 1960]

WHAT ABOUT TVA?—KENNEDY, NIXON DON'T SAY BUT VOTES INDICATE

(By Lois Laycook)

WASHINGTON—Overlooked in the controversy over civil rights and other hot issues of the moment are the views of the presidential candidates on TVA and the rural electrification program.

Neither Vice President RICHARD M. NIXON, the Republican nominee, nor Senator JOHN F. KENNEDY, the Democratic candidate, has had much to say about public power policy since their nominations.

Fortunately, however, both candidates have long voting records on the subject in the House and Senate.

The National Rural Electric Cooperative Association recently conducted a study of the two candidates' records on public power. Here's what it found:

While serving in the House from 1947 until 1950 and in the Senate in 1951 and 1952, NIXON had the opportunity to vote on 19 Federal power, rural electrification and related issues. Out of these 19 possible votes, NIXON voted for public power legislation on only 3 occasions. He voted unfavorably 13 times and was recorded as not voting on 3 other occasions.

The 13 antipublic power votes included 4 votes against TVA legislation.

KENNEDY VOTES FAVORABLY

KENNEDY's voting record spans a 13-year period from 1947 to 1960. Between 1947 and 1952, while KENNEDY was in the House, he had 18 opportunities to vote on power legislation.

Of these votes, according to the association's study, KENNEDY voted favorably 11 times, unfavorably 4 times, and failed to vote on 3 occasions.

On 36 public power issues in the Senate between 1954 and 1960, KENNEDY voted favorably 24 times, unfavorably 8 times and did not vote on 4 issues.

During his 13 years in Congress, KENNEDY has supported TVA legislation on most occasions. However, in 1954, he voted against an amendment to restore $12 million in power transmission funds cut out of the TVA budget by the Eisenhower administration.

On August 9, 1957, KENNEDY was absent when the Senate passed the first TVA self-financing bill by a vote of 61–20. The measure died in the House. When the second self-financing bill came before the Senate July 9, 1959, KENNEDY voted for the legislation. This bill later became law.

KENNEDY voted for appropriations to build the New Johnsonville steamplant on two opportunities while serving in the House in 1948. These key appropriations bills trig-

gered an all-out battle by the private power lobby, which succeeded in blocking funds for the initial TVA steamplant project until 1949.

NIXON VOTES AGAINST

NIXON, who also was serving in the House at the time, voted against New Johnsonville on both tests. He also opposed TVA on two other record votes during his brief tenure as a Senator from California.

On June 3, 1952, NIXON voted for a Republican-sponsored amendment to slash TVA's appropriation for fiscal 1953 by $45,700,000 in an effort to prevent construction of six additional steamplant units. The amendment was defeated by the narrow vote of 36 to 31.

On the same date, an amendment was offered to increase TVA's total appropriation for the next fiscal year from $171,200,000 to $186 million. NIXON voted against the amendment.

These votes give some indication as to the extent the forthcoming election campaign may bear on the Government power issue. Both candidates can be expected to discuss the subject at length, especially during visits to the Tennessee Valley and the Pacific Northwest.

Both the Democratic and Republican platforms discuss the power issue and natural resource development in only general terms. NIXON and KENNEDY will be pressed for a full debate on the subject before election days rolls around.

An Import Quota for Iron Ore

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. BENNETT of Michigan. Mr. Speaker, in the 85th Congress and again in this Congress, I have sponsored legislation which seeks to impose a reasonable quota on the importation of foreign iron ore into the United States for the purpose of forcing our big steel companies to utilize their domestic sources of supply to meet this country's needs for iron ore. When I first spoke to the House on this subject several years ago, I called attention to the tremendous annual increase in the importation of foreign iron ore and the disastrous effects that this free trade policy is having on a vital and strategic American industry and the workingmen and women who are dependent upon it for their livelihood.

I wish to emphasize at the outset that in sponsoring this legislation it is not my purpose to penalize in any way the steel companies which own and operate our domestic iron mines and also own a major part of the reserves in Canada and Venezuela. My primary aim is to have regulated the flow of iron ore from abroad on a reasonable annual basis so that imports will not substantially injure or completely destroy iron mining in this country. Imports were approximately 9 million tons in 1952 and nearly 36 million tons in 1959. Thus, in the short span of 7 years, the annual rate increased almost four times. If nothing is done to limit or regulate this excessive importation of iron ore, it will ultimately replace and destroy the domestic industry.

The table below, prepared from statistics compiled by the Bureau of the Census, reflects the sharp increase in foreign iron ore imports from 1952 through 1959 with the corresponding decrease in domestic production. The figures for the first 6 months of 1960 show the same trend.

Iron ore imports, 1952-59 [1]

[In thousands of long tons]

	1952	1953	1954	1955
Canada	1,822	1,841	3,537	10,077
Venezuela	1,846	1,950	5,210	7,160
Others [2]	6,093	7,283	7,045	6,235
Total	9,761	11,074	15,792	23,472

	1956	1957	1958	1959
Canada	13,723	12,609	8,293	13,447
Venezuela	9,254	12,293	12,170	13,544
Others [2]	7,434	8,824	7,367	8,623
Total	30,411	33,726	27,830	35,614

[1] During the same period domestic production of iron ore has decreased from 98,000,000 long tons in 1952 to 59,000,000 long tons in 1959. Figures for the first 6 months of 1960 reflect the same trend.

[2] Other countries exporting iron ore to the United States include Brazil, British West Africa, Chili, Cuba, Denmark, Dominican Republic, Iran, Liberia, Mexico, Panama, Peru, Philippines, Sweden, Spain, Surinam, and the United Kingdom.

What is this free trade policy costing the United States in terms of the ultimate destruction of the iron mining industry? What does it mean in terms of lost jobs and lost wages for men and women in my congressional district and in other districts where mining is the lifeblood of the economy? The answers to these questions will shock the conscience of the Congress. For example, if the 35,613,259 long tons of iron ore brought into the country from foreign sources in 1959 had been mined in the United States instead, it would have meant jobs for approximately 5,634 more men; it would have provided these men with 11,268,000 man-hours of work and it would have produced $30,322,188 in additional wages. These figures, obtained from the Bureau of Mines, are based on the national average of production and wages of American iron ore miners for 1957, the most recent year for which such figures are available.

Some of the huge expenditures made in recent years to develop foreign mines, particularly in Venezuela and Canada, could have been far better spent in expanding the iron ore industry at home by exploring, developing, and opening new deposits here. The supply of this great natural resource within the United States is still very vast and untapped—reserves are still numerous.

Mr. Speaker, in addition to its economic folly, both national defense and moral reasons dictate against continuation of the unregulated importation of iron ore. It is not farfetched to suggest that the present policy of relying so heavily on foreign sources of iron ore, with its resultant destructive effect on the American industry, could be tragic to the United States in the event of war or other national emergency. If we replace domestic ores with foreign ores, where would we stand if our foreign supplies were cut off in time of war? Abandoned domestic mines cannot be reactivated overnight. Miners who have been forced to leave mining communities to seek employment in other industries cannot return on a moment's notice. New sources of supply cannot be explored and developed instantaneously. Once abandoned or substantially curtailed, the great American iron mining industry will take months, indeed years, to get back in production. Does it make sense to gamble future national security for a few extra profit dollars today? The present policy is shortsighted; unfair to the American miner and his family; makes no sense economically in the long run; and constitutes a threat to our national security.

No one expects the steel companies to operate their mining properties at a loss and the fact is that the vast majority of mining properties in Michigan and Minnesota have been and still are profitable operations. But the steel companies have favored the exploitation of their Canadian reserves because of the higher iron content and lower production costs. When iron mining commenced in Michigan and Minnesota many years ago, many towns and communities grew up around them. Surely, Mr. Speaker, the steel companies owe at least a moral obligation to their own employees and the people in the communities which surround their domestic operations to continue their activities as long as they are reasonably profitable. My bill is aimed at that objective. It would not stop the development of foreign reserves. It would merely regulate the annual flow of foreign ores on a reasonable basis and thus would permit the continued operations of our domestic mines. I think this is a sound, practical and sensible solution to this problem, one that will injure nobody but will be of substantial aid to millions of our own citizens.

I have spoken of iron ore and the problem of foreign competition as it relates directly to the mining industry.

However, there are byproducts which are of equal importance. This vital issue does not stop at the mine shaft.

Thousands of ship-borne products from abroad pass through our customs houses every week in the East, the West and the Gulfport areas as well as the St. Lawrence Seaway. Many of these are made chiefly, or in part, from iron ore derived metals.

For instance, consider the situation of automobiles—Michigan's leading bread and butter industry. As U.S. auto exports dropped to a postwar low last year of slightly over 100,000, imports went from 21,000 automobiles in 1950 to over 660,000 in 1959. And again this year, foreign manufacturers seem to be doing a brisk business here having moved in over 310,000 autos valued at $350 million during the first 6 months.

Now consider the side effects upon our economy of the importation of this one metal product—the automobile. In terms of American equivalents, one standard U.S. automobile requires about 2 tons of steel which in turn is made from several elements including 1 ton of iron ore. In other words, the ratio of iron ore to an automobile is approximately 1 ton to one car.

Accordingly, for every foreign car which displaced an American car, 1 ton of iron ore remained earthbound. Theoretically, since January of 1959, this would represent over 1 million tons of untapped ore in the importation of one metal product. The same applies to typewriters, sewing machines, dozens of steel mill products, oil tankers, cargo vessels, and so forth.

Furthermore, the chain reaction of imports affects additional industries as well. I mentioned the effect upon ore of auto imports. Continuing the analogy, the effect is similar in coal and steel. For example, a standard U.S. auto requires 2 tons of coal as well as 2 tons of steel in its construction. Consequently, about 1.2 million tons of coal never left the earth last year in the United States, nor, of course, was the order placed for 1.2 million tons of steel.

In northern Michigan, an important part of our economy is related to the mining of copper. A decade ago, imports of copper-brass products amounted to only 21 million pounds. But by last year, imports of such products had leaped to 200 million pounds. Furthermore, the copper problem was further compounded by decreasing exports of copper-brass goods which dropped from 47 million pounds to 16 million last year.

While these figures may sound abstract or cold or of little significance to the man in the street, let me assure you that they affect us all in our daily life in a way which we may ignore only at our own expense.

For example, in the case of steel: To tell you that imports of steel mill products were 4.4 million tons in 1959, valued at $515 million (in foreign value only), might not be as meaningful as to tell an American steel producer that these imports displaced U.S. sales of about $700 million. Or if speaking to a steelworker, I might add that that tonnage of steel imports put 20,000 men to work for 40 million man-hours at wages of about $125 million—but somewhere else, not here at home. The same picture—lost jobs, lost wages, lost sales—can be found in one industry after another including shipbuilding, porcelain, typewriters, textiles, cameras, jewelry, fishing tackle, and many, many more. All of these products are made and made as good or better right here in the United States. But the situation has become so bad that even barbed wire which was first invented in the Midwest is being imported in such quantities that the foreign manufacturer now has the lion's share of our own marketplace.

All in all, Mr. Speaker, our program of unrestricted free trade has proven to be not only impractical and unrealistic, but seriously damaging to important segments of our economy. Formerly, the evil effects of this program were spotty and were felt only by selected industries and mainly on an area basis. Today, the inroads of free trade are being sharply felt in most of the principal productive industries in our country. The basic reasons for this disastrous result lies in the wage differential between what is paid here and abroad. The following are a few examples:

The Japanese woodworker receives about 18 cents; the Italian, 24 cents; the French, 54 cents; the German, 48 cents; the English, 50 cents; the American, $1.98 per hour.

The Japanese chemical worker receives about 37 cents; the Italian, 37 cents; the French, 49 cents; the German, 57 cents; the English, 68 cents; and the American, $2.44 per hour.

The Japanese leatherworker receives about 23 cents; the Italian, 30 cents; the French, 54 cents; the German, 40 cents; the English, 47 cents; and the American, $1.59 per hour.

The Japanese glassworker receives about 26 cents; the Italian, 36 cents; the French, 47 cents; the German, 55 cents; the English, 70 cents; and the American, $2.22 per hour.

The Japanese steelworker receives about 41 cents; the Italian, 46 cents; the French, 53 cents; the German, 59 cents; the English, 83 cents; and the American, $3.10 per hour.

The Japanese machinery worker receives about 28 cents; the Italian, 36 cents; the French, 54 cents; the German, 59 cents; the English, 74 cents; and the American, $2.50 per hour.

The Japanese auto worker receives about 26 cents; the Italian, 46 cents; the French, 54 cents; the German, 64 cents; the English, 94 cents; and the American, $2.69 per hour.

Years ago, we were able to absorb wage differentials because of our efficiency and great productive capacity. Today, largely because of our foreign aid programs, we have provided appliances, machinery and tools to foreign countries so that they can produce as efficiently as we can here. Thus, there is no practical way that our producers can meet the competition of articles produced abroad at much cheaper labor costs.

Incentive Military Pay Bill Needs Corrective Action Now; It Discriminates Against Some Retired Officers

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. YARBOROUGH. Mr. President, among the many bills which appear to be in danger of being lost in the great flood of pending proposals is one intended to restore the traditional relationship between the active duty and the retired pay of our military personnel, H.R. 11318. This bill is now in the Senate. It is a meritorious measure to correct a very inequitable law.

The purpose of the bill is to correct existing legislation which discriminates against many men who fought in World War II and who were recalled to active duty for the Korean war. I hope that it passes.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "Inequality," on this subject from the August 18, 1960, issue of the Austin (Tex.) American.

The Austin American has done a fine service in calling our attention to this urgent need.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INEQUALITY

Temporarily trapped in the political logjam in the U.S. Senate is a House-passed measure intended to correct inequalities of the 1958 Military Pay Act.

Victims of the inequities in retirement pay during the past 2 years are thousands of officers and enlisted men who retired from the armed services prior to 1958. Many of them are war veterans. Texas, which traditionally has been an attractive homesite of retired service personnel, numbers hundreds of permanent residents and voters.

The corrective measure, H.R. 11318, passed the House May 12 without a dissenting vote. Its fate now rests in a special Senate subcommittee. Pressure to get it moving is being applied by numerous military organizations, including the adjutant generals of the States. As recent as August 9 President Eisenhower appealed that the traditional active-retired relationship of pay scales in the military services be restored.

Under the 1958 Military Pay Act officers and men on retirement pay were limited to a 6-percent increase. But their fellow servicemen who retired after passage of the new law are receiving substantially larger pay benefits. As an example, the retired pay of a colonel of more than 30 years service retired on May 31, 1958, is $90 less than the pay of a colonel of more than 30 years service retired after that date. The 1958 rule altered the formula of computing retirement pay on the traditional active duty pay rates applicable to the several grades and proportionate to the length of service.

Retired service personnel in Texas are eager to point out the speed with which Congress passed legislation to equalize retirement pay of its own members. Spokesmen for the retired personnel claim adequate support on the Senate floor for passage of the measure, if it could be unblocked in the special subcommittee of the Armed Services Committee. Senator STENNIS, of Mississippi, is chairman of the subgroup of which Senators SALTONSTALL, of Massachusetts, and BYRD, of Virginia, are members.

All we want, writes a retired Army officer, "is to put all uniform service retirees paid under the career compensation act on the same basis for pay regardless of whether they retired May 31, 1958, or earlier with those who retired June 1, 1958, and later."

The inference is that the retired service personnel in Texas are looking at the results with a "voter's eye."

Plain fairness calls for the Senate to end this discrimination, and this sentiment applies to all citizens.

Conference Action on the Social Security Bill on the Senate Amendment Relating to Teachers and Other Public Employees in New Jersey

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. CANFIELD. Mr. Speaker, I submit a letter our distinguished colleague and chairman of the House Committee on Ways and Means, Mr. MILLS, has written the New Jersey delegation. It explains the deletion of the Senate amendment in the conference report on the social security bill relating to teachers and other public employees in New Jersey.

The letter is as follows:

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 26, 1960.

Hon. GORDON CANFIELD,
House of Representatives.

DEAR GORDON: This letter is to inform you, as I promised I would, of the conference action on the social security bill on the Senate amendment relating to teachers and other public employees in the State of New Jersey. This is the provision which you had discussed with me and other House conferees on behalf of yourself and the rest of the New Jersey delegation urging that the House conferees accept the Senate amendment. This amendment was deleted from the bill in conference. You were also interested in an exception in the case of New Jersey if any change was made liberalizing the quarters of coverage requirements.

I am sure you are aware of the fact that on August 23 when the Senate amendment was being discussed in the Senate, Senator KERR, who at that time was handling the bill on the Senate floor, stated at page 16008 of the CONGRESSIONAL RECORD: "I have not had time to digest the amendment; neither have the other members of the committee. However, in view of the fact that they have stated it relates only to New Jersey, I hope it will be accepted and taken to conference. If it is found there to be objectionable, it can be taken out of the bill."

During our discussion of the liberalizations in eligibility requirement in conference the main objection which was raised to adding the changes the New Jersey House delegation was urging was that it was designed to exclude public employees in the State of New Jersey from the liberalizations. Since the social security insurance system is a nationwide system, the eligibility requirements must be the same for all workers throughout the country. The conclusion was reached that this is a matter entirely within the control of the State of New Jersey, and that if the State desires to do so it can change its provisions relating to public employees who are also covered by social security. I hope that you will agree that this is the logical and reasonable way to handle this situation. The Congress in any legislation which it enacts affecting the whole of the United States cannot make exceptions which take into account individual provisions of either public or private pension plans.

I am advised that in 1956 when the provision relating to the age for women to become eligible for benefits was reduced from age 65 to age 62, and certain general liberalizations were made in eligibility requirements, the State of New Jersey did amend provisions of its law relating to public employees in such a way that such employees, both women and men, who had already retired, would not be affected by the liberalizations in these requirements in the Federal law.

The conferees agreed that the above considerations were basic and fundamental and for this reason it was decided that no exception should be made in the case of New Jersey.

I regret that the House conferees were not able to accede to your request, but under the circumstances both in the matter of policy and precedent it appeared that the Senate amendment was undesirable particularly in light of the fact that this is a State matter which can be handled at the State level.

Sincerely yours,

WILBUR D. MILLS,
Member of Congress.

Beware the Erosion of the Free World

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. HORAN. Mr. Speaker, under privilege granted to me to extend my own remarks in the Appendix of the RECORD I am privileged to include a speech delivered by Rear Adm. Laurence H. Frost, U.S. Navy, recently at the Dallas, Tex., Council of World Affairs. Admiral Frost is Assistant Chief of Naval Operations—Intelligence.

I am indebted to Mr. Oren Casey, Esq., of Spokane, Wash., for making this timely address available to me.

The address follows:

Today I would like to share some of my thoughts on the world situation with you. There has been a tremendous quickening of pace in international affairs in the last 2 years. The question in most people's mind is how to assess what all this means.

Have the Soviets mellowed? Has the balance of power changed?

Can we look forward to a reasonable peace with justice for the world? Just what is the world outlook for 1960?

As you will see, I am not so much concerned about what we are already prepared for—about the dangers we are already alert to, my deepest concern lies in those areas where we as a nation see no particular threat or long-term danger.

It is for this reason that I stress that we must keep the entire threat in proper focus. Moreover we must bear in mind that there are occasions when we can harm ourselves far more than the enemy can. For we are in nothing less than a crisis of civilization.

Much has been written about this crisis. But it is given to only a few to set its meaning down in a handful of words. That has been done recently by a distinguished American visitor to the Soviet Union, who said:

"God willing, we shall escape war, but we shall not escape the toughest fight we have ever fought. Coexistence is a pleasant term, but one of these systems is going down. It does not make it easier to learn that the weapons of the conflict are of the spirit."

To that insight I would add that we may need at this time not so much a new weapon as a new state of mind. This is no facile turn of words on my part. It strikes deep at the heart of the matter. One of my primary responsibilities is to chart each day the ups and downs of the entire world along with other members of the U.S. Intelligence Board. As occasion permits, I must make an on-the-spot survey, as I did at great length a month ago. The picture that unfolds before me is not the one that leaps from the headlines or the newscast.

It is a world often heaving in struggle, fired with aspirations, and desperate in its desire to reach a plateau of stability and progress. It is a world comprised of touchy and proud nations. Communism is indeed a part of the struggle, but it is not simply the dramatic military aspect of communism. In fact, the most dangerous aspect of communism for each man as an individual is the philosophy of communism as a guide to action and a way of life.

People of the free world have been justly concerned over possible changes in the Communist threat in recent months. On the one hand, there has been an apparent relaxation of certain pressures within the Soviet bloc itself. Soviet leaders have traveled extensively. They talk continually of peaceful coexistence—they allow tourists to visit the bloc, although under many restrictions—and they themselves seem more relaxed and less inscrutable than formerly. All of this has, of course, been greeted with appreciation by a world that desires stability and peace.

But we must remember that talk of peace by the Soviets cannot mask their aggressive talk about West Berlin, or about the entire West, for that matter. It cannot mask the unbridled threats that are expressed with increasing regularity about growing Soviet strength. In fact, no Soviet leader has ever sought to conceal their objective to beat us out at every turn and to bury us. The burial they talk about is the burial of our system, nothing less than our civilization in all its material and spiritual aspects.

Let us take a brief look at the bedrock of the Soviet creed to see what, if anything, essentially has actually changed. In the first place, the Soviet regime is now more confident than ever that it is the wave of the future. In fact, the Soviet regime believes more than ever that it is the unfolding of history. This is not simply an assertion based upon hope. It is the foundation of what can properly be called a secular religion. Moreover, they have enshrined their creed in what they call a science. Regardless of how tellingly we may refute it, unmask its illogical premises, or counter its claims, the fact remains that it is essentially believed by the controlling element and is used as a guide to action.

In 1900, when writing about Communist workers, Lenin stated that the party wanted the whole of their lives. This is the nub of Communist philosophy which sees all of life in one unalterable picture.

Communist belief claims to encompass all of reality in one interrelated sequence—a concept of nature, of man, of society, and of history. The Communist cannot pick or choose or shade the basic elements of this belief—these are set in concrete—these are not movable parts.

Now, most Americans are willing to concede that Communists believe in their philosophy. But we find it incredible that Communists actually live by it on a day-to-day basis. But the Communists who control the bloc do live by it and plan by it. They are masters of organizational control, they know what they want and why they want it. For them there is only one operational problem—how to get it.

We see them in action on a daily basis. But we usually judge them by our standards and our view of the world. This is where matters get out of focus. We must continually examine their conduct and objectives through their eyes. Otherwise—because we prefer a live-and-let-live philosophy—our alertness waxes when they suddenly commit aggression, and wanes sharply when they soothe us with smiles.

You may be interested, then, in my views of how the Soviets look upon the world about them—their ambitions—their inhibitions—the lengths to which they will go to increase their domination over others. At the same time, I shall be stressing what I believe still applies in Soviet behavior behind the campaign for so-called peaceful coexistence.

First, we must remember that whereas we hope that all nations will develop, produce, and prosper in peace under freedom and self-determination, the Soviets consider our system doomed. They can be remarkably offhand and impersonal about this, for they

consider our system simply a stage in history's evolution toward communism. For them we are the bourgeois society—as Marx said—the closing chapter of the prehistoric stage of human society. For them, every society moves to communism. We may resist history and they may give history a helping hand, but nobody can arrest history.

We may hear a good bit about the discontent of the Russian people with the performance of their state—but we find understandably little questioning by them of the validity of the state's doctrine. By the same token, we may distinguish between the party and the people in some matters—but as the country reaches new heights of technical progress, the people seem to accept the system more readily. Why shouldn't they? They have known no other. They tend rather to blame individuals who abuse them under the system.

In short, although there is undoubtedly some curiosity about other systems in the outside world, they are conditioned largely to invidious comparison. For many of them, the outside is an alien world that will sooner or later be wholly surpassed by Russian achievement in every line of endeavor. They consider our system a highway marker which has come into sight on the horizon and which they will in due time pass and leave far behind.

Many Westerners take comfort in the fact that the peoples of the Soviet Union are pathetically anxious for peace. Soviet people seek assurance on this subject whenever they meet Americans today. But an astute observer has warned of one tragic aspect of this. The Soviet regime controls public opinion. By dint of massive propaganda it has for years held itself up as the champion of peace. Consequently, if the day should come when the regime chooses war, the people will be led to believe that the peace they embraced was taken away by America. This is the tragedy of what is known as the closed society—a society for all practical purposes conditioned by its rulers, cut off from freedom of thought and the free exchange of ideas.

The threat to the free world from the Soviet Union is commonly broken down into three categories—general war, limited war, and the so-called cold war.

Actually, from the Soviet point of view, these form a continuous spectrum of conflict. That part of the spectrum known as cold war is a natural medium for Marxism and Leninism.

This is the area of low risk and high security but slow and steady progress. It has aptly been called protracted conflict by Communists. Let us examine Soviet attitudes toward these forms of conflict, starting with the most dramatic and the least probable—general war.

In the history of mankind, conflict has usually taken the form of military forces pitted against one another. We in the West traditionally think of conflict solely in military terms. But in the last four decades we have been decidedly uneasy about the conflict pressed upon us daily by the Soviet Union. Even today the threat against us tends to be expressed by us mainly in the dramatic terms of megaton weapons, bombers, missiles, and submarines. Even here, the maintenance of substantial army, navy, and air forces in the Soviet Union for conventional warfare is generally ignored in public discussion. As a consequence, we focus on one aspect of the threat—the worst possible contingency—an all-out nuclear attack on the United States.

Now ladies and gentleman, far be it from me to lull you into a false sense of security. The world of megaton weapons is real. But we are more alert to and better prepared for this threat than any other—and we must maintain our deterrent strength. It would be folly to drop our guard. Moreover, as each side makes it missiles more secure—in our case by moving them to the seas and by site hardening—the chances for an all-out exchange of nuclear weapons will be considerably reduced.

But let us never lose sight of another important aspect of the missile question. Missiles are but another form of power adapted to an age of rapid technological development. They represent not only physical power but also—perhaps more realistically—they represent psychological power. We all hope they will never be used. When we speak of them we are speaking for the purpose of deterrence and not rabidly brandishing them. More often than not, when we speak of them we are informing, warning, or reassuring the American people and our allies. The Soviet leaders know full well what missile power is. They are well informed and warned.

If we are not careful, we can slip into an artificial game theory of nuclear weapons exchange that is legitimate enough in planning but which threatens to mask out all other aspects of the daily power struggle. We must consider all aspects of this matter, otherwise we can fall into a national neurosis or obsession.

I think it is safe enough to say that the leaders of the Soviet Union are realists. Survival of individuals within the regime itself has in the past raised realism to a fine political art. They are committed to spreading Communist power throughout the world—they will take aggressive action when they think they can get away with it—but they are unlikely by deliberate choice to bring the world and themselves down in nuclear chaos.

It is too often forgotten that we are dealing with men who are imbued with the psychology of revolution—massive radical change. They think in terms of strengthening their base and from that stronghold of eroding all other political and economic systems.

They attempt to sap the will, the energy, the strength and the spirit of others.

But they do not see military activity as the sole way of doing this. In fact, they see it as a possibly necessary way but hardly the preferred way. In short, Marxism-Leninism lives by conflict in one form or another, but military conflict is used where risk is low or uncontrollable situations face them.

Today, then, we are faced with a world in which two superpowers face each other warily. We have made it plain that our strength is in place solely to deter aggression against us and our allies. We are not anxious to use this strength and hope we will never have to. We are interested in deterrence—just as medical science is more and more interested in keeping a disease from ever starting. But beneath the umbrella of deterrence many other things can happen. We have an old expression that there are more ways than one to skin a cat. In their compulsion to expand their power, the Communists must find those other ways. You can be sure that their actions will be calculated to fall short of a direct challenge to our national survival. They will, when they can, slip under the fence of strategic nuclear deterrence.

At this point, we are back in daily life as it is lived routinely each day—the life of the so-called cold war—or protracted conflict as the Communists who wage it have so aptly described their campaign. This is the war that communism has waged all through this century. Its first victim was the Russian people themselves and since 1917—working from one base—it has spread through revolution, the aftermath of wartime chaos, local military aggression, psychological warfare and diplomatic deceit.

Communism chose the cold war and it ordained that the battlefield was to be the free world. The battle, moreover, was to be fought in the vast gray area that lies between the white of peace and the black of war. In Communist eyes, the free world was to be eroded—its physical and spiritual strength turned into weakness and apathy.

It was to be kept in a state of doubt, fear and discontent—without unity, without purpose, without hope.

Ladies and gentlemen, all of this is alien to our spirit. We have lived so long in accepted traditions of Western civilization and blessed by material abundance that we find it difficult to believe that Communist leaders can be so disciplined, intense and unwavering in purpose.

More dangerous, in fact, is the guise of friendliness under which communism now walks. If you judge its actions by still photos, as it were, you will see smiles, offers of treaties, jocular bantering, and sudden candid camera glimpses of the naked threat. But we must keep the whole picture in mind and see it, as it were, in motion picture sequence—starting back in 1917 and coming right up to date.

Seen in this perspective, I am sure that your first question would be: "Why in the world would communism—after unbelievable success—suddenly lose its desire to expand? What power-hungry group unrestrained in creed by ethical standards ever willingly comes to terms with its chosen opponent?" The answer is that the Soviet leaders are choosing this current gambit for their own tactical reasons.

What we are witnessing now is a burst of self-confidence—a cocksureness of attitude—and a greater conviction than ever that Communist power is the wave of the future.

The irony of all this is that the Soviet leaders make no bones about it. The grim import of what they are saying—or threatening—is lost on us because we instinctively contrast the horror of all-out nuclear war with the undramatic sound of so-called peaceful coexistence. Under these rules, peaceful coexistence cannot help but assume rather benign overtones.

The point I would like to stress is that peaceful coexistence may be morally preferable to a nuclear holocaust but we should see it for just what it is.

In the first place, it is a Communist phrase—in semantics and in intent. To the Soviet leaders it means one thing alone—since communism is the wave of the future, it should be allowed to develop and expand without challenge.

The Soviets have recently been unremitting in their efforts to condemn the term "cold war." They ask for an end to the cold war and acceptance of an era of peaceful coexistence. There is only one difference between these two terms—in cold war one party resists the aggression of the other—in peaceful coexistence one party agrees for the sake of peace not to stand in the way of the aggression of another. The Soviets are quite clear about this. As far as they are concerned, this is the only way that peace can come about in the forecordained history of our era.

Even those who must work professionally on this subject on a day-to-day basis have to remind themselves continually to judge the Soviet leaders by what they actually mean—not by the phrases they use—and not by our standards of reasonable compromise, a mutual basis in confidence, or the traditional norms of Western society.

Over the years, the peoples of the West have been rudely surprised by Soviet actions. Time and again, we have granted the benefit of the doubt and hoped that the future would be calm. Time and again, we have been disappointed. We must accept the fact—unpleasant as it is—that the fu-

ture is going to be more challenging than ever. We must look forward to a long period of cold war—or protracted conflict—or so-called peaceful coexistence—the name doesn't really matter. What is important is that as the Soviet Union grows stronger it will grow in self-confidence. With added strength and ill-concealed arrogance it will seek more boldly to penetrate the free world, to keep it in chaos, to turn it against the United States and eventually to draw it into its orbit.

One threat runs consistently through the Soviet cold war strategy: The moral and physical isolation of the United States. In disarmament plans, the Soviet Union always returns to its original stipulation—the withdrawal of all U.S. forces to North America. In their propaganda, we are imperialists—we are the warmongers—we are the threat to the world of nuclear devastation—we are the hardhearted rich—we are the enemy of the poor—we are the diehards standing in the way of the masses—trying to stop history in its tracks.

These themes are stated simply and are beamed around the world every hour of the day. Sooner or later, they fall on the ears of those who are deeply troubled for one reason or another. They offer a scapegoat and hold out a promise. The subtle use of massive psychological techniques can over a period of time pay off suddenly.

The Soviets understand well that the 20th century is an age of revolution throughout much of the world—and they intend to dominate that revolution by deflecting it into Marxist channels. At this time they see large areas—the underdeveloped countries and emerging nations—on the threshold of decision. The entire future of the world will be influenced by the path that these nations choose—the rapid, inhuman way of Communist industrialization—or the balanced, humane way of the West. The future of Africa alone lies in the balance at this moment.

We have now arrived at the point where I must balance up accounts and try to answer the question I posed in my opening remarks—What is the world outlook in 1960?

First, I would revert to the short observation I quoted earlier: "God willing, we shall escape war, but we shall not escape the toughest fight we ever fought." To me this is good realism. It avoids the negative feedback of pessimism as well as the misleading counsel of optimism. It faces the facts squarely—it warns and informs.

It is natural for all of us to think nostalgically of the good old days when geography isolated us from involvement in world affairs. But that era is behind us forever. We are not only immersed in world affairs—leadership, moral commitment and responsibility have settled on our shoulders. Unless we do our level best, vast areas of the world can fall into hostile hands—hostile not only to us but to people as such everywhere.

The threat to the free world can come in three ways—an all-out surprise nuclear attack against us—a series of limited wars which could gradually contract the free world area—or a long-term erosion of the strength of the free world with the United States finally isolated and psychologically inert.

We have done well in our concern about a surprise attack. Providing we maintain our deterrent strength and the Soviet leaders realize what would happen if they unleashed such an attack, the possibility of such an attack will be remote. As the world moves into the missile age, there will be compensations against the suddenness of missile attack. As our Polaris submarines move a truly invulnerable missile punch to the secrecy of the ocean, and as our missile sites are hardened, an enemy will strike only in suicidal madness. Refinements in the missile race may seem now and then to threaten the deterrence balance, but organically the deterrent itself should not be altered.

With respect to limited war or local aggression there is a different picture. The Soviet Union and Communist China are under compulsion to expand their power and their influence. If an all-out nuclear war is incompatible with their interests—as I think they believe—their energies will seek an outlet in something less risky.

Just as our long-range bombers, ICBM's, and Polaris missiles deter them from a surprise nuclear attack, so must our other military strengths deter them from local aggression. We have seen cases in Korea and the Taiwan Straits.

Local aggression is an outcropping of the cold war. It may start as a probing operation to test our interest or will. It may—as in Korea—be a sudden attack in an area which the Soviets consider a power vacuum. But the most important fact about limited aggression since 1950 is that the enemy realizes we are alert to every move he makes. In the years ahead he will watch carefully to see whether we maintain our limited war capability. If he judges that we are talking big but are ill-prepared, he will be tempted to move all around his periphery and, on occasion, to leapfrog into the inner parts of the free world.

With both large-scale and local aggression deterred, Soviet energy will express itself in what we call the cold-war spectrum—political warfare, economic warfare, psychological warefare, and cultural warfare. This is the situation today. From the Soviet point of view, this cold war or so-called peaceful coexistence is a campaign against the free world. The objective is, as I have said, the physical and moral isolation of the fortress of the free world—the United States of America. The means to the objective are the techniques of erosion—erosion of territory, erosion of national ideals, erosion of the will to resist.

Our greatest error will lie in our feeling that since military strength will deter all-out war and nip local aggression in the bud, our troubles are over. If the combined threat of world communism were solely military, I would agree. But until it is thoroughly understood everywhere by our people, that the Soviet threat far transcends the military equation, we shall be vulnerable to attrition.

Erosion of the free world has been going on for many decades. Our alertness since World War II has controlled it somewhat. But this is a process that does not suddenly come to an end. Our freedom—our institutions—our way of life have to be earned every day—all year around.

For this reason we must be sensitive to the significance of seemingly minor happenings around the world. We must realize that when a far-distant piece of the free world slips into the sea of communism, a piece of our own land, our own heritage, our own security has in fact slipped with it.

Department of State: Please Pause and Ponder

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. DAGUE. Mr. Speaker, for a long, long time Constantine Brown has been recognized as one of our more astute and able commentators on foreign affairs. Consequently, when he comes out as he did in yesterday's Evening Star with the warning to our Government not to drive the Dominican Republic into the arms of the Communists I think those who shape our foreign policy should pay him heed.

In commenting on the action of the Organization of American States in agreeing to withdraw ambassadors and impose an economic boycott on the Dominicans Mr. Brown pinpoints the real cause for this drastic action as the alleged—and too much emphasis cannot be put on that word "alleged"—attempt to instigate the assassination of President Betancourt of Venezuela which, incidentally, is the country where our Vice President was stoned and spat upon.

Mr. Brown also points to the frightening but althogether logical possibility that the precipitate action now planned in regards to the Dominican Republic may well result in driving Trujillo and Castro together to form, along with unstable Haiti, a Caribbean Communist bloc, thus broadening the base from which Khrushchev can launch his military and ideological attacks on the United States.

I have no defense for Trujillo or any other dictator. I certainly join with Mr. Brown, however, in questioning the wisdom of seeming to tolerate dictators of Communist persuasion while doing our utmost to stamp out the other kind. And whatever else he may be, the strong man of Santo Domingo has heretofore never shown the slightest inclination to do business with Khrushchev and his ilk. I pray that our statesmen will not now involve us in a diplomatic fiasco from which we may be a long, long time in extricating ourselves.

Mr. Brown's disturbing article is appended hereto in full:

NEW RED OPENING IN CARIBBEAN?—OAS BLAST AT DOMINICAN REPUBLIC HIT AS KREMLIN MAKES OVERTURES

(By Constantine Brown)

The creation of a Caribbean pro-Soviet unit composed of Cuba, the Dominican Republic, and inevitably Haiti would have been called a ridiculous phantasy a few days ago. Now it could gradually become a reality as a result of the decisions taken at the OAS conference at San Jose, Costa Rica.

There, by unanimous vote, the government of the Dominican Republic not only has been reprimanded for the alleged attempts to instigate the assassination of President Romulo Betancourt, of Venezuela. Drastic measures short of war, such as the withdrawal of the OAS ambassadors and an economic boycott, have been ordered.

But while President Eisenhower demanded legal authority from Congress to hit the people of the Dominican Republic where it hurt—mostly by withholding the Dominican share of the U.S. sugar quota—Moscow, which seems to anticipate everything, was ready for action. Soviet official agents—the Dominican Republic does not have diplomatic relations with Communist countries—offered to barter whatever the Republic needed for Dominican sugar. Simultaneously, it was announced from Ciudad Trujillo that the Dominican radio station was negotiating for the service of the Soviet news agency Tass.

These first steps may seem inconsequential at first sight. They do not indicate in the slightest that there could be a recon-

ciliation between Cuba's Communist puppet Fidel Castro and the tough dictator Generalissimo Trujillo. But Moscow and Peiping are not interested in harmony between such men. They are interested in establishing as many anti-American areas as possible in this hemisphere.

The Dominican Republic would be a highly important prize, since it paradoxically had been adamantly hostile to alien dictatorships. Before and during World War II Trujillo was bitterly opposed to the Nazis and opened the gates of his country wide to the victims of nazism, particularly the Jews. Since the beginning of the cold war he has been equally bitterly opposed to the Soviet Union and international communism. It took a miracle—such as that performed at San Jose by Secretary Herter and his Latin American colleagues—to induce Trujillo to look toward Moscow for help. Trujillo and even the moderate members of the Dominican Government, as well as the rank-and-file of the people, were reported indignant not only at the harsh treatment they received at San Jose, but also because at the same time, the OAS mildly rapped the knuckles of Castro, who has been guilty of far greater misdeeds, including the confiscation of legitimate properties valued at close to $1 billion.

It seems that the high priests of our diplomacy refuse to learn from the mistakes of the past. In 1946 the United Nations, at the bidding of Joseph Stalin, decided to make Spain a democracy by overthrowing Generalissimo Franco. Since it was inconvenient to send troops into Spain—as Stalin had demanded originally—the U.N. ordered the withdrawal of the ambassadors of its member nations and the establishment of an unofficial boycott. This, it was believed, would bring about another revolution and the demise of Franco's dictatorial regime.

The contrary happened. The Spanish people rallied in support of their strongly anti-Communist leader, buckled their belts, and withstood the hardships of the economic blockade for several years. The cold war followed the short honeymoon between the U.S.S.R. and its former wartime allies. We needed reliable air and naval bases; Washington came to the conclusion that Spain could offer valuable real estate for the defense of the free world.

Not only were diplomatic relations with Madrid renewed and a firm friendship established, but because of the economic ravages brought about by the economic blockade we had to provide Spain with upwards of $1 billion in economic aid. The security of our bases demanded an improvement of the standard of living of the Spanish people. Spain, while still not a member of NATO, has all the same become one of the most important adjuncts in our planned defense system.

There is much talk, though little is done from the practical point of view, about the tremendous importance of Latin America and especially the Caribbean to our security. For the first time in our history, we have an enemy dedicated to our destruction right on our doorsteps. The Iron Curtain has descended upon Cuba. Now there is strong possibility, judging by the most recent developments, that it will descend upon the Dominican Republic as well.

And all this is the result of a misguided philosophy of some of our leaders that while we should tolerate and try to befriend Communist dictators, we must do our best to stamp out the other kind.

Baring Shows National Significance of Port of New York Authority Investigation Issue

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD the following letter written to Hon. Robert B. Meyner, Governor of the State of New Jersey, August 18, 1960, so that all people may know the importance of a full investigation of the Port of New York Authority, and may be apprised of the necessity of their giving expressions of their support to Congressman CELLER so that he may most effectively continue the investigation.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 18, 1960.

Reference: Investigation of the Port of New York Authority.

Hon. ROBERT B. MEYNER,
Governor, State of New Jersey,
Trenton, N.J.

DEAR GOVERNOR MEYNER: Your letter of August 2, 1960 about the Port of New York Authority is quite plausible and convincing except for its vain attempt to suppress the significance of that most important little syllable "bi-".

The port authority need not be claimed a Federal agency to warrant congressional investigation; nor can it hide from congressional investigation by claiming itself a State agency.

The Founding Fathers of our country foresaw this very issue and placed interstate compacts of which the port authority is a bistate example under the control of Congress by article 1 of the Constitution of the United States.

Article 18 of the bistate compact between New York and New Jersey creating the Port of New York Authority acknowledges this responsibility by the port authority to the Congress of the United States.

"Render therefore unto Caesar the things which be Caesar's, and unto God the things which be God's."

No contest of power here exists between the Federal Government and a State unless a State seeks to deny things which be the Federal Government's.

Investigation of the bistate port authority does not create any new precedent leading to further Federal investigation of State agencies.

So much for the law.

"It is easier for a camel to go through the eye of a needle," than for the port authority's friends to pretend "the port authority is a local port development agency."

I have noted that the port authority has trade development offices in Washington, D.C.; Chicago, Ill.; Cleveland, Ohio; Pittsburgh, Pa.; London, England; Zurich, Switzerland; Rio de Janeiro, Brazil, and San Juan, P.R., which seek to direct traffic to New York. This international effort may be of considerable value to the port of New York, but it affects the trade volume of other ports in the United States and is no local matter.

I have noted that the port authority paid the expenses of the Governor of New Jersey when he visited the Belgian Trade Fair in 1958.

I have noted that the port authority gave a $10,000 luncheon for 600 guests, including the Governors of the Governors' conference at San Juan, P.R., which is outside the continental limits of the United States, on August 6, 1959, at which luncheon the Governor of New York and the Governor of New Jersey were the guests of honor.

I have noted that the secretariats of the Council of State Governments, Governors' conference, and National Association of Attorneys General are all located at 1313 East 60th Street, Chicago, Ill.

Those organizations have furnished such prompt, similar, and vigorous support in favor of port authority avoidance of congressional investigation as to raise the question whether even they are free from port authority influence.

There is no use in discussing how many record items and proposals to testify have been offered to Congress by the port authority, as long as the port authority continues to select the information to be released or withheld.

The files and data of the port authority have been secret for 39 years.

As long as any record or item is held in secrecy from Congress by the port authority, the port authority is not candid with the Congress of the United States.

What is the port authority hiding?

I believe the only issue raised so far in this matter is the misguidance of public officials who believe they can deny the Constitution of the United States and the Congress of the United States when such denial suits their pleasure, yet enjoy reliance on that same Constitution and Congress when it meets their need for protection against foreign and subversive powers.

Sincerely,

WALTER S. BARING,
Congressman for Nevada.

Communism and the Caribbean

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. SCHOEPPEL. Mr. President, as most of us know, we have no better authority on Latin America in general and the Caribbean area in particular than the Honorable Spruille Braden. His intimate association with these critical areas of our hemisphere encompasses nearly half a century.

As a young man he negotiated financing and obtained contracts for the electrification of the railways in Chile. He was our Ambassador to the Chaco Peace Conferences, 1935–39. He has served as U.S. Ambassador to Colombia, Cuba, and Argentina. From 1945 to 1947 he was Assistant Secretary of State for American Republic Affairs. Highly respected throughout Latin America, he probably holds more Latin American awards and decorations than any other of our citizens.

On May 20 of this year, Mr. Braden addressed the Long Island Federation

of Women's Clubs on "Communism and the Caribbean." It is a revealing and alarming account of conditions not far from our southeastern coastline.

I have checked with the Public Printer and find that the estimated cost of printing would exceed the number of pages allowed. It is estimated that the printing will involve 5¼ pages at a cost of $425.25.

I ask unanimous consent that the article be printed in the RECORD at this point notwithstanding the fact that the estimated cost will exceed the amount allowed.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNISM AND THE CARIBBEAN

(Address by the Honorable Spruille Braden, before Long Island Federation of Women's Clubs, May 20, 1960)

Always it is a pleasure to speak before the Long Island Federation of Women's Clubs, made up as it is, of so distinguished and attractive a group of ladies. I am especially complimented by your kind invitation to address you a second time. Also, it is a rewarding experience, because as I learned last year, individually and collectively, you make your views known in Washington, and they are listened to with attention and respect.

Therefore, to the extent you agree with my theses today, I hope you may be disposed to bring such constructive influences to bear on the administration and Congress, as may compel legislation and measures to wipe out at least some of the dangers now threatening the United States.

Let me begin by saying that I am profoundly worried by the way things are going all over the world. I am alarmed by the growth of collectivism on all sides, and the infiltration of communism into every phase of our national existence.

I used to say that probably I could live out my life in relative tranquillity, but that I was sorry for my children, and much sorrier for my grandchildren. Presently, I am not so sure that major catastrophe may not strike our Nation, even before the relatively few years remaining to me shall have run their course.

The United States, provenly the greatest and finest country ever to rise on the face of the globe, is in mortal peril of being struck down, not by an enemy from without, but by apathy and ignorance, collectivism and treason from within, opening the way for socialism and communism. This is a repugnant, not to say intolerable, thought, yet it is precisely what may happen unless the American public is awakened soon—very soon—to the danger; and through our republican processes, so impresses its views on Congress and the administration, as to force them to immediate and effective steps for the preservation of the Republic and of our way of life.

This morning, it is my purpose to speak with you aboue one of the many threats to our security and, for that matter, to the safety of the entire Western Hemisphere. I refer to the spread of communism throughout the Caribbean beginning at the gateways from the Atlantic, passing Puerto Rico and the Virgin Islands, to the portals of the Panama Canal, and up to the soft underbelly of the United States itself.

When discussing communism, it is well to remind ourselves of the true nature of the beast. Therefore, with your permission, I shall list on the one hand, some of the many falsehoods and mistaken views, and on the other, some of the basic truths on this subject:

A. We are not confronted, as so many people think, merely by an antagonistic ideology, or soley by a group of evil men who never in the slightest will be influenced by appeals to reason, decency, and morality, as we know these terms. This is a battle between light and darkness, right and wrong, freedom and slavery, religion and atheism. Communism is not peculiar to Russia, China, or any other country. Transcending all frontiers, it is a diabolical worldwide conspiracy, fanatically dedicated to the destruction of faith, of all national existence, individual dignity, and freedom everywhere. In particular, it aims to smash the United States and everything in which this Nation believes. The Communist leaders know that this must be done if they are to dominate and enslave humanity, as is their intention. They will stop at no crime or abomination to achieve their purposes. Testifying to this fact are the tens of millions cruelly tortured and murdered in the U.S.S.R., China, and the satellite countries, now, alas, including Cuba, only 90 miles from our shores.

B. More inhuman than even the Nazis at their worst, the Communists respect and fear only one thing: force—usually physical force—greater than their own. When they have the upper hand, they are unappeasable and relentless; they rant and rage, as do Khrushchev, Mao Tse-tung, and Fidel Castro. But when their bluffs are called by someone with superior power and determination, they plead, they beg, they even grovel, for accommodation, for peaceful coexistence, and pity. This is the experience of all of us who have had the opportunity to deal firmly with them.

C. Like the Nazis, they frequently are fiendishly clever; but similarly, they are not supermen. Both because of and despite their being such adept liars, one should doubt their every word; for my part I even believe false some of their claims about space navigation, including Lunik I and other alleged scientific achievements.

It was easy to identify the Nazis with their race superiority complexes, whereas the Communists shrewdly use the nationals in each country. They hide within other political parties, and are hard to detect or expose. They use well-intentioned idealists, "do-gooders," and other gullible citizens of each country as dupes to propagate their atheistic and materialistic ideology, and their satanic conspiracy. That is happening throughout the United States and the other 20 American Republics and Canada.

D. The so-called card-carrying Communists are the shock troops used for cannon fodder in riots, insurrections, and revolutions. But they do not command. The really dangerous Communists—the Rosenbergs, the Klaus Fuchs, and Hisses, and still more, their bosses—probably never had a card.

I testified before a Senate committee in 1954 as to how Alger Hiss blatantly followed the Red line in an attempt to arouse Panamanian animosity against the United States and to support Soviet charges of aggression against the United States in the 1946 U.N. Assembly. But so securely was Hiss tucked away in an important State Department post that at the time I only thought he had blundered stupidly. I was not so sharp as I might have been, because I failed to recognize until afterward the Communist inspiration and impulse behind his actions.

E. The Communists always are a minority—a small one, even in Russia. Their leaders all over the world for the most part are drawn from the intellectual and bourgeois classes, rarely from the workers. The masses do not go "on the march" of their own volition. They are instigated and led by these cynical, envious, and often frustrated intellectuals, ravenous for personal power. I have met, or been reliably informed about, scores of Communists throughout this hemisphere; but I almost could count on the fingers of my hands those who originally were horny-handed sons of toil.

F. It is not true that the best or the only breeding ground for communism is where there are poverty and illiteracy. On the contrary, it usually flourishes most where there is industrialization and higher living conditions. To mention only two of many possble examples, witness northern Italy and our own great metropolitan areas, as contrasted with the lack of communism in the poor and unschooled regions of southern Italy or the Tennessee hills. Even in Russia and China it was not until after the Communists had seized the large urban centers, such as Moscow and Shanghai, that they were able to conquer and make serfs of the great rural populations; at that, they had to resort to the mass murder of tens of millions of farmers. A similar procedure, on a numerically smaller scale, because there are fewer people to kill, is now underway in Cuba.

Poverty and illiteracy must be eradicated and replaced by improved living conditions and education, not by helter-skelter welfare statism, but only with the utmost care and thought exercised over a considerable period of time—perhaps generations.

G. Instead of meeting these problems intelligently, we have neglected our own needs, including the curing of poverty and illiteracy at home, in order, since 1946, to dash all over the earth, spending $80 billion on what we call foreign aid, or mutual security. Thereby, we neither have defeated communism, nor materially improved the lot of the recipient peoples anywhere. We have set an appallingly bad example of extravagance, waste and corruption, which always are inherent in such a huge bureaucratic operation. As a result, country after country has been pushed toward socialization, an accompanying inflation, and eventual ruin, thus easing the way for a subsequent Communist takeover and destroying the peoples' ambitions for a genuinely representative and constitutional government.

Bolivia offers a fair pattern of the harm we have done. By pouring in close to $200 million to sustain a Marxist regime, we have abetted murder and torture. Thousands of citizens have had to flee for their lives. The Government has confiscated not only Bolivian-owned properties, but also those of U.S. citizens. Washington, in turn, taxes the latter in order to support and keep in office the selfsame Communists and crooks who seized the properties.

The squandering of much of these $80 billion on foreign aid destroys the value of our currency through inflation. It brings us closer to that national bankruptcy which Lenin sought, as a way to destroy our free Republic. Karl Marx, hoping to disrupt all constitutional government said: "The surest way to overturn the social order is to debauch the currency." In keeping with these precepts, both Lenin and Stalin declared that an essential for the spreading of communism was a program to aid underdeveloped areas. By our oversea giveaway system, we, like guileless innocents, have underwritten Communist plans for our own ruin. The Kremlin despots must roar with laughter at our naivete, as they promise to bury us.

H. Communists, to gain temporary benefits, will pact with anyone; with reactionary dictators, nationalists, or sworn anti-Communists. They both try to create new conflicts and to deepen those already existing. They gladly will reverse themselves, sacrifice and kill off their own agents, and always will go back two steps, in order later to take three forward.

Playing both ends against the middle, Communists often pretend to have intra-party disputes, one group supporting and the other opposing a particular government. This happened for a time vis-a-vis Peron in Argentina. However, they also have genuine and desperate schisms, such as arose between the Stalinists and Trotskyites. Such a cleavage may be starting now in Cuba between the older and younger generations of Communists. In this connection, I am not convinced so far of the sincerity of the so-called Movimiento de Recuperacion Revolucionario (the Movement to Recapture the Revolution). It might be a disguised group of Communists, who in an emergency, could be substituted for the Castro gang.

Since they grabbed Russia in 1917, the Communists have shown an almost unbelievable persistence; or, as my friend Bob Welch, of the John Birch Society, puts it, "A patient gradualism has been the most important key to the Communists' overwhelming success."

That has been their history in this hemisphere. After dismally failing to stir insurrection in Chile during late 1931, they attempted to seize power through a bloody revolution in El Salvador during 1932. Twenty thousand people lost their lives, and the Communists were defeated. (Please remember that only a few Communists, by murder and terror, can and have seized many countries.) They have persisted in their attempts to communize the Americas. Within the past year, Argentina, Mexico, and Uruguay have had to eject Soviet and satellite diplomats caught redhanded in subversion and espionage. During the last decade, Communist endeavors have been especially notable in Guatemala, Bolivia, and now, Cuba. It is by these patient, slow and periodic, perservering and insidious infiltrations that they expect eventually to demoralize, envelop, and then take over the United States. They have traveled far along this road.

I. When the Communists wish to seize control of a country, they try at an early stage, if possible, to wipe out the army, especially the officer corps. Certainly the assassination of at least 10,000 Polish officers in the Katyn Forest, largely contributed toward that poor nation's fall. The same procedure was followed successfully in China and other satellite countries. That the armed forces, especially the officers, were not eradicated in Spain, Guatemala, the Dominican Republic, Argentina, and Venezuela, so far has saved these republics. But this well-known Communist tactic did prevail in Bolivia and Cuba, with dire results for those poor people.

J. It is foolish, as our inter-American conferences have done, to underscore international communism as the only danger. Any brand of Marxism, international or national, of which there are a wide variety in this hemisphere, is bad: Socialism, the "flop of the century," as it has been characterized by Max Eastman, himself a former Socialist, is merely a prep school for communism.

It is pertinent to observe that so inefficient is socialism, that it only can be made to work at all when propelled and protected by the authority and ruthlessness of a totalitarian police state, such as the U.S.S.R. If it were not for this, the Soviet and every other Communist government, long since would have gone down the drain.

The United States cannot beat communism, coupled with Soviet-Sino aggression and imperialism, if we ourselves sink into the ineptitude, impotence, and waste of collectivism, welfare statism, or that impalpable thing called social democracy. There are only two ways by which we can win:

1. By ourselves becoming the biggest and strongest totalitarian police state, with the consequent abandonment of all morality, liberty, and everything else we hold dear, or;

2. By forthwith throwing out, bag and baggage, the socialism which, as Norman Thomas boasts, has taken over our country, and by returning to the principles laid down by the Founding Fathers. If we will again become the constitutional representative republic which we are supposed to be; if we wholeheartedly will support free, private, competitive enterprise, then we will not only survive, but we can and will outproduce, outsell, and handily defeat any combination of Socialist states, totalitarian or otherwise, who dare to defy us.

Because of the relative underdevelopment, plus the large admixture of Indian (of Asiatic origin) and other non-Caucasian blood in much of Central and South America, the Communists long ago felt that Chinese methods of infiltration and guerrilla warfare would be best suited south of the Rio Grande. In the early twenties, promising young Communists from Latin America were trained in the "Yenan Way" by Mao Tse-tung, Chu Teh, Li Li Siang and their colleagues, in the outskirts of Moscow. Now, with certain exceptions, such as the sabotage school in Prague, the Chinese are becoming increasingly active in the subversion of this hemisphere. They inspire more confidence amongst intellectuals and students—even in the secondary schools—than do the Russians. Also, the Chinese brand of communism has been more readily accepted than the Muscovite. Unfortunately, the Cuban Government now is spreading its Red agents over the entire hemisphere; they are financed lavishly and are proving far more effective than those of any other nationality, including the Chinese. They go in the garb of diplomats, cultural, trade or labor delegations, or as simple tourists.

Castro and the Cuban Communists frankly proclaim their intentions to rule the Western Hemisphere, just as Messrs. Lenin, Stalin and Khrushchev, like Hitler and Mussolini, called their shots in advance. In 1924, Lenin in summary prophesied: "We shall take Eastern Europe; next the mass of Asia; then we can encircle that last bastion of capitalism, the United States of America. We shall not have to take it; it will fall like overripe fruit into our hands. [sic.] The Cuban Communists expect to be the hands.

Eastern Europe and most of Asia are gone. A part of the Middle East is lost, and the rest is wobbling. Western Europe trembles, and Africa is teetering.

The Communist Party claimed a worldwide membership of 4 million in 1937. Twenty years later, this had grown to 33 million—up over 800 percent. But far more serious than this increase in party membership, is the fact that since August, 1945, the Communists have averaged the enslavement of over 7,000 people per hour. At least 1,000 million people, non and anti-Communists, who 15 years ago were as free as you and I, now live in virtual slavery, behind Iron, Bamboo, and more recently, Sugar Curtains.

Washington for years, in an attempt to counter this grim offensive, has squandered the $80 billion I mentioned, and has placed our troops and bases all over the world. It has entered into NATO, SEATO, and other similar alliances. We citizens have had dinned in upon us that the Rhine and Berlin, Korea and Taiwan, and many other far-off spots are our real frontiers, and vital for the defense of the United States.

Yet, no administration since 1948 has given more than a passing thought, or done anything effective to protect our shores and this hemisphere from the very serious threats which have been growing up throughout the Caribbean area.

Repeatedly, from 1942 to 1947 I, officially by cable, dispatch and in person, warned the highest offices of our Government about the Communist danger in Cuba and Latin America, including the Peron regime in Argentina. Later I sounded the alarm about Guatemala. But on October 4, 1957, I went out of my way to tell the State Department that a continuation of its policies inevitably would bring Castro, chaos, and communism to Cuba. My warnings were ignored.

By use of the most dangerous of all Communist weapons, infiltration and subversion, beginning in 1947, power gradually was seized in the Republic of Guatemala by Presidents Arevalo and Arbenz, together with their Communist coconspirators. Fortunately, in 1954, the Communist regime was overthrown. The United States was blamed throughout Latin America for an intervention we had lacked the brains and initiative to carry through in our own defense.

What actually happened was that the President of Nicaragua, Tacho Somoza, had the courage, through his Ambassador in Washington, to buy planes and equipment for the Guatemalan colonel Castillo Armas, who chased the Communists out of his homeland. The State Department did nothing, until a group of ambassadors from the other American Republics in effect said, "You are being blamed for intervention in Guatemala. It doesn't matter what the truth is. You will be considered the culprits and accused of intervention. Therefore, you might as well help out, and quickly, because if you don't, Castillo Armas will lose, Arbenz will win, and then you will find a series of these little Communist dictators cropping up all over Central America."

Only then did we support Castillo Armas. Of course, there is the unfortunate sequel that both he and Tacho Somoza were assassinated, and there is good reason to believe that the Communists had a hand in that.

One glance around the Caribbean shows it is fast becoming a Red lake. The Communist, Jeddy Jegan, is top man in British Guiana. The French islands, such as Martinique, are represented in the Paris Parliament by Communists. Betancourt's government in Venezuela, while admittedly left-wing, nevertheless might be upset by the Communists any time. Panama is weak, and the comrades are infiltrating there, as they are trying to do again in Guatemala. Costa Rica, Honduras, Nicaragua, and the Dominican Republic are under severe attacks. Trinidad demands that we get out of our military base at Chaguamaras.

Of all the Caribbean republics, by instinct and experience the least influenced by exotic totalitarianism has been Colombia. Yet since 1948, it has suffered continuously from Communist inspired and directed guerrilla bands operating in outlying districts. As a result in these areas, the national economy has been disrupted, agriculture paralyzed, thus raising the cost of living. The terrorized peasants, have had to seek refuge in the cities where they can find no work. The ensuing chaos has broken down law and order and eased the way for communism. This plan of the comrades has been executed slyly and effectively under the leadership of such Communists as Gerardo Molina and Jorge Salamea.

Because Cuba is the most dangerous spot in the Caribbean, I shall devote the rest of what I say today to the catastrophe which now engulfs that beautiful island and wonderful people.

(Parenthetically I should add that having been accredited as Ambassador to Batista during his first term of office as President, I am intimately acquainted with all of his bad as well as his good points. I also am fully informed of the many atrocities perpetrated during the closing years of his last administration. During that period, the Batista government could be compared to a serious

and painful ulcer. In contrast, under the present Communist regime, Cuba is suffering from a cancer which, with indescribable agony, will kill.)

If, by the grace of God, the Cuban Communist regime could be purged tomorrow, the effects of the economic and social, moral and spiritual evils it has wrought will endure for a very long time. This is part of a "burnt earth" policy always pursued by the Communists. If they cannot rule, they try to ruin.

Even at this late date, when the Communist nature of the Castro revolution should be apparent to a child, authorities in Washington profess to be puzzled by the Cuban situation [sic]. They cannot understand Castro's motives, and even declare that no one can assert that a Communist regime rules that unhappy island [sic].

Well, I do categorically and emphatically assert that Castro, his brother Raul, "Che" Guevarra, President Dorticós, and practically every other important official is a Communist, and that Cuba rapidly is coming just as much under Communist domination as the U.S.S.R., China, and any of the satellites or Yugoslavia. I further assert that this constitutes a grave threat to the United States, to our security, and that positive remedial measures must be taken immediately.

To substantiate my aforegiven assertions, let me briefly review the record for you: I learned quite a lot about Communists, their ways and foibles, while serving as Ambassador to Cuba from 1942–45, because all their activities throughout this hemisphere were directed from Havana by a man named Fabio Grobart—probably a Pole. The only exception was that propaganda among colored people, in and around the Caribbean, was run from Harlem. Grobart traveled under 11 aliases and 9 different passports. He was an extremely important man. He set up and ran the "Caribbean Bureau," which was a section or branch of the Cominform. Castro's so-called 26th of July movement (i.e., his revolutionary movement), is a direct outgrowth and descendant of the Caribbean Bureau, including much of the same membership.

I was fortunate enough in Cuba to destroy a Communist organization known as the National Anti-Facist Front. My action in this particular caused a bit of a rumpus with the Soviet diplomatic representative in Havana. It was then that I learned how a Communist will grovel and demean himself, when faced with superior force.

Some of the then well-known Communists, such as President Dorticós, Minister of State (Foreign Minister) Raul Roa, the two heads of INRA (the Agrarian Reform Institute) and many others, now, as a temporary expedient, pretend, just as Mao Tse-tung once did, not to be Communists, but simply agrarian reformers, seeking only the welfare of the masses. As members of the 26th of July movement, they are every bit as Communist as are Khrushchev and his Kremlin pals.

Also, while I was Ambassador in Havana, the notorious Harry Dexter White, Assistant Secretary of the Treasury of the United States tried to put over an insidious and clever scheme to establish a Central Bank and Cuban currency on such conditions as inevitably would have brought about so severe a financial and economic chaos as to open the way for the Communists. Again I was lucky enough to defeat those machinations and to learn some more about their worldwide conspiracy.

You will observe that our great and noble Russian ally, even in the midst of World War II, by patient gradualism, was trying to get a footing at our very threshold, just as it had been trying to do for more than 30 years previously. Nor is there anything new about Communist endeavors to take over Cuba.

As for Fidel Castro, in the university he was recognized as a Communist by such a distinguished professor as Carlos Marquez Sterling and by fellow students including his own former brother-in-law. He had a rival candidate for the presidency of the student organization assassinated. Even his stanchest advocate in the United States, Herbert Matthews of the New York Times, admits that Fidel, during the forties belonged to a young Communist group, and that he actively participated in the Communist-inspired and directed Bogotazo, which almost destroyed by fire the capital city of Colombia during the Inter-American Conference of 1948. The Bogatá police records are more precise and prove that Castro was a Communist, sent by his party to help bring on that disaster.

Castro trained for guerrilla warfare in Mexico, under the Spanish Communist colonel, now general, Bayo. When the Castro boys and their followers attacked the Moncada Barracks near Santiago in 1953 before being repulsed and captured, they killed, in typically Communist style, with their machetes and knives a dozen or so of the soldiers, who were sick in their hospital beds.

The brothers, while still revolutionaries in the eastern Cuban hills, reportedly received substantial arms and financial aid from the Soviet. During that period they gave another example of usual Communist tactics, when they kidnaped a number of United States and Canadian civilians, plus a score of marines, from our Guantanamo Naval Base. That the U.S. Government not only tolerated this indignity, but sent first one, and then two of its consular officers to the hills, to negotiate with these bandits, is one of the most disgraceful episodes in our history. Our acceptance of this outrage of course encouraged the Cuban Communists to further violence and insults. I might add that some of the scurrilities launched against the United States and President Eisenhower by Castro and his companions via the Havana press, radio and television, are unprepeatable in a polite company.

Fidel described his attack on the Moncada Barracks as the springboard from which he would take Cuba. And later, after Batista fled, he said Cuba would be the springboard from which he would take the hemisphere. In short, he hopes to be the "Mao-Tse-tung" of the Americas, and spearhead of what he calls the continental revolution.

But enough of the psychopath Fidel, and his brother Raul, who with his wife, were trained behind the Iron Curtain. Already too much attention has been given to the Castros, who at the most, are only important incidents in this whole affair. If Fidel continues to lose his influence over the masses and becomes expendable, he will be wiped out overnight, just as have been Beria and so many other top Communists in the Soviet, Czechoslovakia, and elsewhere. But the Communists will remain in power. Having assassinated him they might even blame the imperialistic Yankees and acclaim Fidel as a martyr.

Not only is the present Cuban Government largely manned by Communists, but everything it has done shows its true Red color and is in keeping with the normal, cruel procedures recommended by the Supreme Soviet.

(a) One of the first things it did after getting power was—in cold blood, with Communist-incited popular clamor replacing any pretense of justice or a fair trial—to shoot soldiers and police, mostly officers, and even some civilians. The Castro government admits to something over 600 being murdered in this bloodthirsty fashion. Other estimates range from 5 or 6 thousand to as high as 15 thousand.

(b) Many thousands more—probably upward of 30,000 Cuban citizens—have been imprisoned under the most shocking conditions of suffering, misery and torture.

Political prisoners, no more guilty of criminal or counterrevolutionary activities than are you ladies, are subjected to indescribably wicked and cruel tortures. Ernesto de la Fe, a well-known anti-Communist leader who opposed Batista, and whose forehead was severely cut by a jailer's gunlashing, is imprisoned on the Isle of Pines. He and many others are forced to work all day under the broiling tropical sun, but allowed only the equivalent of a small paper cup of water per day. Their insufficient food is mixed with offal and filth. The prisoners' cells and clothing are infested with vermin. Bayonets are run into the orifices of the body. Or the guards, getting bored, play such games as awakening a prisoner in the middle of the night, telling him his hour has come, marching him off, lining up the firing squad and shooting—but with blanks. What fun, what a sense of humor.

(c) The regular army and officer corps, having been killed, imprisoned, or otherwise disposed of, the usual Communist-led peasants', workers', women's and children's—even 7 to 10 years old—militias have been and are being established, just as has been done in China, Bolivia, and so many other Communist-controlled countries. This is just one more step toward totalitarian regimentation. Including these militias, Castro is mobilizing the largest army in Latin America, to total 135,000 men and women. His May 1, 1960, parade, with tanks, weapons, soldiers, and militia, imitated the Moscow show on a smaller but nonetheless impressive scale.

(d) With the sole exception of the Communists, every other political party has been wiped out. Castro has just proclaimed that he will not indulge the people in what he calls the "antidemocratic farce of elections."

(e) Systematically, private property is being confiscated without any compensation whatsoever, or even a receipt being given. The promise of payment in 4-percent, 30-year bonds has been broken. Up here, we have read of how approaching $1 billion worth of U.S. property has been or is being taken over, or as they call it, intervened, which is the same thing. To this should be added the huge confiscations of Cuban holdings from thousands of small businessmen and humble folk of very modest means.

The Government either has seized, or gradually is acquiring, at least a 51-percent control over all industry and commerce, banking, and business. On April 25, the Bank of Foreign Commerce was created to be the sole importer and exporter of products as may be to the national interest.

(f) The entire public is subjected to intensive around-the-clock propaganda, all with a furious pro-Communist and anti-U.S. content.

This mind conditioning of the Cuban people is good Communist practice. It is designed to prepare the ground for subsequent action.

Everyone, every nation, likes to feel they have friends, even protectors, who will stand by in times of stress. In Latin America, especially Cuba, that always has been the role of the United States. By their hate, hate, hate the U.S.A. program, the Communist hope to replace us with the U.S.S.R. in Cuban minds and hearts.

Parenthetically, this explains Cuba's renewal of diplomatic relations with the Kremlin, the trade agreement with Mikoyan, and the delivery to Havana, in Soviet tankers of oil and gasoline, which Cuba could buy far more cheaply from her neighbor, Venezuela.

(g) Education similarly is being converted to the Communist and "hate Yankee" lines. These themes are driven home in the press and over television and the radio, so that even the small children of respectable, anti-Communist citizens recite them by rote. Brainwashing is at a peak which is not even

exceeded in Russia, China, or any of the satellite countries.

English is no longer taught in the schools, and the history books have been altered to paint the United States as a tyrannical enemy, who for reasons of selfish gain, delayed the final victory in the Spanish-American War, thus sacrificing thousands of Cuban lives.

In all of this there is the additional tragic note that never were any people more warmly friendly to our country, than the Cubans of all classes.

(h) The Cuban 1940 Constitution has been violated in practically every clause by the words and actions of this Communist regime. No longer is there any separation of powers, review of government acts by the courts, nor equality and equity under the law. The judges are told what to do and how to rule or pass judgment. When a judge failed to condemn some aviators, pursuant to Castro's orders, he was shot for his pains. As in this case, the unconstitutional death penalty has been employed ruthlessly and repeatedly, as I have already described. Life, and the security of either person or property under law no longer exist in Cuba.

(i) Fundamental and human civil rights and freedoms are ignored completely.

(j) There is no real liberty of expression and opinion, nor of assembly.

(k) Everyone, including children, is encouraged to denounce members of their families, friends and neighbors for counter-revolutionary activity, which can be made to cover almost anything, such as not attending a Castro meeting. But the prime counterrevolutionary crime for which loss of property, arrest and even the death penalty may be imposed, is the slightest sign of anticommunism, or even noncommunism. Marinello, the head of the Communist Party, Foreign Minister Roa, and Castro all have declared that any attack on communism is an attack on Cuba [sic].

(l) Armed aggressions have been planned and perpetrated against Panama, Haiti, Nicaragua, Guatemala, the Dominican Republic, and even Paraguay, 5,000 miles to the south.

The attack last year on Panama evidently was aimed at the Madden Dam, which if it could be blown up, would close the canal for many, many months or even years.

The Cuban regime actively has pulled diplomatic wires to encourage Panama and Nasser to get together in order to force the United States out of the Canal Zone.

(m) Known criminals are given favors and preferences over political prisoners, and encouraged to beat them up. Sometimes, as a reward, criminals are freed to be given Government jobs.

A notorious criminal escaped from the United States has been naturalized and is a major in the Army. His special delight is sadistically to shoot the finishing bullet into the prisoners' heads as they lie wounded by the firing squad.

(n) Decrees and so-called penal laws are applied retroactively or ex post facto.

(o) No one, without special Government permission, can take out of the country more than $150, in any one year. Far worse than this, those men and women who are permitted to leave, often are stripped and searched in the most intimate and embarrassing fashion. Others can only get out of Cuba by escaping, just as do those fleeing from behind the Iron Curtain.

(p) Very few of the guajiros (peasants) have received the farmlands promised them under the so-called agrarian reform. Those who have, must work their farm under rigid official controls and can neither sell nor leave them to their heirs. Also, they easily can lose them at the whim of any minor government supervisor.

(q) Most of the confiscated lands and other properties have been converted into cooperatives owned and operated by the state. The workers, as in Russia, often receive smaller wages than before, and in all cases, are loaded down with new taxes, such as 4 percent for the Government's purchase of arms. As a result, their take-home pay is considerably less than before, and in a 40 percent to 50 percent devalued peso. As labor increasingly comes under the subjugation of the Communists, who now control the unions, it will sink into serfdom.

(r) Almost the first thing the Communists did on seizing power was to burn the files of the official anti-Communist bureau known as BRAC.

The number two man in that organization, Captain Castano, was a brilliant and highly competent young officer, who had been trained in the United States by CIA. He was completely nonpolitical. Nevertheless, within a few weeks after the revolution, he was shot summarily. It is reported that our embassy requested and was granted clemency for him.

(s) The most important inter-American multilateral treaties have been repudiated publicly by Fidel Castro, because his government did not sign them [sic]. It should be noted that the Caracas Charter, which he denounced, pledged all of the American republics to oppose and fight international communism.

(t) An unsuccessful attempt was made by Castro to subvert some Cuban priests to separate from Rome and form a Cuban Church. His proposition was rejected indignantly; he now attacks the church whenever opportunity presents.

(u) The official Government radio repeatedly has attempted to arouse Puerto Rican animosities against the United States, and even to encourage a Negro uprising in our Southern States. Cuban Communist agents actively are proselyting in the factories of Miami and elsewhere in Florida.

The Cuban regime, having denounced all of the great press associations, such as AP and UPI, as the instruments of Yankee imperialism, has established its own "Prensa Latina," which in reality is merely a branch of the Soviet information agency.

(v) As I have indicated, the Castro revolution, from its inception, has received every possible backing from international communism. Now, Cuba has been pledged a worldwide trade union boycott of all U.S. products, and a blockade of our ships, should we dare to enact any economic or other reprisal for the theft of property owned by our citizens. This proposal originated with the Mexican noncard carrying Communist, Vicente Lombardo Toledano.

(w) Russian, Czech, and other foreign Communist agents have been supplied with Cuban passports to facilitate their travels throughout this hemisphere.

(x) The Cuban Foreign Office has been trying desperately to convene a conference of so-called underdeveloped countries. Those so far invited are largely the Communist or neutralist nations of Asia, the Middle East, and Africa. The more responsible Latin American countries, such as Argentina and Chile, have refused to have anything to do with this proposition.

The intent of this conference clearly is to disrupt international relations, viciously attack the United States, and to demand at least $30 billion from us for development in Latin America.

On April 5, 1960, the World Conference of Young Communists convened in Havana. Four thousand attended, with all expenses paid by Cuba. Speakers from every country vied with one another in damning and insulting the United States and its people.

(y) Great numbers of Russian, Chinese, and other technicians have come to Cuba during the last year. On May 1, the International Marxist Day, Castro was accompanied on the reviewing stand by the representatives of the Soviet, Red China, Czechoslovakia, and other Communist countries.

There is even some reason to believe that the very secret work known to be going on in the Zapata swamps, involves the construction of missile pads under the guidance of some of the Soviet technicians. There are reports that the U.S.S.R. also is installing a submarine base.

(z) Cuba's Communist Minister of Foreign Relations, Roa, was an unmitigated liar when he accused President Ydigoras of Guatemala and the United Fruit Co. of planning an attack on Cuba. This is good Communist procedure: Always to accuse the opponent of what one is doing himself. In view of the timidity shown in Washington, it is pertinent to observe that Ydigoras promptly has broken diplomatic relations with Cuba.

The aforegiven listing of Communist activities by the Cuban Government from "a" to "z," could be extended manyfold. But I will spare you the numerous other harrowing details.

I trust from what I have said that you will agree with me that:

1. Few people in this country or the hemisphere have any real comprehension of the true nature of the vast and complicated Communist conspiracy. They must be alerted and made to take positive and constructive steps for the safety of the United States and all the Americas;

2. The Communists' infiltrations and subversions have produced such fantastic results that they now control 40 percent of the world's population. Even this does not give the full picture because if we could count on all our allies, which I doubt, there still are left among the remaining 60 percent, many hundreds of millions of neutralists, who even if they do not oppose or fight us, never will be of any help;

3. The situation is almost terrifying in its connotations for the security of the United States, especially now that communism is advancing all around the Caribbean, with main objectives being Panama and Cuba, the latter of which now is completely in the enemy's hands. Of course, the ultimate target is the United States;

4. It is apparent that the State Department is utterly oblivious to this major threat looking to the final subjugation of the United States. It either has ignored or treated the situation with timidity and vacillation for years, thus making it all the more perilous. It has forgotten that never in history has appeasement paid and that if Cuban Communists get away with kicking us in the teeth, others soon will follow suit.

Anti-Communists throughout Latin America, because of our pusillanimous attitudes, are discouraged and do not dare force a bold and positive initiative against our common enemy;

5. In self-defense, it is our right, under the Organization of American States and the United Nations Charters, and infinitely more important, under God's law, that we should take immediate and forthright action to end this threat to our Nation and our very lives;

6. Any further delays in saving Cuba may be fatal for them and for us. Among the steps which still can be taken are:

Here at home, get rid of all Communist agents and infiltrators along with their stooges.

Stop paying Cuba nearly double the world price of sugar, or a premium of about $150 million per year. True, the Cuban people might temporarily suffer, but they would benefit in the end by ridding themselves of their Communist masters. This measure should have been used over a year ago, when it would have been far more effective.

Stop all foreign aid to Communist nations, including Cuba, and eliminate all the extravagance, waste, and corruption involved in these foreign aid programs. In other words, we should put ourselves in fighting trim to resist the Communist infiltrations and subversions which now are right at our own front door.

Make amply clear to Khrushchev, Castro, and company, that we will no longer tolerate their insults, robbery of our citizens' properties, and economic or armed aggressions; and that if these things do not stop, we will break diplomatic relations. The mere threat of such action in Cuba, even at the late date, would weaken that Communist government greatly.

Give full support in every appropriate way, to a group of responsible Cubans, who with such aid, can and will free their country from the Communist tyrants, and return it to constitutional representative government.

It is these things to which I trust you ladies will give your support, thereby helping to force the Congress and administration in Washington to courageous and positive action.

God have mercy on our country.

Leadership Where Leadership Is Needed

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. MULTER. Mr. Speaker, it was my privilege to attend the opening session of the 63d annual convention of the Zionist Organization of America, held at the Hotel Statler in New York City.

The principal speaker was the distinguished Senator from Massachusetts, the Honorable JOHN F. KENNEDY. He properly used the occasion for the delivery of a most important statement on American foreign policy. This was not the statement of a candidate for high public office but rather a declaration of sincere and strong-minded principle by one who will seek to implement the ideals he lives by and cherishes.

Senator KENNEDY's full statement is as follows:

President [Abraham A. J.] Redelheim, Rabbi [Abba Hillel] Silver, Mayor Wagner, ladies and gentlemen, I am honored by your generous invitation to speak here tonight. I had the opportunity 14 years ago as a newly elected Member of Congress to hear one of the greatest speeches that I have heard in all of my life given on the cause which interests you so much tonight in the city of Boston by your great guest here tonight, Rabbi Silver.

Prohpecy is a Jewish tradition, and the world Zionist movement in which you have played such a great role has continued this long tradition. It has turned the dreams of its leaders into acts of statesmanship. It has converted the hopes of the Jewish people into the concrete facts of life.

When the first Zionist convention met in 1897 Palestine was a wasted, neglected land. A few scattered Jewish colonies had settled there. But they had come there to die, not to live. Most of the governments of the world were indifferent.

But all this now has changed. Israel has become a triumphant reality, exactly 50 years after Theodore Herzl, the prophet of Zionism proclaimed its inevitability. It was the classic case of an ancient dream finding a young leader, for Herzl was only 37 years of age.

YOUTH NO BARRIER

Perhaps I may be allowed that observation because the Jewish people ever since David slew Goliath have never considered youth as a barrier to leadership or measured maturity and experience by length of days.

I spent 2 weeks in Palestine in 1939. There the neglect and ruin left by centuries of the Ottoman Empire were slowly being transformed under conditions of the utmost difficulty by labor and sacrifice. But Palestine was still a land of promise in 1939 rather than a land of fulfillment.

I went back in 1951. In 3 years this new state had opened up its doors to 600,000 people. The United States, composed of 175 million people, has an immigration of all we can take, we say, of 250,000 a year. Even while fighting for its own survival Israel has given hope to the persecuted all over the world, and it has given a new dignity to those who believe in religious freedom in every part of this globe.

I left with a conviction that though the United Nations had given international status to Israel, nevertheless, Israel had been made a nation by its own exertions.

And it has claims to immortality. Some do not agree.

ATTACKED BY CAIRO RADIO

Three weeks ago I said in a public statement Israel is here to stay. The next day I was attacked by the Cairo radio rebuking me for my faith in Israel and quoting this criticism from Arabic newspaper Al-Gomhouria: "As for the question of the existence and nonexistence of Israel," the paper says, "Mr. KENNEDY says that Israel has been created in order to exist. And we say that Israel will not continue to exist. Time will judge between us, Mr. KENNEDY.

I agree. Time will judge between us whether Israel will continue to exist or not.

But I wish I could be as sure of my prophesy about this November as I am about my prophesy on this occasion.

It is worth remembering at this meeting that the cause of Israel stands beyond Jewish life. In our pluralistic society, as Bob Wagner pointed out, it has not been merely a Jewish cause, any more than Irish independence was the cause merely of those of Irish descent, because wherever freedom exists, there we are all committed. And wherever it is endangered, there we are all endangered.

The ideals of zionism have, in the last half century, been endorsed by both parties, and Americans of all ranks in all sections. Friendship for Israel is not a partisan matter. It is a national commitment.

Yet within this national obligation of friendship there is a special obligation on the party of which I am a member. It was President Woodrow Wilson who prophesied with great wisdom a Jewish homeland. It was President Franklin Roosevelt who kept alive the hope of Jewish redemption in the days of the Nazi terror. It was President Harry Truman who first—my friend Harry Truman—who first recognized (I've only been able to say that since last Saturday, but I'm saying it), who first recognized the status of Israel in world affairs.

And may I add that it would be my hope and pledge to continue this great Democratic tradition, to be worthy of it, to be associated with it, for what is needed now is leadership—impartial but firm, deliberate but bold, leadership instead of rhetoric.

There has been enough rhetoric in recent years about free transit through the Suez Canal to float every boat through it, but there has been no leadership. Our policy in Washington and in the United Nations has permitted defiance of our 1956 pledge with impunity—indeed, with economic reward.

If America's word to the world is to have any meaning, if the decisions and resolutions of the United Nations are to be binding on all parties, if the mutual security amendments, which I cosponsored with Senator PAUL H. DOUGLAS, is to have meaning, if the clear, thoughtful language of the Democratic platform is to have meaning—the influence of this Nation and other maritime powers must be brought to bear on a just solution that removes all discrimination from the Suez Canal.

A MORAL OBLIGATION

The Israelis surrendered their 1956 victory only because the United States and the United Nations committed themselves to the fulfillment of a pledge of free transit in the Suez Canal. So this is a United Nations resolution, in which we have a particular moral obligation.

We have also had much rhetoric in recent years about the arms race in the Middle East. This rhetoric has not only been empty and negative; even more fundamental is the premise that if the United States and the United Nations are to reject a solution based on force then they must accept the task of finding a solution based on reason and justice.

When I talked with Prime Minister David Ben-Gurion on his recent visit to the United States, he told me of dangerous signs of unrest which existed then under the seeming quiet of the Middle East. For there is no peace in that region today, only an embittered truce between renewed alarms.

American intervention, on the other hand, will not now be easy, for the record is not one to which we can point with pride. The series of incredible American blunders which led to the 1956 Suez crisis, events in which the role of our Government has never been fully explained; the so-called Eisenhower doctrine which had been repudiated by the very nations which accepted our aid, and, in general, a deterioration in our relations with all Middle Eastern countries primarily because neither Arab nor Israeli know exactly where we stand or exactly what we mean.

PUNISHMENT FOR VIRTUES

At times it must have appeared that champions of democracy were being punished for their very virtues by being taken for granted, by a neglectful administration which showed concern only when it was displeased by their conduct.

Peace in the Middle East is not one step nearer reality than it was 8 years ago, and the Russian influence has increased immeasureably.

What can a new President do? Moral weakness and timidity will not do. More stubborn errors, redeemed at the last minute, will not do. Now we must take the risk of leadership and use our influence to compose this ugly situation before it breaks out in a new threat to peace.

And I know we will not be alone in searching for a peaceful solution, if our aims are high, and if they are centered solely on the genuine needs of the people of the Middle East, and on an honorable end to an ancient quarrel.

First, I propose that the new President reaffirm our sincere friendship for all people in the Middle East, whatever their religion or their race or their politics.

Secondly, I propose that we make it crystal clear that the United States meant what it said in the tripartite declaration of 1950 that we will act promptly and decisively against any nation in the Middle East which attacks its neighbor.

MAKE INTENTIONS CLEAR

I propose that we make clear to both the Israelis and the Arabs our guarantee that we will act with whatever force and speed is necessary to halt any aggression by any nation.

I propose that an international effort be made to limit an arms race in the Middle East with a realization—with a realization that if this is not accomplished we shall not permit an imbalance to exist which threatens the right of any country to self-defense.

Once the nations of the Middle East have a firm and precise guarantee, then the need for continuing an arms race can disappear, the easing of tension can follow, and both sides will be able to devote their energy to peaceful pursuits.

Third, I propose that all the authority of the White House be used to call into conference the leaders of Israel and the Arab States to consider privately their common problems, assuring that we support in full their aspirations for peace, unity, independence, and a better life; and that we are prepared to back up this moral commitment with economic and technical assistance.

The offer should be made with equal frankness to both sides and all the world would be watching the response of each side. I sincerely believe that an American Presidential initiative, honestly intended and resolutely pursued, would not be lightly rejected by either side, unless that side was prepared to bear the burden of breaking the peace.

And I promise to waste no time in taking that initiative. The Middle East needs water, not war. They need tractors, not tanks, and they need bread, not bombs.

There is already little enough in that sandy soil to be wasted on a dizzy arms race on both sides, an arms race which could be prevented if guarantees of security were provided. For the original Zionist philosophy always maintained that the people of Israel would use their national genius not for selfish purposes, but for the enrichment of the Middle East.

The earliest Zionist leaders spoke of a Jewish state which would have no military power and which would be content with victories of the spirit. The compulsions of a harsh and inescapable necessity have compelled Israel to abandon this hope. But I cannot believe that anyone in Israel tonight wants to live their lives out in a garrison state. And I cannot believe that the Arab world would not find a better basis for unity in a united attack against all of their accumulated social problems—an attack in which they could benefit immensely from a closer association with the people of Israel.

The people of Israel have brought their blessings to people all over the world, to Burma and Ghana and Ethiopia. Why should the countries of the Middle East which need technical assistance, why should they be denied this opportunity to participate in a great source of future wealth for them and their people?

It is a long and painful step, may I say, from the era of the boycott to the era of peaceful partnership. And that step needs the direct encouragement and help of the people of the United States and the President of the United States. The next President of the United States, whoever he may be, should always be available first to stimulate every experiment in cooperation, from the joint development of a river to a reconsideration of the Arab refugee problem, suggested I think best by the Democratic platform, to the crowning mercy of a final reconciliation that can be brought about by a true peace settlement.

Peace is our objective in the Middle East and peace is the objective of Israel, and peace is our responsibility in part. "Seek peace and pursue it," says the Psalmist. And that we must do—open up our minds and our hearts and we shall seek peace for ourselves and all who share our aspirations: And when history writes its verdict, let it say that we pursued peace with all of our courage, that we did everything that we could do with our hands to make sure that the blessing was brought to our children and all those who think as we do.

We are in this country the youngest of people. But we are the oldest of republics. Now is our chance in this country to extend the hand of friendship to the oldest of people and the youngest of republics.

Community Program Set Up by Junior Chamber of Commerce of Oconto, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. WILEY. Mr. President, the future progress of this country, despite the illusion which, regrettably, has grown over the years that the Federal Government is the major driving force of progress, I believe, rests fundamentally with the communities of our country.

True, Uncle Sam does have responsibilities in major fields of national scope—particularly in defense.

However, there is also basically a need for grassroots support and leadership in promoting progress.

Recently I welcomed, therefore, a report of a forward-looking effort by the Junior Chamber of Commerce of Oconto, Wis., to set up a community development program. Initially, the chamber is conducting a survey of manpower, natural, human, financial, and other resources.

The purpose is to provide a foundation upon which to build a better future for the community.

Reflecting the spirit of independence and enterprise which I have long felt should be revived and strongly encouraged in our country, as well as a brief view of its splendid objectives, I ask unanimous consent to have an article from the Green Bay Press-Gazette printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette, Aug. 23, 1960]

COMMUNITY PROGRAM SET UP BY OCONTO JUNIOR CHAMBER

OCONTO.—General and specific goals for 1960–61 that have been drawn up by officers and directors of the Oconto Junior Chamber of Commerce sound interesting for the future of this community.

The general goals are:

1. To bring together the young men of Oconto in an organized effort to serve the community and, at the same time, train members in roles of leadership and organization which is required in some form of all young men.

2. To interest and engage the youth of the community in wholesome, educational activities so that they may find their hometown a good place to live and play.

3. To establish a healthy interest in Oconto by all of its citizens.

4. To encourage new businesses and to assist the established ones in making Oconto the ideal place to work and raise a family.

The specific goals laid down by Oconto Jaycees for the year ahead are:

"1. To conduct a survey among the citizens of Oconto so that we can best determine her needs, her likes and dislikes, and then establish a program by which we can best serve, solve and fulfill.

"2. To strengthen the junior chamber of commerce in the eyes of the community and her members by a planned program of growth and internal development.

"3. To cooperate with and assist, where possible, the State, national, and international organizations with which we are affiliated.

"4. To see that all young men have the opportunity to take part in the Jaycees program and are properly recognized for doing so."

Dan Stemper is the 1960–61 president. J. T. "Terry" Durkin and Richard J. Pinkart are first and second vice presidents. Norman Noah is secretary and Garner Sowle is secretary. Robert Telford, Corliss Lightner and Randolph R. Virgin are directors.

The Threat of Centralized Government

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Monroe (La.) Morning World, Aug. 21, 1960]

VIEWS OF OUR READERS

MONROE.—It is deeply regrettable, but true—and the recent national conventions of both the Democratic and Republican Parties have clearly pointed up the dangerous trend—that our Federal government is moving, faster and faster, further and further away from the people. Centralized government in Washington is seriously threatening, through shameful responses to political expediency, to literally destroy our constitutional system of government.

Thomas Jefferson, surely one of the greatest men in American history, warned against the danger of centralization as early as 1822. That year, he wrote:

"If ever this vast country is brought under a single government, it will be a government of corruption."

Today, 138 years later, we realize—and even more acutely so now, in the light of the extreme platform declarations of the two national political parties—how justified Thomas Jefferson was. Unfortunately, however, not only are his warnings going unheeded, but they are being repudiated by the ultraliberal and liberal elements in both major parties, who hold the reins of control. And now, therefore, crushing momentum is being applied to the movement to tamper with our Federal system for the short-lived benefit of shortsighted politicians.

A gravely dangerous example of such heedless tinkering with our precious heritage is, of course, the reckless drive—for which both the national Democratic and Republican campaign platforms have declared full speed ahead—to push the Federal Government ever further into the field of so-called civil rights. Certain of the extremist politicians have discovered that the issue of civil rights has all the elements of political magic.

So, these advocates of increased Federal powers are concentrating, as all of us are

well aware, not only on interference with the States' control over the franchise, but also on education and numerous other vital areas of State and local jurisdiction—attacks which, in fact, constitute assaults on the Constitution itself. Once the elections and the schools, for example, should be controlled by Washington, the centralized Government of which Thomas Jefferson warned, would be upon us.

The freedoms we enjoy will endure only so long as our Federal system endures. In order to preserve that system, we must keep the Federal Government out of education—especially. We cannot allow Washington to get a foot in the door of our schools. If it should succeed in penetrating our schools, there would be no stopping point. Conceivably, all the schools throughout the United States would sooner or later be coordinated so as to turn out robots in accordance with Washington blueprints.

Admittedly, we are losing the battle now. But that does not necessarily mean we will lose the ultimate victory.

We must never lose sight of the fact that our great American heritage is worth protecting and preserving. Every generation owes it to itself to safeguard that precious heritage so that succeeding generations may be the recipients of our labors and may, too, enjoy living under the greatest form of government ever conceived by the mind of man.

Our plans, all our hopes, all our dreams—indeed, our very lives—depend on the continued support and defense and maintenance of constitutional government in our country.

In the long run, we will not fail.

OTTO E. PASSMAN,
Member of Congress.

The Soil Bank Program

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. YOUNG of North Dakota. Mr. President, there have been many articles written about the soil bank program, both as to its virtues and its shortcomings. The most ardent support for the program comes from areas where people have contributed little in the way of placing land under the soil bank program.

I think that Members of the Senate would be greatly interested in reading a thought-provoking letter from one who has had an opportunity to observe this program in operation firsthand. This letter, a copy of which was sent to me, was written by Rev. Richard D. Vangerud, of Bottineau, N. Dak., to the editor of the Atlantic Monthly.

I ask unanimous consent to have Reverend Vangerud's letter printed in the Appendix of the RECORD, together with his transmittal letter to me.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FIRST LUTHERAN CHURCH,
Bottineau, N. Dak., August 23, 1960.

The Honorable MILTON R. YOUNG,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YOUNG: Inclosed find a letter addressed to the Atlantic Monthly which is a hasty sketch of the thoughts in respect to the soil bank that cross my mind as I gaze across the prairies of Bottineau County and mix with its people.

Sincerely,

RICHARD D. VANGERUD.

AUGUST 23, 1960.

The EDITOR, THE ATLANTIC MONTHLY,
Boston, Mass.

DEAR SIR: Your editorial in the July Atlantic to me was one of the most fair discussions of the farm situation I have read. The trend to the soil bank that you discuss is a trend that can cause real concern. To be sure this trend is causing real socioeconomic problems in the towns and cities dependent on the rural economy as well as to the open country areas. The statistics are real people caught in these forces. However, the problems that cause me concern are the moral and religious questions involved.

Every vocation needs a religious-moral purpose in which a man seeks to express himself purposefully in serving his God and his fellow men. A man needs to have a feeling of being useful, that his life has a real purpose. If this need is obliterated in reducing a life calling to a mere economic formula the moral, creative worth of the individual is destroyed.

Farming stands high as a vocation with a real purpose. The farmer has the calling to produce food for the human race and to conserve his soil for unborn generations. If this sense of purpose is divorced from his calling his dignity as a creative human being is eroded. If making money is the only goal in life there would be no real moral question involved, but if there is a higher goal the farmer's dignity as a human being is being destroyed by any farm program that does not look beyond mere economics.

To me, it seems, that the soil bank is guilty of destroying the moral-religious purpose in the farmers calling. The farmer is paid for not carrying out the basic purpose of his vocation. There are cases, of course, where taking land out of production may be necessary for the purpose of conservation. There is land that should never have been put into cultivation. In such cases a program of assistance such as the soil bank or something related does serve the religious-moral purpose of conservation, however, the entire soil bank cannot be written off in this sense.

I still feel that the real problem is not overproduction. It is rather faulty distribution. The negative approach of controlling production certainly is not the solution in the world of 1960 where starvation is the rule for the world's people. There is a need for the farmer to produce bread for the hungry, for the hungry are certainly with us. We should not blame the farmer for expressing his God-given purpose in abundant production. The world has a need for this production.

Long-range programs that are positive and forward looking should have priority and not the expedient of the moment. The solutions should not counter the religious-moral purpose of the farmer's vocation. In addition to the problem of international distribution that needs a solution there is the local need of planning to meet the food needs of the future. Perhaps incentive should be given to meet these needs. Water diversion programs that would help transfer areas now limited to small grain production into diversified farm areas merits consideration. This is out of my field, but I am certain that our creativity as an American people is capable of something greater than paid curtailment.

Again, what will be the end result of a farm program that will not let the farmer express his religious-moral reason for being? What will its result be on the farmer? What will its result be on the American Nation as a whole? I feel that a farm program that will stand the test of time should let the farmer creatively express the religious-moral purpose of his vocation—to produce food for man and beast, to conserve the soil for generations yet to come.

Sincerely,

RICHARD D. VANGERUD.

Technical Assistance Program for the United States of America

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mrs. KEE. Mr. Speaker, I have introduced legislation (H.R. 13077) providing a new approach to the problem of Federal assistance for areas of persistent and substantial unemployment. I am placing in the RECORD at this point the following news release explaining the bill:

In an effort to break the deadlock between the President and Congress over assistance to economically depressed areas, Congresswoman ELIZABETH KEE, Democratic, of West Virginia, offered this week a new approach to the problem of areas with substantial and persistent unemployment.

Mrs. KEE proposed creating a $75 million area assistance fund within the Department of Commerce to be loaned to States which come up with programs to attract new industries. Only areas with 6 percent of the labor force unemployed over a period of years could qualify for loans.

"The neglect of this serious national program verges on a national disgrace," Mrs. KEE declared.

"On two occasions, Congress has passed what I believed was sound legislation. The President disagreed with this particular approach and vetoed the legislation.

"The time has come to get off of dead center. This new approach offers a plan of effective aid to States which desperately need it, and at the same time should be acceptable to the President.

"There is no reason why Congress cannot pass such a program at this session. Extensive hearings have been held. There is complete agreement on the nature of the problem. The only difficulty has been in agreeing on a program."

Under Mrs. KEE's plan, States would be required to provide at least 25 percent of the cost of any project.

Loans could be used for the purchase and development of land, construction of new facilities and buildings, rehabilitation of abandoned plants, and alteration or conversion of existing plants. Loans cannot be used to finance transfer of establishments if such transfers will result in increase in unemployment in the area of the original location.

Mrs. KEE's proposal also authorized appropriating $1.5 million to be granted to the States to make studies of possible economic growth.

"These are technical assistance grants," Mrs. KEE declared. "It is the same type of activity as that conducted abroad with U.S. funds under the technical assistance program. It has worked aboard and there is no reason why the Federal Government cannot make a modest contribution toward economic rehabilitation in areas of this country which are desperately in need of help."

Mrs. KEE said the program is keyed to creating new jobs to provide work for unemployed persons, and added "In West Virginia, we have an outstanding labor force. These men do not want handouts. They want jobs."

An Unwise Cut in Foreign Aid

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Unwise Cut in Foreign Aid," published in the Philadelphia Inquirer of August 26, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN UNWISE CUT IN FOREIGN AID

The action yesterday of the Senate-House conference committee on the President's foreign aid appropriations bill comes as a sharp disappointment in view of the wise and vigorous action that had been taken in the Senate only the day before.

Where the Senate had approved a $3,989,054,000 measure, thereby restoring virtually all of the House cuts in the administration aid request, the conference committee agreed to a compromise figure of $3,722,350,000.

This is, of course, better than the original bill passed by the House, which had provided $132,600,000 less. And, in this respect, the conference committee bill represents something of a concession to the administration. But it is a rebuff as well, for it falls far short of the amount of aid the President, as well as Senate leaders, have repeatedly stated was necessary if the United States was to carry out its obligations to its friends in the free world.

As a result, foreign aid supporters in both Senate and House should fight to strengthen the aid bill before final passage.

As approved by the conference committee, the bill does retain two worthwhile features, added as amendments in the Senate, which reflect the growing tension in the Caribbean. One would cut off foreign aid funds to any nation supplying arms or economic assistance to Cuba. The other would apply the same penalty to any nation providing arms to any Latin American country being subjected to sanctions by the Organization of American States—which means the Dominican Republic.

Considering Secretary of State Herter's warning that Cuba was becoming a beachhead for Communist infiltration of the Western Hemisphere, there can be no argument about the amendment aimed at Fidel Castro. And, in the case of the Trujillo dictatorship, that ban should have been adopted years ago.

But so far as the money provisions of the new bill are concerned, Congress owes it to the country and the free world to strengthen the economic defenses of our friends, to help them stand up to Communist blandishments and threats. And, if Congress finds itself in too much of a hurry to do anything about restoring the needed funds before adjourning its bobtail session, it should certainly repair the damage when it reconvenes for a full session in January.

Friendly Relations Between Sewart Air Force Base and People of Nashville, Tenn.

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. LOSER. Mr. Speaker, I have received a copy of the letter Brig. Gen. Frederick J. Sutterlin, Sewart Air Force Base, Tenn., received from Mr. Thomas D. Tenpenny, director, retail division, Nashville Chamber of Commerce, which praises the existing relationship between Sewart and Nashville.

The people of Nashville are proud to have this relationship with the Sewart Air Force Base, which is rendering such outstanding service to our country.

Under leave to extend my remarks in the RECORD, I am including the letter from the Nashville Chamber of Commerce which, I believe, will be of interest to you. The letter follows:

NASHVILLE CHAMBER OF COMMERCE,
Nashville, Tenn., July 15, 1960.

Brig. Gen. FREDERICK J. SUTTERLIN,
Commanding General,
839th Air Division,
Sewart Air Force Base, Tenn.

DEAR GENERAL SUTTERLIN: On behalf of the directors of the retail division of the Nashville Chamber of Commerce, I express to you our delight and congratulations on your new command at Sewart. Your record of outstanding service to our country speaks for itself and we are honored to welcome you.

The chamber of commerce has long recognized the vital role that Sewart Air Force Base has played in the development of our area. The past contribution has been tremendous and the future indicates even greater things for all of us.

At the regular November board of directors meeting of the retail division, Colonel Bane attended and presented to our directors a very factual and informative breakdown of the operations at Sewart with particular emphasis placed on your base commissary and post exchange. The retailers of Nashville are, of course, interested in all possible retail markets and the fullest development of their potential. With this in mind, you can understand their keen interest in the commissaries and post exchanges of all military installations in the Middle Tennessee area. Upon completion of his presentation, Colonel Bane extended to our board an invitation to visit Sewart and see first-hand the operations carried on and we accepted this invitation and on March 22 we made this visit.

This not only was a delightful trip but it was certainly informative in every respect giving us a greater knowledge of the excellent program being carried on there. This trip helped us to realize fully the vital role the commissary and post exchange play in the overall operation of Sewart Air Force Base and any misgivings our retailers had concerning these were certainly dispelled. Our directors feel that the money saved by the families at Sewart through shopping on the base finds its way into the Nashville economy and we commend these operations as they now exist exclusively for the military personnel and their families.

It is our opinion that the relationship that now exists between Sewart and Nashville in both a social and business way is the best we have ever known. We here in Nashville are proud of this relationship and we feel that you share these sentiments with us.

Best wishes and kindest personal regards.

Very truly yours,

THOMAS D. TENPENNY,
Director, Retail Division.

Politics and the Aged

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. BYRD of Virgina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Politics and the Aged," from a recent issue of the Washington Evening Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS AND THE AGED

The Senate's action on medical care for the aged should meet with general approval—from the aged, the middle-aged and the young. For the measure which finally was approved, while probably not adequate for the long pull, is at least a substantial step in the right direction. And, of greater importance, it was a step which was politically feasible at this time.

Under its terms, Federal payments will be increased for medical assistance to those on State relief rolls and similar help will be extended to elderly persons who are not on relief but who lack the means to pay their own medical bills. Since this is similar to a House-approved bill, the outlook is favorable for final congressional approval, acceptance by the President and inauguration of the new benefits on October 1. This is more than can be said for the Javits proposal, backed by Mr. NIXON, and the Anderson amendment, supported by Senator KENNEDY. Had the Senate passed either of these, there would have been little chance of surviving House opposition or a presidential veto.

Of all the proposals, the ANDERSON-KENNEDY approach, in our judgment, is the least desirable. It would graft medical aid onto the social security structure, thereby setting up what Senator JAVITS described as a "national program which at the very least, in view of the unequal nature of medical facilities in different parts of the country, must lead to inherent discrimination, injustice and frustrating delays."

Commenting on this, Senator KENNEDY said he thought it would be "most unwise" to accept the principle that the Federal Government and the States "will operate with all the different standards which are going to be set up in the different States, with some States participating and many not participating." Assuming that the Senator is correct in this forecast, we still fail to see why such a procedure would be most unwise. The people of Virginia, acting through their locally elected legislators, may wish to set up standards which differ from those preferred by the people of New York and their legislators. If so, what is wrong with this? Available facilities will vary from State to State, and so will the cost of providing care.

Why should the Federal Government seek to to impose its standards, regardless of local wishes, local costs, and local facilities?

Senator KENNEDY made another comment which is open to question. Medical care, he said, should be placed under a system the people themselves will pay for rather than burden the Federal and State Governments with the cost. But this is hardly a valid distinction. For the people, meaning the taxpayers, are going to pay the costs of medical care either in higher social security taxes or in higher general taxes. In the end, the cost will come out of the pockets of the taxpayers, or, if Senator KENNEDY prefers, the people. The only other way would be to foot the bill through the device of deficit financing, and we don't think Senator KENNEDY would advocate this inflationary approach which, in the long run, would rob everybody.

Our feeling, after reviewing the debate, is that the Senate was wise to adopt the Finance Committee's bill at this bobtailed session. If something more comprehensive is needed, there will be time enough next year. Senator KENNEDY seems to think that the defeat of the Anderson amendment gives him an issue which he can carry to the voters. Whether it will be a good issue, politically speaking, we do not know. But we are quite certain that a better medical care plan, if something more is needed, can be worked out next year when a new Congress will be comparatively free from the harsh pressures of presidential politicking.

Economic Aid to India

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. MONAGAN. Mr. Speaker, India is perhaps the most important uncommitted country in the world today. Many Americans inside and outside of Government are giving continued and serious thought to means of keeping India on the side of the free nations of the world.

In this connection, economic assistance has been an important consideration.

Last year, one of my young constituents, John McG. Smith, of Waterbury, Conn., now aged nine, wrote his most interesting observations of the Washington scene.

This year he has written a prescription for a means of giving economic aid to India which is a model of terseness, as well as completeness, and could form a pattern for foreign affairs experts of more mature years.

I am including below his contribution:

I think someone who knows the Indian language should go over to India with some farm tools and help parts of India.

He should make speeches and boost up their courage by helping with the tractor. Tell them why they should have schools and hospitals. They could make a big creater with walls around it and catch the water. Then they could make irracation ditches or pipelines to ponds, wells, and fields.

After awhile all India would be on there own two feet and fighting for freedom and they will get it. The trouble is who will do it. I think any brave man should do it for India's good.

Losing the World While Keeping Our Souls

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. THORNBERRY. Mr. Speaker, I would like very much to commend to the Members of the Congress for attention and study a very thoughtful sermon of deep significance delivered by Dr. Madison C. Scott, pastor of the First Baptist Church, of Austin, Tex., to his congregation on Sunday, August 7, 1960, and again to the members of the Austin Rotary Club.

The sermon, "Losing the World While Keeping Our Souls," is as follows:

LOSING THE WORLD WHILE KEEPING OUR SOULS

(St. Mark 8: 36)

As you can see, the title of this sermon has to do with losing the world. But paradoxically I really want to talk about keeping the world, if possible. Do you remember the typing exercise you used to type in your high school classes, "Now is the time for all good men to come to the aid of their country"? I am afraid that this statement is no more a typing exerise. I think it has become an inescapable truth in these times. If there ever was a time when good men—not demagogs or chauvinists—but good men—not men of panic and alarm—but good men of courage and character—should come to the aid of their country, that time is now.

Patriotism has been defined as "love of country; devotion to the welfare of one's country." It could be defined more specifically as devotion to the way of life found in a country. Love of country surely means reverence for institutions, belief in social patterns, and devotion to ideals that are a basic part of the life of a nation. For many a sterling patriot has come from a country that had little to offer physically beyond severe climate, forbidding mountains, and storm-lashed coasts.

Dr. Samuel Johnson did say that patriotism is the last refuge of a scoundrel," but it may also be the proud belief of a man who feels himself to be brother not only to men in his own country but also to men around the world, for the thoughtful man quickly sees that the ideals and institutions he cherishes in his own home are basically the same which millions cherish in their countries, north and south, east and west, around this earth.

The patriot is forced to look beyond his own national boundaries, for love of country is love of things within that country, and, to be true to himself, a patriot must love these things wherever they are found, in whatever measure they are found. I think it is correct to say that what the true patriot loves is a way of life, if you please, a civilization.

In these days of world turbulence, it is important to define civilization. Will Durant said, "Civilization is social order promoting cultural creation." I think that definition can be expanded. I think it can be said that civilization is human existence that defines man as less than man unless free, as less than human unless morally responsible for others, and as less than civilized unless possessed of the leisure and incentive to make enduring contributions of mind and spirit to those generations that will follow. True civilization provides freedom by which men grow in courage and character and the leisure and incentive because of which men contribute meaningfully to human life upon this planet. And it is for these things that the heart of any patriot worthy of the name beats with excitement. Our patriotism is best when it is a devotion, a force that will keep alive such things as freedom, decency, and human dignity not only at home but around the world.

Yet, there is a way of life upon this earth today, called in some quarters a great civilization, "the new age," that is not concerned with the freedom and decency and dignity of the individual, that is in point of fact, disastrously destructive of these values. Boris Pasternak says of the Communist government in Russia today, "They don't ask much of you. They only want you to hate the things you love and to love the things you despise." And in the famous novel, "Dr. Zhivago," says, "Microscopic forms of cardiac hemorrhages have become very frequent in Russia in recent years. I think its causes are of a moral order. The great majority of us are required to live a life of constant, systematic duplicity. Your health is bound to be affected if, day after day, you say the opposite of what you feel, if you grovel before what you dislike and rejoice at what brings you nothing but misfortune." And another character, speaking of life in communistic Russia, says, "We are ready to betray what is most dear to us and praise what repels us and say 'yes' to what we don't understand." Is this a fit life for man? Is this the golden age? Is this civilization?

The current Reader's Digest carries a condensation of the book about life in Communist Russia. It is a picture of the new, Soviet man, and the title of the book is, "The Future Is Ours, Comrade." One Russian citizen is quoted as saying, "Authority rules millions, so it is entitled to make mistakes where individuals are concerned." It is explained that, when the authority of the state speaks unjustly and brutally, the average citizen is ready to question his own character or to doubt the probity of his wife or parents rather than to challenge the authority of the state. The incredible story is told of a certain laboring man in Moscow who went by a certain metropolitan hotel to pick up his wife who worked there as a maid. He had failed to check the calendar and discovered that his wife was working at another hotel.

"On his way out of the hotel he stopped in the men's room. He bent over while flushing the toilet, and suddenly all his personal papers, his passport, his party card and his union card, fell in and were swept away.

"In the downstairs lobby an agent of the secret police, noticing that the man stood out like a sore thumb among the well-dressed foreigners was patronized the hotel, asked to see his papers. When the man explained his mishap, the agent didn't believe a word of it and took him away for questioning."

The man was sentenced to 4 years in a labor camp. And as he was sentenced in the court, the man accepted it all with composure, only looking about in the spectators for the tear-stained face of his wife. The brother of the condemned man said, "Too bad you couldn't have met him. He was an exceptionally decent man, honest, never did anybody any harm. He loved his family and enjoyed a game of chess. If only he had been healthy, but he has serious stomach trouble and a diseased kidney. If he comes out alive after 4 years, he won't be of much use." The brother was silent for a moment, and then, with anger in his eyes, he said, "Tell me, abroad, where everyone has such toilets, do people lose their papers or money in them? Perhaps the construction is deficient and should be improved?" The au-

thor of the book said "I could not answer him. Possibly valuable papers get lost in toilets, but do people perish because of it?" Is this the society of the future, a society in which a man loses his life because he loses his papers down a rest room facility? Is this the future? If so, they may have it. I don't want it.

In plain truth, there is a life that is not worth living. As Shakespeare says:

"There's the respect that makes calamity of so long life;
For who would bear the whips and scorns of time,
The oppressor's wrong, the proud man's contumely,
The pangs of despised love, the law's delay,
The insolence of office, and the spurns
That patient merit of the unworthy takes."

There is such a thing as a government, a way of life, an existence making man less than man, taking away his freedom, denying him his emotions, dehumanizing him into a machine, a unit, an integer. It is not just life, existence, that we want, that's worth living: it is a certain kind of life we want, a life of freedom, dignity, meaning. Dr. Zhiago says: "Man does not die in a ditch like a dog—but at home in history. * * *" And it is the feeling of most of us that if man dies in a ditch like a dog, it would be better if he had never lived.

May I come to an important point: Mere survival is not the highest good. Simply managing to survive cannot be the supreme goal of a civilization, because civilization is more than survival, existence. I feel somewhat strange as a minister saying this: There is something worse than nuclear annihiliation—it is enslavement of body and mind and soul.

Recently Dr. Elton Trueblood, a leading religious thinker and former head of the U.S. Religious Information Office, and a Quaker, said: "It's neither good philosophy nor good Christianity to say that extermination is the worst possible event for the human race. To make avoidance of death, even death for everyone, the prime consideration lays the conventional basis for totalitarian oppression, and is contrary to the immemorial ideals of Western philosophy." Socrates once said: "For neither in war nor yet at law ought I or any man to use every way of escaping death. The difficulty, my friend, is not to avoid death, but to avoid unrighteousness."

I am not a military strategist or a world diplomat, but I tell you this: In my opinion, the day that the Communists think we will not die, individually or as a nation, for the things we believe, they will move in, confidently and surely.

Dr. Trueblood further said, "The fear of atomic explosions and atomic fallout has been so great, in many hearts, that the result has been a willingness to accept anything for the sake of survival and those desiring to dominate mankind become the chief gainers." But Joyce Kilmer cried, "What matters death, if freedom be not dead? No flags are fair, if freedom's flag be furled." And what matters life, if freedom be not alive? Who wants to live forever without freedom? It's not the length of life—or of a civilization, God knows—it's the quality. I don't want to live without these things, these things of freedom and faith and hope and love! And—God help me—I am not a warmonger or a chauvinist—if I have to choose between total, nuclear annihilation and existence under slavery without freedom and decency and dignity, I'll take annihilation. I don't want life in which people are destroyed because their papers fell down the drain of a men's room facility.

But, as shocking as this may sound, I submit to you that this is the surest way of preserving the real values of true civilization, namely, loving these values dearer than existence, or life itself, being willing to lose the whole world while keeping our souls. As a matter of fact—and this is a forgotten point of our beliefs and our greatness—we Christians never have believed that everything depends upon the survival of the human race. We have traditionally and figuratively expected that the heavens and the elements would dissolve in a fire and the earth would be rolled up like a scroll. We have always believed that our ultimate destiny lay in the hands and the awful power of God beyond this world and beyond this earth. To believe les than this now will be to deliver ourselves, our civilization, into the hands of those who would enslave us, dehumanize us. To believe less than this now will be to deliver ourselves into the hands of those who would set up as the highest symbol of the human race not the prophet who sacrificed himself, but the lion tamer with the whip in his hand and the beast beaten at his feet.

Congress, Go Home

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. AUCHINCLOSS. Mr. Speaker, If any citizen had any doubts about the need for this extra session of Congress, they must be entirely dissipated by now. Whatever has been accomplished by this politically led Congress could have been done before the recess if the Democrat Party with its overwhelming majorities in both Houses had displayed any sound vision and statemanship. It is eloquent testimony to the fact that when our national lawmaking body is dominated by a leadership saturated in partisan politics, the country suffers, and the prestige of our national system of government is lowered. These thoughts are ably expressed in the following editorials appearing in the New York Herald Tribune and the Washington Daily News of August 25:

[From the New York Herald Tribune, Aug. 25, 1960]

CONGRESS, GO HOME

When his ambitious medical-care plan was defeated, Senator KENNEDY bitterly suggested that if Congress were not in a mood to pass "decent" bills in this and the minimum-wage field, its Members "might as well go home."

Translated, this means that if the Senator is not going to get his way with campaign legislation he'd better hotfoot it out of Washington. Which isn't a bad idea, though for quite the opposite reasons from those Mr. KENNEDY probably had in mind.

Legislative defeat in a Congress controlled 2 to 1 by his own party is bad for the Kennedy image. But legislative politicking—which attempts to ram such programs through a campaign-dominated session represent—is bad for the Nation.

Providing federally financed medical care for the 16 million Americans over 65 (or even for any substantial portion of them) is not only a vast undertaking, but a vastly complex one. Determining whether to do it, and if so how it should be done and what its limits should be, is not a piece of business to be disposed of in a few days of political sniping and maneuver for partisan credit.

The Nation has survived 184 years without such a program. It could have survived another 5 months, until a new Congress could give it the deliberative attention it deserves. It is, as Senator COOPER declared, "cruel and cynical to treat people over 65 as footballs in a political campaign."

When Congress reconvenes after the conventions many voices, including that of the President, called upon it to act in the national interest and not in partisan political interest. Few can really have been naive enough to suppose it would fully heed those voices. Its actions so far—notably on medical care and minimum wage—have been shot through with politicking on both sides of the aisles; votes have been hailed as "Kennedy victories" or "Kennedy defeats."

This is no atmosphere in which to pass laws. It's high time Congress wrapped up the business that has to be done this year, packed its bags, and moved the presidential campaign to the hustings.

[From the Washington Daily News, Aug. 25, 1960]

TIME TO GO HOME

Senator KENNEDY, vexed over the Senate's action on medical care and impatient to hit the campaign trail, says perhaps Congress ought to go home. We second the motion.

It's increasingly apparent there never was any real justification for this postconvention session. As an election-year gimmick it has backfired against its Democratic sponsors, demonstrating they can't hold their majorities in line on their platform pledges.

The health bill finally passed by the Senate is similar to one passed by the House before the conventions. It is far more conservative than those sponsored by the leaders of either party. Its effect simply is to ease requirements for paying relief money to the aged for medical and health bills. It applies only to the destitute and low-income groups.

The plan supported by Senator KENNEDY and pledged in the Democratic platform, on the other hand, would be a radical departure from present practices. It would set up a form of compulsory health insurance, under social security, to pay bills for the well-off and the low-paid alike, regardless of financial need.

Aside from its technical merits, such a plan should be undertaken only on clear evidence that the country, in large majority, really wants it—that the workers are dissatisfied with present health plans and want their pay clipped to pay for a new one.

The campaign offers a chance for the sponsors to explain and promote their plan, also to test public sentiment regarding it. Our lawmakers should wind up this futile session promptly, and get on with the campaign.

The Late Brent Hart, of Kentucky

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Brent Hart a Many-Sided, Useful Man," published in the Madisonville (Ky.) Messenger of July 19, 1960.

The editorial, written by Mr. Edgar Arnold, editor of the Messenger, accurately reflects the opinion of hundreds of Kentuckians who knew Brent Hart and held him in respect and affection.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRENT HART A MANY-SIDED, USEFUL MAN

Funeral services for Brent Hart were held in Louisville yesterday morning, July 18, and thus departed from this earthly scene a Hopkins Countian who for many years was associated with the industrial, civil, political, and social life of our community.

Thomas Carlyle, the Scottish essayist and historian, wrote a hundred years ago:

"It is the first of all problems for a man to find out what kind of work he is to do in this universe."

Brent Hart determined early in life that his career was to be in coal mining, which was a decision of high consequence for our county and for the western Kentucky coal field. For Brent Hart in the many years he devoted to mining developed some excellent producing properties, bought others, and furnished a total of man-days of job opportunity which would be difficult, indeed, to estimate.

Mr. Hart started his career, it is true, with a brief try at newspapering, in the circulation and advertising departments of the old semiweekly Madisonville Hustler. He became business manager of the paper, and in those days business manager of a twice-a-week community paper meant a day of many hours and a day of many responsibilities. Most of all, it represented a day of countless chores, and Brent Hart did his work well.

It is recalled by friends that when Brent Hart engaged in his first coal-producing venture, which was a small mine at Mannington, his motive power was mules. He laughingly said at one time that when he turned his mules out to pasture Saturday afternoon, his overhead ceased until Monday morning.

It was a jest which did not apply for long, for Brent Hart started systematically at the job of putting together a mining business which eventually became Hart Coal Corp., and Hart-Ross Coal Co. The job led to a prominence in the coal business which put Mr. Hart at the top of operator groups and made his influence felt all over the industry, statewide and regional.

In addition to his coal interests, Mr. Hart found time to engage in cattle raising, oil exploration, sports such as golf and hunting, politics on the local and State level, and social activity which made his home at Hartlands, on U.S. 41 south, a hospitable place to which invitations were greatly coveted.

Mr. Hart's activities in behalf of the Republican Party were such that he was mentioned at times for State office, including and candidacy for Governor, and in fund-raising his talents were used in various campaigns. Most recent of these efforts was organiaztion of the Ike appreciation dinner in Louisville, to which, as chairman, the former Hopkins countian brought Republican supporters from all sections of the State.

It is difficult to sum up, in the limited number of paragraphs available for obituary articles in a newspaper, the career of a producer like Brent Hart who went to work early in life, who worked long and hard for small wages and who once, upon hearing a local whistle summoning people to work, vowed—as he later recalled—someday to be the man who blew the whistle.

Brent Hart's determination to blow the whistle, or to be the man who had the whistle blown, worked out well over the years, and worked out well for a community which is dependent in large part upon coal as the source of its economic life.

In pursuance of his policy in the mining field, Mr. Hart made opponents and enemies, many of the latter being people who never on their own ever produced anything in our busy world. Brent Hart had little regard for the free riders who toil not and neither spin, and in opposition to their attempts to hamper him he stood firm for a great many successful years.

A world which needs production needs men like Brent Hart. In all the ups and downs which marked his career nobody ever heard Brent Hart whine, and nobody ever saw him when he looked life he felt sorry for himself. Coal was often difficult to sell, and was often almost given away, in the days when Brent Hart was making his start in the business.

It is a great testimony to his strong character that he started with an exceedingly small operation and wound up with a prosperous and farflung enterprise. Although in recent years he had lived in Louisville and Fort Lauderdale, Brent Hart maintained contact in Hopkins County. He had many friends in his home county who were shocked at his untimely death. Most of them regretted, as we ourselves do, that death called him before he could realize a long-held ambition to make a trip around the world.

Banking's Half-Told Story

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, August 26, 1960

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Banking's Half-Told Story," written by Arthur R. Greene and published in the June 20, 1960, issue of United States Investor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BANKING'S HALF-TOLD STORY

(By Arthur A. Greene, president, Atlas Advertising, Inc.)

The ordinary symbol of a bank is money. Many people do business at a bank simply because the bank—and the credit—are there.

Banking has not won the public appreciation it deserves in serving the public and helping to build strong and prosperous communities from coast to coast.

We know that the unfriendly atmosphere that once was associated in the public mind with banking has been quietly diminishing over the years. The New Look in banking is not only changing the exterior and interior of the physical appearance of banks, but is also changing the spirit of banking itself. Yet most people do not know or understand what banks are doing for them.

Bankers know the many ways in which banking has raised the standard of living for the American family, but the public knows little or nothing about it.

On a compartively limited income, for example, millions of families are able to buy nice homes and cars, and such conveniences as electric appliances and even boats—through bank installment credit. Without consumer installment credit (and banks provide the largest single share) many of the American families' present possessions would have been unobtainable. Indeed, banking has contributed to better living.

Younger American families go to their community bank to get a loan with little more thought about the process involved than when they go to the local supermarket. In one place they buy food; in the other they get money. But at the bank they may have both a fear or a misunderstanding of the complexities of banking.

Although banking is basically a public service, few Americans have any idea of the vitally important role banking plays in their economic security. Consumer bank credit, for example, has made it possible for many families to increase title to their worldly possessions to sizable amounts. And there is room at the top for them, through bank installment credit, a truly significant contribution of the 20th century banker in America. But is this average American consumer aware of this? The answer is "No." Ask him, if you doubt this. He rarely understands how banking contributes to his prosperity.

An imaginative and rewarding image of banking must be created through the bank's advertising and other communications. This is necessary if the banking industry is to compete more successfully in the coming decades for the burgeoning income of the American consumer.

What do we mean by image? Why is it important? Why should bankers be concerned with the public's esteem and confidence? An image is a mental representation, an impression, or an idea. It is only within the past 20 years that the corporate image has become a recognized, large-scale problem for all businesses.

In banking some changes have already begun to occur. In installment credit, for instance, there is now less feeling of borrowing money than of being extended credit. But, even so, the full story of banking is still not being told.

Why should the banking industry be concerned with adopting a more favorable image of itself? Briefly, I will enumerate a few main thoughts:

1. Although banks have been an integral part of the social and economic growth of this country for over 150 years, they have never been properly identified with this Nation's success story in the public's mind. Compared to the contributions of organized labor, and even the politicians, bankers have done more to create jobs, and to help raise the American standard of living than most other groups have done. It is now time to prove to the average American consumer that the high level of prosperity he enjoys is due in a large measure to enlightened banking and bankers. Unfortunately, bankers have hidden their light under the bushel for too long.

In the coming national political campaign bankers and banking will be prime targets of dissenters. For political reasons, alone, it is high time for bankers to give the people a positive and true picture of banking's contribution.

2. Banks are facing more aggressive competition from the growing number of nonbank financial institutions. In 1950 there were 12 million American families with incomes over $4,000 a year; in 1960, there are 36 million families in this group, and this means that more and more families will continue to gravitate upward and become eligible for credit and other banking services. This expanding market is a spur to competition for serving these growing millions.

3. Studies made at the Harvard Graduate School of Business indicate that a company's image is communicated through their advertisements—and especially their institutional advertisements. This type of image affects your bank not only in relation to the public at large, but in the recruitment of the better young men and women your banking will need in the future.

However effectively a banker may have managed to humanize his own institution in the past, he has actually just set the stage for what should be the feature presentation.

Aunt Hepsy likes to think of her bank as strong and solid, but she has little understanding of its importance in her life. Why not take a look at your bank and what it has done in your community in the past 10 years, and tell the story to your community. Discover how many homes and cars you've financed, and then identify this loan volume with employment. Then, you can tell Aunt Hepsy, and her fellow citizens of the community-building role of your bank.

You can tell it in speeches you make to civic clubs, you can tell it through more effective advertising; and tell your customers. Let them know, for instance, how bank credit affects the American economic system, and especially how a customer's own use of credit will help him to assure his own security. How many people's jobs are affected when a new car is bought on credit?—roughly 60, in all parts of the country, in related industries, in rubber factories and in textile mills. How many residents of a community are employed because a loan is given to a man to build a new house? This is the story that banking should tell and a portion of your advertising and business-development budget should be devoted to it.

In recent years a few notable examples of image building among bankers come to mind. Recently the First National Bank of Miami and the Commerce Union Bank of Nashville, among others, have taken full-page newspaper ads with a "Statement of Policy" approach, reminding their communities of what their bank stands for, their responsibility to the community and that as banks they are ready to help—not just to profit. It's this kind of public education that will gain your bank the recognition and image it deserves.

Most bankers are leaders in their communities and devote much of their time to helping advance local charitable, and other worthy causes. There is a real need, however, for bankers to devote some of their time to advancing the cause of banking in their community, too. After all, banking is one of your worthiest causes and one of the most dynamic forces in your community.

Address by R. Lyle Barton

EXTENSION OF REMARKS
OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. BERRY. Mr. Speaker, it was my privilege to hear an outstanding address delivered by R. Lyle Barton, national executive director of Taxpayers, Inc., Galesburg, Ill., before the annual banquet meeting of the South Dakota Taxpayers Association in Pierre, S. Dak., July 30.

I regret that I cannot insert his entire speech in the Appendix of the RECORD because of its length, but I do wish to call to the attention of my colleagues excerpts from it which I know will prove to be enlightening:

EXCERPTS OF ADDRESS BY R. LYLE BARTON

Our American Government and our free enterprise system of economic life are based upon four major documents.

First of all, underlying the whole American structure of life is a faith in God, the facts, experiences and guiding examples of which we find in the Holy Bible.

Second, we have the Declaration of Independence which announced to the 18th century civilization, that here in the New World was a group of people who cherished freedom and abhorred domination from the outside.

Third, we have the Constitution embodying the Bill of Rights, which charts the establishment and operation procedure for the Central Government and defining the separate and exclusive rights of the individual.

A devoted student of the Constitution would, I am sure, find it quite difficult to reconcile the authority granted the Central Government with the final and fourth document, the Budget of the U.S. Government which is a yearly document.

This final document has come to mean so much to you and me, particularly in the last few years, for it is this document which is the physical and practical expression of one segment of the great conspiracy.

Government will consume this year the total of $156 billion. Sixty years ago Government was taking $1½ billion per year. This is quite a jump, but of course our whole economy has expanded during this time. But the tragic story in this picture is that the cost of Government has multiplied four times as fast as has our economy as a whole. In other words we as a nation are four times as socialized as we were at the turn of the century. Another factor causing grave concern is to see how we as taxpayers have been gradually passing over to Federal Government, so many of the activities formerly handled by local or State government. Government is fast becoming a tremendous centralized power. Federal Government spending in 1902 amounted to less than half a billion dollars. This year Federal Government will spend $98 billion. Don't be misled by $80 billion publicized Federal budget—there is extra spending from funds outside the budget—this shows a multiplication of 205 times in less than 60 years. State government consumed $180 million in the earlier period, this year State governments will use $28 billion, which is an increase of 155 times. Local government including schools, city and county government operations was the major activity in the 1900's when they were spending a total of around $900 million. Today local governmental units will be spending $30 billion.

As a taxpayer you are helping to support over 11 million public payrollers. This means every six gainfully employed taxpayers are together carrying one Government employee on their backs.

As a Federal Government taxpayer you are supporting the fantastic total of 28,600,000 who are drawing regular direct Federal Government checks. This list just includes the regular Federal Government civilian employees totaling 2,323,000; the 2,500,000 military servicemen; 4 million drawing Federal pensions and medical payments which includes former Government employees, and the social security payees numbering 19,840,000.

Now I know you aren't going to remember many of these statistics, but I just want you to get a bit of the picture of how big and extensive we have allowed our Government to become. We don't think about these factors nearly enough, and are inclined to shrug off their importance so it is necessary for us to recall these facts once in a while, to get us back on the road to sound thinking and judgment.

I have just thrown on the table six silver dollars in 6 seconds. I could keep this tossing silver dollars for 60 seconds every minute, 60 minutes every hour, 24 hours a day, 365 days a year and I would have to continue for 32 years, to add up to just $1 billion.

Do you realize that today when we are talking of $80 billion Federal budgets and knowing that Federal spending is actually running at the level of approximately $100 billion per year, that this same Federal Government of ours, following the World War I period, never spent as much as $10 billion in a single year until as recently as 1941 when we started gearing up for World War II?

In the fiscal year 1934 during all the pump priming spree of Franklin D. Roosevelt, with the plowing under of the little pigs, leaf raking, NRA, WPA, CCC, PWA and assorted other alphabetical agencies were in full swing, the total spending for that year was $9,550 million, and then in 1941 went to $14½ billion.

Do you realize our Federal Government alone since the end of World War II has spent the staggering total of $1 trillion. That's right. Over $1,000 billion in the 15 years since World War II.

The question is, "Has it all been necessary?" Well, let's look at the record.

The Federal Government has become the largest landowner in the Nation, largest personal property owner, largest employer, largest business organization, largest spender of money, largest lender of money, largest borrower of money.

The Federal Government has 772 million acres of land scattered all over the world in 109 nations; they own 21.5 percent of all land in the United States involving 12,689 different locations. They own one-half of the 11 Western States; in Nevada the Federal Government owns 87.7 percent of the State. Taxpayers through the Federal Government property ownership has $64 billion tied up in real estate and $186 billion in personal property.

Did you know that our Federal Government has a direct treasury indebtedness of $290 billion. But that is only the admitted portion of our debt. On top of this we have $100 billion Federal Reserve contingent liability, $105 billion of legislative commitments which have not been paid for, and $350 billion accummulated social security fund obligations, which brings the total Federal Government liability up to the staggering total of $845 billion.

And we haven't even counted our currency obligations backed up by Fort Knox gold—$19.6 billion gold—and knowing that foreign governments have claims against this gold to the total of $19 billion, a great portion of these claims developed as the result of our foreign aid giveaways throughout the world which have totaled about $150 billion since the start of World War II.

Now, add on top of this $238 billion total indebtedness by the individual private citizen; $236 billion debt from corporations; and $51 billion owed by State and local governmental units and you reach the unprecedented total of $1,370 billion, and the figure is mounting every day.

That, my good friends, is why everything might appear to look so good. It is always well to look around the corner.

The men who worked on the creation of the Constitution all knew that freedom had never existed for long anywhere, and that no nation had ever become a world leader and survived. Twenty world-leading nations had floundered in their own mistakes and eventually had fallen. Washington, Hamilton, Webster and the other framers of the Constiution were determined that the American system should survive and become a world pattern for lasting freedom and human progress. The structure they developed has lasting qualities if each succeeding generation will but understand its workings and safeguard its principles.

Here is a brief review of the taxpayer's national platform. You can think of the reason for each plank in this platform as you review a few of the items we have discussed in this meeting.

1. No new Federal taxes.
2. No increase in Federal debt limit.
3. Reduce Federal Government spending.

4. Establish $40 billion Federal budget ceiling for operations.

5. $5 billion special budget appropriation for Federal debt reduction.

6. Reduce Federal employees to a maximum of 1 million.

7. Income tax reduction in line with reduced appropriations with final action being complete repeal of the 16th (income tax) amendment.

8. Eliminate all new foreign aid and work toward complete elimination of foreign aid program.

9. Curtail subsidies of all kinds. Repeal Agricultural Adjustment Act of 1938.

10. Gradual elimination of all Federal aid to local and State governments.

11. No new Federal Government programs, projects or activities.

12. Post Office Department required to pay its own way through expenditure reductions.

13. Establish "Taxpayers' Lobby" in Washington, D.C.

14. Reduce appropriations for extravagant parties and entertainment.

15. United Nations expenditures, and all other foreign cooperation organizations expense, to be more equally allocated among nations of the world, with United States paying only our proportionate share, rather than present practice of substantially subsidizing all these organizations; with ultimate goal to have United States get out of the United Nations and the United Nations out of the United States.

16. Federal Government to get out of all commercial business operations including power, loans, and financing, housing, manufacturing, etc., excepting such cases as prison factories, the mint, and others where commodities being manufactured are not economically available for purchase from private business organizations.

17. To awaken every American citizen to his responsibility in maintaining sound, economically operated government at every level—local, State, and National.

18. To make every public official in our Naiton realize he is a trusted public servant, charged with the responsibility of providing a service to the people at the least possible cost.

19. To achieve better government at a better price for every American citizen through elimination of waste, extravagance, overlapping, duplication, political payoffs and dishonesty in ever governmental unit in the United States.

20. To halt further new taxes or increases in taxes on State and local levels of government throughout the United States.

21. To help establish stronger and more firm belief in the free enterprise economic system, and our republican form of government with a general public education program to deepen all citizens' convictions on the American way of life.

22. To oppose communism in every possible manner and to further assist the anti-Communist movement throughout America, with particular emphasis in opposing Communists and Communist sympathizers in our public schools and governmental units.

Now we are ready to work on the implementation of this platform. We are down to bedrock, ready to strike for pay dirt. Here is the challenge for you. Every one of you can help to establish a strong local taxpayer committee in your area. We have the full program outline for you to follow in setting up a local committee. The local committee is absolutely essential as it will be the focal point of all activity. The local group will be the educational arm for the training and development of all leadership in our crusade for better government at a better price, and thus will be the action stimulating nucleus through which the citizens will be drawn out of their sleeping, entertainment crazy inertia, and directed into an avenue of positive action designed to force governmental leaders to give us the kind of leadership which will save our freedom.

Here are some further specific personal actions which you may adopt if you are really earnest in helping push this crusade for better government:

1. Gain knowledge. Know specifically what is going on in government. Your taxpayer association office will supply you with information sources. You have the daily papers, magazines, books, radio, and television programs bringing constant information as to what is going on. Read the conservative movement reports and their lists of recommended books. Be alert to reports on Government operations and you will be surprised at the amount of information constantly in front of you.

2. Get some working tools. Pick up a few tools which will help to guide you in your search for new knowledge of government. Here are several which you should have available for constant reference:

(a) Map of the United States.
(b) Map of the world.
(c) Map of your State.
(d) Map of your county and city.
(e) Structure of government charts for Federal Government, State government, and local government, so that you may be familiar with the division of responsibility for various governmental services.
(f) Scrapbooks or files for keeping clippings and articles on government. At least one section each for Federal, State, and local governments.
(g) Copies of budget or expenditure summaries for State and Federal Governments.
(h) Copies of expenditure reports of your local county, city, township, road district, and school expenditures.

3. Get together the mail addresses and names of your government officials including Senators, Representatives, senators and other State officials, local government officials, and board members of city, county and school boards or councils.

4. Start today writing letters to your representatives in Congress letting them know in no unmistakable terms your dislike for the way everything is being operated. Pick out a few specific items to concentrate on. Mention one item in each letter, but make it a habit to write one letter to some Government officials about some specific extravagance every day. Really register your protest where it will be known.

5. Talk to at least one neighbor or friend every day for a few minutes urging him to become active in the crusade.

6. Write at least one letter every day to a friend or business acquaintance in some other area, enclosing taxpayer literature asking him to help in the crusade.

7. Whenever the opportunity is present visit personally with your elected representatives in Congress and other Government leaders.

8. Discuss tax problems among the members of your family, in your job, at your club or business conferences, to give widespread publicity to the seriousness of these problems.

9. Pray to God for guidance in helping you carry out your responsibilities as a good citizen and in furthering the work of the crusade for better government.

In this way, my friends, the world's greatest sleeping giant will be so aroused that weak politicians will tremble, constitutional government will be restored, America will command respect throughout the world, and freedom will be assured for your children.

Dr. Teller, Called Father of the H-Bomb, To Conduct Research, Lecture at Rice University

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. YARBOROUGH. Mr. President, Texans have long been proud of the exceptionally high academic standards at Rice University—formerly named Rice Institute—in Houston, Tex. Few universities in the Nation maintain the high degree of educational excellence for which Rice University is noted and respected.

Because there are so many wonderfully talented and brilliant students attending Rice, I was particularly pleased to note recently that Dr. Edward Teller, the Father of the H-Bomb and a man who has had a leading, vital role in keeping America's defenses unassailable, will conduct theoretical research at Rice University beginning next February. It is an honor and privilege for Texans to welcome this brilliant scientist, especially when his mission is to instruct our young students.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the August 14, 1960, issue of the Houston Post entitled "Dr. Teller Noted for Nuclear Achievements."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. TELLER NOTED FOR NUCLEAR ACHIEVEMENTS—"FATHER OF THE H-BOMB"

Hungarian-born Dr. Edward Teller, 52, a naturalized American since 1941, is renowned among the Nation's scientists for achievements in nuclear physics and quantum theory.

But he is known to the world at large for an idea he had about 10 years ago which is still a hush-hush Government secret to all but the comparative handful of men who made the H-bomb for the United States at that time.

Federal law prohibits the H-bomb scientists from divulging Dr. Teller's famous idea. But, whatever it was, he has since been popularly known as the "father of the H-bomb."

He received his first public credit for his H-bomb work during Atomic Energy Commission security board hearings in 1954 which resulted in denying further security clearance for Dr. J. Robert Oppenheimer, World War II Director of the Los Alamos Laboratory which produced the A-bomb.

Here's how Dr. Teller's idea was described by Dr. Hans A Bethe, professor of physics at Cornell University and a science adviser to President Eisenhower, in testimony at the Oppenheimer hearing discussing how the H-bomb was made:

"Finally there was a very brilliant discovery made by Dr. Teller. It was one of the discoveries for which you cannot plan, one of the discoveries like the discovery of the relativity theory although I don't want to compare the two in importance—but something which is a stroke of genius, which

does not occur in the normal development of ideas. But somebody has to suddenly have an inspiration. It was such an inspiration which Dr. Teller had which put the (H-bomb) program on a sound basis."

Dr. Bethe, one of the U.S. experts at the 1958 nuclear test ban negotiations with Russia and Great Britain in Geneva, has expressed himself in favor of halting all further nuclear tests if agreement can be reached with the Russians.

Dr. Oppenheimer, now director of the Institute for Advanced Studies at Princeton, in his own testimony at the hearing described Dr. Teller's contribution as a "brilliant invention."

Dr. Teller has long since disclaimed sole credit for creating the H-bomb, saying, "It took scores of brilliant highly skilled workers" to bring the bomb to reality.

A stocky, beetle-browed man with a shock of unruly black hair, Dr. Teller was born in Budapest of a well-to-do Jewish family. His first scientific studies were at the famed Institute of Technology there. At this same institute studied a number of other emigree scientists who worked on the A-bomb during World War II. He completed his education in Germany, first in Munich and later at the University of Leipzig where he received his doctor's degree in physics in 1930.

While a student in Munich in 1928, Dr. Teller fell under a streetcar and lost his right foot. The accident has not been much of a handicap. He drives his own car skillfully and is well known for the strenuous mountain hikes he has since undertaken.

After Hitler came to power in Germany, Teller left Goettingen where he was working as a research associate, taught at the University of London and later became a Rockefeller fellow in Copenhagen, studying under the great physicist, Niels Bohr.

In 1934, a year before he came to the United States, he married his childhood sweetheart, Augusta Harkanyi. They have two children, Paul 17, and Susan Wendi, 13.

Since he came to the United States in 1935, he has served with distinction at numerous universities as professor of physics. Included are George Washington University, Washington, D.C., 1935–41; University of Chicago, 1946–49, and University of California, Berkeley, from 1952 to date.

During World War II, he worked on the A-bomb project at Los Alamos and elsewhere, becoming an expert in atomic reactor technology. During the war years, however, he also managed to devote a good part of his time to exploring the possibilities of making the H-bomb as soon as the A-bomb was built so it could provide the millions of degrees of heat needed to trigger the superbomb.

He was called back to full-time duty at Los Alamos soon after the Russians exploded their first A-bomb in 1949 to work on the H-bomb. While there, in addition to his "brilliant inspiration" about the bomb, he became a leader in the campaign for the AEC to set up a second nuclear weapons laboratory.

This laboratory, now the Lawrence Radiation Laboratory at Livermore, Calif, was finally set up under the supervision of the University of California late in 1951.

This was too late to help make the H-bomb, the first being successfully exploded in the Pacific in November 1951. But in the years since, the Livermore Laboratory has made substantial contributions to the refinement of U.S. nuclear and thermonuclear weapons by tests at the Pacific and Nevada proving grounds.

Dr. Teller has been with the laboratory from the beginning along with his post as physics professor at the University of California. He served first as staff member, then associate director and was finally director of the laboratory for the past few years until he left that post and returned full time to the University of California in July.

During the past 10 years Dr. Teller has been interested in the work of detecting nuclear explosions on seismographs, when the first bomb was exploded at Eniwetok, he did not attend in person but watched the record of the tremendous blast on the seismograph at the University of California.

In cooperation with Kenneth Watson at the University of California, Dr. Teller is credited with the discovery that nuclear explosions could be set off in large underground caverns or holes with the result that the record they made on seismographs would be muffled and hard to detect.

Next February, Dr. Teller will visit Rice University through a grant of the Robert A. Welch Foundation. Through the remainder of the school year he will conduct theoretical research, advise with graduate students and give a series of special lectures for gifted undergraduate students.

Nuclear-Powered Airplane

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an article I have written which is entitled "The Story of the U.S. Atomic-Powered Plane Bungle," which appeared in See magazine, September 1960 issue:

THE STORY OF THE U.S. ATOMIC-POWERED PLANE BUNGLE

(By Congressman MELVIN PRICE)

Somewhere in the Canadian polar regions, far north of the DEW (distant early warning) line, a tired airman methodically scans a radarscope. Nothing. He logs the time on a pad at his elbow and turns his attention to the complicated control console which for a year is part of his isolated life in the Arctic. An hour passes; and another, like the many uneventful hours that have gone by and will continue to pass. Once again he focuses his attention on the radarscope and his eyes quickly pass over the fast-moving blip now appearing on the criss-cross screen.

One blip, two—three. "Blips" he suddenly exclaims to himself as the importance of his discovery registers in a quick double-take. The weary cast quickly disappears from his features, replaced by the first flush of excitement—the unknown, the reason for his isolated duty. With one hand he hits the emergency horn, alerting his four sleeping and off-duty buddies. With the other he snatches the red-painted alert phone from its cradle, a radiotelephone he only remembers using twice, and then only during secret tests. But this time he has a feeling this is not a test.

A crisp voice at the other end of the priority circuit acknowledges that a duty officer is standing by awaiting information. At North American Air Defense Headquarters in Colorado Springs, Colo., a second officer is monitoring the flashing alert circuit, awaiting the young airman's report of an unidentified aircraft. So far only a yellow alert has been sounded. Meanwhile, high-speed jet fighters are ready to scramble from any number of points in the huge area guarded round-the-clock by Norad, the joint United States-Canadian Air Defense Command.

But for the excited young airman there's more on his radarscope than just a blip indicating an off-course commercial passenger transport on its shortcut polar flight. While his crewmates are quietly moving to their battle stations in the snowbound control center, the young observer shouts into the phone the reason for his warning alert.

"Unidentified aircraft, a single, bearing * * *," and he quickly rattles off the coordinates before continuing. "Speed * * *," he pauses and inhales deeply, "* * * approximately mach 3."

"Are you sure?" the duty officer 1,500 miles south gasps and repeats, "Are you sure?"

"Bearing changing," the airman shouts into the phone's mouthpiece. "It's definitely flying at mach 3, mach 3, sir, mach 3 at least."

Less than 4 minutes have passed, but the impact of the DEW line observer's report strikes home at Norad Headquarters. An aircraft has been developed that can fly at least three times the speed of sound—faster than the mach 2 all-weather fighter-interceptors that were at that very moment scrambling fruitlessly from Norad bases in Alaska and Canada.

Only the Russians could have developed such a plane so soon. And this one, now reported skirting the entire North American defense perimeter and alerting all DEW line radar stations, has added a new threat to the security of the free world.

At Norad this high-speed bomber covering so great an area meant only one thing: The Soviet Union had developed a nuclear-powered bomber. It was another Russian first; perhaps this was the fantastic new weapon that Premier Nikita Khrushchev boasted about during his annual report to the Supreme Soviet in January 1960.

I cite this graphic illustration as more than just a remote possibility. It may not happen this year; but it could happen, and sooner than we think.

A nuclear-powered bomber lies within the realm of fact, not fancy. This is the dream plane that, in the hands of the Soviets, will give us more to think about than intercontinental-range missiles fired from Soviet bases deep inside Siberia. With nuclear-powered aircraft, the Russian Air Force could surround this Nation with a constant patrol of bombers carrying H-bombs and 1,500-mile-range missiles tipped with atomic warheads. These planes could avoid flying over friendly territory and just patrol along our borders, primed to let go at any time.

These are the unlimited-range aircraft which could blast us at close range while huge ICBM's with less accuracy came streaking in along high-altitude trajectories to devastate wide areas. This would be turnabout, a swing of the pendulum the other way.

For years Russia has complained that we have surrounded her and her satellites with air bases. For years, and at tremendous cost, we have been maintaining Strategic Air Command and other military bases in friendly nations within shooting distance of the Soviet Union, for no other purpose than to check Communist aggression. But if the Russians are first to develop a nuclear-powered plane—and they might well be—they will then be able to flank every last one of our oversea bases with planes that can remain in the air indefinitely.

If this Nation is first with a nuclear-powered aircraft, in our hands this prototype plane would ultimately become a fleet of bombers and commercial air transports. As high-speed, long-range bombers, they will dispense with the problem of forward bases and an expensive airborne alert of B–47 medium-range and B–52 intercontinental jet warplanes. We would no longer need costly tanker planes and additional ships to carry

jet fuel to oversea bases. Perhaps Air Force manpower could even be slimmed down.

All we need is the aircraft engine that will run on a few pounds of fission material. We are close to developing this engine. All that is needed is the money to carry through present research and development in the powerplant and in the aircraft to be flown by this engine. Moreover, a nuclear-powered aircraft engine would be just the beginning of things to come, for the study and development of this powerplant will ultimately lead us to the nuclear rocket engines of the future that will give our space program the boost it sorely needs.

However, at the present rate of research in the problems of nuclear-powered aircraft, the Soviets stand a good chance of flying one first. Russia is pressing ahead with the development of its own nuclear-powered aircraft. There is no doubt in my mind that the first nation to achieve actual nuclear-powered flight will reap an enormous psychological propaganda victory no less important than a military advance. We lost on sputnik. And with that loss went much of the world's confidence in American scientific capabilities. We cannot afford another such loss without risking the gravest of consequences.

Now it's time that the truth is made public about our nuclear-powered aircraft program. These are the facts:

Farsighted military planners as long ago as 1944 began thinking of nuclear-powered aircraft.

Actual research was started in May 1946.

An airborne nuclear reactor was carried aloft in a B–36 in several flight tests back in 1956. However, this reactor was used to test the effect of radiation on air crews rather than to provide an engine for the purpose of flight propulsion.

"We could have had a plane flying on nuclear power in 1957," Maj. Gen. Donald J. Keirn, recently retired head of the Air Force project working on the problems of developing this aircraft, declared time and again. "We could have had it before the Russians put up their first sputnik."

We have the technical know-how to build a nuclear-powered prototype plane, but the administration's budget planners won't authorize the necessary funds.

No matter what the military experience of our top civilian decisionmakers, this is how one man in uniform looks upon the dream plane of the future. According to Lt. Gen. Roscoe C. Wilson, Air Force Deputy Chief of Staff for Development, "the essentially unlimited range of nuclear-propelled manned aircraft can be translated into distance, endurance, or both.

"The impact on operations is significant in several areas. Unlimited range permits zone-of-the-interior (continental United States) basing without the burdens imposed by tanker-aircraft inventories or overseas-base logistics, defenses, and political considerations. Routes of approach to mission areas are no longer restricted. Operational commanders are free to choose inbound and outbound routes of varying tracks around the globe. The possibility of missions of several days' duration permits the effective utilization of as high as 50 percent of the force on air alert.

"Strategically placed around a sensitive area, the airborne alert would be invulnerable to attack and in its close proximity to the enemy heartland would constitute an ominous deterrent. Effective stationing of the air alert forces would provide omnidirectional penetration routes which would tax the enemy defense effort severely, forcing him to defend his entire perimeter in strength. The use of the manned nuclear bomber in a high-endurance weapons system on air alert permits flexible and positive timing, control, and target assignment."

In other words, the nuclear-powered bomber in our hands is a positive deterrent which, on the one hand, will by its very nature save us the expenditure we dispense today to maintain costly oversea bases. On the other hand, this plane will force the enemy to expend more of his resources to counter the threat of the unlimited range bomber powered by the atom.

Few people realize that we have the knowledgeable scientific and technical manpower to build the first prototype nuclear-powered jet engine and aircraft. The Air Force recognized this problem years ago and established an intensive training program for officers and civilians in the nuclear energy field.

Since the ANP (aircraft nuclear propulsion) program began in 1946, a total of $880 million has been parsimoniously parceled out. During the past 10 years $700 million was authorized for an air-breathing ramjet missile called Navaho, a project that was canceled before this weapon even reached the combat readiness stage. The Navy received $440 million for jet propelled Seamaster seaplanes. Sixteen were built. Two cracked up in tests and the remainder were consigned to the scrap heap.

Only a portion of this billion dollar-plus sum was needed along with the right priorities, and America's atomic-powered plane would have been flying long ago. If the administration had given the go-ahead as quickly as it had ordered the Atlas ICBM crash program in October 1954, our first prototype nuclear-powered plane would have flown in 1957. According to General Keirn, the Soviets may have a prototype atomic-powered plane in the air within the next year. Twelve months ago he told our committee that the Russians might have one in 2 years. Time seems to be running out.

Men like former Secretary of Defense Charles Wilson wanted no part of the ANP program. He described the plane we need as a "Shitepoke," a big clumsy bird, all bones and feathers, and not worth a hang for either eating or flying. "It'd be a big lumber wagon of an airplane, too slow," he declared. And I agree. But it would have given us the chance to iron out the bugs so that within 2 or 3 years we might have had the high-speed nonstop aircraft we want before the Russians develop theirs.

Nor was President Eisenhower of any help to the ANP program last year. "There is no usefulness that anyone can possibly see from such a plane," he declared at one of his early 1959 news conferences. "There is no use going into a field where the whole purpose would be to get a plane a few hundred feet off the ground." As a military man, the President wants a militarily useful plane. He doesn't realize that the prototype will be useful and that progress will be rapid after that. We shouldn't be concerned only with military applications, but with commercial applications and the progress of aviation as a whole.

While our country has been doing virtually nothing in the ANP program, the Russians have been reportedly flying a prototype bomber. Almost 2 years ago one of our weekly aviation periodicals reported that just such a plane had been observed flying in the Moscow area. The description of this plane fitted that of a nuclear-powered aircraft. Although I wouldn't go so far as to say that the Soviets are actually flying such a plane powered by a nuclear reactor. I would, however, base credence on reports that a plane has been seen flying in Russia which appears to be a prototype of the atomic-powered plane. It also appears that this airframe was on a shakedown flight. It hasn't been seen since these tests.

We know exactly what problems are faced in designing just such a plane. The Soviets have to overcome these problems, too. Theirs certainly is an all-out effort to do so. I know. I've seen Soviet science in action. The Soviet Union sent its third rocket speeding toward the moon on the day I departed Moscow after my second visit to the U.S.S.R. in 2 years. On October 6, 1957, I had arrived in the Russian capital to find a people jubilant over the success of the first sputnik, which had been launched 2 days before. In the meantime they have scored a direct hit on the moon with Lunik II.

It isn't so important what I found in the Soviet Union in the brief visits, as it is in what I found in the United States in October 1957 and what has happened since. It is better to appraise our own efforts than it is to guess at the efforts of the Soviet Union. There was a sense of urgency in our country in the fall of 1957. It quickly died away. There appears to be a permanent sense of urgency in the Soviet Union in matters pertaining to scientific and technological achievements—there is no indication they will rest on the laurels of sputniks, mechtas, or luniks.

There is every indication they are seeking laurels in the field of nuclear-powered aircraft.

I have seen firsthand the aggressive, unrelenting pressure that Soviet scientists are applying in the struggle for world supremacy. In the scientific fields, unlike in our country, this pressure is consistent and does not fluctuate with the international political barometer.

The Soviet successes undoubtedly are attributed to a priority approach—missing in our ANP program—which marshals together and makes maximum use of their existing and ever-increasing manpower and material resources. Their achievements in space effectively demonstrate the value of this approach. Through these spectacular accomplishments the Soviets have in a few years bridged the gap between the United States and the U.S.S.R. in those scientific and technical fields which are directly related to our Nation's survival. Moreover, the Soviets have reaped a political and psychological windfall by the calculated timing and exploitation of their individual successes.

I've seen what they can do in terms of atomic power research. Soviet installations for peaceful atomic development which I visited lacked the niceties and extra conveniences of many of the laboratories I have visited in the United States. The outside of the buildings are drab and are frequently in need of replastering or repainting. But once inside, where equipment, computers and other hardware are located, it's a different story. Spotless control rooms which give the impression of sterile operating rooms, mazes of intricate wiring, layers of well organized equipment bulging out of each room, all contributed to a feeling that the emphasis is more on substance—on what's done—than on appearance.

But the one thing that hit hardest is the sense of urgency and the controlled aggressiveness of the Soviet scientists who are in charge of these installations.

When I first visited Dubna in October, 1957 the Russians proudly displayed the world's largest synchrophasotron. It was going through a series of test runs. Subsequently stories reached us of the difficulties they were encountering in operating the machine. When I visited Dubna again last year, I found that the problems, such as focusing the beam inside the chamber, had been solved and the machine was functioning within expectations. Twelve Soviet bloc nations participate in the operation of the Dubna center, which corresponds to our Argonne Laboratory. They contribute on a percentage basis both brains and finances to

the institution, although the major financing comes from the Soviet Union.

This then is an illustration of how the Russians methodically go about organizing a solution to a scientific-technical problem. They are probably tackling the nuclear-powered aircraft problem in the same way.

Another place I visited is the Physical Technical Institute at Leningrad established in 1919. Russian scientists began serious research in nuclear physics in 1939. A short time thereafter they had in operation a small cyclotron. Many of Russia's most prominent scientists did their research at this institution, and today the institute lays claim to world leadership in solid physics research. More than 300 scientists out of a total working force of 2,100 work in the most crowded conditions imaginable, but look forward to the completion of a new and more adequate building now under construction.

Does this sound like a nation that's sitting still in the field of aircraft nuclear propulsion?

While the Russians are working toward this "dream" plane, we in Congress have been battling for more money to get the ANP program off the ground. We could cut corners in terms of time if we do something about it—if we would only stop to realize that the Soviets do not have any more scientific knowledge or better technology than in our country.

Time is important. If we have the determination to be the first to fly an atomic-powered plane, we may still beat the Russians. But it will take some doing, and it may take another 3 to 5 years. But even this is time saved if we can utilize an airframe that is presently on the drawing boards. This is the B–70 Valkyrie, a mach 3 bomber powered by chemically fueled jet engines. This plane is sufficiently large enough and designed to take on nuclear reactor engines.

But the administration has seen fit to practically scrap the B–70 program in its 1961 budget. The only provision made is for the construction of two B–70 airframes. Nothing is provided for the development of the complex bombing, navigation, armament, and other equipment that will be required.

The B–70, originally a top secret conception of a breakthrough in the history of aircraft development, for years was referred to as weapons system 110A. In the words of Dr. Hugh L. Dryden, at the time Director of the now scrapped National Advisory Committee for Aeronautics, it was in 1957 that "a strange and wonderful thing happened."

"It was as if the pieces of a jigsaw puzzle began falling into place," he reported to the House Appropriations Committee in February 1958. "Almost simultaneously research programs that had been under way at the NACA Labs in Virginia, California, and Ohio began to pay off. The result—this is an oversimplification, but not an overstatement—was that the companies and the Air Force suddenly realized it would not be much harder to design a long-range bomber that could fly its whole mission supersonic than design one that would fly subsonic most of the way, and only a fraction of the flight supersonic. Not only that, but the top speed of the prospective bomber was raised to mach 3—about 2,000 miles per hour."

The Valkyrie—named after the beautiful maidens in Norse mythology who galloped through the heavens on their chargers, choosing those who were to die in battle and bearing these fallen heroes back to Valhalla—to many aircraft designers has the lines of a beautiful woman. Into its construction will go titanium, stainless steel, and nickel-base alloy for a top weight of 250 tons at takeoff. That's about the same as a B–52 intercontinental range bomber now in the SAC inventory. Built into the B–70 performance is a landing speed slower than that of an F–100 super Sabre (now obsolete) with a range and speed to take it around the world in less than 12 hours. Traveling at mach 3, a B–70 crew could eat their breakfasts in New York at 8 o'clock, take off, and arrive in Los Angeles an hour and a half "before" they ate. The B–70 flying west at mach 3, at altitudes of over 70,000 feet or along the deck, could show its crew a sunset in the east or bring the moon back up once it had set in the west.

This is the plane that the experts acknowledge could be the testbed for a nuclear-powered jet engine. However, I'm not suggesting that it be used strictly for the ANP program. It was designed as a bomber and should be developed as such, and in the numbers needed. But it has the design that's also required by the nuclear scientists working on the atomic-powered engine. If we can build the B–70 within the next 3 years, perhaps we'll edge the Soviets by taking to the sky first in a nuclear-powered plane.

I have a letter in my files, more than a year old, written by a scientist who is now spending his 9th year working in the ANP project. He is an industrial manager in the program to develop a nuclear powerplant for a military aircraft. I believe that what this man had to say early last year is still important today. I think his statement is important. It was originally written to President Eisenhower, who angrily answered critics a few months ago in the same "parochial" terms in which he accused them of thinking. In referring to the Nation's defenses he said: "I've spent my life in this and I know more about it than almost anybody * * * because I have given my life to it." It accurately reflects the overriding conviction of our technical people in the field—the people about whose scientific and technical problems nonscientists like the President know little—that this nuclear plane project has got to move forward more vigorously if we are to meet vital needs of national defense.

Speaking for his fellow scientists and engineers out on the firing line—the people who are actually bending the hardware—he had this to say about the present state of technology in the project:

"The powerplant development work is now at a stage where it is ready to proceed at a faster pace. It is true that some solutions in detail (as opposed to feasibility) are required—but these are the reasons why the development is necessary in the first place. Today's situation on the nuclear aircraft program is similar to that which prevailed on the missile programs 3 to 5 years ago. At that time, development work was accelerated on propulsion and guidance aspects of the work; today, we are just beginning to see signs that we will have operational missile systems over the next 2 to 4 years. The same situation can prevail for nuclear aircraft.

"Let's face it. Nuclear powered aircrafts are inevitable. The sooner we get about really facing up to the job in total—including an airframe—the sooner they are going to be a valuable weapon in our arsenal."

The nuclear plane can solve a great many of the problems that crop up in the headlines time and again under Washington datelines. From the military point of view, this is what the nuclear plane can do for this Nation:

It can give us the constant airborne alert that the administration says we cannot now afford. This is the CAMAL (continuously airborne missile-launching and low-level penetrating) weapons system to oppose the Russians. We have the missiles and the military knowhow. The only thing lacking is the nuclear-fueled airplanes to carry the missiles and the H-bombs.

We can do away with most—if not all—of our SAC oversea bases at great national savings and put this money into the development of more and better atom-powered planes for civilian as well as military use. Over a period of time the nuclear bomber flown from bases in this country can save several billion dollars that we ordinarily would sink into SAC bases overseas.

The nuclear bomber would fit well into the present mix of forces. This plane can perform in areas where missiles can't. ICBM'S and IRBM's can hit targets of known importance and location. They do however suffer on two counts—one being worked on, the other out of reach. First, missiles have to possess sufficient protection (underground silos or antimissile missiles) against attack, or quick reaction time to get off the ground before the enemy missiles find their mark. These problems are being worked out.

Secondly, missiles are only able to hit targets of known location and importance. They cannot hit targets of highest priority; namely, those which the enemy has built up, such as troop concentrations dispersed over a wide area, supplies, submarine fleets and so forth. These forces and targets can only be predicted by detailed last-minute intelligence information, the type of intelligence and information which is hard for us to come by. Since missiles cannot act as human eyes and minds, they cannot be recalled once launched nor can they report back what they see or decide when, where, and how to strike.

We need a scientific breakthrough in the area of nuclear aircraft propulsion to bolster our falling prestige stock overseas—and even here at home.

This Nation does not lack scientific know-how to build just such an aircraft. It takes a change of attitude and determination on the part of the administration to give us this plane we sorely need.

The development of a nuclear powerplant will lead to a breakthrough in nuclear-powered rockets for space flight, and longer range missiles for defense and deterrence.

Finally, the development of this atomic powerplant will ultimately filter down to the commercial aviation industry just as military jet fighters and bombers within a matter of years were translated into our present airline jet transports.

This is the background to the problem, and the problem itself. Since 1944, when Army Air Force planners first looked into the feasibility of a nuclear powerplant, 16 years have passed us by. Fourteen years have gone by since we actually began studying the problem technically. Four years have gone by since we flew a reactor in a B–36. One year has gone by since we unveiled plans for a mach 3 supersonic bomber that can serve as a testbed for nuclear propulsion jet engines. How much more time must go by before the Soviets beat us again with their own prototype atomic plane?

It's evident from this brief history that the ANP program has been beset by a multitude of problems since its inception. In my opinion these problems have not been so much a question of technical progress, which has in general been good, but rather involve the problems of ill-defined objectives and administrative indecision. Despite constant prodding over the years, these roadblocks have had a tendency to linger on—to the detriment of all. Particularly vexing after my 13 long years studying and working for the success of this program, is the fact that the ANP project still has no firm target date for the first flight. Moreover, our scientists and engineers in the field still don't know where they stand as to the future prospects for the program. This latter factor has for some time been a bad morale problem in the field, as can be well imagined.

But beyond this, I have had the feeling all along that there has been considerable confusion over this question of so-called military usefulness of the nuclear plane. It's high time we nail down, once and for all,

what is meant by "usefulness" and get on with the job.

From my own point of view, and that of the working engineers in the field, the most useful thing we can do at this point is to test out the propulsion system in actual flight as soon as possible. The engineers in the ANP project claim that the present B–52 can even be converted as a test bed for a nuclear jet engine. Moreover, no one has ever pretended that this first flight would involve a full operational military aircraft. Far from it, this first flight, in line with historical precedent, would be a distinctly limited affair aimed specifically at providing information which is vital to subsequent development of a fully operational aircraft. It is my understanding that we are in fact technically ready to proceed with this limited first flight; and further delay will only put off the time when we reach a fully operational capability.

There is some indication that this concept is finally percolating through to those who have responsibility for making this decision on a flight program—I only hope we're not too late.

Royal Canadian Air Force Base in Northern Alberta

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, August 26, 1960

Mr. KEFAUVER. Mr. President, our neighbor, Canada, is making a great and vital contribution to the defense of the Western Hemisphere. Working hand in hand with engineers from our own Nation, the Royal Canadian Air Force has established one of the largest bases in the world in northern Alberta. An article telling of this outstanding work appears in the current issue of the Police Gazette. I believe it is in the interest of all of us to read about this development. I ask unanimous consent that the article from the Gazette be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Thanks to the Royal Canadian Air Force, America now has a powerful outpost next door to the Soviet Union.

Hidden in the dense shrub and brush of the remote wilderness in Alberta, Canada, is Cold Lake Airbase, the world's most fabulous military establishment. Embracing 4,400 square miles, it is four times larger than the State of Rhode Island (1,058 square miles), and is the most potent weapon the Allies now have to answer a Soviet attack. From push button control centers, hundreds of guided missiles can be showered on the enemy within minutes.

But the strategic importance of this airbase, built by the Royal Canadian Air Force and also used by the USAF Strategic Air Command, is not only in its technological miracles; but the fact that its terrain, climate and atmospheric conditions are the same as in the Soviet Union. Here, airmen can be trained and planes and materials tested under conditions that would prevail if the cold war turns hot.

Cold Lake is situated in an area closely connected with Canada's early history. A considerable number of Indians, particularly of the Chippewayan Tribe, live in the area, and there are two Indian reservations on the shores of Cold Lake itself.

In sharp contrast to the underdeveloped area in which it is located, Cold Lake Airbase is a showplace of modern technology. Where coyotes recently roamed, hangars now stand, and jack pine and spruce have given way to one of the largest and most modern communities in northern Alberta. Two thousand service personnel and their dependents, plus civilian employees, bring the total population to about 5,000.

One of the most active subdivisions at Cold Lake is the Central Experimental and Proving Establishment at Primrose Lake, where rockets are tested.

At Primrose Lake, modern and rustic buildings stand side by side in a clearing in the wilderness. Steel buildings, with tiled floors, electricity and showers, rub shoulders with log cabins and clapboards huts. The intrusion of civilization, however, seems to have had little effect on the wildlife of the area. In addition to the countless gulls, loons and ducks that haunt the lake, moose and bear amble imperturbably along its shores. Before the lake became so heavily populated, bears used to break into the camp's refrigerators.

Near the base camp is a rough road leading to the summit of a hill, known locally as "Mud Mountain." Here an 80-foot tower gives an unrestricted view of the test area and incidentally, a panoramic view of the surrounding wilderness. At specific locations along the shores of the lake are a number of instrumentation stations. These States, consisting of a tower and theodolite, are the functional part of the rocket testing system. These theodolites are used for optical tracking of rockets and guided missiles, but with such added improvements as an electrically controlled swiveling device, a 24-power telescope, and a synchronized movie camera. The power of the cameras is such that a picture taken of a plane flying at 30,000 feet clearly shows the aircraft's pilot tube.

Eventually, Cold Lake Airbase may become one of the most populated military camps in the world. Its facilities can be extended to accommodate a population that any extension requires.

Until the early 1950's an airbase so strategically situated to cope with a potential enemy, was an impossibility. The engineering problem was how to overcome the extreme cold winter temperatures, which run as low as 60° below zero. Maintaining aircraft at these cold temperatures requires a steady supply of fuel at the base. Even the oil in the pipelines freezes.

But this obstacle was finally overcome when the Canadian Department of National Defense discovered vast resources of natural gas 20 miles away. A number of American stockholders and Andy McNaughton, who was at one time the chief test pilot of the Royal Canadian Air Force, formed the Cold Lake Pipe Line Co., Ltd., and soon started feeding the natural gas for heating to the Cold Lake base. With this obstacle licked the entire area of northern Alberta can now be developed industrially.

In 1954, the massive hangars were completed and gradually a fantastic "city" in the wilderness sprang up, complete with hospitals, schools, homes, and laboratories.

The development of the Cold Lake Airbase is a tribute to the ingenuity of both American and Canadian engineers. The base, which is the "showplace" of the RCAF, stands as a powerful deterrent to any Soviet military plans, since it can put an umbrella of missiles over the U.S.S.R. within a minute's notice.

In Defense of Abolishing Capital Punishment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Somner Forbes as it appeared in the Connecticut Daily Campus:

IN DEFENSE OF ABOLISHING CAPITAL PUNISHMENT

(By Somner Forbes)

"Hatred does not cease by hatred at any time; hatred ceases by love."—Siddhartha Gautama (the Buddha).

In the movies, on television, and in magazines, the fitting end to a crime story, especially one involving murder, is the death of the malefactor. The viewer or reader is supposed to get the impression that everything has ended happily. There are but a few exceptions to this pattern, where the culprit's death is tragic; the movie "I Want To Live" and the French picture "Rififi" are two of these. Rififi portrays the criminals with their loves and loyalties as well as their lawlessness, rather than as worthless, evil scoundrels as do most crime stories. This concept that criminals are wholly evil and deserve no mercy carries over into actual life; to know this one only has to see the public's behavior in a big capital case such as that of the teenage youths who killed Michael Farmer, or the famous Leopold-Loeb case, at which a bailiff's arm is broken in a courtroom riot the first day. In both these cases the defendants were not executed; in the former because of the youth of the boys; in the latter, because of Clarence Darrow's moving appeal for sanity and mercy. Not so fortunate were four of the eight anarchists who in 1886 were convicted and sentenced in connection with a bomb explosion at one of their gatherings in Haymarket Square, Chicago. The four were sentenced to death and hanged, the others receiving lesser sentences. A few years later Gov. John P. Altgeld pardoned these remaining four on the grounds that the trial was unfairly influenced by public pressure. Even though this was several years after the trial the Governor lost much favor with the people, who maliciously named him John "Pardon" Altgeld. Today many people are exerting pressure to have Carryl Chessman dispatched; even to the extent of trying to impeach Governor Brown.

REVENGE MOTIVE

The people who exert this pressure offer many reasons for their behavior. The most common arguments are those of revenge such as: "Show him the same mercy he showed his victim"; or the absurd "You worry about the criminal; but not about the corpse." This argument fails to take into account the fact that the death of the culprit does the corpse no good at all. The most absurd of all is the quotation: "an eye for an eye and a tooth for a tooth." This quotation from the Bible is assumed to carry great weight; however, it is really from Matthew, verse 38, where Jesus repeats the Mosaic concept of retaliation in kind, but it is probably the only source of knowledge of this law which these people have. (The actual passages Jesus refers to in the Old Testament omit the articles.)

It would not be fair to say that all proponents of the death penalty offer cries for

revenge or quote the Bible out of context, perverting the meaning of the passage entirely, for many offer constructive reasons for the retention of execution. These include reference to its values as a deterrent and as a better alternative than life imprisonment. Upon the examination of statistics and incidents which reveal something of the nature of criminals we find the deterrent value of capital punishment to be overrated. Statistics for five European countries, Holland, Denmark, Norway, Sweden, and Switzerland, all of which have abolished capital punishment; the crime rate has declined except for a slight increase in Sweden from 1921 to 1935. In the United States, the abolitionist states have had a somewhat lower murder rate than the average. To be fair one has to note that the social conditions are often better in these abolitionist nations and States than those that retain execution. It does indicate, however, that the general public will not regard suspension of executions as the beginning of open season on humans or that man-hide furniture will become the latest fashion for the den. On the other hand, it appears to be a partial denial of the deterrent value of the penalty by its supporters when they forbid public execution, which should, according to their reasoning, fill the crowds with the fear of the wages of sin; actually even executioners indulge in murder, who see executions often and see many of them. The ineffectiveness of capital punishment is further evidenced in the annals of English crime. In the old days when no nonsense was taken from anyone, and people were hanged for stealing food when starving and for picking pockets, shop lifting by starving children was common, and the public hangings proved very profitable hunting grounds for pickpockets. Other people regarded the occasion as an excellent opportunity to dispose of some undesirable relatives. Since its discontinuance in the case of petty crime, and attendant improvements in social conditions, crime of all kinds has declined; the starving child having become almost extinct. In a recent Florida rape case these interesting facts were revealed: in the records of Florida crime there are 30 cases of Negroes who were convicted and executed for rape, usually of whites; on the other hand, in spite of the tendency of the Florida courts to be lenient in these cases, there have only been four such cases of whites attacking Negroes in that State. This seems to demonstrate not only the lack of deterrence in State-killing, but also the importance of social conditions as a determining factor in crime.

NONHUMANITY

Many people say that capital punishment is the less costly and more humane alternative to life imprisonment. The cost of building and maintaining a death house for the relatively few that are executed actually exceeds that of maintaining these people in prison for life. As for humanity of the death penalty, people point out that life in prison is a dreary, dull one of abject despair. This is largely true, though there is always hope of a pardon. These factors however cannot equal the terrors of the death house, where one sits counting his last days; waking up at night and realizing that in a month he will be rotting quietly in his coffin; one day discovering it to be the last Thursday of his life; knowing that in 24 hours he will be entering the death chamber. In Sing-Sing Prison one is lead on Thursday morning to the last minute cell after taking his last shower. That night he receives his last meal; almost always a splendid affair for which he has no appetite; knowing that before it is digested he will be a corpse. Most people feel that when the victim is strapped down and the current turned on that his sorrows are over. In this there is some debate; while some people feel that a good electrocution is painless, the French scientist L. G. V. Rota disagrees, saying that "* * * Death inevitably supervenes, but it may be very long and above all excruciating painful * * * no one killed by electrocution dies instantly, no matter how weak the subject may be." When the current is turned on, the subject convulses violently as the muscles contract simultaneously; the face turns crimson and sometimes the scalp smolders at the point of contact; all rather unpleasant if the vicitim is still conscious. In the case of guillotined malefactors, studies have shown such evidence of consciousness as contortions and apparent attempts to speak made by the severed head. There is no assurance that the pain centers are inactive in these instances. If this is true of beheating it must certainly be true in a well-executed hanging in which the atlas and the axis (the first and second vertebrae) are dislocated; in a mismanaged hanging where the victim is beheaded or strangled, the suffering is increased. The gas chamber is said to bring no physical pain, but it must be rather terrifying to be sealed into a room in which the deadly fumes rise slowly toward one's nostrils.

LATER INNOCENCE

There is even a more important reason than being merciful to the guilty, why we should abolish capital punishment, and more important than the ending of a useless tradition of barbarous ritual. That is providing for the pardon of the victim on the subsequent discovery of his innocence. Aside from the Chicago anarchists heretofore mentioned there is the case of Sacco and Vanzetti, who after 7 long years of legal wrangling were finally executed in Massachusetts in 1927. They are now believed to be innocent, and the trial unfair and biased. Another case is that of the Englishman, Timothy Evans, who was hanged in 1950 for the murder of a woman, I believe his wife. In 1953 the woman's body was found in the walls of another man's apartment. Some will say that these cases are rare and need not cause much worry; in this case murder is no problem either, because it is less common relatively than judical miscarriage. Other miscarriages might be discovered were it not for the reluctance of the courts to review such cases. The pardoning after the revival of these prisoners has many formidable difficulties, as reviving a corpse requires the service of a saint or a magician whose services would be hard to obtain and whose powers would be questionable, to say the least.

The abolition of capital punishment will be a major step toward love, humanity, justice, and sanity. Though there will still be many problems to be solved concerning society and criminals, the abolition of State-killing will help end the concept of justice as revenge and as purging "the innocent blood." We will be following the true spirit of the Biblical passage "an eye for an eye and a tooth for a tooth" where the Nazarene pleads for love. We will have begun to recognize, as did the Buddha, that "Hatred does not cease at any time by hatred; hatred ceases by love." This is an eternal law.

Foreign Aid for the Congo

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 26, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article written by David Lawrence with respect to the $100 million in foreign aid funds for the Congo.

I am in complete accord with what Mr. Lawrence says.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY SHOULD UNITED STATES SUBSIDIZE CONGO SAVAGERY?

(By David Lawrence)

WASHINGTON.—An amazing item came over the news ticker this week. It read in part as follows:

"The State Department asked Congress today for an extra $100 million in foreign aid funds to help the violence-torn Congo and possibly other new African nations."

Not many days ago the troops of the Congo Government which is to be given American taxpayers' money committed one of the worst atrocities in human history—brutal attacks on white residents, with wholesale beatings of the men, mistreatment of the children, and rape of the women, including at least two American missionaries.

Yet the Prime Minister of the Congo Government has called it all a "lie," and not a word of regret or apology has come from the very government whose troops were guilty of the atrocities—and whose same troops now would be supported with money furnished by the taxpayers of America.

The U.S. Ambassador in Leopoldville reported the facts at the time, and a commission of inquiry created on July 16 by the Belgian Government has just issued a preliminary report that documents case after case. The commission is composed entirely of high judges of Belgian courts and is not under control of the Government. Its report deals only with cases "among those which the commission can retain as established and proved as of now," but presents what it calls "often painful details" of the rapings of well over 100 women, including a number of nuns, most of whom were savagely assaulted not once but over and over again. The commission points out that the press has reported that 291 Belgian women have testified to such treatment.

No word of public condemnation, however, has come from the Department of State addressed to the Congo Government itself or to the press, expressing American disapproval of what has happened. Not so many months ago the same Department of State, however, was quick to interfere in the internal affairs of the Government of the Union of South Africa by issuing a statement condemning outnumbered police because they fired at a mob of several thousand that threatened them. Surely this is a precedent for public expression now about the horrors in the Congo, though there are plenty of precedents in international law, anyway, which say a government may at any time express opinions and take action when the lives and property of its citizens have been impaired.

The United Nations itself is subject to severe criticism for having failed to recognize the right of the Belgian troops to remain in the Congo to protect the lives and property of Belgian subjects and to secure redress for grievances suffered by them. Since the United Nations has taken over instead, then it is the duty of that organization, morally at least, to obtain redress. Yet, so far as anyone knows, the U.N. Secretary General has done nothing to require the Congo government to administer punishment to those troops guilty of rape. So far as the U.N. is concerned, the atrocities have been ignored—as if they had not occurred.

It may be wondered what possible good can be served by giving money to an irresponsible government which has not yet

shown its capacity to honor its obligations to all foreign residents. The State Department insists that the extra $100 million is needed "to restore some of the fundamental conditions that will permit a more normal life to be resumed." But how can a capacity to govern be suddenly acquired by a people hardly emerged from savagery? How can there be any respect for the lives and properties of foreigners in the future if the United States now overlooks the misdeeds of the Congo Government and turns around and gives it money?

But American taxpayers who are expected to foot the bill can still have recourse to their own Congress and insist that not a penny be appropriated to the new Congo Government until satisfactory action has been taken not only to punish the wrongdoers but to safeguard foreigners against similar attacks in the future.

The argument will be made that, if the United States doesn't help with money now, the Soviet Union will. But the truth is that the Communists have their agents in the Congo already and have played no small part in egging on the terrorists so as to create more and more complex problems for the countries of the West. Unless the Congo government is willing to exterminate the Communist intriguers and stop trying to blackmail the West by attempting to play off Moscow against Washington, there is little justification for pouring American taxpayers' money down the drain in the Congo.

Hotel Mayflower's Mack Finds Chance Career Perpetually Interesting

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article from the Evening Star, Washington, D.C., of Wednesday, August 17, 1960, the subject of the article being Mr. Corneal J. Mack, general manager of the Mayflower Hotel, Washington, D.C. Mr. Speaker, Mr. Mack was born and reared in my hometown of Wilkes-Barre, Pa., and it has been my distinct pleasure to know him and the other members of his family for many years. In fact, when I first came to Congress back in the midforties I made my residence at the Mayflower Hotel and during that period I had the opportunity of resuming my close friendship and association with the distinguished general manager of that hotel, Mr. Mack. It has been a cherished association and we in my congressional district are indeed most proud of the outstanding career that Corneal Mack has carved in the hotel business here in Washington and, in fact, the fine reputation which he has in the industry throughout the Nation.

The article follows:

TALKING OF BUSINESS—MAYFLOWER'S MACK FINDS CHANCE CAREER PERPETUALLY INTERESTING

(By William MacDougall)

The guests were hopping mad and hopping barefoot that day in 1925.

And the management of the newly opened Mayflower Hotel was temporarily at a loss.

Corneal J. Mack, then a bookkeeper at the hotel, remembers the incident well.

"It was our first big convention, the International Parliamentary Union," he explained, "and most of the members were foreigners.

"True to their custom, they had gone to bed the night before after putting their shoes in the hall to be shined—as they do in Europe.

"But our help then was inexperienced, and not knowing quite what to do, collected the shoes in a laundry bag. When we found out what had happened, we notified the guests, spread out the shoes on the ballroom floor and let them come down and collect them."

TIME FOR JOKE

The Mayflower can tell that joke on itself because in succeeding years the hotel has successfully entertained kings, prime ministers, and presidents. Its 800 employees—9 of whom have worked there since the opening—speak 19 languages, and one caterer alone speaks 5.

Last year 100,000 persons spent an average of 2½ nights each at the hotel, which is unofficially reported to have recorded a volume in 1959 of about $7 million. The business is owned by the Hotel Corp. of America., a Boston-based concern.

In testimony to the reputation of the Mayflower's management, the 5,000-member American Hotel Association is slated this fall to elect Mr. Mack to its presidency.

The Mayflower's general manager since 1941, Mr. Mack is one of the Nation's most seasoned veterans of the business. He has provided baked Alaska for Soviet Premier Khrushchev, a rocking chair for Cecil B. De Mille, and a gold punchbowl for the White House—but wisely keeps his hands off public politicking.

CAREER BY ACCIDENT

A Wilkes-Barre (Pa.) boy who came to the Capital in World War I to work for the Government, he entered hotelwork almost by accident.

"I was walking up the street one day," he recalled, "when I passed the hiring office for the hotel before it was opened. I remembered that the treasurer had worked for the same agency I did, and I walked in to see him.

"'What do you know about the hotel business?' he asked.

"'Nothing,' I said.

"'Fine, we won't have to break you in again,' he said, and I was hired."

Mr. Mack has never regretted that impulse.

"It is a life that is always interesting," he said. "You're in on the planning for state dinners, debutante balls, and wedding parties for every sort of person there is."

Some of those persons, who have either stayed or eaten at the hotel, have included President de Gaulle of France, the King and Queen of Thailand, Premier Lumumba of the Congo, the Prime Minister of Italy, the Prime Minister of Japan, Chancellor Adenauer of Germany, former King Peter of Yugoslavia, Emperor Selassie of Ethiopia, the Shah of Iran, and Sir Winston Churchill.

ROOSEVELTS GUESTS

President and Mrs. Roosevelt stayed at the Mayflower for 3 months before inauguration in 1933, and two former Presidents, Herbert Hoover and Harry Truman, are frequent callers at the hotel.

President Truman, incidentally, was asked to autograph a guestbook in the Presidential Dining Room one day. His name and occupation are still on view there. He wrote:

"Harry S. Truman. Retired farmer."

Unlike many hotel executives, Mr. Mack prefers to live some distance from the premises. He has a home in Bay Ridge, Md., where he spends much of the summer months just taking it easy on his hours off duty.

"I'm a member of the Annapolis Yacht Club," he noted, "and the only member who doesn't have a yacht."

He is frequently mistaken for his twin brother, Joseph A. Mack, an employee of the Commerce Department.

There is no mistaking the hotelman's interest in civic affairs, however. He has served as president of such organizations as the Cosmopolitan Club, the Merrick Boys Club, and the Friendly Sons of St. Patrick, and as a director of the Metropolitan Washington Board of Trade, the Red Cross, the Tuberculosis Association, and the Boy Scouts of America.

He is also a member of the John Carroll Society, the Columbia Country Club, the Alfalfa Club, and the Tavern Club.

An innkeeper immensely proud of this interesting institution he heads, Mr. Mack is glad he took that walk 35 years ago.

"If I had to do it over again," he said, "you can be sure I'd do it about the same way."

The Crisis on the Commuter Railroads—No. 12

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. IRWIN. Mr. Speaker, in an effort to cope with immediate commuter system problems, the State of New Jersey has adopted a stopgap plan which is expected to both halt further curtailment of commuter services while also improving the commuter systems. It is described as an initial step toward a long-range program, shortly to be disclosed, which would aim at development of an expanded rapid-transit system, which would, in turn, alleviate highway congestion and provide efficient, adequate and safe commuter service. Details of the New Jersey stopgap plan are described in an article published in the New York Times on August 22. The article, in addition, relates the plan to the entire New York metropolitan region commuter system and traffic situations and thereby points up the critical need for relief in other sections of the city's metropolitan area as well as New Jersey. As an addition to the series of articles I am including in the RECORD to help bring recognition to the commuter system problems of our Nation's urban areas and under permission previously granted, I include the article:

BREAKTHROUGH ON RAILS—JERSEY HAILS AID PACTS AS FIRST STEP TO EXPANDED RAPID-TRANSIT SYSTEM

(By George Cable Wright)

TRENTON, August 21.—The spotlight of public hearings was turned last week on subsidy contracts being drawn between New Jersey and eight of its nine commuter rail lines. The hearings posed these perennial questions in a new context: Why is continued rail passenger service important to the social and economic life of the metropolitan area? Are the residents of the area willing to underwrite the deficits that seem sure as long as rail transport is to be sustained? If not, who will underwrite them?

New Jersey's public hearings seemed to emphasize these things:

Adequate rail service for the New Jersey-New York commuter will be available for another year and perhaps far longer.

Much can be accomplished with only $6 million toward meeting the critical metropolitan transit situation.

The contract approach is more acceptable to the hard-pressed carriers than any yet devised in the New York, Boston or Philadelphia region.

A FIRST IN RAIL AID

New Jersey is the first State to offer such contracts. The enthusiasm with which the major commuter lines have accepted them and agreed not only to halt further curtailments of rush-hour service but to improve such facilities has made it clear that a real breakthrough in the commuter rail crisis has been scored.

Dwight R. G. Palmer, State transit chief, hails the acceptance of the contracts by the carriers as a real "foot in the door."

He predicts that a long-range solution to the railroad problem that he plans to propose within 3 months will prove equally acceptable to the carriers and to the public. It will, he says, eliminate the grave problem "once and for all."

The contract system, he concedes, is only a stopgap measure. The pacts to be signed within 10 days extend for 1 year. The signatories pledge to continue all existing passenger services deemed essential by the State for the contract period. Mr. Palmer reserves the right to reopen arbitrarily all contracts at the end of 6 months and to order any service revisions he desires.

Of the nine lines, only the Lehigh Valley rejected the proffered aid. A 10th carrier, the New York Central, was offered a subsidy to reactivate its defunct West Shore service, but it has rejected the offer.

Mr. Palmer's long-range solution will be far less costly than the multimillion-dollar blueprints heretofore unveiled and thus far more palatable to the public, which, directly or indirectly, usually foots the bill.

The plan would extend the Hudson Tube service—with new, air-conditioned rolling stock—west from Newark to Bound Brook and north to Morristown. It would link the tube trains with the New York City subways.

Regional bus lines and parking lots would merge the new rail system with new freeways soon to crisscross the State. To alleviate New York City traffic congestion, Mr. Palmer is expected to propose that trucks be admitted to Manhattan streets only between dusk and dawn.

The public, as a whole, has repeatedly indicated its unwillingness to bear the responsibility of financing such commuter transit projects. Mr. Palmer, cognizant of this, hopes for considerable help from the port authority in financing his long-range project. Some State officials are convinced he will get such aid.

The cost of building enough roads to cope with a sudden collapse of rail transit would be prohibitive, all experts agree. In addition sufficient parking facilities to accommodate the increased traffic are out of the question.

MANHATTAN WOULD SUFFER

The primary sufferers of any rail collapse would be lower Manhattan and the suburbs that house its labor force. Most of these people find it impractical to reach their jobs by bus or auto. These workers constitute the major portion of the city's 225,000 rail commuters.

Most of the men employed in that area and many of the women might be forced to migrate to more accessible residential sectors if rail service collapsed. At the same time a serious labor shortage could result among young women who hold clerical and secretarial posts.

Some idea of what impact a major shift of rail commuters from one community to another might have may be seen in this: Rail commuters in the New York area earn about $4 billion a year.

New York State seemingly has been less successful in solving its rail troubles than New Jersey. Its programs of reimbursing communities that extend tax relief to lines and of underwriting port authority attempts to purchase and lease rolling stock to carriers have run into many snags.

Last year the two States set up a bi-State transit agency to attack the commuter problem. Connecticut was invited to join but declined. Neither New York nor New Jersey, it appears, has yet utilized this agency.

Boston has attempted to solve its transit problem by levies on affected communities, Philadelphia by modest local subsidies. In each instance there has been little evidence of cooperation from the railroads.

THREE SUCCESS STORIES

In Chicago, Toronto, and Cleveland there is ample evidence that commuter rail problems can be solved—and most successfully.

Tackling the problem a decade ago, aggressive executives of the Chicago and North Western and Rock Island roads began to replace all their suburban Chicago rolling stock with new double-deck, air-conditioned cars. At the same time they erected rights-of-way along a local expressway into the Loop.

Now they are integrating their track systems with public garages and parking plazas. The result: their commuter services are annually producing substantial profits.

Problem of Foreign Imports

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. MONAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to make known that the sharp increase of foreign imports poses a real problem for industry in my district of Connecticut, and when I speak of industry I am referring not only to the businesses themselves but to the loss of jobs and taxes that decreased business may bring.

The brass and copper industry, the major industry in this area, is currently requesting the Tariff Commission and the Committee for Reciprocity Information to retain at their present levels tariffs on certain brass mill products.

I appeared before the U.S. Tariff Commission in support of this request and I append by statement on this vital subject herewith:

STATEMENT OF REPRESENTATIVE JOHN S. MONAGAN BEFORE U.S. TARIFF COMMISSION AND COMMITTEE FOR RECIPROCITY INFORMATION, FRIDAY, AUGUST 26, 1960

I appear before you today in connection with the request by the Copper and Brass Research Association for a retention of present tariffs on certain brass-mill products.

The Fifth District of Connecticut, which I represent, is known as the brass center of the world and the economy of that whole region depends for its health upon the healthy functioning of the brass industry.

Since the advent of World War II, the brass industry has been seriously affected by the necessary military development of other metals and materials such as aluminum, steel, and plastics. This development has had a marked effect upon the traditional demand for brass products.

Now, in recent years, to this technological change, there has been added the additional adverse effect of an increasing volume of low-wage-produced foreign imports.

Certainly, a reasonable volume of international trade is a necessity in these times, but the sharply increasing volume of brass good imports has reached a point where the security of the industry is threatened.

An example of this increase can be seen in the field of brass tubing where from 1953 to 1959 the percentage of imports to the total shipments of U.S. mills increased from 3.6 to 31.6 percent; the imports themselves increased over 500 percent.

When one realizes (as the briefs which you have been furnished will demonstrate) that these imports are produced in countries like Japan—where hourly wage rates are 33 cents an hour and Germany where they are 59 cents an hour as compared with the United States—where the current straight-time rate is $2.52 an hour, the seriousness of the problem can be better appreciated. It should also be pointed out that the differential between foreign and domestic wages has increased rather than decreased.

I ask therefore that favorable consideration be given to the request of this vital industry.

My interest is not in the companies as such but in their role as providers of jobs and payers of taxes in our area, as well as their availability for defense needs.

The relief which is sought does not involve any new concessions or increase of protection. It merely asks that the present situation be continued and that no further increase in this crippling competition be permitted.

Scovill Manufacturing Co., estimates that in 1959 loss of sales due to imports cost the employees of that company 44,800 manhours of direct labor and $134,400 in wages.

I certainly do not advocate a return to a rigid and high protective tariff, but I do submit that the instant request is reasonable and should be granted.

Tribute to Dr. George Washington Carver

SPEECH
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, the late George Washington Carver, noted Negro scientist, was outstanding in the field of agriculture. As the present decade marks the 100th anniversary of his birth, it is, indeed, appropriate that we pause to recall his accomplishments and pay tribute to his greatness.

Dr. Carver, eminent in the field of science, and especially chemistry, was for many years an honored educator at Tuskegee Institute in Alabama. It was Booker T. Washington, great Negro educator, who induced George Washington Carver to join in the work for the youth of his race which he was undertaking.

The boy George Carver, born of slave parents, was taken into the home of kindly people disposed to give room to his eagerness for learning. He learned

from the field and wood and soon developed a sense of deep economy of the trees and flowers. As a young lad he determined to get a good academic education and, further, to take part in the work of educating his people. When he arrived at Tuskegee he was caught up in the opportunity he faced to meet their fundamental needs.

With a zeal almost evangelical, George Washington Carver began right off to try to turn the interests from cotton planting to peanut planting. He knew there was a large market awaiting peanuts; and, besides, it was a plant good for the soil. It was enriching.

Reluctantly the Negro farmers followed him. They raised so many peanuts that subsequently there was no market for them. But Dr. Carver was determined not to betray the confidence of his people in his efforts.

Then followed weeks alone in his laboratory. He had only the crudest type of equipment, but out of his earnest prayers, his unfailing courage, and his skill came forth uses for the peanut that opened up market after market for the planter.

It is not to be wondered that this man became familiar among the world's men of learning and the recipient of medals and doctorates from many learned societies.

His friend Thomas A. Edison once offered him the facilities of the New Jersey Edison Laboratory for his work, but Dr. Carver chose to stay at his beloved Tuskegee Institute. It was there he died in 1943.

Presidents, statesmen, leaders of industry, and the humble called at Carver's laboratory. Henry Ford visited an exhibit in Carver Memorial Museum to view the peanut-oil massage display. In 1936 Dr. Carver experimented with peanut oils as a massage for after-treatment of infantile paralysis. Prior to 1936 he had developed numerous everyday uses for sweetpotatoes, peanuts, cornstalks, and blossoms. For the products of the South's red clay he developed milk, ink, plastics, cosmetics, paper, and paints.

Besides being chief of research and experiment at Tuskegee Institute, Dr. Carver was closely connected with the research work of the U.S. Department of Agriculture.

While he was best known for his contributions to agriculture, Dr. Carver was also listed among the artists of his age.

Near the close of his career, Dr. Carver was asked if his labors did not seem arduous, considering how alone he worked to prove his beliefs in his experiments. He denied this emphatically with the following comment:

No, I am just an interpreter. I have only to listen for God's voice, and to do what he tells.

Mr. Speaker, I consider it an honor to pay tribute to this great American, George Washington Carver, who rose from the ashes of the unfortunate institution of slavery to become one of the world's great scientists.

What Do They Mean—"Family Size"?

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. SCHWENGEL. Mr. Speaker, one of the major issues of the current campaign—the farm problem—is constantly being discussed by farmers, politicians, editors, and so forth. Mr. Frank Nye, editor of the Cedar Rapids (Iowa) Gazette, has discussed, on his editorial page, "What Do They Mean—'Family Size' "? I would like to call this article to the attention of my colleagues for their study. Therefore, under unanimous consent, I include the article in the Appendix of the CONGRESSIONAL RECORD:

WHAT DO THEY MEAN—"FAMILY SIZE"?

The "family-size farm" is one of the major shibboleths of the current political campaign. The Democratic Party is committed to its support and Republicans mention it often with respectfully muted breath.

At his press conference in Des Moines Sunday Senator JOHN F. KENNEDY defined the family farm as "big enough that a family can live on—and make a living on." That leaves as many questions unanswered as it answers. How big a family? What kind of a living—a peasant-type subsistence or a commercial farming operation that makes possible a standard of living comparable to that of the rest of our population?

Nearly 100 years ago, Congress in its wisdom decreed in the Homestead Act that 160 acres was a family-size farm. Under that act the Government, in effect, bet a farmer a quarter-section of land against 5 years of his time that he couldn't carve a farm out of the public domain. In the small part of the Middle West not already preempted, farmers did prove up and win the bet. But in many Western States the plains still are dotted with old basements, scattered stones from a homesteader's chimneys, and an occasional bush or tree planted by a homesick homesteader's wife to brighten the bleak surroundings. Obviously, there, 160 acres was not a family-size operation.

Farmers themselves have been answering the question for a good many years. The answer is a bigger farm than now. The average number of farms in Iowa in the decade 1937-46 was 209,360, with an average size of 165.4 acres. The 1954 agricultural census reports 174,707 farms averaging 193.6 acres.

The big reason for this trend toward larger farms is improvement in farm mechanization and the greater productivity of farm labor. The output per man-hour of work on U.S. farms now is 2½ times what it was in 1944. During the same years total farm production has increased by more than 30 percent. Meanwhile, the number of farm workers has declined from more than 12 million to less than 7 million.

The substitution of machinery for men on the farms has called for much greater capital investment. The economic necessity of making as efficient use as possible of costly machinery adds to the pressure toward larger farms.

The big bugaboo which some politicians and farm organizations conjure up is corporation farming. It is true that very large corporation-type farming operations have moved into specialized fields such as broiler production, cotton and fruit growing in the Southwest and California, cattle-feeding in some western states and the like. In most cases they have moved in to fill a vacuum where family-size farms failed to seize the new technological developments for their own use.

The implication of those backing family-size farms is that someway they will halt this trend toward larger and more efficient operations. Such a governmental policy would mean freezing unneeded people in agriculture, where technical unemployment already is a major problem. It also would mean limiting the opportunities for ambitious and able farm operators to expand their operations to the limit of their abilities. Neither objective is desirable.

It is desirable that American agriculture continue to be made up of individually operated units. The percentage of family-operated farming units has remained practically the same for the last 40 years. There is no indication that any great change is in the offing.

Twenty-fifth Year of Unemployment Insurance System in Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. LANE. Mr. Speaker, this month marks the silver anniversary of beginning of the Bay State's employment security program authorized by the Massachusetts General Court on August 12, 1935, and presently administered by Director Antonio England. Some highlights of its growth and record are outlined in the following article which appeared in the August 1960 issue of the magazine Industry:

TWENTY-FIFTH YEAR OF UNEMPLOYMENT INSURANCE SYSTEM IN MASSACHUSETTS

(By John P. Sullivan)

The law which established our Commonwealth's system of unemployment insurance here was enacted by the Massachusetts Legislature on August 12, 1935. It provided for the payment of weekly benefits to qualified unemployed workmen for a specified number of weeks. The benefits under the new program were to be financed by a payroll tax on employers of eight or more persons.

The enactment of the new State law resulted from two major incentives held out to the States by the Social Security Act. States which enacted their own law could receive Federal grants for administration if they met certain minimum requirements of the Federal Government. These requirements related largely to the establishment of safeguards to protect the unemployment fund, the payment of benefits through public employment offices and provisions for a fair hearing to claimants who were denied benefits. The second incentive permitted employers who paid taxes into the State unemployment fund to deduct these payments when they paid the 3 percent Federal unemployment tax, which was established by the Social Security Act.

The requirement that public employment offices be used to pay unemployment benefits enabled Massachusetts to merge the new unemployment insurance system with the State public employment service which had operated a chain of employment offices in Massachusetts since 1906.

Integration of the services in 1935 made the administration of the new law easier because two of the major requirements for receiving unemployment benefits were that a claimant must register for work and also that he must be available for work. Combining the systems not only made job registration easier but it also gave the unemployment insurance system job offerings with which to test the availability of claimants for employment.

MERGED SYSTEM HAS ADVANTAGES

The merged system also brought a major advantage to the employment service because it provided a much wider selection of applicants for referral to employers. The requirement that unemployment insurance claimants register for work also meant the employment service would have the largest labor pool in the community for filling jobs in industry. The employment service arm of the integrated program is placing more workers in industry in a single year today than it did in the first 10 years of its existence as an employment activity alone.

The integrated system of paying unemployment insurance and providing job assistance still exists today and is known as the "employment security program." The activities of the program are carried on by the Massachusetts Division of Employment Security under the supervision of Director Antonio England, through a statewide network of 42 full-time and 33 part-time employment offices. Mr. England is serving his second term as director; his record as an administrator includes experience in government, management and labor. Mr. England is sepecially proud of his administrative record with regard to the instigation of the new building program for local office activities.

A major accomplishment of the entire program in this quarter century has been the ability of those administering it to weld these services into a unified program which would meet the needs of the economy in a satisfactory manner. This organizational feat was accomplished during 25 of the most critical years of the Nation, at a time when the system was called on to serve during two wars and two recessions. It also took place while both the unemployment compensation law itself and the economy of the State were undergoing great changes. From a chaotic beginning when business was carried on in State armories with cardboard boxes for files and a hastily recruited staff, the employment security system has become one of the smoothest pieces of machinery in our State government.

EFFICIENCY KEY TO SUCCESS

A key factor in the success of the Massachusetts unemployment insurance system has been the efficiency with which liable employers have been registered, the care with which their records have been kept, and the speedy system for collecting unemployment insurance taxes. The success which the State has had in conducting these operations, while the number of employers subject to the law has grown from 18,000 to 103,000, has been widely praised by the employment security officials throughout the Nation. Probably no aspect of our operations has been studied by more State employment security administrators than our employer registration and tax collecting system. In 1942 the uniform tax on employers was changed to a variable tax. These so-called experience rates of unemployment taxes were made available to employers with comparatively good experience with unemployment.

This new taxing system called for additional detailed information to be posted to the account of each employer and the maintenance of each account in a much more extensive manner. Today, some 64,000 of the State's 103,000 employers have earned experience rates by building up the legally required reserve balances in their experience rating accounts. All States today have some type of variable tax rating system, although a majority of States use that system now employed in Massachusetts. Unemployment taxes are levied only on the State's employers. Unlike the Federal social-security program, the Massachusetts unemployment law does not tax employees. Since the beginning of the program the Commonwealth's employers have contributed more than $1¼ billion, while benefit payments have exceeded $1 billion. The payment of this tremendous sum to the unemployed during this 25-year period has greatly assisted the unemployed in meeting their economic needs and in preserving their dignity while jobless. In addition, it has given an important boost to the State's economy in times of high unemployment.

The unemployment program faced a severe test when, in the recession years of 1949 and 1958, $115 million and $123 million, respectively, were paid to the jobless. In the year of 1949, more than $12 million was paid to unemployed in the city of Lawrence alone.

NEW PAYMENT SYSTEM

The Commonwealth's employment security system can boast of the promptness with which it pays benefits and the speed with which it hears appeals on disputed claims. Today, more than 70 percent of Massachusetts unemployed receive their benefit checks directly in hand when they appear at an employment office in the week following a period of compensable unemployment.

This new system of payménts was introduced last year by Director England and is now in effect in the agency's 23 large employment offices which take claims from more than 70 percent of the State's jobless. The remaining 19 offices will go on the new system as facilities become available. In the meantime, claimants applying at these offices receive their benefit checks by mail, a system of payment which has been in effect since 1938 in all offices. More than 94 percent of so-called mail payments are made within 1 week after a week of compensable unemployment.

In the years since the unemployment insurance law was enacted, the number of workers covered by the program has increased from less than 1 million to more than 1½ million as smaller employers were brought under the system. The present coverage includes about 75 percent of the State's 2 million work force. The major groups not covered by unemployment insurance are farm, State and local government employees; others not included are employees of nonprofit, fraternal and charitable organizations, and persons in domestic service.

Of the 103,000 employers who are covered by the law, some 90 percent are small businessmen with less than 25 persons on their payroll and employing a total of ½ million workers. The remaining 10 percent are the large employers with a total work force in excess of 1 million.

ADDITIONAL PROGRAMS

The record would not be complete without a listing of the various programs which the division has administered for the Federal Government. These include the payment of benefits totaling $144½ million under the Servicemen's Readjustment Act of 1944, the payment of $2¼ million under the Veterans' Readjustment Act of 1952, the payment of $25 million under the Temporary Unemployment Compensation Act of 1958, and the payment of more than $7 million under title XV of the Social Security Act, which provides unemployment benefits for Federal employees and ex-servicemen.

While lessening the hardship of the unemployed through payments under the unemployment benefits program, the employment arm of the program has filled more than 4 million jobs for Massachusetts employers since 1935. More than 2,800,000 of these placements have been made in industry, commerce and trade, while the remaining 1,200,000 have been made on Massachusetts farms.

The greatest activity in the division's employment service came during the years immediately following our entry into World War II when the service was federalized by Executive order immediately following Pearl Harbor. In recruiting workers to staff the State's war plants between January 1, 1942 and December 31, 1946, employment offices filled 796,000 jobs in industry. During this period, it had the delicate and unenviable task of administering the labor priority system and channeling manpower into essential industries and keeping it there. The reconversion to a peacetime economy after World War II was another trying period for the employment service because of the heavy unemployment created by the transition from a wartime to a peacetime economy and the difficulty of matching warworkers trained in the production of war goods with peacetime jobs.

Today many of the State's well-known employers regularly call up the State agency in the recruitment of workers.

One of the State's largest employers has staffed every one of several new plants which it has opened in Massachusetts with the assistance of the division's employment service. This has frequently been done after the agency's labor market service had supplied key labor market data when the employer was selecting a plant site. In setting up jobs in newly established plants, many employers invite division job analysts in to study specific jobs before attempting to fill them with new employees. This job analysis is a key tool in plant staffing.

The employment program has achieved the most spectacular growth during these years in the farm labor recruiting service. From a small operation, little known by Bay State farmers, it has grown to such a phenomenal extent that today most of the big tobacco, cranberry, market garden and dairy farmers in the State recruit workers exclusively through the division. In the period from 1942 through 1948, public employment offices filled 24,251 farm jobs. In the period from 1949 through 1959, employment office placements totaled 574,460.

AMENDMENTS KEEP PACE

The tremendous expansion in both the unemployment insurance and the employment service programs were affected in various degrees by the amendments to the unemployment law itself. The expansion of coverage, changes in both the benefit formula and the qualifying requirements for benefits, the introduction of experience rates and a host of other changes had a considerable impact on the entire employment security program. Some idea of the changes in the law which took place during the period may be gleaned from the chart below. Latest benefit amendments effective as recently as December 1959 make the unemployed workers in Massachusetts as well off today as in most other competing industrial States.

A comparison of benefits

	1938 [1]	1960
Waiting period for benefits	3 consecutive weeks	1 week or part of week.
Weekly benefit rates	$5 to $15	$10 to $40.
Duration of benefits	16 weeks	30 weeks.
Maximum total benefits	$240	$1,200.
Partial benefit rates	None	$1 to $39.
Partial earnings disregarded	None	$10.
Dependency allowances	None	$6 per dependent.
Maximum wages used for benefits	$1,200	$3,333.31.
Tax base	1st $3,000 of wages	First $3,000 of wage.
Penalties for major disqualifying acts	4 weeks with 4 weeks reduction of benefits.	4 to 10 weeks without reduction of benefits.
Tax rates	2.7 percent	2.7 percent.
Experience rates	None	0.5 to 2.5 percent.

[1] Figures for the year 1938 are used because this was the 1st year in which benefits were payable.

During the quarter century that the employment security program has been in operation here, it has not only served the jobseeker and the employer, but also the community, the State, and the Nation. During these eventful years these services were taxed to their utmost during war and recession, yet never failed to do the job required.

Today, the program is known and respected throughout the Commonwealth for the high quality of its employment recruiting service, the efficient administration of the unemployment benefits program, and the substantial buffer against wage loss which it provides for the unemployed.

The Desertion of Sergeant York

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. EVINS. Mr. Speaker, Cavalier magazine has sent me an advance copy of a story entitled "The Desertion of Sergeant York," by William Bradford Huie, which will run in the magazine's October issue. This is a very interesting article, is well written, and expresses the views of many Americans about Sgt. Alvin C. York, the great fighter, distinguished soldier, and grand patriot, who lives in the district I have the honor of representing in the Congress.

I have urged that Sergeant York be relieved of his tax assessments and the Internal Revenue Service has agreed to go part way. I see no reason why they should not go all the way.

Under unanimous consent I include the article in the Appendix of the RECORD, as follows:

THE DESERTION OF SERGEANT YORK

(By William Bradford Huie)

In a mountain meadow in the Cumberlands—he calls it the Valley of the Three Forks of the Wolf—the last American folk-hero is dying.

He's the sergeant—Alvin York—direct, traditional descendant of Dan'l Boone, Davy Crockett, Old Hickory, and Sam Houston; mighty men who mastered forests with rifle-guns, inspired ballads, and who at crisis stood fast, slew our enemies and made America great.

The sergeant is old now: 73. He's been "riding a bed" 6 years since a cerebral hemorrhage paralyzed portions of his powerful frame. He's in financial distress; the United States says he owes $29,000 income tax.

But he's not dismayed. The old eyes which once squinted so accurately down rifle barrels still sparkle when he talks of the majesty of America; his voice is deep and unwavering; and he pridefully shows the Congressional Medal of Honor and all its Allied counterparts, along with letters from Foch, and Clemenceau, Haig, and Lloyd George, Pershing, and Wilson, expressing gratitude for services to the cause of liberty.

We'd better take care of the sergeant. For when we sound taps over him on a Cumberland mountainside, his breed will end. Suburbia doesn't grow heroes; and we can't write ballads about Americans who bolt wheels onto Chevrolets, drink beer, and watch "Gunsmoke."

My journey to see the sergeant was an excursion into the simple, sweet, quaint, and slightly unbelievable past. I was born when the First World War was beginning and, with the trouble I've seen, that adventure in world-saving has always seemed to me like a combination holy roller camp meeting and a Boy Scout summer exercise for merit badges.

I drove through Huntsville, Ala.—where men are preparing to visit the moon—into Tennessee, through Fayetteville, Tullahoma, McMinnville, and climbed atop the Cumberland Plateau between Sparta and Crossville.

This is Appalachia, the area which produced all the fabulous folk-heroes, even Abe Lincoln. And here only three battles are ever mentioned—King's Mountain, New Orleans and the Argonne. At King's Mountain, during the Revolution, the British infantry first met the long rifles. Score: 1,200 British dead, 8 riflemen. At New Orleans the long rifles crouched behind cotton bales for Old Hickory and murdered Wellington's veterans. And the Argonne? Alvin York won that one singlehanded. He "teched off" enemies by the score and captured "half the whole damn German Army."

These legends derive from one proud fact: American frontiersmen did indeed invent the world's first accurate gun. The old, long, heavy, homemade, muzzle-loading, "hog" rifles—the Gibsons, the Beans, the Duncans, the Decherds—were the world's first guns with which an experienced user, at 60 yards, could hit a silver dollar four shots out of five. And Dan'l Boone, Davy Crockett, Alvin York—any of them—on a galloping horse, could reload these guns with powder, patch and ball in 10 seconds.

Even today, up to 60 yards, this old rifle may be more accurate than any gun in existence.

In 1918 Alvin York was 29—and the deadliest shot in the mountains. He had hunted foxes for $35 a month, shooting them through the heads so as not to spoil the pelts. And when, on October 8, at Hill 223 in the Argonne, a German machine-gun battalion confronted him, they were just as dismayed by his marksmanship as had been the British infantry at King's Mountain. Every time a German exposed an eyebrow, the Sergeant "teched him off."

When you reach Fentress County and its county seat, Jamestown (Jimtown), you are in York country and everything is named for the sergeant. You ride the Alvin York Highway past the Alvin York Agricultural Institute and the Alvin York Bible School. At a filling station I got my first report:

"You'll find the sergeant in bad shape * * * sick and in debt. He oughta tuk that money."

"That money" is a reference across the years to the day in 1919 when the returning 6-foot-2-inch, 210-pound rawboned barely literate hero reached Manhattan. The city went wild. They gave him the ticker tape, bedded him down at the Waldorf. They didn't try to sell him the Brooklyn Bridge; they did their damnedest to give it to him. Newspaper syndicates, magazines, vaudeville promoters, picture producers—they offered him a million old-fashioned dollars to "show hisself" to America.

But the sergeant was—and is—a Bible man. He belongs to a sect called the Church of Christ in Christian Union. He almost missed frontline service as a conscientious objector. He had fought his war without smoking, drinking, cussing, raising his voice, or accepting any of that French female gratitude. He told them he didn't have "nothin' to sell." He turned his back on the moneychangers, heard the applause of the Congress of the United States, attended a celebration in Nashville, then went home to a vast dinner-on-the-grounds at which the Governor of Tennessee married him to his girl, Gracie Williams.

In the Valley of the Three Forks of the Wolf, where he was born, he accepted his only gift—a house and 400 acres along Wolf River for which readers of the Nashville Banner and the Rotary Clubs of Tennessee paid $25,000. He lives in the same house today, with Gracie. They have had 7 children—6 living—and 15 grandchildren. The house stands 200 yards south of Wolf River bridge, and 50 feet east of U.S. Highway 127. The place is 6 miles for the Kentucky line. The sergeant's address is Pall Mall, Tenn.

Neither the sergeant nor Gracie regrets his turning down "that money." But his neighbors no longer admire him for it: They say he "should'a tuk it when it was handy."

Even in the Cumberlands this is America's Age of Charles Van Doren. A prudent man "just don't turn down hard money." The admired attitude is: "Take it. Spend it or sock it away. But take it."

When I reached the sergeant's house, Gracie met me at the door. "I've come to see the Old Soldier," I said. "I want to write a piece and see if I can help him." She led me to his bedside, we shook hands, and off and on we talked for 3 days about his life since the Argonne.

First: the farm was not a free-and-clear gift. When he moved in, the Banner and the Rotary Clubs had paid only $10,000, and $15,000 was still to be raised. The sergeant had to "work it off" by filling speaking dates which were arranged for him. His fees, sent directly to Nashville, retired the debt.

Hence the first tax question: Was that $15,000 taxable income? Was the whole $25,000 taxable? If you win $25,000 on TV now, it's taxable. Was the sergeant's money a capital gain and therefore taxable at a low rate, or was it straight income and taxable at a higher rate?

One mountaineer said to me: "Hell, it ain't easy to be a hero now, with all these taxes."

Despite turning his back on that first money, virtually all the sergeant's lifetime earnings have been from "showing hisself"—from Americans wanting to see the big, unlettered mountaineer who, according to Marshal Foch, "performed the greatest feat accomplished by a private soldier in all the armies of Europe." The sergeant was a founder of the American Legion; he represented the 82d Division in the organization

meeting in Paris. So inevitably he has been a professional patriot; the star attraction in every Legion parade; the guest of honor at a thousand banquets. Much money has been paid or given to him, but he has poured it into the schools which he has tried to finance.

"When I come back," he said, "I could see how far our mountain country was behind the times. Not having any learnin' myself, I wanted it for the boys coming up. We needed schools and roads, and because I could get in to see Governors, I made schools and roads—and the Bible—my lifework. I raised all the money I could, and as fast as it come in I spent it. For 10 years I signed every check for the York Institute, and I give it my time and whatever money I had. I never had enough."

The sergeant paid taxes. He had a lawyer, and he paid whatever the lawyer said he owed. He remembers paying $10,000 one year, and the Government sent him $4,000 back. Just how his taxes were computed, I was unable to clarify completely.

"I got no education," he said, "so I never tried to understand all that stuff. I sorta figured I owed the Government half of whatever I had left, and that's the way I tried to pay it. I figure now, instead o' being short, I paid too much."

The big money started coming in 1941, from the picture "Sergeant York," produced by Jesse Lasky for Warner Brothers and starring Gary Cooper. The sergeant liked the picture. He spent 3 weeks in Hollywood helping them edit it. He had a percentage deal, and to date he has grossed about $215,000 from it. He still gets little checks when the film is shown on TV.

But the sergeant didn't sock any of this; he poured it into the school. Also by 1941 he was fighting another war. His role was to "show hisself"—to sell bonds, and the Army took him from camp to camp as a "morale builder."

"What'd you tell the lads in the Second War?" I asked.

"Well, he answered. "I just did my best. The boys were so different from the way we were in the First War. We thought we had something grand to fight for—and the boys in the Second War seemed mighty confused. I told them the new war was the fault of us in the First War, we just hadn't gone far enough. We had stopped before we got the job done. We wanted to go to Berlin, but they stopped us. I told the lads in 1942 that I was sorry, but that they'd just have to finish the job that we failed to finish in 1918."

One trouble with the sergeant's finances is this: He worked constantly during the Second World War, traveled extensively, gave everything he had, yet the Government paid only his traveling expenses; he got nothing for his time. Other men in his position were given commissions and pensions, but not the sergeant; he did the giving.

The Army had a pretty good answer for not commissioning him: "How the hell could we commission Sergeant York? He has to be a sergeant: this country wouldn't want any Colonel York. It wouldn't sound right."

Maybe it wouldn't; but the Government found a way to pay everybody else. Moreover, the sergeant has served 15 years as head of his draft board, and he has never been paid even for the gasoline he burned between his home and Jimtown.

I asked him why, in all his postwar travels, he had never gone outside the United States—back to London or Paris.

He smiled.

"A lot of us boys in the AEF," he explained, "we had a sayin', when we were comin' into New York harbor, looking at the Statue of Liberty, we'd look a long time, then we'd say to the statue: 'Take a good look at me, Old Girl, for if you ever see me again you'll have to turn around.'

"Ever' time somebody's mentioned going to Europe to me, I've sorta thought of that," he said.

After talking with the sergeant for an hour, you are suddenly struck by an omission. In all his conversation he has not employed one obscene or profane word, not even slang. In his youth he had some years when he "fought, cussed, chewed, played poker and drank moonshine." But from New Year's Day, 1914, he has not once "raised his voice."

That's the only criticism he has of the Legion.

"I love those old boys," he said. "I've paraded many a street with 'em. But it hurt me—the way some of 'em acted at the conventions. I don't hold with drinking and loud talking."

In the books about him his speech is that of the illiterate mountaineer. But with his experience, he now speaks as correctly as a high school graduate. In all his life, however, he has read only two books—the Bible and "The Life of Jesse James." He looks at TV, and he enjoys most—not the westerns—but Ed Sullivan.

With him, I recalled the time when he was "out-Bibled."

When he was drafted, he walked 40 miles to the railroad at Oneida, Tenn., and reported to Camp Gordon, Ga. He carried his Bible, and he had filed letters from himself and his preacher saying he couldn't conscientiously fight because his church held the Bible was "against it."

The Army was on the point of excusing him from combat when his major invited him to his tent. They talked "man to man."

"I can't fight, Major," Private York explained, "for the Lord says, 'If a man smite thee on one cheek, turn the other.' "

But the major had his Bible, too. He opened it and read:

"He that hath no sword, let him sell his cloak and buy one."

York countered with:

"They that live by the sword shall die by the sword."

And the major fired back:

"For my Kingdom is not of this world; but if my Kingdom were of this world, then would my servants fight."

The duel continued into the night, and Private York was so shaken that he took a furlough, went into the mountains and prayed all day and all night, and decided the major was right.

If the major hadn't known his Bible, the AEF would have lost its finest soldier.

The sergeant, after all the years, is still convinced that on October 8, 1918, in the Argonne, the Lord was with him.

"There is no miracle about what I done," he said. "The Lord was with me. He had told me I wouldn't get a scratch, and I didn't. I didn't have nothing to be afraid of."

If anyone else said this to me, I'd probably smile. But the sergeant believes it. And who knows? Perhaps the Lord is with men who can believe He is.

The sergeant's favorite Americans are President Truman, General MacArthur, and General Patton. He doesn't "hold much" with President Eisenhower.

"I'm afraid Ike has let the old country down," he said. "When Khrushchev called him a liar in Paris, he should'a mashed his mouth. I don't believe Khrushchev would'a called MacArthur a liar, or Patton, or Harry Truman."

The sergeant met Truman many years ago in the Legion. "He's a good man," he said. "I've paraded many a street with him."

His only contact with MacArthur was by mail. A Tennessee soldier under MacArthur was sentenced to death for shooting a tentmate. The sergeant asked the general to commute the sentence to life imprisonment.

MacArthur explained that the Tennessean had raised up on his cot and shouted to a reading tentmate, "If you don't put that light out, I'll put yo' light out." When the tentmate continued reading, the irate Tennessean had shot him through the head with his .45.

"The general wrote that he thought the man deserved death," the sergeant said. "He executed him, and I guess he was right."

One of the sergeant's regrets is that he never met General Patton.

"There was a soldier," he said. "When we have to go again, I sure hope we can find more like him."

And the sergeant thinks, sadly, that we will "go again." "Looks like we stopped short the second time, just like we did the first," he said. "The first time we should'a gone on to Berlin. The second time we should'a gone on to Moscow. Maybe the third time we'll finally go far enough."

In 1950 the Government began "hounding" the sergeant for money. They said he owed $35,000; he insisted he owed nothing. They said the York Institute was not a "charitable institution" since it was also supported by the State and county. He said it was a charitable institution. The Government trimmed down to $29,000, but in 1954 the claim became more or less hopeless when the sergeant was struck down by the cerebral hemorrhage. It was massive. A less vital man would have died, but the doctors tapped his spine, drained off the blood, and he has survived for 6 years. But he can never earn another dollar.

Now it's the *United States* v. *Sergeant York*—and what are we going to do about it? Confiscate the 400 acres and the rundown house and barn? Auction off the Congressional Medal and the letters from Marshal Foch? Turn the sergeant out onto Highway 127 and let him die in the nearby cave where his great-grandfather, Coonrod Pile, holed up as the first white man in Fentress County?

The sergeant's neighbors wax sarcastic when they compare his case with that of Joe Louis. Old Joe owes $1,250,000—which the United States can kiss goodby—and much of it Joe gambled away on golf courses. Yet Joe seems to be living comfortably.

How does Joe Louis, as a citizen, compare with Alvin York? Where are Joe's medals, and how much of his money has gone to educate underprivileged boys?

Then there is the case of General Eisenhower. The general got a special ruling from the tax agents on the $1 million which a grateful Nation made payable to him. He didn't pay 50 percent; he paid 26 percent—$260,000 in taxes—which left him $740,000 and rich enough to join the Augusta Golf Club. Yet in two wars against the Germans Ike never got close enough to smell powder.

Those are some of the sentiments of the sergeant's neighbors. They think the United States ought to square accounts with the sergeant and let him live what's left of a gallant and decent life in peace.

And, after spending 3 days with the sergeant and his neighbors, I agree with them.

Perhaps his bookkeeping has not been as accurate as his rifle fire. So what? There is only one Sergeant York; he's broke, and he can't live much longer. Surely a Senator like ESTES KEFAUVER or ALBERT GORE, both of Tennessee, can figure an honorable way for the United States to liquidate this claim.

If there is no better proposal, I suggest this:

On October 8, 1918, in the Argonne, the sergeant "teched off" 28 Germans, after which the whole machinegun battalion of 4 officers and 128 men surrendered to him.

Why don't we figure those dead Germans as deductible at a $1,000 apiece, then allow

an extra $1,000 for all those prisoners? That'll square the tax account.

The Defense Department should then pay Sergeant York a sergeant's wages for 4 years for all that morale work he did in the camps during the Second War. That'll come to $10,000, then add interest at 6 percent for the years between 1945 and 1960. The whole sum will let the sergeant pay his doctor bills and "ride his bed" in peace and dignity.

Finally, since Highway 127 is a scenic route between Chicago and Miami Beach, I commend this route to sun seekers from the Midwest. When you cross the Wolf River bridge, stop at the sergeant's house. Don't go in, for he's old and tired. But slip a card under his door, and tell him you haven't forgotten the Argonne, or Hill 223, or "the greatest civilian soldier of the War to Make the World Safe for Democracy."

Against Toll TV

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. MULTER. Mr. Speaker, at the request of Philip F. Harling, chairman of the Joint Committee Against Toll TV, I direct the attention of our colleagues to the following items: "Smog Over Hartford," as it appeared in the Bulletin of August 8, 1960; and a column by Allen M. Widem as it appeared in the Hartford Times of August 11, 1960:

SMOG OVER HARTFORD

Ted Leitzell, the indefatigable propagandist for Zenith's over-the-air Phonevision system of subscription television, has just sent out a booklet entitled "Eighteen Questions and Answers about Subscription TV in Hartford." The Connecticut city is to be the location of a feevee experiment.

The Leitzell booklet is a collector's item. Rarely have the true aims of toll-vision been more explicit stated, and rarely has the phony feevee pitch been more obvious.

The first question, for example, asks what feevee will mean for the subscriber. The answer is that he will "see premieres of class A Hollywood motion picture features now seen only in theaters," as well as first nights of new Broadway productions, "experience the excitement of the opening of a grand opera season" and so forth.

You may wish to ask Mr. Leitzell at this point whether he wants to bet on it, particularly on that grand opera bit. But wait. In the next answer, we are told that "arrangements are now being considered by Hollywood's top studios for bringing to Hartford via subscription TV the best of new, motion pictures—feature films of the caliber of 'Ben-Hur,' 'Can-Can,' and 'From the Terrace.' Broadway producers of musicals, and serious dramatic offerings believe that subscription television can bring about a new era for theater lovers and are currently making plans to bring Broadway shows—productions of the quality of 'Sound of Music' and 'Andersonville Trial'—to Hartford subscribers." And so forth.

The phrasing of these promises deserves attention. Note that they talk about films of the caliber of "Ben-Hur" and stage shows of the quality of "Sound of Music." If this isn't a deliberate effort to mislead people into thinking "Ben-Hur" and "Sound of Music" are already scheduled for Hartford feevee, it is certainly careless phrasing.

It is worth pointing out that the toll-vision test in Etobicoke, Canada, is offering a rather steady diet of second-run movies, incidentally, although it too was full of the same kind of advance visions of premieres and first nights.

Movie men may also be somewhat puzzled as to how a spectacle like "Ben-Hur" will look on a 21-inch screen; but then the Phonevision booklet didn't say they would play "Ben-Hur" at all.

It is when we get to the question and answer about program costs, though, that the full import of Phonevision's golden vision becomes discernible. "Even those with a minimum budget for entertainment can afford subscription TV," says the booklet, "since it would enable families of moderate means to enjoy more quality entertainment than is now feasible at high box office rates." Comparing feevee's projected rate schedule with the cost "when a family with two children attends a downtown first-run movie theater in Hartford * * * including transportation and parking," the feevee booklet says that "With subscription TV, this family could enjoy as many as four movies at home for the cost of one evening out." That's the pitch. Don't go to the movies; patronize the cash box in your living room.

Compare this with the comment about existing free television. "Subscription programing will be in addition to what you already see in Hartford. Subscription TV will make your television set more valuable by bringing you the economy and convenience of great box office entertainment in your home."

In other words, you can always switch to the free channels; you just don't have to go out to the movies any more. To spell out this point, the last paragraph in the booklet says that while feevee will be broadcast for a few hours each day, "when we go on the air with subscription programing, we will continue to devote the major share of our broadcasting day to sponsored and sustaining nonsubscription programs at no cost to the viewer."

Here we have it. While Telemeter has been claiming that feevee has had no effect and will have none on theater business, Phonevision is telling its potential customers they won't have to go to the box office any more—"four movies at home for the cost of one evening out."

While Telemeter has been running subrun movies, Phonevision is promising premieres of films "like" the unique "Ben-Hur" and stage shows "like" the equally unique "Sound of Music."

Hartford is not too far from another Connecticut city named Bridgeport. Bridgeport is famous as the home of P. T. Barnum, to whom is ascribed the immortal saying that "There's a sucker born every minute." If, in his abode of eternal rest, Phineas T. Barnum could read the Phonevision booklet, he would doubtless feel that he had died too soon. Feevee must certainly be counting on the accuracy of Mr. Barnum's sucker count.

Who you kidding, Mr. Leitzell?

COAST TO COAST

(By Allen M. Widem)

What is Connecticut theatrical exhibition's view on pay TV and particularly the approaching Zenith-RKO general pay TV experiment on Hartford's WHCT-TV (channel 18)?

By way of background: The campaign against pay TV is mushrooming into a battle of nationwide proportions as exhibitor leaders continue to exhort showmen to extend themselves in every possible way to curb the threat to the Nation's motion picture theaters.

Published reports that the major television networks have changed their stand and now look with favor on pay TV were attacked last week by Philip F. Harling, as completely unfounded and untrue.

Harlin said that after publication of articles from Washington, D.C., stating that the television networks were abandoning their opposition to pay TV, he personally checked each network and obtained flat denials of the report.

He said that each network stood by its recorded statements at hearings before the Federal Communications Commission and congressional committees that it was opposed to broadcast pay TV as being contrary to the public interest.

"It is my belief," Harling added, "that these reports were planted by pay TV proponents in an effort to stampede their opponents. The television networks are just as adamant today against pay TV as they have been during the past decade, and as they publicly stated at various hearings in Washington. The reports are absolutely false."

Harling noted that Marcus Cohn, of the Washington law firm of Cohn & Marks, which has been retained by both the joint committee and the Connecticut Exhibitors Committee, had filed with the FCC a request on July 14 that the Zenith-RKO general application be made the subject of public hearings.

Bernard Menschell, of the Outdoor Theater Corp. (operating the Manchester and Pike Drive-In Theaters), has written the following paragraphs for the Times:

If pay TV ever comes to your house, what will you be able to see for money that you can't now see for free? Nobody knows.

Since 1955 the Federal Communications Commission has been trying to get the various promoters who have come before it to spell out exactly what programs they will show. To this day this question remains unanswered.

As a matter of fact the lawyers for the local promoters of pay TV have pleaded with the FCC not to hold an open hearing where any claims as to programs could be challenged while the promoters are under oath.

The local promoters of pay TV claim, in general terms, they will offer first-run movies, plays, sporting events, grand opera, ballet companies, and symphony orchestras. You can now see most of these types of programs on your TV set for free.

The new movies now available for free TV have never been seen by more than three-fourths of our country's population. To these people these movies are first run. The plays of the "Hallmark Hall of Fame" and similar programs are wonderful and they are on free TV. Would it make a sporting event any better if we had to pay for it rather than watching it for free as we do now?

Grand opera, ballet, symphony orchestras. Now here is something. For those of us who like to watch the long-hair programs, pay TV might be the answer—and perhaps the FCC would nail down the amount of time pay TV must offer this type of entertainment during prime viewing hours to make certain it is not offered 3 o'clock in the morning.

Most of us, however, ask nothing more than being entertained enough to forget our everyday problems plus forgetting the ever-increasing possibility of being clobbered by an atom bomb tomorrow.

We like the "Mavericks," "Wagon Trains," "Open Ends," "Robert Young," and "Danny Thomas" shows. Plus the ball games. And even though we might fall asleep while watching we are in the majority by thousands to one. Our tastes call the shots as to what is now shown on free TV and will call the shots as to what will be shown on pay TV. The only change being, we will have to pay, and pay dearly, for it.

This is so, not because the talented people who make the shows love us, but because

we are where the money is. In fact we are the money in the bank for the mass entertainment business. It is impossible for the golden pay TV dreams of its promoters to be realized without the dollar-a-show of the mass audience.

Just how much will we have to pay for the privilege of watching on our own TV set that which we now see for free?

During the day the boss of the house—the Missus—steals a well-deserved 90 minutes of relaxation—$1.

She can now watch as long as she wants for free. Your kids watch a couple of hours before dinner—$1. They now watch for hours and hours for free.

Now, Dad, it's your turn. You, too, can watch for 90 minutes for a buck. But will you be relaxed? No siree.

You're not going to doze off while that darn box is eating up your dollar. After the dollar is gone you are going to turn the dial to what is left of free TV—a test pattern—and dream of the good old days when the air waves were free.

No matter how they slice it, you have spent at least $3 for 1 day's viewing. Let's say this happened to be a 30-day month. So, good old dad, you have spent $90 for the privilege of watching your TV set a month for actually less hours than you now watch for free. That $90 is just about the same as your monthly mortgage or rent. Good old dad.

If you don't feel at this time that you'd like to double your monthly rent or mortgage payment, drop me a line, saying how you feel about pay TV, include your address and sign it. I'll get it to the proper people in Washington. They are all right down there. They will understand. They have to pay their bills, too. Write me at the Outdoor Theater Corp., 153 Main Street, Manchester, Conn.

FCC—Renewal of Broadcast Licenses

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. LIBONATI. Mr. Speaker, I have received some very interesting correspondence, touching upon legislation before the Congress.

The resolution, passed unanimously by the American Federation of Television and Radio Artists—Chicago Local, affiliated with the AFL–CIO, is especially interesting.

I am certain that the suggestions contained therein are worthy of the consideration of the membership of the Congress.

Under unanimous consent I include the following in the Appendix of the RECORD:

AMERICAN FEDERATION OF TELEVISION AND RADIO ARTISTS,
Chicago, Ill., August 12, 1960.

DEAR CONGRESSMAN: I am enclosing a copy of a telegram which I sent on August 12 to the Honorable EVERETT MCKINLEY DIRKSEN.

I am also enclosing a copy of a resolution which was unanimously passed by our delegation to the Washington convention.

We honorably and respectfully urge your support on this matter.

Sincerely yours,

RAYMOND A. JONES,
Central Regional Director, AFTRA.

RESOLUTION FROM THE CHICAGO LOCAL AFTRA

Whereas the license to operate a broadcasting station granted by the FCC is predicated upon the broadcasting licensee operating the station in the public interest, convenience, and the necessity; and

Whereas the phrase "public interest, convenience, and necessity" rightfully means "substantial programing by the broadcasting station so as to aid, foster, and reflect the cultural, economic, sociological, and other objectives of the community in which the station is located," as well as the origination of a substantial number of programs from that locality; and

Whereas many broadcasters in their license applications for the right to operate a station have made certain promises, representations, and warranties as to the programing of the station in the public interest, convenience, and necessity; and

Whereas many broadcasters have failed in substantial measure to live up to their promises as to programing the stations in the public interest, convenience, and necessity; and

Whereas local and network broadcasters have canceled, with increasing and alarming frequency, locally produced programs, therefore terminating services of many local technicians, performers, musicians, and other highly trained personnel; and

Whereas the members of AFTRA, as well as the general public, have a real and substantial interest in the programing of the station in accordance with the promises, warranties, and representations upon which the broadcast license was issued; and

Whereas the FCC is obligated by law to determine the initial issuance of the broadcast license as well as the application for the renewal of the said license; and

Whereas the FCC has the right to examine and hold public hearings on the right of any broadcast licensee to a renewal of its license: Now, therefore, be it

Resolved, That AFTRA's national executive secretary and national counsel be and they hereby are authorized to take any and all action in Congress, before appropriate committees and the FCC, in cooperation with other affected unions, guilds, and associations in the broadcasting field, to secure the right of AFTRA, and the aforementioned unions, guilds, and associations, and other interested members of the general public to require the FCC to hold public hearings on applications for the issuance or renewals of broadcast licenses where a protest has been filed, so that the broadcaster can be required to prove that he has operated and will operate in the public interest, convenience, and necessity.

AUGUST 12, 1960.

The Honorable EVERETT MCKINLEY DIRKSEN,
Senate Committee on Labor and Public Affairs, Washington, D.C.:

Respectfully urge you to drop exclusion of employees of radio or television stations in cities of less than 100,000 population from the provision of the proposed amendment to the Fair Standard Labor Act of 1938. It is unthinkable that announcers, engineers, and other talented and trained personnel get less than $46 per week for 40 hours in America today. I have in my possession brochures published by the company which claims a listening audience of more than a million persons in Chicago, Gary, and Hammond. There are hundreds of such stations which have a studio and transmitter just outside the city limits of large metropolitan areas, which would be exempted under proposed exclusion. I am mailing you special delivery copy of brochure.

RAYMOND A. JONES,
Central Regional Director, AFTRA.

AUGUST 24, 1960.

Mr. RAYMOND A. JONES,
Executive Secretary, AFTRA, Chicago Local, Chicago, Ill.

DEAR MR. JONES: I have received your letter relative to the matters passed upon in the adoption of the resolution for the Chicago local—AFTRA, and have called your suggestions to the attention of Congressman PETER F. MACK, Jr., of Illinois, who is our representative on the House Committee on Interstate and Foreign Commerce, and I am recommending the same to him.

Thank you for calling this matter to my attention, I am,

Sincerely,

ROLAND V. LIBONATI.

AUGUST 24, 1960.

Hon. PETER F. MACK, Jr.,
Washington, D.C.

DEAR COLLEAGUE: I have received the enclosed communication from Mr. Raymond A. Jones, executive secretary of AFTRA, Chicago local.

I feel that some of the suggestions that are included in this resolution contribute, in a measure, to the solution of many of the problems facing that industry.

Thanking you for your consideration of this matter, I am,

As ever,

ROLAND V. LIBONATI.

AUGUST 25, 1960.

The Honorable ROLAND V. LIBONATI,
House Office Building,
Washington, D.C.

DEAR ROLAND: This will acknowledge receipt of your letter of August 24 and the enclosed resolution from the Chicago local of AFTRA.

Many of us on our committee have been quite concerned about the policies of radio and television stations in overlooking local interest and in the FCC policy of automatically renewing station licenses. I feel the suggestions made in the resolution from AFTRA are extremely appropriate and support the views expressed in reports made by the Committee on Legislative Oversight.

Sincerely yours,

PETER F. MACK, Jr.

Mr. Speaker, the communication received from the Honorable PETER F. MACK, Jr., Representative from the 21st Congressional District of Illinois, is indicative of the acceptance of the suggested changes contained in the resolution from Chicago local of AFTRA.

As a recognized expert in this field, certainly, his recommedations should be accepted.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Jet Takeoff Noise

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. KUCHEL. Mr. President, the jet age has brought a marvelously new means of transportation to the people of the globe. However, it has also brought many new problems, one of which is the extremely unpleasant problem of noise in jet takeoffs and landings. I share the continuing concern of many people who live with me in the State of California with respect to the problem. During the past many months I have been consulting with the head of the FAA, General Quesada, with a view to taking steps which might be useful in eliminating the unsettling sounds of takeoffs when jet planes take off from airports.

General Quesada has issued a series of regulations to deal with that problem. I believe they will be helpful. I have been interested also to note that some $50 million has been allocated by the aviation industry to study the best means of eliminating these noises.

I ask unanimous consent that an excellent editorial on this subject entitled "Quiet, Please!" appearing in the Washington Star for August 21, 1960, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

QUIET, PLEASE!

Disclosure that the aviation industry has spent $50 million during the past 5 years in efforts to solve the increasingly serious problem of airline noise gives a measure of hope to those whose ears and nerves have been blasted by the din of passing planes. Sufferers from the racket in the skies should not allow their hopes to soar too high, however, for no immediate relief can be promised by those studying the problem.

The industry's program of noise research and suppression was outlined by Sir William P. Hildred, director general of the International Air Transport Association, at his headquarters in Montreal. He said the noise problem would be a major issue at the meeting next month in Denmark of the international group. Meanwhile, according to Sir William, an enormous amount of work has been done on both sides of the Atlantic in trying to silence the big aircraft—especially those with jet engines. Waxing philosophical, Sir William added that "people should understand that a certain amount of power in anything makes a noise—and noise is an essential accompaniment of modern life."

Maybe so. But we fervently hope that the aviation people nevertheless will continue to seek effective means of making airplanes quieter. Residents of some sections of the Washington area are finding it difficult enough to be philosophical about the roar of conventional planes taking off or landing at the National Airport. They will be even less philosophical when the big jet airliners start using the new airport at Chantilly.

Federal Aviation Administrator Quesada is no less concerned over the noise problem than harassed residents near airports. He has stated that the FAA is concentrating right now on the problem, which involves not only engineering research on engines and planes but the arrangement of takeoff and landing patterns so as to cause the least disturbance to persons on the ground. Some progress has been made in the latter direction here, although pilots do not always follow the routes laid out. Here is an enforcement problem with which the FAA should deal.

Mr. Quesada wisely has taken steps to cope with the jet noise "fallout" when the Dulles International Airport opens next year. Large buffer zones, each as large as the National Airport, have been established at the ends of each runway. Land that otherwise might have been used for residential purposes and thus become a source of complaints has been taken into these zones. But the breakthrough that some day may silence the jets and bring peace of mind and body to those of us who are earthbound is not yet in sight. Whatever the cost, we hope the aviation industry and the Government will press ever onward in their search for a solution.

House Program for Week of August 29

SPEECH
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

PROGRAM—DISTRICT BILLS IN ORDER ON MONDAY NEXT—CONSENT AND PRIVATE CALENDARS TO BE CALLED ON TUESDAY NEXT

(Mr. HALLECK asked and was given permission to proceed for 1 minute.)

Mr. HALLECK. Mr. Speaker, I take this time for the purpose of inquiring of the majority leader as to the program for the balance of this week and as best he can tell us at this time the program for next week, and if he can predict, if he cares to, as to a possible sine die adjournment next week.

Mr. McCORMACK. Mr. Speaker, the next order of business today is the deficiency appropriation bill.

Following that will be bills from the Committee on the District of Columbia and I suggest to the chairman of the committee that they bring up today only those bills which in his opinion and that of the members of his committee are not controversial and that the others be carrier over until Monday of next week.

Mr. HALLECK. If the gentleman will permit an interruption, I might suggest that he obtain consent at this time to consider those bills on Monday next that are not disposed of today.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order on Monday next to consider bills from the Committee on the District of Columbia.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. On Tuesday, of course, there will be the call of the Consent Calendar and Private Calendar.

Mr. Speaker, I ask unanimous consent that it may be in order on Tuesday next to call the Consent Calendar and the Private Calendar.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. HALLECK. If the gentleman will permit at that point, may I express the sincere hope that members of any committee which has bills eligible for consideration on these calendars get them in so they can be called on the calendars and not have to be brought up under unanimous consent.

Mr. McCORMACK. I agree with the gentleman.

Then there will be called up on Tuesday the bill H.R. 8093, the Merchant Marine Act, Pacific coast shipbuilding, if a rule is filed on it.

Also there will be several resolutions and bills from the Committee on House Administration relative to printing and other matters. A list of these resolutions and bills will be placed in Monday's RECORD.

The bill H.R. 8093, dealing with the Merchant Marine Act, is the only legislative bill I have put down specifically.

Of course I make the usual reservation that any further program will be announced later and that conference reports may be brought up at any time.

In reference to the sine die resolution, I am unable to state anything in connection with that. The one thing that might delay it would be the length of time the conferees may take on the minmum wage bill and how far the conferees are willing to go in accepting the better bill that passed the other body.

Mr. HALLECK. I was satisfied with the House bill, as, apparently, the majority was.

Mr. McCORMACK. That makes a straight issue between the gentleman from Indiana and the gentleman from Massachusetts. I favor neither bill, particularly, but between the two I favor the Senate bill. But let us not get into that.

DISPENSING WITH CALENDAR WEDNESDAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday of next week be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, I do not want to be held down to this, but my best judgment is that we may adjourn sine die around Wednesday or Thursday.

Mr. HALLECK. I would like to make one further observation that has been suggested to me. We may have some committee action dealing with extension of the Sugar Act. Any matter, I may say to the gentleman, such as that, we can agree among us to consider, and I will be glad to cooperate in every way I can.

I would like to make one other suggestion. That is that everyone understands as we come into the closing days of the session, if any bills are to be brought up under unanimous-consent agreements, which would involve unanimous consent for passage or for suspension, that there be consultation so we can understand completely what is involved.

Mr. McCORMACK. The gentleman is clearly within his rights on that.

ADJOURNMENT UNTIL MONDAY

Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

States Rights Found

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. THURMOND. Mr. President, the August 26, 1960, issue of the State, of Columbia, S.C., contains a well-written editorial which makes an excellent point. The point is that the important principle of local self-government, referred to by many as States rights, is quite meaningless to the advocates of centralization of power in Washington until and unless this vital principle can be found to serve a useful purpose for them.

I ask unanimous consent that this editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATES RIGHTS FOUND

Four of New York's leading politicos, the present Governor, Nelson Rockefeller, and his three predecessors in office, Averell Harriman, Thomas E. Dewey, and Herbert H. Lehman, have made a big discovery. They have found out that there is such a thing as States rights. And we are glad they have.

It all came about this way: Representative EMMANUEL CELLER, of Brooklyn, was preparing to ask the House of Representatives to cite three officials of the Port of New York Authority for contempt of Congress on the ground that they had withheld information wanted by the House judiciary committee which has been investigating the authority for several months. Since then CELLER has gone through with his proposal and the House has voted to cite them.

A telegram of protest, sent to all House Members, said the four Governors believed "such precipitate and unhappy action would mark the first time in the history of the United States that the Congress ever voted to instigate criminal prosecution for contempt against State officers serving a State agency in a matter that concerns the proper exercise of their official duties." It was charged the Judiciary Committee's attempt to subpena confidential interoffice memorandums—the source of the proposed citation—was an attempt to invade States rights.

CELLER said if the Governors believe that his committee has acted unconstitutionally, the proper way to test the question is to appeal to the courts, and Rockefeller replied that if these officials were cited (which they have been) "of course we shall take it to the courts."

In their letter the four New York Governors said: "We are faced with an assertion of Federal power to control State and municipal agencies which would wrench our system of government from its established foundations. The subpena at issue appeared to us and our legal advisers to constitute a novel intrusion by the Federal Government into areas reserved by the constitution to our respective States and to constitute a precedent which could subject various agencies of State government throughout the Nation to be similarly answerable to Federal authority."

As a believer in States rights we, of course, side with the Governors. But that is not the immediate point we wish to make. We are just so glad that these chief executives have at long last discovered that there is such a thing as States rights. The next step for them would be to recognize that States rights apply not just to New York, but to other parts of the country as well—even to the South. But we guess that would be asking too much.

Can America Maintain Peace?

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. WILSON. Mr. Speaker, one of California's most distinguished State senators, Nelson S. Dilworth, of Riverside County, last year made an outstanding address at the Kiwanis Club of San Diego. The subject, "Can America Maintain Peace?" is one which is of uppermost concern to all of us today and the outstanding quality of Senator Dilworth's effort is indicated by the fact that the Freedoms Foundation at Valley Forge selected this speech as the winner of its George Washington Honor Medal.

The speech defends the American system of government from the slander and false claims of the Russian dictatorship and is more timely today than it was when it was first delivered at San Diego on August 25, 1959.

Under unanimous consent I include this speech in the Appendix of the RECORD as a portion of my remarks:

CAN AMERICA MAINTAIN PEACE?

Thank you, Mr. Chairman, for your gracious words of welcome and to you, President Cunningham, may I express my sincere appreciation for the outstanding leadership of your organization in clarifying the obligations of citizenship in a free, popular form of government and also your accomplishments in meeting these obligations.

I am sure that you all fully realize that a government, whether good or bad, is made up of people, men and women of varying standards and motives. Our illustrious first President of this Republic often stated in substance and I think in words, "Government is a dangerous servant and a terrible master." What words could be more true or more applicable to our situation today? Shall we keep our government as a servant of the people, doing their will, or allow cunning and malevolent conspirators to seize control and make of our free institutions an instrument for the exercise of their dictatorial will? This is not an idle thought. It has happened to a score of republics in your lifetime and mine. Shall it also happen to us, to you and to me, to your children and to mine? The answer is for us to give.

Centuries ago in the English Parliament Sir Edmund Burke declared, "For evil men to succeed it is only necessary that good men do nothing." Perhaps others voiced that sentiment in earlier years in forums unrecorded. It was true then and it is true now. For evil men to seize our Government and with it our liberties and freedom, it is only necessary that our official leaders do nothing.

For the world Communist conspiracy, to take over and enslave Americans by means of control of our American Government it is only necessary that freedom-loving American officials in public office do nothing to oppose them. Our governmental leaders must resist the Socialist front of the Communist conspiracy, or we will be engulfed as others have been.

The freedom-loving President of Czechoslovakia was not removed from office when the Communists seized the Republic. The freedom-loving majority in the Parliament was not immediately replaced. They were just intimidated into doing nothing to hinder the Communist organization at work. They thought, perhaps, that they could compromise, or coexist with Communists in political activity. Alas, how tragic a mistake. America also can fall into the Communist tyranny while hating it.

The last step in Czechoslovakia that sealed the doom of freedom and the end of the Republic was when the newspapers refused to continue printing the facts developed by the parliamentary commissions exposing the organizational methods of the Communist conspiracy to terrorize non-Communists into submission. The Communists boasted that they would make the non-Communists destroy the Republic and they did. The long sharp blade that drew the lifeblood of freedom from the heart of Czechoslovakia was the stupid participation by non-Communists in organizations directed and controlled by concealed Communists. The Communist Party was only the handle of the blade and the rough hand on the handle was that of the Politburo in the Kremlin.

It is only prudence to consider the fate that has befallen other free governments. The czars of Russia in the evolution of time and progress finally granted to the Russian people a parliament, a duma, in the year 1905. Progressively the elected representatives of the people accomplished faltering but well directed steps toward freedom. In the mili-

tary debacle of 1917 with disaster at the fighting front a harsh reality, the duma set up a republic to be rid of the incompetent hereditary rulers. Political freedoms were declared and political prisoners released from jail. Revolutionary fugitives in foreign lands were permitted to return.

As the new republican leaders rallied their armies to defend their native homeland they allowed opposition parties to organize and even to arm themselves in the name of liberty. In only a few months, as the republic's leaders and soldiers, faced the foreign invader, they were stabbed in the back at St. Petersburg by the organized Socialist Party of Nicolai Lenin, a returned Socialist fugitive. Under Lenin's orders a mob of revolutionary conspirators, rifles in hand, rushed into the duma and made prisoners of the elected representatives of the Russian people. Arsenals and supply trains were raided for arms that should have been in the hands of the armies defending Russia from attack, and before the armies at the fighting front could turn about and deal with the enemy at home, the homeland had fallen into the bloody hands of Lenin's well-disciplined party. And what party was it? It was the Socialist Party. Lenin was a Socialist. As a Socialist he came to power, but to force his socialism on an unwilling people he had to have a secret police system under a released bank robber from the Caucasus. Socialism was made compulsory and extended to the daily details of personal life. It required punishment and terrorism for enforcement on such a scale that no ordinary court system could cope with the volume of resistance. Compulsory socialism, known as communism, cannot be made effective without arbitrary police power to individuals or groups and liquidate them.

The socialism of Lenin was but a high-sounding name to screen a tyranny and oppression never realized under the worst of the czars. And it all happened so quickly, so unexpectedly. It happened in days, even in hours. The transition from freedom to slavery is quick, like passing through a door. The return trip from slavery to freedom takes whole generations, yes, centuries of sacrificial struggle by the noblest and best youth of the land. All the accomplishments of the Russian people in hundreds of years of struggles for freedom were swept away in minutes as Lenin's rifle-bearing revolutionary Socialists rushed into the duma and made prisoners of the freely elected representatives of the Russian people. Nothing remained to stop Stalin from displacing Lenin and setting up rule by violence. Not only can socialism never provide peace, but socialism requires violence and tyranny to exist.

South and west of Russia across the continent of Europe, Lenin and Stalin were copied. A conspiracy was organized within a country enjoying constitutional freedom under the nominal leadership of an indulgent and popular king. Benito Mussolini was allowed to organize to use force by the tolerant government. He marched on Rome and rather than shed Italian blood the government allowed him to take over. And who was he? He was the leader of the Socialist Party of Italy. It is true that he copied the emblem of the Caesars, the bundle of sticks and battleax called faces, and became known as a Fascist, but he built his organization out of the Socialist Party on socialist theories.

Faced with popular dissent and reluctance, he, too, turned to secret police and bathed Italy in the blood of her own sons and daughters. The indolent Italian citizen content to leave the government to others paid a thousandfold in labor, blood, and tears under the Socialist dictatorship for his apathy during his years of freedom. Yes, and in the loss of his sons in the rash military adventures of the dictatorship, the Italian father's aged head was brought low to an unhappy and lonely grave. All because they neglected to make the sacrifice of time and effort to preserve their free institutions when they had them.

Freedom will not operate itself. It must be defended. It is but a chance to achieve liberty for ourselves. We must accept the responsibility and labor to operate our popular government or become slaves. May I repeat that for evil men to succeed it is only necessary for good men to do nothing. Socialism in Italy could not provide peace but plunged the country into reckless foreign wars and maintained murderous, decimating strife in the homeland.

By the time that the people of Italy were ground under socialism's iron heel, a man with a cropped mustache reached for the leadership of the Socialist Party in Germany. With inflammatory speeches and promised glories for Germany he bound to his will the Socialist organization. The German Republic was tolerant. The leaders were hesitant. Their currency was valueless. Adolph Hitler was allowed to organize with military methods.

As a Socialist he came to power by election. To carry out his Socialist decrees in the face of rising resistance of the German people, Hitler too, had to organize a gestapo and secret police, yes, and huge crematories and charnelhouses to liquidate and dispose of millions of his own countrymen, and countrywomen. By the chance of history this Socialist dictator come into political command of the German General Staff, the world's greatest war machine, and plunged the whole world into the mass carnage of World War II. This was Hitler's method of suppressing the German people's discontent under socialism. Enforced socialism cannot keep peace but leads inevitably to war.

And what shall I say of the German people who neglected to keep their constitutional republic and voluntarily chose a fuhrer? In exchange for their freedom they got poverty, destructions of homes and loss of livelihood, wounds without number, death and a national and racial condemnation and dishonor on the unchangeable pages of history. All this was because they would not accept the friendly duties and responsibilities of free popular government under the Reich.

From these examples, and I could give others, I think it is clearly evident that compulsory socialism, or call it communism, it's the same thing, holds no promise for peace or for any advancement of human welfare. Marx called it socialism, Lenin called it socialism, Stalin called it socialism, Khrushchev calls it socialism, and socialism it really is. Under its rule government is a terrible master, indeed. And why should America adopt it piecemeal, a little at a time? Careless officials thrust on us various types of socialism. It aggrandizes their power. It multiplies their control of affairs and control of people. If we allow these officials to put one thin layer of socialism on top of another, they will soon be our masters, and we will be prisoners in the land we failed to protect and save. Socialism on the installment plan is just as tyrannical as any other socialism.

Socialism is never practiced voluntarily by all people. It has to be enforced. Enforced socialism is communism. To enforce socialism in the common, everyday acts of life of the people, a secret police and dictatorship are required. The police state inevitably develops into terrorism and destroys every trace of freedom. It becomes the terrible master that President Washington warned us to beware of. But the father of our country also said the government could be a servant, even if a dangerous servant.

The critical turning point of whether government is a master or a servant is this, "have controls been established so that the people may control the men and women into whose hands power is delivered?" And we must remember that one government has as much power as another, the power of life and death is wielded by every government. In our America let's look at some of the controls that have been firmly established to hold in check any rash and adventurous official who may come to temporary power.

What has our American Constitution enabled the American people to accomplish toward realizing in government the ideals of the great Declaration of Independence, ideals of life, liberty and the pursuit of happiness?

First we have accomplished freedom of life. We have established effective curbs on the police and military forces of our country. The citizens cannot be placed in jeopardy for life or liberty by the police or even by any judge without the voluntary waiver of the right to a jury trial. Every citizen may count on this security. The people have withheld from government officials and reserved to themselves in the form of juries the right to judge the innocence or guilt of their own neighbors. Americans have established the greatest consideration and fairness toward those accused of wrongdoing ever known to exist in this world. Even for petty offenses the citizen accused can demand a trial by a citizen jury of his peers within the jurisdiction of the alleged offense. This vital feature of American liberty is not equaled in other governments.

Other great powers are withheld from our Government officials by the people. Leaders of the National Government are powerless to alter the Constitution if they are faithful to their solemn oaths to uphold and defend it. Only by referring proposed amendments to the elected legislatures of the States or to elected conventions can amendments be affected.

The history of liberty the world around has been the story of resistance by the people to the encroachments of their own government. No matter how well intentioned, human beings in public office, some of them at least, tend to expand their power and enlarge their activity. In no other country have the people more safeguards, more weapons to strengthen their resistance by peaceful means to such trespass of the liberties as have been reserved to the people by the Constitution.

In the Constitution itself there are numberless checks and balances to safeguard our people against arbitrary caprice in official acts. Congressional action is subject to Presidential veto. The veto may be overridden by a two-thirds vote in each House of Congress. The President must obey the laws duly enacted and must uphold the Constitution. If he fails, Congress by the process of impeachment may remove him from office. The President may not touch a single dollar in the Treasury without an appropriation by Congress. The powerful House of Representatives is required to come before the people for election or removal every 2 years.

In 170 years no one has successfully subverted our constitutional processes and today our Government is the oldest national government in the world without major change in its basic institutions.

Another check or balance on the Presidential power is that the most important appointments made by the President are subject to the approval and consent of the Senate. Thus the important policy decisions of the American Government are for the most part the result of concerted action of several or even many officals.

Historically the last word in the defense of the Constitution has been the prerogative of the judiciary with the final resort being the Supreme Court. Acts of Congress or acts by any official may be challenged in the courts by any citizen and if the courts find that they are in conflict with the Constitution, the governmental act is void. So

we have a government of laws made by many rather than one official and all subject to the scrutiny of the courts as to their conformity with the Constitution. The security of the American citizen in his constitutional rights is our Nation's most outstanding and unique political accomplishment. Comparable rights in the economic field are enjoyed by the people of America as a result of their active participation in governmental activity and their use of the political safeguards so that in America, government is in fact a servant of the people.

Our Government being under the control of the people should bring about a significant and unique policy in relations with other countries. It certainly has. Although America has become the greatest military, naval, and aerial power on the earth, we hold and rule no conquered land. Along our farflung land frontiers our neighbors dwell peacefully and unafraid without forts or defenses of any kind. The American Constitution is the greatest peace document ever produced by men. Our weaker neighbors pay us not tribute but dwell secure under our protection from the greed of conquest by totalitarian countries. The flow of wealth is not from the weak to this powerful Nation but from us to the weak and underdeveloped countries. All this is in response to the will of the American people as freely expressed in elections. In American elections there is always another name, or place for one, on the ballot to confront our official leaders when they go back to the people for extension of their tenure of office. There is always competition for election to office or the opportunity for competition. Competition in elections is another word for freedom.

There is also competition for business success. In the interest of the public, competition is regulated to insure honesty and fairness, but there is little socialistic governmental dictation. This competition in business for public favor and demand is very real and keen. The public is the umpire and the banker is the scorekeeper. Every time you buy a General Motors car you make that corporation more prosperous. When you buy Texaco gas you promote the growth of that company. You have your choice. You may buy Chevron or Shell gas. That manufacturer will grow. You may buy Chrysler or American Motors. You choose. Competition, the American way, gives you your free choice. Competition lets you, the people, decide what you want. Competition greatly expands American liberty and is another word for freedom. It is what has made America the wonderland of the world.

In the American competitive economic field there have developed many instances of voluntary cooperation that are highly beneficial to the public and to the parties participating. These must never be confused with the politically compulsory socialism that has been so tragically destructive abroad.

Competition exists all around us in the world of nature, between the grasses in our lawn and the trees in our forest, between the wild animal life for survival, yes and even among birds for life itself. Competition is natural in this world and in our political life, competition is the means by which we give the people their choice, their control of government as a servant and not as a master.

Our Constitution guarantees no results. It is primarily a rule of the game, a means of fairly determining the will of the people. Our Constitution will not work itself. We can no more have liberty and peace without effort than we can have bread without toil and labor. Our Constitution is entirely in language of opportunity, a chance for the ambitious to achieve for the people of America.

Today the way to survival in American national official position is to serve the cause of peace among the peoples of the world. This benign competition between the most able and powerful leaders of America is the hope of humanity the world around to escape the unavoidable trend to war of the socialist dictatorships. While foreign dictators compete for power, American leaders compete to make peace more secure and to banish fear and want from the firesides of the world. I can best describe it as the Golden Rule put into practice by our Nation in international affairs. We are trying to do unto others as we would that they would do unto us.

I have tried to show how the Constitution of the United States requires competition for positions of leadership in the American Government and uses this competition as the means by which the people, with their choice of candidates, exercise their control over the policy of the American Government and restrain the over ambitious should they come to power. This control by the people over their officials in Government not only renders civil war unnecessary and preserves peace at home, but in effect selects leaders for our Government who seek peace in relations with other peoples and other nations. Our leaders do this because it serengthens their positions in the political competition for continued return to official position by the people at elections. This is a true and dependable type of peace that is based solidly on the will of the American people.

The wise Forefathers who framed our Constitution understood this point clearly. They wrote a provision in the Constitution that the Federal Government must guarantee a republican form of government to each State. In other words should a State become a dictatorship or a monarchy, the United States must step in and restore a republic. The architects of our Constitution understood clearly that we cannot have a partnership with dictators and maintain freedom.

The least successful phases of government in the American Republic are those municipalities that fall under the power of a political boss. This happens too often but the point I want to observe is that, whenever, a boss gets control of a city political machine, he inevitably corrupts the State government. We cannot permit dictators or bosses within the framework of our free institutions without great harm to our Government and to the people. Neither can we safely go into partnership with foreign dictators in a world government. We are but one-fifteenth of the population of the world and we have one vote in 77 in the Assembly of the United Nations. Conferences with other nations and cooperation for specific goals, yes, but surrender of our Army and Navy to foreign control and yield to aliens at the head of world government the power of taxation and the regulation of immigration to this free land of ours, never. Any such step would end all freedom.

Our unique political and economic institutions have enabled the American people to produce one-third the wealth and goods of the world. We cannot, we dare not subjugate our people and our accomplishments to the control of representatives of the backward peoples, representatives who dominate and oppress their own lands. If it is necessary to fight Communist infiltration in Lebanon, why not in America? If it is necessary to fight Communists in Quemoy and Matsu, why not resist and expose them in America now, while yet we can?

But you ask me, How is America going to stop the Communist world conspiracy short of war? Students of history believe Hitler could have been stopped if the nations had realistically faced up to his announced intentions in time.

And what are the Communist intentions? They have been proclaimed countless times by books, speeches, pamphlets, radio, and periodicals. They are driving for a world dictatorship. A dictatorship of the proletariat they say, meaning dictatorship by the power-mad, self-appointed conspirators in the Kremlin. The Communist official who in person directed the slaughter of 15 million blond, freedom-loving Ukrainian peasant men, women, and children has publicly boasted speaking to the American people that "some day we will bury you."

It is probably true that the majority of the Russian people want peace. Most common people do. But have they the power to keep the leaders of their dictatorship within peaceful objectives?

Only Khrushchev and the Politburo can put names on the Russian election ballots. The peace-loving people are not permitted to place the name of a candidate of their own for governmental office on the ballot, beside the Communist Party names.

The greatest assurance of world peace that I can think of would be for the Russian people to obtain this right to place their own candidates' names on their election ballots and then have a secret vote in an election where they were free to vote as they chose without fear of Khrushchev's secret police and terrorism.

I know of no other way to restrain Khrushchev's insane lust for world power and domination.

And how shall we stand against Khrushchev's intent to bury us? First by truthful and honest national policy with a helpful friendly hand extended to all other national leaders who exhibit good will and who value freedom among men.

Second, by a national and popular return to trust in Almighty God and His Commands of righteous living and devotion to service of our fellowmen. National and ecclesiastical recognition of God is good but not enough. It must be a widespread and heartfelt turning to God and His Bible by our God-fearing people individually, by families, and communities as well as in churches and religious groups. We must preserve our faith as a people and as a Nation in the Almighty God, our Creator. No other defense against communism is as powerful and as universal in effect.

Then having taken our stand on truth and good will and acknowledging our dependence on God, we must be strong, strong militarily, strong economically, strong in the spirit of service to others, strong in our faith in God.

We must rekindle the fires of patriotism and service in the hearts of our youth, our adults, and our aged. There is a duty for all. I warn you that patriotism, like everything else, has to be taught and to be taught effectively it has to permeate all of our schoolbooks and it has to be lived sincerely by both parent and teacher.

I cannot think of a nation worthy of the name but which has been built on the patriotism of its people, particularly its young people. I can name many nations that have been quickly pillaged and destroyed when their people lost the ideals of patriotism and service to their country. When the youth of any land refuse to offer themselves freely in the service of their country the tragic end of that nation hastens on apace. Grey heads can provide the best shock troops in the cold war of the forum and printed page against the propaganda of socialism and dictatorship which seeks to discredit competition and freedom. All our adults of the middle years can be loyal in word and deed. Their social and cultural organizations can assist as agencies for patriotism and service to our country.

We must be strong in research and science and safeguard our new knowledge with great care that our discoveries do not enable our enemy to harm our land and our people.

For their own protection it is imperative that our youth in schools and colleges select the serious hard courses in science, mathematics, and languages. The empty seats in these classes should be filled up by volunteers for service to America, service in peace as well as war. Many are demonstrating great ability and perseverance in these fields, but they are too few in number. Our institutions of national defense are unable to secure enough scientifically trained recruits to modernize our defenses fast enough. This is the only road to peace. Superior knowledge and skills. More advanced research carefully guarded. Greater skill and willingness to sacrifice ourselves in the defense of our country. And demonstrated cooperation between the free nations of the world.

Then, if the evil Socialist distatorships unleash the great engines of war, our young adults must spring to the defense of our country and once again demonstrate that freemen are more brave than the driven subjects of dictators. It may be that, as the Kaiser was not stopped in time, and as the dictators of socialism were not stopped by peaceful means in the thirties, that the oriental madmen of Moscow and Peiping will not be deterred from their course of blood. It may be that the beautiful trees of popular freedom and liberty have to be again defended and watered with the blood of sacrificial service by the American people. Our forebears gave their lives gladly for our freedom. We can do no less with honor in our time.

Whenever liberty has been proclaimed in any land it has been the result of fervent national spirit, of enthusiastic patriotism. Not only does patriotism produce freedom in government but it produces justice, it defends truth, it strengthens morality and it practices righteousness. And what is patriotism, it is love of one's native country, love of one's neighbors and friends, love of the institutions of freedom and justice, love of liberty for youth and aged. Patriotism produces that indispensable willingness to sacrifice one's own comfort and even life itself for others, for country and native land. Patriotism is love's supreme expression best defined 1,900 years ago by the unforgettable words, "Greater love than this hath no man, that a man lay down his life for his friends."

I plead with you to welcome and act on every patriotic impulse in your breast. Read patriotic books. Support the efforts of patriots who are striving to preserve freedom in our conutry. Speak of patriots who are striving to preserve freedom in our country. Speak out for liberty at every appropriate opportunity.

As our honored forebears pledged their lives, their fortunes, and their sacred honor to the support of the Revolution against the tyranny of 1776, may we now as freely and sincerely pledge our lives, our means, and our secred honor as men and as citizens of America to the equally perilous struggle to maintain our freedom and national independence today.

What Makes Them Communists?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely article on communism which appeared in the American Legion magazine for September 1960:

WHAT MAKES THEM COMMUNISTS?—A FORMER COMMUNIST LEADER DESCRIBES THE TYPES WHO JOINED THE PARTY AND TELLS WHY THEY DID

(By John Lautner)

While relatively few Americans have had the dubious distinction of knowing personally any active members of the Communist Party, everyone has learned about such people from millions of words that have been written and spoken about Communists and their activities.

Thanks largely to investigations, all America has seen how these people have used their positions and their talents to betray their country. They have seen how, in positions of trust, these people have stolen secret documents and plans for use by Soviet Russia. They have seen how highly placed people in Government have used their influence to make foreign policy which has endangered these United States. They have watched with dismay as stars of stage and screen were exposed as having given lavishly of their money and their influence to a conspiracy directed against a nation that made them rich and famous. They have been saddened to find that Communists have used their jobs in schools, colleges, newspapers, and even in churches, to spread their deadly doctrine.

Where do these modern Benedict Arnolds come from? What kind of mentality do they possess? Certainly they were not born Communists, so what made them Communists, willing to do the Kremlin's dirty work in this country?

Having been in the operating leadership of the Communist Party for many years, I think I have a pretty good understanding of what it is that causes people to become Communists and how they are used by the party once they are absorbed into it.

Why does one join the Communist Party? I have heard this question many times in the last 10 years while traveling for the Government on cases dealing with communism. People in all walks of life, judges, Federal grand juries, spectators at hearings and trials, attorneys, Federal agents, and others seek an answer to this question. Even the Communists themselves—but for different reasons—never failed to ask new members why they joined the party.

Party leaders spared no effort, time, or money to get new members. And when the new party member came to his first meeting, the Communists were always eager to find out what compelling reason prompted him to leave his former way of life behind, and step over the threshold into the disciplined ranks of the party.

I had many opportunities to listen to the explanations the newcomers gave. Most of the reasons given by new members for joining the party were primitive and emotionally motivated. The new member usually had only a vague idea as to what Marxism-Leninism—the doctrine of communism—meant to him. Almost invariably he explained his move into the party by condemning the existing social order with its institutions, traditions, and ethical standards. Some of the newcomers did this quite eloquently.

In the course of 20 years of party leadership, I have seen many join the party, who were nonsocial in behavior and weak in character. The party to them meant strength, and they were encouraged to lean on it. Prior to joining the party, these people had no connection with any of the many legitimate social and benevolent organizations that function everywhere in the country. They were not participants in the political activities in their respective communities. At best, the new party members had been tied up with a party-controlled front organization, such as a nationality group, an unemployment unit, the American Labor Party in New York, a left-wing student group, an anti-Nazi organization, or one of the many other front organizations that the party has created from time to time. Some came from the so-called "rank and file" groups organized by the party in the labor movement.

New members rarely realized that the party they joined was committed to the principle of dictatorship and the defense of the Soviet Union. They learned about these obligations later through gradual careful indoctrination. New members had no idea of the strict discipline enforced in the organization. As these conditions unfolded before their eyes, most of them hurriedly left the party. This created an extremely high rate of turnover with thousands sometimes joining and leaving the party at the same time. On the basis of my own experience I would estimate that there are at least a half million individuals in this country who, in the course of 40 years of the party's existence, have at one time or another made out an application card to join the Communist Party.

New party members invariably came from that segment of our society known as dissidents. They were embittered individuals, who found in the party many like-minded people. It was only natural that the Communist Party should get a great many of these bitter and frustrated individuals.

The bulk of the party membership, and notably the party leadership, did not come from the industrial working class. At all meetings in which the industrial composition of the membership came up for discussion, party leaders would warn: "We must change the composition of the membership to become a truly working class party." This, however, never happened, and to date the problem has remained unsolved. When leaders such as Earl Browder ventured to say that the composition of the leadership should also be changed, it was softened with the after thought: "Well, Marx, Engels, Lenin, and Stalin were not workers either."

At the height of its numerical strength, in 1938, the membership consisted of 75,000 dues-paying members with 20,000 more in the Young Communist League. About half of this membership was in New York City. In 1929, when I joined, the party had around 10,000 dues-paying members including the Young Communist League. The bulk of this membership was foreign-born, from central and Eastern Europe, but among them were a few native-born members, who were surging ahead into leadership. The party-controlled press consisted of 10 daily newspapers and 17 other publications, printed in about 20 languages, with a total circulation close to 200,000.

When I joined, the overwhelming majority of the members were people who had split away 10 years before from the Socialist Party, plus some immigrants who had come to this country soon after the First World War. The former leftwing of the Socialist Party, the so-called language federations, had split away on issues related mainly to the Soviet Union, and these formed the Communist Party. They believed in giving all-out support to the bolsheviks in Russia; they endorsed the bolsheviks' methods of gaining state power; and they were determined to seize power in the United States by the same methods. To these wild-eyed leftwingers world revolution was inevitable. They believed in the Leninist way to "the dictatorship of the proletariat."

As these people broke away from the Socialist Party, they could not agree even among themselves. They split again in a scramble for recognition as the sole representatives of Moscow, and organized two

Communist Parties. The Bolsheviks of Moscow then had to step in and force them to merge into one organization to be directed by the Communist International. The merged party quickly learned obedience and loyally carried out the policies and instructions that came from Moscow.

It used to be a common saying in the party that all roads do not lead to Rome, but to Moscow. It was also said that the party leadership in the United States is like the Brooklyn Bridge: it is supported by cables, in this instance cables from Moscow. The former left-wing Socialists, who had made such an outcry that they were gagged in their exercise of free speech by their leaders in the Socialist Party, now meekly succumbed without even a whimper to every directive that came from far-away Moscow.

Soon after World War I, during the years when immigration to this country was relatively simple, some of the newly arrived immigrants found their way into the Communist movement. These new party members had already lived through the 1917–20 revolutionary upheavals in their respective homelands, and after arrival in this country a few who could not adjust themselves to the way of life here found their way into the Communist Party. Many of them promoted themselves into leadership. This was not difficult to do in a party which had a lot of foreign-born members.

The most active individuals, who in a short time became party leaders were: Louis Weinstock, J. Peters (Sandor Goldberger), James Lustig, John Szanto (Dezso Hammer), Sam Milgrom (Mills), "Buck" Lazar, Bill Lawrence (Lazar), James Matles, Steve Nelson (Meszaros), Sam Brown, Louis Roberts (Sass), George Siskind, Joe Roberts (Gubelow), Martin Young, John Steuben (Rizsak), George Powers, Jim Keller (Karl Sklar), Peter Chount, Emil Gardos, Louis Koves, Louis Bebrits, and many others. By 1930 all of them were on the way into the first and second echelon of leaders in the party. They were well equipped to serve the party, and proved to be dependable troubleshooters always available to carry out party orders and decisions.

In all but one or two of the intraparty factional fights of the 1920's these fellows were known as "Jay Lovestone's boys." After all, he was the general secretary of the party, the leader designated by Moscow. But, when the break came between Lovestone and Stalin, the boys did not follow him out of the party. Not that they did not see the absurdity in projecting Moscow-directed Bolshevik methods in the United States, but Lovestone had openly defied Stalin's methods and that was unforgivable. Right or wrong, the Soviet Union and its leaders come above all else, and Lovestone's majority support in the American Communist movement melted away overnight.

When Jay Lovestone returned from his lost battle in Moscow, he found only a handful of his former followers. His whole party was gone, safely anchored in the monolitic structure of the Stalinist Communist International.

With the Lovestonites out of the way, the party braced itself for an influx of new members. It came soon enough with the depression that set in with the 1929 Wall Street crash when the unemployed provided a vast reservoir of potential party members.

Building the unemployment councils, a party front organization operating amongst the unemployed, became the most urgent task of every functionary and member. The kickoff came on March 6, 1930, with demonstrations organized by the Communist International all over the world. Practically all the major cities in the United States witnessed such Communist-organized demonstrations, many of them ending in riots. By the end of 1933 the party had doubled its membership. As a concession and inducement for the unemployed to join, their initiation fee and monthly dues were reduced to only 10 cents.

The rise of Hitlerism in Germany also benefited the Communists in America. They organized the League Against War and Fascism and the Anti-Nazi League, both front organizations of the party, and this made it possible to appeal to a new group of prospects. Many of them subsequently joined the party. During this period, at one of the big outdoor meetings in New York, the principal speaker, Willy Muntzenberg, an internationally know German Communist leader, told his audience that Hitlerism was a historical accident. Within a year or so, he said, it would be shoved into oblivion by the German people led by the Communist Party of Germany. "Have faith in the German party and the international," he said. And many listening to him at Starlight Park near the Bronx Coliseum believed him and joined the Communist Party of the United States.

At the time I was a section organizer for the party on New York's West Side. The boundaries of the section were from West 59th Street to 110th Street and from Central Park West to the Hudson River. It was a densely populated area with a wide variety of inhabitants. The section was organized in February 1933 and activated with 55 party members. When I left that section in April 1936, it had 560 dues-paying members and about 2,000 close party sympathizers in the Unemployment Council, Friends of the Soviet Union, League of Struggle for Negro Rights, International Labor Defense, Icor, Anti-Nazi League, and International Workers Order—all front organizations built by the party in a small section of New York City.

In this period two types of new members swelled the ranks of the party. There were unemployed people from the poorer parts of the section around Columbus Avenue and the lower sixties, and there were native-born, younger professional people from Central Park West; from west of Broadway, and from West End Avenue and Riverside Drive. The latter included teachers, lawyers, dentists, doctors, students, musicians, housewives, and office employees of all sorts. They moved into the party from Communist-controlled front organizations and from street corner meetings. In the course of the 3 years that I was there, at least 1,500 party application cards were signed and paid for in this one section alone. Many who signed never came to a meeting. Some left after one of two sessions; but there were others who stuck for good.

Why did they join the Communist Party? In the party a member had a feeling of belonging. He felt he could express his opinions and they would be listened to. At the Saturday evening house parties, there was a lot of fun as participants raised money for the party. To mingle with others, who had a sympathetic understanding of one's personal problems; to be on the ground floor in a building a new society; to get direction and guidance to run party-controlled front organizations; to sound off against Father Coughlin; to keep abreast of world events through the eyes of the party; to work for the revolution; to have excitement—these were some of the many reasons people joined the party. Front organizations produced new recruits with regularity, but special efforts were made to recruit college and university students as well as workers from industry. Some of the recruited students turned up later in the New Deal administration in Washington.

Getting new members was easier than holding them in the ranks. The joiners were the product of the American educational system, not the foreign-born comrades, and most of them did not stick. The leadership of the party desperately looked for a solution to stop this in-and-out routine.

The answer was found when Earl Browder, the Moscow-appointed leader, "discovered" that the Communist Party had its historical roots in the American soil and in the forefathers of this country. The party brush went to work on Washington, Jefferson, Douglas, Paine, and Lincoln. With a little adjusting here and there the Communist Party of the United States fell into line with the revolutionary traditions of America's illustrious historical figures. Listening to Browder, one would surmise that Jefferson and Lincoln would have been charter members of the Communist Party if they lived today. And to dispel any doubt, Browder made it crystal clear that "communism is 20th century Americanism." For the first time, in addition to singing "The Internationale" at mass meetings, the Communists began to exercise their lungs on "The Star-Spangled Banner."

At the same time, party leaders did not fail to point out that the banner of international solidarity must be held high by every member. They argued that while the party represented the best interest of the American people, it still stood for internationalism, and it represented the future. The party was all things to everybody. "Join the united front—join the party." This line was sweet music to the opportunistic pseudointellectual who had no roots anywhere in American life.

Another big break for the party's leaders came in the spring of 1936 when the Congress of Industrial Organizations came into being in Pittsburgh. For many years William Z. Foster and his cohorts had tried every trick in the book to gain a foothold in the ranks of American labor. On the instructions from Moscow the party set up the Trade Union Unity League (the trade union front of the Communist International), to infiltrate the ranks of American industrial workers. With the aid of a few professional revolutionaries and some unemployed party members they set up skeleton organizations from textile to steel. But there was no rank and file membership.

With the formation of the CIO the party was able to capture leadership with planted Communists in some of the newly formed unions. Somehow they managed to get charters and jurisdiction, in spite of the fact that no appreciable number of rank and file unionists ever joined or ever listened to the party.

Among trade unionists, only opportunists looking for personal advancement ever came near the party. These fellows were the type who would introduce a Communist-tailored resolution for adoption in a local union, or who would raise issues for which they were well-coached by a party functionary behind the scene. This type, anxious to look like a "big shot" in his local union, could never stand on his own feet, so he ran to the party for help and advice. The party, of course, was willing to oblige.

It should be said, and with the greatest emphasis, that only a handful of Negroes ever became members of the Communist Party. The time, money and talent that the party invested trying to get a foothold among Negroes was way out of proportion. But the American Negro, the target of the party for many years, refused to join its ranks.

The party injected itself into such issues as the Scottsboro, Angelo Herndon, Trenton Six, and other cases, but even this agitation did not help. The Negro people turned a deaf ear toward anything that had to do with the Communists. At the present time a handful of frustrated professional Negro Communist leaders are frantically trying to devise a "new line" which will break the

solid wall of Negro resistance to Communist infiltration.

Communist strength and influence started on the downgrade with the signing of the Hitler-Stalin Pact in 1939. A further setback occurred when Stalin intervened through Jacques Duclos, the French Communist leader, to "set the Communist Party in the United States on the Leninist path again."

These two events considerably reduced the influence as well as the membership of the party. The party and the Young Communist League between them had approximately 100,000 members in 1939. In spite of tactics employed during the war, such as their drives for a second front, and the use of the theme that "Russia is our ally," membership fell off. In 1946, soon after the war ended, the Communists could count only 60,000 members, and half of these were in New York City.

The years following the end of World War II did not produce any substantial increase in party membership, and the party concentrated on internal reorganization, reindoctrination of the membership in Communist theory and tactics, and concentration drives on the basic industries of the country. These drives were aimed at getting new members from workers in industries and unions. But in spite of the well-organized efforts and reorganization schemes, and even though thousands of new recruits came into the party, others left in droves. The old problem of turnover of membership continued.

To cite one example: In 1947 in the industrial sections of the New York party, organizers at staff meetings reported a large number of new members recruited. The organizer of the distributive trades section of the party reported 132 new members in May of that year, and pledged 1,000 by the 4th of July in the 16 clubs under his leadership. He almost reached that figure by July 4, but at the end of the year, he showed a net gain of only a dozen or so over the previous year. The same thing happened in all other sections of the New York party, and there was a similar picture in other parts of the country.

The turnover in the party rank and file so frustrated the branch and section functionaries that some of them openly opposed the idea of indiscriminate recruiting. The top leadership of the party singled out some of the defiant functionaries in the Midwest and New York and warned them to carry out their recruiting orders. Those who refused to carry out the orders were expelled from the party. When these functionaries appealed for readmission at the 1948 Communist Party convention they were rejected, to show that the party could not be defied.

Quality versus quantity became the issue, and the national leadership insisted on quantity. The leadership reasoned that they must have quantity first, which could be turned into quality. This, however, did not solve the acute turnover.

The history of the Communist Party, from the early 1920's to 1960, shows that it was not difficult to find people who, indifferent to consequences, would fill out a Communist application card, sign a nominating petition for a Communist candidate for public office, or become part of a Communist front organization.

Such a person, on joining the ranks of the Communist Party, was carefully molded into a loyal defender of the Soviet Union and a "fighter for the cause," to bring about a Communist dictatorship in the United States. He also learned that in the defense of the Soviet Union and the "dictatorship of the proletariat," he must be ready to risk exposure, ridicule, scorn, and sometimes even jail.

However, since 1950, a few events have occurred which have given the partly leadership some headaches. As we have pointed out, the party lost members as well as influence. Steps taken by such Government agencies as the FBI, the Department of Justice, the House Committee on Un-American Activities, the Senate Internal Security Subcommittee and others have badly hampered it. Such action on the part of the Government developed alertness and vigilance on the part of the American people as well. Another handicap has been the public exposure of Stalin's insidious murders of his own cohorts and millions of other innocent people, and Khrushchev's wholesale murders and persecution of the Hungarians, fighting for their freedom against Communist tyranny in 1956. Also oppression of national minorities, particularly Jews, did not help the Communist Party in this country. Recruits have dropped to almost zero, and many have left the party.

It need hardly be pointed out that, even though they live in this country, Communist Party members are in the Soviet orbit. As for those who left the party, it would be a mistake to think that many of them have become anti-Communists. These people are merely waiting to be coaxed by the leaders to get back in the fold. And from time to time such a call is voiced by leaders in the Communist press. The leaders look upon these people as party members who support the party without being organizationally connected with it.

A few years ago J. Edgar Hoover, Director of the Federal Bureau of Investigation, made a well-publicized appeal to ex-Communists, asking them to give the benefit of their experiences and knowledge about the Communist Party to the Government. Not many ex-party members took the opportunity to reach for Hoover's outstretched hand. Few indeed are the ones who make a clean break with communism.

In the main, the ex-party member remains the dissident he originally was when he signed the application card to join the party. He is fortified in his defiance by certain liberals who say that the ex-party member should be left alone in regard to the mistake he made. The ex-party member certainly made a mistake against his family, community, and country when he joined the Soviet conspiracy and he would be doing only what decency requires if he gave the benefit of his knowledge about the Communist conspiracy to his country's representatives.

The present Communist Party membership—the open leaders, the hidden membership, and the members at large—carry on their subversion under the slogan of: "One party, one policy, one direction," given by Gus Hall, the present general secretary of the party. These conspirators, like Nikita Khrushchev, dream of the day they will bury us, a free people, living in a country under the best form of government that the human mind has ever conceived.

In a nation of 180 million people it should not be surprising to find a few thousand people who will sign their names to anything without giving it much thought. Some will even join the Communists. What is necessary is that the American public be informed about this problem, so that we can be aware of what these people are like and what they are up to. This is one way, and an important way, in which we can keep the Communists from making headway.

Pollster Gallup Explains His Polls

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. SPRINGER. Mr. Speaker, much has been said in the past few days about polls and how they are made up. Dr. George Gallup yesterday wrote an article for the New York Herald Tribune explaining his method and more particularly the poll recently taken which showed Mr. NIXON today receiving 50 percent of the popular vote and Senator KENNEDY receiving 44 percent, with 6 percent undecided. The article is herewith appended for insertion in the Appendix to the CONGRESSIONAL RECORD:

IN REPLY TO ALSOP AND GORE—POLLSTER GALLUP EXPLAINS HIS POLLS

(By Dr. George Gallup)

Open season on pollsters has arrived, and the shooting, as usual, comes from those who do not like the poll findings. The basic procedures used by the Gallup poll have been described in books and articles. But in every new election many of these criticisms reappear. During recent days these points have arisen:

THE UNDECIDED VOTE

Standard procedure of the Gallup poll is to report what people think today and how they would vote if the election were today. Ask a typical voter how he plans to vote on November 8 and frequently he will say he doesn't know—it depends on what happens between now and election day.

On the other hand, virtually all voters can and will tell an interviewer how they feel at this time about the candidates. As a regular part of the question procedure of the Gallup poll, persons are asked to tell how they "lean" as of today, in those cases where there is indecision. This still leaves a residue of about 6 percent who can't make up their minds as to how they feel today, or are reluctant to tell the interviewer.

The history of polling provides ample evidence that polls can report accurately how people think at the time they are interviewed. Polls go wrong, as they did in 1948, chiefly because they assumed that people would feel the same on November 2 of that year as they did in the middle of October.

THE NONVOTERS

Standard procedure of the Gallup poll is to base its election poll findings on voters, and to exclude as carefully as possible all nonvoters. No poll could possibly lay claim to being an accurate gage of the voting public if its sample were not a sample of the voting public.

An election poll of the whole population which embraces aliens, people who are institutionalized, persons who are not registered and do not plan to register, would be inaccurate and misleading. For example, a sample drawn in New York City might include an area which is heavily populated by foreign-born residents who have not yet become naturalized U.S. citizens. To include these noncitizens in an election poll sample would obviously be indefensible.

Standard practice of the Gallup poll in making its election reports is to include each section of the country in proportion to the number of votes which it casts of the total popular vote.

Any forecast of the popular vote of the Nation would be wrong to the extent that the South—or any other section—failed to be represented at its true proportion of the total popular vote. It must be remembered that today all polls deal with the popular vote—not the electoral vote.

In the most recent national election—the election of 1958—the Gallup poll forecast that the total popular vote for Democratic Congressmen would be 57 percent; for Republicans, 43 percent. In the election of 1958 the Democrats polled 56.5 percent. The deviation of the Gallup poll from the actual result was, therefore, one-half of 1 percentage point. If the South had not been included at its true voting proportion, the error would have been six times as great.

NUMBER POLLED

A favorite criticism of polls based upon scientific sampling is that they reach a small part of the population, and that a switch of a few voters could change the results.

One answer to this oft-repeated criticism of polls is their record of accuracy. Since 1948 the Gallup poll has made election surveys in five national elections. Poll findings have deviated from election results in these five elections by an average of 1.7 percentage points. This is the best answer to the critics who continue to say, "it can't be done," and to those who say they have a better way.

Actually the U.S. Government itself makes great and continued use of small-scale sampling. Many government reports today on unemployment and other problems are based upon samples covering one person in approximately 5,000 of the total population.

During the last 25 years some poll critics have been concerned about the "bandwagon" effects of polls. No evidence whatsoever has been produced that polls have any such influence on voters, and there is a mountain of evidence that they do not. In 1948 every political writer and every poll predicted that the Republicans would win. If people had wished only to be with the winner, then Dewey would have won by the greatest majority in history.

The Gallup poll has never claimed infallibility. No one has yet found a perfect way to forecast human behavior. And at this point, no one can say whether the polls will be right or wrong in 1960. But what can be said is that the Gallup poll is trying to make full use of its experience and of its technical know-how, and to report its finding honestly and objectively.

Departments of Labor, and Health, Education, and Welfare Appropriation Bill, 1961

SPEECH
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. TOLL. Mr. Speaker, I support the conference report on H.R. 11390, which makes appropriations for the Departments of Labor, and Health, Education, and Welfare and related agencies for the fiscal year ending June 30, 1961.

I am glad to note that the higher Senate figure of $173,050,000 was agreed to for grants, loans, and payments under the National Defense Education Act of 1958; that the expansion of teaching in education of the mentally retarded grant of $1 million to public or other nonprofit institutions of higher learning and the State educational agencies, pursuant to the act of September 6, 1958, was not disturbed.

I am pleased with the increase of grants to States in accordance with the Vocational Rehabilitation Act to $57,500,000. The substantial increase in favor of grants for hospital construction to $186,200,000 will materially help grants and loans for hospitals and related facilities, including diagnostic and treatment centers and hospitals for the chronically ill and injured.

I am glad to see substantial increases in the appropriations for research in cancer, heart, arthritis, mental health, and other conditions which are affecting our population and which will be eliminated or reduced by continued study.

He Refuses To Conform

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. BERRY. In the totalitarian states of the world, the central government assumes the responsibility for the care and security of everyone from the cradle to the grave. To shoulder this responsibility means that the central government must at the same time be able to regulate the amount of work the individual shall do to compensate for such lifelong security. This is known as the "work norm."

By the same token, if the individual "refuses to conform," the state must have some leverage, some power, or some control to force such conformity. In some states this method of persuasion is called the Gestapo. Others have their particular name for persuaders, but in each the purpose and result is the same. Conformity must be compulsory in a totalitarian state. Any state which guarantees security, which compensates each individual according to his need, must also be able to compel conformity.

TOTALITARIANISM

The founders of this Nation came to these shores to free themselves from conformity. They came here to free themselves from central government security. They came here seeking only opportunity for the individual, opportunity to provide for his today and his tomorrow through the fruits of his own efforts and ability.

But, despite the good purposes of the Founding Fathers, there has grown up within these borders the totalitarian philosophy. Central government planners have moved into each breach and have established their foreign philosophy, not as much through laws passed by Congress, because Congress is responsible to the voters and dare not authorize these steps directly, but instead Congress has given a free reign to the bureaucrats who in turn socialize through the Federal rules and regulations.

THE INDIAN PROBLEM

There are few totalitarian states where the central government forces conformity of the individual more strictly than on the Indian reservations of the United States. This system has created what is popularly known as the "Indian problem."

There is no Indian problem, there is only a totalitarian or "socialist" problem. There are many examples; I shall relate but one.

BACKGROUND

Years ago Congress provided for the allotment of lands on many of the Indian reservations to the individual Indian, this on the theory that the Indian was found on the land and it was assumed that all of them should be farmers and live from the soil.

For years the tendency of the Department of the Interior, which was given guardianship over the property of the individual Indian, was to increase the freedom of the Indian. The Indian was given the right to lease his land and to use the proceeds of such lease rental to help provide his livelihood. When the Department of Interior determined that he was competent to handle his own affairs, he was permitted to sell and dispose of his allotment and to use the proceeds thereof as any individual would.

Then under the so-called New Deal there came a strange philosophy into this free Nation, a move back toward the totalitarian state from which the forefathers had come. The plan of subjection of the individual to the state was slower among the non-Indians because with the return of crops and production and good times, the individual demanded a return of his freedom. The return of that freedom has become a political issue and is the dominant issue in the present election. The voters in the November 1960 election shall decide whether they wish "security with conformity" or whether they want "individual freedom with opportunity."

The Indian, however, has no alternative, he must accept "security with conformity" at least so long as he chooses to live on or near an Indian reservation, or until the Congress repeals the Wheeler-Howard Act enacted in the early days of the New Deal.

EXAMPLE

The Bureau of Indian Affairs at the Washington level is adamant in their stand that an Indian allottee is free to handle his own land so long as he conforms to the regulations, the regulations being that he himself must work his own land unless he turns complete authority to the Bureau.

Under the policies of the Bureau all land on the reservation is classified to determine the best "use" to which such land shall be put. In grazing areas, all land in a certain tract, whether it is tribal or allotted, goes into a "grazing unit" and the allottees in that area must sign a power of attorney authorizing the Department to handle the rental of their land for them.

If an allottee—who by the way is supposed to be a free American—refuses to conform, refuses to give a power of attorney or attempts to revoke one already given, he is required to fence his own land out of the unit and handle the use of that land himself. He dare not rent it. He cannot contract to have the hay put up and sold. He cannot contract to have the work done on shares so that he gets his portion of the crop. He must do the work himself, or he must hire the work done and pay the cost himself out of his own pocket. Then he can sell the crop and pay the cost of having someone who does have the harvesting machinery do the work. If he refuses to conform, the Bureau steps in and forces conformity.

Yesterday, I received a frantic call from an Indian allottee on one reserva-

tion in my congressional district. I shall not mention his name or the name of the reservation for fear of reprisals either upon the Indian or the employees involved. The allottee told me he had hired a non-Indian rancher to cut and bale the hay on his allotment, which he had refused to put into a grazing unit because it was an especially good hay quarter and was worth more for hay than the normal rental for grazing purposes. Those allottees who conform in a grazing unit receive the same rental as all other allottees in the grazing area, regardless of the productivity of the allotment, because under this system, as in all totalitarian states, "equal compensation shall be provided for all."

The allottee told me that he did not have the cash to pay for the cutting and baling of the hay, so he had contracted with the non-Indian to do the work with the understanding he would sell the hay to the non-Indian who owned the haying equipment for $15 per ton, first to pay the cost of harvest and the remainder to be his cash rental return for the production of his allotment.

He told me that the Department had stepped in, taken over the baled hay and was selling it to someone else, proposing to deposit the proceeds of his account in the Agency office to be paid to him as they decided it should be disbursed. He asked me what chance an Indian had to establish his own credit, to get started in the ranching business, if his contracts were to be summarily revoked by the Great White Father at the will of the Great White Father.

When I called the Superintendent I was advised that it appeared the contract with the non-Indian was a fraud, that instead of the Indian making a contract to hire the hay cut and baled, then sold to the rancher at the price of $15 per ton to pay the cost of harvesting the hay and the balance to go in cash to the allottee, it was apparent to the Department that the contract had been made to harvest the hay on a share basis with the rancher taking a certain share for harvesting the hay and then buying the share of the allottee, which the Bureau official advised, was strictly against the regulations of the Department.

I was told that the Bureau was having trouble with this Indian "because he refuses to conform."

I was also advised that this procedure becomes necessary because the Bureau has the "responsibility of protecting the property and the income of the Indian people."

When the Founding Fathers established a system of government which provided the utmost of individual freedom and opportunity, they failed to take into account that certain forces would in later years be at work guaranteeing security to certain groups and that with that guarantee of security comes the responsibility of the "work norm," or the "rental norm" in this case, which compels "conformity" of all, and that with this compelled conformity, individual rights, individual privileges and individual opportunity is sacrificed. Socialism? Totalitarianism? Where? Here in America.

SBA Extends Loan Program for Small Businesses

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. EVINS. Mr. Speaker, the Small Business Administration has announced that that agency has agreed to make loans to local development companies for construction of shopping centers to be occupied exclusively by small businesses.

This worthwhile extension of the SBA loan program was a recommendation of Subcommittee No. 1 of the House Small Business Committee, of which I have the honor to serve as chairman. It is gratifying that this recommendation by the subcommittee has been accepted by SBA and that this new assistance program for small businesses was adopted.

Mr. Speaker, under unanimous consent I insert the press release announcing this program in the Appendix of the RECORD. The press release follows:

Philip McCallum, Administrator of the Small Business Administration, announced today that his agency has inaugurated a program of loans to local development companies for construction of shopping centers to be occupied exclusively by small businesses.

He said the loans would be for construction, conversion or expansion—including acquisition of land—for shopping centers. Mr. McCallum said:

"We are pleased to announce a plan within our existing authority, under which the Small Business Administration may be of assistance to small firms so that they can participate in shopping centers, which have been developing significantly across the country.

"The problem has been under study for many months and there have been conferences with bankers, small business owners and civic leaders. The Small Business Administration will welcome the participation of banks and other lending institutions in the financing. However, where private lenders are not in a position to participate, the Small Business Administration will make direct loans.

"A major deterrent to small business tenancy in shopping centers has been a requirement by financing organizations of a top financial rating for the tenants or a guaranteed lease by the small business firm seeking tenancy in the shopping center."

Mr. McCallum explained that under the program of his agency, loans up to $250,000 for each small business to be assisted may be made to local development companies for shopping centers. The number of loans to a local development company would be limited only by the number of small businesses to be assisted, and by the amount of its own funds which the local development company can inject into the project. These companies must have a financial interest in the project, he said.

The SBA Administrator said there are about 3,200 local development companies across the country and that many of them are now in a position to participate in the SBA program to assist small firms and provide jobs.

Loans to local development companies for shopping center projects may be made for a period not to exceed 10 years with an allowance for construction, conversion or expansion times and will be amortized generally on an equal monthly installment repayment basis. All or part of the loan may be prepaid at the borrower's discretion without penalty.

Interest charges on loans to local development companies under this program will be 5½ percent per annum for direct loans by the SBA. Where bank participation is involved, the rate of interest may be fixed by the bank. However, the interest on the Small Business Administration's share of the loan in such cases will not exceed 5½ percent, nor be less than 5 percent per annum should the participating bank elect to charge a lower rate of interest.

Interest on these loans will be on a per annum basis on only the outstanding indebtedness, payable at the time each installment repayment is due.

Regulations to govern granting of these loans are being completed and will soon be available at Small Business Administration regional offices in Boston, New York, Philadelphia, Richmond, Atlanta, Cleveland, Chicago, Minneapolis, Kansas City, Detroit, Dallas, Denver, San Francisco, Seattle, and Los Angeles.

Spiritual Values Are Our Basic Need

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which appeared in the San Diego Union of August 16, 1960:

SPIRITUAL VALUES ARE OUR BASIC NEED

EDITOR, THE UNION:

America is a great nation founded on principles that have been discovered by mankind over centuries of experience. These principles are basically religious in nature and from this source comes the concept of the worth of the individual.

The U.S. Constitution did not invent the rules of morality and try to fit man to them by Government fiat. The Constitution assumes that the moral code exists as the system of society and sets up a form in which a particular society can pursue its goal of governing itself through free institutions.

The men who wrote the Constitution had a profound regard for the essential truths from Greece and from the religions of mankind. But freedoms written into this document reflect a great truth of Western culture. Understanding of these truths is what we most need today. We must know why we are free to worship at altars of our choice; why we are able to seek and to speak the truth without fear of dictation; why we can work and play according to our own conscience; why we can own property; and why we have the right to our day in court.

In the long history of mankind no other form of government has contributed so much to the happiness and the prosperity of the common man as has our American democracy. No system has given the average citizen greater opportunity to enjoy the fruits of his labor, initiative and enterprise. None has afforded greater protection to a man's own conscience or a freer right to express his own opinions. No other system of government has so fully bestowed upon man the dignity due him as a human being.

The greatest danger to the free world is not from military invasion but from the invasion of a materialistic doctrine which is designed to capture the minds of men. The central feature of this doctrine is that it

contains no belief in spiritual values, no respect for the individual, nothing that even resembles the ideals for which man has died over the centuries.

MALCOLM A. LOVE,
President, San Diego State College.

Independent Voter Groups Back Fields

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. MILLER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portion of the Chicago Daily News, editorial page, "Letters to the Editor," of August 24, 1960, with reference to the situation in the 12th Congressional District of Illinois which I think is of considerable interest to people in Illinois—and especially in the Chicago area:

LETTERS TO THE EDITOR—INDEPENDENT VOTER GROUPS BACK FIELDS

In the 12th Congressional District (North Side of Chicago) the Independent Voters of Illinois (IVI) has endorsed Ted Fields, Republican, for Congress, because of his knowledge of foreign and domestic affairs and his liberal and progressive position on issues.

In the interviews conducted by the IVI, Mr. Fields proved to be eminently more qualified than his Democratic opponent.

Mr. Fields was, until last week, also endorsed by the 12th District and Cook County COPE (AFL–CIO political action group).

According to a newspaper story of August 16, a spokesman for COPE said "an earlier endorsement of a Republican candidate by the 12th District COPE was reversed."

Apparently the reversal action was taken because of labor's refusal to endorse a Republican for Congress, regardless of the merits of the candidate.

IVI and all independent voters regret that they must be on opposite sides from COPE in this contest.

Local labor people are now asked to support a candidate they do not favor.

I hope the voters of the 12th District will not be split by this tactic and will vote for the best man, Ted Fields, regardless of party label.

EDWIN ASTRIN,
Chairman,
12th Congressional District IVI.

CHICAGO.

Volunteers for Independent Political Action (VIPA) is an organization of independent voters of the far North Side of Chicago who endorse and actively support selected candidates for local and district offices. Selections are made on the basis of interviews and the qualifications and platforms of candidates.

VIPA has played an important role in the election of liberal and progressive officeholders and is proud of helping this area to achieve a status of excellent representation.

For Congress in the 12th District, VIPA has endorsed Theodore P. Fields, Republican, because of his liberal position on issues. In our interviews and examinations, Mr. Fields proved himself to be far superior to his Democratic opponent.

Mr. Fields has also been endorsed by the Independent Voters of Illinois (IVI) and, until last week, by the 12th District and Cook County COPE (AFL–CIO political action group).

According to the Chicago Daily News of August 16, 1960, a spokesman for COPE said "an earlier endorsement of a Republican candidate by the 12th District COPE was reversed." VIPA regrets that for the first time it finds itself opposing a candidate endorsed by COPE.

We feel that this reversal is regrettable.

IRV. NEBENZAHL,
Chairman, VIPA.

CHICAGO.

Thomas Paine and the Declaration of Independence

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. DOOLEY. Mr. Speaker, the following address by Joseph Lewis of Purdys, N.Y., recalls to mind the trenchant logic of Thomas Paine and the effects of his reasoning on the lives and thinking of our Founding Fathers.

It is Mr. Lewis' contention that Thomas Paine was the author of the Declaration of Independence. Without "Common Sense" there would have been no Declaration of Independence, Mr. Lewis believes, and without Thomas Paine, its author, there would have been no United States of America.

Thomas Paine's influence was certainly wide and varied. He knew Ben Franklin, who was in close touch with Adams. Even though Paine's contribution "Common Sense" was written anonymously, Mr. Lewis points out that Adams was aware of its authorship.

The statement of Mr. Lewis is so scholarly and so illuminating that I believe it should be printed in the RECORD. His speech follows:

THOMAS PAINE AND THE DECLARATION OF INDEPENDENCE

(By Joseph Lewis)

I want to talk to you today about the Declaration of Independence, which I consider the greatest political document in the history of mankind. I consider July 4, 1776, the day of emancipation of the human race.

And I want to talk to you about the author of that immortal document.

No, it is not Thomas Jefferson, and that is why I ask you to do me the courtesy of listening to what I have to say.

We all know that it was the pamphlet "Common Sense," by Thomas Paine, which fired the first shot for American Independence, and that its influence upon the people; and the Founding Fathers, was both immediate and overwhelming.

But Thomas Paine's contribution toward the establishment of this Republic did not stop with the publication of "Common Sense." To him, that was only the first shot fired.

Following the conclusion of World War I, the proposal was made to establish a League of Nations, for the purpose of settling international disputes by peaceful means. Having been a student of Thomas Paine's life and his writings for nearly a half a century, I remember having read in Paine's works a similar proposal to prevent wars between nations.

However, it was not easy to find this essay in his writings, because this proposal had been incorporated in one of Paine's letters to the American people while he was in France. He called his proposal "A Maritime Compact," and he had sent it to Thomas Jefferson with the inference that if Jefferson wanted to use it as his own, Paine would have no objections to it. The essay is found in Paine's works, entitled: "The Seventh Letter to the Citizens of the United States."

In rereading the "Maritime Compact," I was suddenly struck with the marked similarity of the mode of expression, the construction of the sentence, and the kinship of sentiment with the opening paragraph of the Declaration of Independence. The words of both instruments seemed suddenly to become audible, as if spoken by the same tongue. I read it again and again, and was more impressed each time I read it. Nor is the opening paragraph the only similarity between these two documents.

I then made a detailed comparison of them, and was more than ever convinced that the same man wrote both "A Maritime Compact" and the Declaration of Independence.

I could not dismiss this thought from my mind. It persisted in recurring again and again. I could not down it.

I then began to doubt Thomas Jefferson's authorship of the Declaration of Independence, despite the fact that the only copies I had ever seen were in Jefferson's handwriting.

I made a study of Jefferson writings, and nowhere in his works could I find the sentiments, the political philosophy, the mode of expression, that were in the Declaration of Independence; while, as a matter of fact, I found in Paine's writing abundant similarities of thoughts and expressions.

At the same time, I was somewhat reluctant to be convinced that Jefferson's authorship of the Declaration of Independence was of a doubtful nature, as I greatly admired the third President of the United States. But I said to myself: If Thomas Paine was the real author of the Declaration of Independence, the truth should be told. With this conviction, I decided to make a deeper and more thorough study of the matter, and the more deeply and the more thoroughly I went into the subject, the more convinced I was of my premise.

The evidence I discovered began to pile up to such an extent that it simply became overwhelming, and I was convinced beyond the shadow of a doubt, that Thomas Paine was both inspirationally and literally the author of that immortal document, the Declaration of Independence, America's charter of freedom, and the greatest manifesto ever written proclaiming the rights of man.

Unfortunately, too many people believe that things as they were readymade for them. The benefits we enjoy are only too often taken as a matter of course. Many little realize the struggle that our fellow man has made to secure those benefits that are woven into the very fabric of our lives.

If more people had a better understanding of the price of progress and the precious blood that has been shed for the liberty we enjoy, we would not only have a greater appreciation of our own possessions, and guard them more zealously, but our whole social and moral consciousness would undergo a remarkable renascence. Our conduct in society would then be predicated upon a higher concept of social solidarity.

The American Republic was not always in existence.

It was not created by a divine fiat.

In fact, before the American Revolution, monarchies were considered sacred institutions by divine right, and arrogant and brutal kings wielded their scepters as vicars of God on earth. Their whims and desires were law, and disobedience often meant death.

Less than 100 years ago, slavery was considered, by Biblical sanction, a divine institution, and even today millions over the face of the earth are still living in serfdom.

Government by law was achieved only after a most bitter struggle, and equality before the law—regardless of race, color or creed—is not much older than the locomotive.

Do not think for a moment that these fundamental rights were accomplished easily; not only was it necessary to defeat the forces of reaction to achieve them, but there are thousands of people, even today, who are enjoying these great social privileges who would have opposed them when they were first proposed.

Freedom of speech and freedom of the press are mere babes in arms when reckoned in years, and the right of conscience, to accept or reject a religious mode of worship, isn't much older than the steamboat.

Many members of society use these newly won rights as a matter of course, without the slightest element of appreciation or understanding of their value.

American independence was one of the miracles of history. How lightly it is accepted by its beneficiaries today. Until July 4, 1776, all the people of the earth, with the exception of an insignificant few, lived under the yoke of some tryant. They could not call their minds, their bodies, or their possessions, their own. All that man possesses is the result of man's labor, and much of the misery he suffers is the result of his ignorance, and an unawakened sense of appreciation.

Liberty is one of our youngest possessions and one of the most precious. The Declaration of Independence is the charter of that liberty; and how it came into existence should be known and appreciated by every living being.

Many today consider liberty so essential a part of life, and so necessary to our mode of living, that they cannot imagine that such an obviously inalienable right did not always exist through the simple expedient of commonsense—and commonsense it was.

And without commonsense there would have been no Declaration of Independence; and without Thomas Paine, its author, there would have been no United States of America.

Yes, Thomas Paine's "Common Sense" was the pamphlet which stirred the American Colonies to establish a new form of government, and which was responsible for the Declaration of Independence.

In fact, the Declaration of Independence is a perfect reflection of "Common Sense." It is, in brief, a condensation of its sentiments and principles. It is the very essence of the book. In no volume other than "Common Sense" is there to be found such sentiments regarding independence and their direct applicability to the cause of America; and no writer other than Thomas Paine, living in America at that time, nor anyone else, ever expressed such sentiments in such a manner, and in such language, for such a cause.

"Common Sense" was published January 10, 1776, and 5 months later, to the day, the Continental Congress passed a resolution and appointed a committee to draw up a declaration of the intention of the Colonies declaring their independence of Great Britain. And it was done exactly in accordance with the words of "Common Sense."

These are Paine's words of admonition, as found in his famous pamphlet:

"Were a manifesto to be published and despatched to foreign courts, setting forth the miseries we have endured, and the peaceful methods which we have ineffectually used for redress; declaring at the same time that, not being able any longer to live happily or safely under the cruel disposition of the British Crown, we had been driven to the necessity of breaking off all connections with her; at the same time assuring all such courts of our peaceful disposition toward them, and of our desire of entering into trade with them, such a memorial would produce more good effects to this continent than if a ship were freighted with petitions to Britain."

Certainly Paine met and exchanged confidences with Franklin, and was obviously in close touch with Adams—both members of the committee—at that time. Otherwise, how would Adams have known that Paine was the author of "Common Sense" which was written anonymously, and its author not generally known. This is indicated in a letter which Adams wrote his wife, and which contains this passage:

"The writer of 'Common Sense' and the 'Forrester Letters' is the same pesron. His name is Paine, a gentleman about 2 years ago from England, a man who General Lee says, 'has genius in his eyes.' "

And in a secret pamphlet that Paine wrote anonymously, to allay the fears of those who thought that independence was too drastic a step to make, he said:

"I forbear to argue any further with you. The decree has finally gone forth. Britain and America are now distinct empires."

How did Paine know that "the decree has finally gone forth" unless he himself had written it, since he was not a member of the committee appointed by the Continental Congress?

Let us recall Paine's advice that "a day be solemnly set apart for proclaiming the charter." What charter could it be but the charter of freedom—the Declaration of Independence?

And it was done as Paine suggested. It was proclaimed July 4, 1776.

The American people do not know, and certainly are not aware of the fact that a copy of the original draft of the Declaration of Independence, in the handwriting of John Adams, is in the vault of the Adams family in the Massachusetts Historical Society in Boston, Mass.

It is my firm conviction that the Adams copy of the Declaration of Independence was made before Jefferson made his so-called rough draft, and this copy contains the complete text of the Declaration as it was originally written. In fact, I do not hesitate to say that the John Adams copy of the Declaration of Independence could not have been made from Jefferson's rough draft, and that both Adams and Jefferson made their copies from an original manuscript apparently no longer in existence.

Let me repeat, as emphatically as I can, that it was utterly impossible for the John Adams copy of the Declaration of Independence to have been made from Jefferson's rough draft. And Jefferson himself is authority for the statement that the rough draft is his original copy.

It is also not generally known that in editing this immortal document, Jefferson eliminated more than 30 percent of the original text, and that this 30 percent contained some of the most important principles of this charter of freedom.

In fact, when Adams sent his copy to his wife, Abigail, and when she saw the printed copy, she wrote, and this is highly significant:

"I cannot but be sorry that some of the most manly sentiments in the Declaration are expunged from the printed copy."

And when Jefferson sent a copy of the Declaration, as he had changed it, to Richard Henry Lee who had introduced the resolution calling for a committee to draft the document but who, because of illness, was prevented from becoming a member of the committee, Lee wrote, after having read Jefferson's version, with indignant surprize: "Why was the manuscript mangled so?"—the inference being that Lee had seen the original copy, and was horrified that it had been so outrageously mutilated. Had it not been for this illness in the family of Richard Henry Lee, Jefferson would not have been appointed to take his place on the committee—and what a difference that would have made.

No author would have been guilty of doing such an injustice to his own writing, as Jefferson did to the original draft of the Declaration of Independence.

If the Declaration had been accepted as Paine originally wrote it, his name could never have been dissociated with it, because the language, the mode of thought, the philosophy, the rhythm of expression, and the universal concept of the right of individual freedom in society are unmistakably his, and there would never have arisen any doubt as to his authorship.

Now what were the "manly sentiments" which Abigail Adams said had been expunged from the original? What were the parts that were "mangled so" according to Richard Henry Lee?

I will tell you.

In the original draft of the Declaration of Independence there are three paragraphs dealing with Negro slavery, that, if they had been permitted to remain, would have abolished slavery at the same time that America's independence was won.

Thomas Jefferson was not the author of these three paragraphs; because they were not his sentiments, they were not his convictions. Jefferson did not believe in political freedom for the Negro, and that is why these three paragraphs were eliminated; that is why they were expunged; that is why the Declaration of Independence was "mangled so."

If there were no other evidence, and there is an abundance in existence, the slavery clause alone in the original draft of the Declaration of Independence would be sufficient to justify Paine's authorship of this immortal document. And, at the same time, the elimination of that clause more than justifies the conclusion that Thomas Jefferson could not have been the author of it.

Thomas Paine was the first man on the American Continent to raise his voice in behalf of the abolition of Negro slavery. And here is another significant fact. Paine's "Essay on Slavery," written 2 years before the Declaration of Independence, contains the same sentiments, and almost the same words, as those which appear in the original draft of the Declaration of Independence. They are as alike as image and reflection. The very words themselves seem to echo each other.

The whole Declaration is one great and grand emotional outburst against all forms of tyranny and in behalf of freedom. It is a manifesto of freedom for all people. Paine was right when he said: "We fight not to enslave, but to set a country free, and make room upon the earth for honest men to live in."

Paine posed the question, and he gave the answer:

"Can America be happy under a government of her own? The answer is short and simple, viz.: As happy as she pleases. She hath a blank sheet to write upon."

"Start the slate afresh," Paine told America. "Leave no mark of injustice upon it." And, as a further warning, because he knew that sooner or later it would have to be done, he continued his admonition by shouting: "Put it not off too long." What did he mean by "put it not off too long?" "Forget not the hapless African," he cried.

Let us recall these words from "Common Sense."

"Now is the seed-time of continental union, faith and honour.

"The least fracture now will be like a name engraved with the point of a pin on the tender rind of a young oak; the wound would enlarge with the tree, and posterity read it in full-grown characters."

What a prophetic statement, and what tragic results followed the ignoring of it.

Was not slavery at that time like a "point of a pin upon the tender rind of a young oak?" And did it not "enlarge with the tree" until it became a menace to our liberty and freedom?

Jefferson ignored Paine's warning not to forget "the hapless African," and it was necessary to fight the Civil War, with all its horrors and bloodshed, to wipe out this terrible stain on the "blank sheet" upon which America started to write. If only the slavery clause had remained in the Declaration of Independence, as Paine originally wrote it, the terrible War Between the States—where the blood of the flower of American youth was spilled—never would have occurred.

It should also be known that when Paine wrote the Constitution of the State of Pennsylvania in 1780, he wrote an emancipation proclamation 75 years before Abraham Lincoln; and Negro slavery was abolished, for the first time on this continent, in the State of Pennsylvania.

Here is the concluding paragraph of Paine's Emancipation Proclamation:

"And whereas the condition of those persons, who have heretofore been denominated Negro and mulatto slaves, has been attended with circumstances, which not only deprived them of the common blessings that they were by nature entitled to, but has cast them into the deepest afflictions, by an unnatural separation and sale of husband and wife from each other and from their children, an injury, the greatness of which can only be conceived by supposing that we were in the same unhappy case. In justice, therefore, to persons so unhappily circumstanced, and who having no prospect before them whereon they may rest their sorrows and their hopes, have no reasonable inducement to render their service to society, which they otherwise might, and also in grateful commemoration of our own happy deliverance from that state of unconditional submission to which we were doomed by the tyranny of Britain."

Now there appears in the Declaration of Independence an old English word that was not generally used by the people of the American Colonies at that time, with the exception of the Quakers. Paine, as you know, was of Quaker origin. It is the word "hath"—h-a-t-h. While to some the use of this word may appear to be a trifle, its appearance in the Declaration is highly significant. It is significant for the fact that in the 3 million words which Jefferson claims as his own composition, the word "hath" does not appear even once, while in "Common Sense" alone, a pamphlet of only 50,000 words, Thomas Paine used the word at least 120 times.

The word is used in the Declaration of Independence in this phrase: "and accordingly all experience hath shewn."

In Jefferson's writing he uses continually the phrase in this manner:

"Experience has shown."

And equally as significant is the fact that the world "shewn" is spelled with an "e" in the Declaration, which was Paine's way of spelling the word, while it is always spelled with an "o" in Jefferson's writing, and was the prevalent way of spelling the word in the Colonies at that time.

There is another word in the Declaration which I found that Jefferson never used in his writing, but, on the contrary, it is found many, many times in the writings of Thomas Paine. It is the word "prostituted." The word is found in the slavery clause which Jefferson eliminated, and reads as follows: "He has prostituted his negative * * *." It is inconceivable that Jefferson, who was so precise in his use of language, would use such a word for the first time in the Declaration of Independence; but, knowing the sentiments of Thomas Paine, it was the proper word to use to express his detestation of both the institution of slavery and the Royal Brute of Britain who maintained it. The word "prostituted" was part of Paine's vocabulary, and he used it when he thought it was the proper word to express his thought.

But, perhaps the most significant piece of evidence found in the original draft of the Declaration to prove Thomas Paine was its author is in a "mangled" sentence, the word which Richard Henry Lee used so characteristically to describe Jefferson's callous disregard for the original text. Not only was the political philosophy destroyed, but the sentence itself was so garbled as to make it utterly ridiculous, and on many occasions it has been the subject of heated and oftimes embarrassing dispute.

The text in the original copy of the Declaration reads: "all men are created equal and independent;—semicolon—that from that equal creation they derive rights inherent and inalienable." This statement is unequivocal. It is a political truism. We are all born equal, politically. From both a social and philosophical point of view, the statement is incontrovertible. And when Paine wrote that sentence he had in mind that kings and royalty were not born superior to other people. There was no divine right in the political philosophy of Thomas Paine. To simplify the statement: It meant equality before the law; not equality of person.

Jefferson, in editing the original manuscript, changed the wording, with its sentiments of political equality, to read:

"All men are created equal.—period.—They are endowed by their Creator with certain inherent and inalienable rights."

This is not true. This is merely a piece of pious nonsense. We are not endowed with rights. Political and social rights are acquired as members of society. If we were "endowed by our Creator" with inherent and inalienable rights, then there could never have been slavery nor serfdom nor, for that matter, any form of social and political inequality. We are endowed with certain physical characteristics, such as our eyes, our face, our hands, and feet, or other physical traits—but rights, never.

Nor are we all born equal in the physical and mental sense. The physical and menal inequalities among men are too obvious for comment. One person is stronger than another; one has a better brain; one can run faster; one has a better voice; one is taller; one lives longer than another—but why continue.

Not only that, but when Jefferson changed the original word "inherent" to "certain" he put a limitation upon our rights which is a glaring and outrageous prostitution of the original text and its meaning.

I need but quote from "Common Sense" to prove that Paine means the universal rights of all men before the law, with the statement as he originally wrote it. Paine said: "As the exalting one so greatly above the rest cannot be justified on the equal rights of nature."

The distinction of Kings and Subjects was abhorrent to Paine. He remarked: "How impious is the title of Sacred Majesty?" and again: "All men being originally equals, no one by birth could have the right to set up his own family in perpetual preference to all others."

Not only is the original statement in the Declaration identical with these fundamental rights, which Paine so eloquently expresses, but nowhere in the writings of Jefferson are such sentiments to be found. This is an irreconcilable difference between the two documents. One is a universal declaration of the inalienable rights of man, and the other a provincial statement of the separation of one nation with another. In the face of such pertinent evidence—truly an historical revelation—can there be any honest doubt regarding Thimos Paine's authorship of the original draft of the Declaration of Independence.

And now I want to make but one comparison regarding the similarity of language in "Common Sense" and the Declaration of Independence. The opening phrase of the Declaration of Independence: "When in the course of human events * * *" is not an ordinary statement. It is not the product of a provincial mind like that of Thomas Jefferson, but rather of a literary genius with a world concept. It is worthy of a Shakespeare. And the man who conceived this magnificent sweep of human history also wrote these words. There is a kinship of both language and intellectual passion in them.

Let me repeat them together:

"These are times that try men's souls."

"The birth of a new world is at hand."

"The sun never shined on a cause of greater worth."

"Liberty hath been hunted round the world."

"When in the course of human events * * *."

To hear them is all that is needed to prove that they were written by one and the same man.

I have given you but a rough sketch of the evidence I have amassed in favor of Thomas Paine as the author of the Declaration of Independence.

All I ask is that you judge it with an open mind. Judge it fairly and impartially.

If you do, I am certain that your decision will confirm my efforts to prove that Thomas Paine, the author of "Common Sense," was also the author of the greatest political document in the history of man, the Declaration of Independence, America's charter of freedom, which was proclaimed to the world on July 4, 1776, the greatest day in the history of mankind's struggle for liberty.

Thank you for listening.

August 26—40th Anniversary of the Final Ratification of the 19th Amendment

EXTENSION OF REMARKS

OF

HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mrs. WEIS. Mr. Speaker, August 26 is one of the most significant of all dates in the long struggle of American women to secure for themselves the right to vote, for it was on August 26, 1920, that the 19th amendment to the Constitution of the United States, the "Susan B. Anthony amendment" became the law of the land.

Forty years ago today, after a courageous battle which lasted the better part of half a century, the women of America won the right to vote in Federal elections. No small credit for this victory goes to the woman who devoted her entire adult life to the cause of woman's

suffrage, Miss Susan B. Anthony. Miss Anthony, who was virtually a lifelong resident of my home community of Rochester, N.Y., did not live to see the culmination of her efforts in the final ratification of the 19th amendment, but she is so universally recognized as the leader in the suffrage movement that the 19th amendment has always been known as the Susan B. Anthony amendment.

The women of Rochester are justifiably proud of Miss Anthony's role in the equal-rights struggle, and her Rochester home, Anthony House, has been preserved and maintained by the Susan B. Anthony Memorial, Inc. I should like at this point to include in the CONGRESSIONAL RECORD a letter from Mrs. George Howard, president of Susan B. Anthony Memorial, Inc., to the Rochester Democrat and Chronicle, captioned "The Great Anthony Crusade":

THE GREAT ANTHONY CRUSADE

Here in Rochester we should remember August 26 as the 40th anniversary of the day the Susan B. Anthony amendment became the law of the land.

This 19th amendment, giving women the right to vote, was named for Miss Anthony because she worked for it the greater part of her life. The crusade for voting rights for women was a great crusade. It was done with perseverance, patience, courage and devotion with the thought that it was a just cause.

Now women voters exceed men voters by several million. They have an important duty in the coming election to vote wisely. Their vote may determine the result. Many women today take the right to vote as natural and do not know at what a cost it was won.

There were many dramatic incidents connected with the suffrage campaign; there were many tense and anxious times, and there had to be much able strategy. Let us mention one tense time.

Thirty-five States had ratified the amendment. It was necessary to win one more. Some Governors said they would not call special legislative sessions to consider it. There were three possible States that would—all in the South. Tennessee seemed the most likely.

The Governor called a special session in August 1920, when it was very hot. The southern men were gallant but there were the suffragettes and the antisuffragettes trying to influence them. It would be a close vote.

A southern belle went up to the mountains of eastern Tennessee to get Mrs. J. L. Burn to write to her son, one of the youthful legislators, to vote favorably. When a roll was called the vote was a tie, 48 to 48. When the next rollcall came, Harry Burn had received his mother's letter and responded with an "aye." As he said it he took from his coat lapel the red rose he wore to signify he was with the "antis." His vote broke the tie and by a majority of one, Tennessee ratified.

But there was still another hurdle. Governor Roberts immediately signed the ratification certificate and sent it registered by special delivery to the State Department at Washington. There was a fear that maybe the legislators might want to reverse their decision.

The Solicitor General had been waiting up all night to receive this letter. It arrived at 4 a.m. August 26, 1920. He stamped it to certify that it had been received and at 8 a.m. Bainbridge Colby, Secretary of State, placed his official signature on the letter. Then there was the formal proclamation.

There should be a small book telling of the work done by women for the right to vote, starting with the first Woman's Rights convention July 19 and 20, 1848, at Seneca Falls. There must be women in this area who can tell stories about the crusade. We wish they would send such accounts to the Anthony House.

MRS. GEORGE HOWARD,
President,
Susan B. Anthony Memorial, Inc.

Worldwide Recognition of Albion, Ill., Chowder

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. SHIPLEY. Mr. Speaker, this session of Congress is about to close and many of us will be traveling back to our districts. I want to commend to the attention of our colleagues and their secretaries who may be using State Highway 15, or Highway 130, through southern Illinois, that a wonderful opportunity is available by stopping at the fairgrounds at Albion, Ill., Edwards County, on September 1, to enjoy some of the most delicious Albion chowder known throughout the world, unique to Albion as is the bean soup to the U.S. Capitol. This is the eighth annual Albion community chowder celebration, supported by the fine people of this area. The greatly increased attendance each year speaks highly of the chowder and the wonderful entertainment for all in attendance preceding the serving.

"Welcome to the Albion community chowder—free" goes out to the public through various means of communication. I will be personally present if Congress adjourns before that date. The most able mayor of Albion, Major Bailey, in extending invitations has this to say:

In a few short years this event has grown from a few hundred people in the Albion courtyard square to over 6,000 at the Albion fairgrounds last year. The 1959 affair attracted worldwide recognition of being included in the picture section of the St. Louis Post-Dispatch.

Chowder is one of the oldest institutions in Edwards County. In 1958 this county was officially proclaimed chowder capital of the world, and the claim has not been challenged.

You are welcome to come and enjoy the events of the Albion community chowder with us. The entertainment starts at 2 p.m. and over 6,000 quarts of Albion chowder will be served starting at 5 p.m.

Even as I speak today, various citizens' committees appointed by Mayor Bailey are hard at work preparing for this tremendous task of feeding and entertaining some 6,000 people who will attend Operation Chowder, U.S.A.

I am indeed proud to represent these folks in Congress. This chowder is evidence that we have in southern Illinois the finest, most friendly people in the world. If this kind of hospitality and friendship that is evident here in Edwards County could be transported to Washington, D.C., and around the world, we would definitely have a far better world in which to live.

Latin America

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mrs. KELLY. Mr. Speaker, in May 1958 I introduced House Resolution 563, which, under unanimous consent, I include as follows:

Resolved, That it is the sense of the House of Representatives that, in order to improve and strengthen United States relations with Latin America through policies and programs authorized by the Mutual Security Act of 1954, as amended, there be conducted by the executive branch, under the direction of the President, a thorough review and study of and inquiry into the policies and programs of the United States and of international organizations in which the United States participates with respect to Latin America, including recommendations on improving and strengthening the relationship, policies, and programs between the United States and Latin America, taking into account the views of officials, press, representative groups of the peoples and the views contained in congressional reports and deliberations.

It is further the sense of the House of Representatives that the President shall transmit to the Congress such study within six months of the adoption of this resolution.

On the day I introduced this resolution I made the following remarks which I insert below. Is it not misfortunate that the Republican administration did not take the advice of many of us Democrats who forsaw the problem arising in the continent to the south at this period in 1958.

This morning I introduced a resolution expressing the sense of the House of Representatives on improving and strengthening the relationship, policies, and progress between the United States and Latin America.

My resolution is only a first step in improving U.S. relations with our sister republics to the south. Surely, we cannot ignore the dangerous situation which exists in Latin America. This is a resolution which I feel should have immediate consideration and will have favorable reactions throughout the Western Hemisphere. Whatever the administration may do about it, at least it will demonstrate that the people of the United States, speaking through the U.S. Congress, do not intend to sit idly by in the face of grave danger vitally affecting the welfare of our own hemisphere.

Although it seems clearly established that the ill feeling recently expressed against Vice President NIXON in Latin America is part of an organized Communist scheme, I believe that it cannot be written off simply as Communist inspired.

The United States has neglected being a good partner. The United States has been preoccupied with cold wars in other parts of the world.

Latin America is on the threshold of imminent and radical reforms. It is urgent that the United States exert effective guid-

ance so that these reforms will improve the lot of the people rather than the stature of the Communist Party in Latin America.

The economic, cultural, and political influence of the United States in Latin America is an evident fact. The feeling of mistrust on the part of Latin Americans toward the United States exists.

However erroneous and prejudicial it may be, the misunderstanding of the people of the United States about the Latin Americans and the Latin Americans' misunderstanding about us may be partly our fault. We have failed to show them in a tangible way what we are and that we mean what we say when we exclaim about being good neighbors and good partners.

One of the greatest irritants is the complacency with which we seem to regard them in the mutual security program. To illustrate the neglect of Latin America by the United States as evidenced in the mutual-security program, one need only compare the foreign assistance figures for Latin America with those of just one country in Europe. The amount for total assistance to Latin America this year is about one-half the amount listed in the mutual security bill for undelivered war materials to Yugoslavia.

At this point I wish to compliment our former colleague, Hon. THOMAS J. DODD, of Connecticut, for emphasizing to the House Foreign Affairs Committee the urgent necessity for paying more attention to Latin America. On March 6, 2 months before the anti-Nixon and anti-U.S. demonstrations in Lima, Peru, Mr. DODD in his testimony before the committee prophetically stated:

"It is essential that there be created within the executive branch of our Government a deeper consciousness of the importance of this area, not only to the United States but to the whole free world, coupled with plans and programs of assistance to Latin America which will meet at least the minimum needs of the 184 million people of Latin America. This is an area seething with a tremendous urge to improve its social and economic conditions, with a population that has since World War II been rising about 2.3 percent a year. People want to be free of disease and hunger. People want to house, clothe, and educate their children. People want medical and hospital facilities. People want means of communication.

"Latin America is a giant which is beginning to stir. How it stirs and to what it stirs depends largely upon U.S. foreign policy, policy translated into programs that will fit the various needs of the people of Latin America, rather than a policy which takes them for granted.

"While serving on this committee and while listening to the various presentations made by the executive branch on the mutual security program, I was impressed with the fact that Latin America was an area which was always treated last by the executive branch. It was always treated, as indeed, it is treated this year by the executive branch, as the "also ran" of areas. There has been a certain condescension about the area—a certain attitude of 'Well, they will go along with us anyway.'

"We must remember this: Even if we should have successful policies toward the Far East, even if we should have successful policies toward Europe, even if we should have successful policies in other parts of the world, if we do not develop and maintain successful policies toward Latin America, the other policies would be meaningless and ineffective. It is abject folly to try to build up a free world without a strong and free Latin America. It is abject folly to hold the line against communism in Europe only to yield it to the Communists in Latin America, or to the Far East for that matter, as we seem to be doing.

"I would respectfully urge, therefore, that there be an end to programs of complacent cooperation. I would suggest that there must be developed a bold stroke of leadership that will catch the imagination and kindle the hope of the people of Latin America."

In his testimony, Mr. DODD further recommended that the deep interest of the United States, in improving and strengthening our relations with Latin America be highlighted in the mutual security bill itself through the adoption by the Congress of language calling upon the administration to mobilize its energy and resources toward the betterment of United States-Latin American relations.

Lower Manhattan Expressway

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I have written to the editor of the East Side News, a publication with wide circulation in the 19th Congressional District of New York:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 26, 1960.

Mr. ABRAHAM SCHLACHT,
Editor, East Side News,
New York City.

DEAR MR. SCHLACHT: As you are undoubtedly aware, I have been actively opposing the construction of the Lower Manhattan Expressway since December 1959. Since that time I have been in constant communication with the Federal Bureau of Public Roads, the New York State Department of Public Works, the New York City Board of Estimate, and other public officials in an effort to prevent this roadway from being built in our neighborhood. I have introduced legislation in the Congress to prevent its construction, but, unfortunately, the Committee on Public Roads has not taken up this bill.

Building an elevated highway across part of lower Manhattan, when we have finally rid ourselves of the elevated railways, to my mind would create an eyesore in the area and would deface the neighborhood.

It would destroy real estate values, resulting in lower assessed evaluations and lower real estate taxes to the city.

Its construction would create severe hardship to hundreds of small businessmen in the area. In many instances their establishments, representing individual enterprise, foresight, lifetime investments and sheer hard physical labor—generations of hard labor, stability, and sacrifice—would be wiped out.

Most important, it would displace approximately 2,300 families for whom new quarters are not available. Too many public improvements are being undertaken with a total disregard of the families residing in the areas proposed to undergo improvement. Too many families today are awaiting relocation under circumstances that are deplorable. The reconstruction taking place in Manhattan today makes unfeasible the relocation of the aforementioned families. I am more concerned with the peace and tranquillity of these families in their homes than in the convenience of crosstown motorists who would use the expressway to cut across Manhattan Island.

In the course of my protestations and the protestations of Assemblyman Louis De Salvio, State Senator Joseph R. Marro, and City Councilman Daniel S. Weiss, to the construction of this blight, the New York State superintendent of public works advised on February 18, 1960, that "In the case of an urban project such as this one we invariably await the expression of the local officials." • • • "We will move only after we get this approval" (referring to the approval by the board of estimates).

Imagine, therefore, my surprise and consternation to learn by reading the New York Times on August 24, that Mr. Moses in a letter to Mayor Wagner and other members of the board of estimate, had said he had been notified by Federal and State highway officials that the city had had more than enough time to act and that they would not tolerate further delay. Mr. Moses warned that unless the board of estimate approved the expressway at its meeting held on August 25, the project probably would be abandoned and the bulk of the funds would be shifted to other projects, mainly outside the city.

Knowing full well that funds allocated by the Federal Government for such projects are not allocated for specific projects, except at the request of the State, and that such funds cannot be withdrawn, except at the request of the State, I immediately wired to the members of the board of estimate as follows: "Hope you will not be intimidated by the New York Times article insofar as Lower Manhattan Expressway is concerned," and immediately contacted the Federal Bureau of Public Roads for an explanation as to why there was suddenly a deadline to be met, thereby not giving the demand by Acting Borough President Louis A. Cioffi for a survey on relocating the 2,000 families who would be uprooted from the artery's congested route, time for completion.

I was informed by the Bureau that nothing "official had come from the Bureau, either directly or indirectly or informally." Further I was once more assured that "funds allocated by the Federal Government are not allocated for specific projects except at the request of the State and they cannot be withdrawn except at the request of the State." This information I immediately wired to each member of the board of estimate to prevent their possible succumbing to the veiled threat contained in the New York Times article.

I had been in touch with the New York State Department of Public Works to ascertain if the State had requested the board of estimate to bring the matter to an immediate conclusion; but I have not yet received a reply to my request.

In view of the foregoing, therefore, it is apparent that the information in the article referring to notification by the Federal highway officials is not the position taken by the Federal Bureau of Public Roads; and the reference in the same article to the bulk of funds earmarked for the Canal Street Expressway being shifted to other projects, mainly out of the city, is not the information furnished me by the Bureau of Public Roads.

Therefore, I trust the board of estimate will not, at this time, approve the Lower Manhattan Expressway; and I urge every resident of the area to make known his opposition to the construction of the expressway by writing to the members of the board of estimate.

Sincerely yours,

LEONARD FARBSTEIN,
Member of Congress.

"Untouchables" a National Disgrace

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DENT. Mr. Speaker, there has been a great deal of controversy and agitation over the value as a public service of the TV program entitled "The Untouchables."

Recently an article in the Sons of Italy Times calls attention again to this controversial subject.

I believe it will be in the best interest of our country to have this item available for reference when this subject is being discussed, and under unanimous consent I include it in the Appendix of the RECORD:

CROSBY CALLS "UNTOUCHABLES" A NATIONAL DISGRACE AND THE WORST PROGRAM EVER SHOWN ON TELEVISION

In the toughest attack on television since the unhappy day it was invented, Columnist John Crosby this week went after the medium with armored tanks, cannonballs, torpedoes, swords, daggers, knives, hammers, tongs, boulders, stones, and bricks.

He took TV apart tube by tube, antenna by antenna, program by program, director by director, producer by producer.

Crosby, whose syndicated column appears in the Evening Bulletin of Philadelphia, trained his heaviest fire on that awful monstrosity of a program called "The Untouchables."

He called it the following:

1. The worst show on television.

2. The worst show that was ever on television in its inglorious 14-year history.

3. A national disgrace.

"And," he said, "the only reason it hasn't caused any popular outcry is that television has long since been abandoned by decent people of all ages."

Crosby stated that "no responsible people look at television."

"And by no responsible people," he added, "I mean no responsible people—no clergy, no press, no advertisers, no network executives, no Senators, nobody. Noboby but people.

"When you have a vast conglomeration of leaderless people, you have a mob. And when you have a mob, the best place to aim is the groin—which is exactly where most of the high-rated television shows aim."

Crosby also took a shot at Desi Arnez, producer of that mountain of tripe, "The Untouchables," who at 50, still belongs in the "pretty boy" category, along with Pretty Boy Bobbie Stack, the alleged star of the show.

Following is the John Crosby column as carried in the "Around the Dials" section of the Evening Bulletin:

Turning the set back on after a month of almost total relief from the cumulative idiocy of television, I was greeted by: "Rolaids. Each particle consumes 47 times its own weight in excess stomach acid. Result: It slows down the drip, drip, drip of stomach acid."

It was a wonderfully appropriate welcome back to the drip, drip, drip of television which is almost exactly the same action.

The same evening I watched a couple of hoodlums on "The Untouchables" machinegun a young girl. She was running right at the camera at the time and the hoods machinegunned her in the back so that you got the full action like a blow in the face.

They have wonderfully interesting ways of killing girls on this show. Killing men is kids' stuff. No one does that any more. I'm indebted to the Saturday Evening Post for the information that the hoods on "The Untouchables" once gunned down 20 prostitutes lined up on a road—bang, bang, bang—like that.

That leads me to encounter more and more people who tell me they don't look at television but they read about it. Are we getting to the point where television columnists can't bear to look at television and are forced to read about it in the Saturday Evening Post? Did Pete Martin, who wrote the Post piece, see that incident or did someone else tell him about it?

Who looks at bread-and-butter television? Well kids do. But those responsible don't. Do you really think executives at NBC—which is saddled with the dreadful thing—really looked at the 25th episode of "Riverboat"? Do you suppose writers, directors, producers, or actors look at it? Do you even suppose the sponsors sit through it? Don't be silly.

When I first became a radio columnist back in the pretelevision days, I found it passing strange that so few people who earned their living in it knew what was on radio.

In America, no responsible people look at television. And by no responsible people, I mean no responsible people—no clergy, no press, no advertiser, no network executives, no Senators, nobody. Nobody but people. When you have a vast conglomeration of leaderless people, you have a mob. And when you have a mob, the best place to aim is the groin—which is exactly where most of the high-rated television shows aim.

"The Untouchables" is not only the worst show on television; it is the worst show that was ever on television in its inglorious 14-year history. It's a national disgrace, that show, and the only reason it hasn't caused any popular outcry is that television has long since been abandoned by decent people to children of all ages.

In its survey of TV columnists and critics, the Fund for the Republic pointed out that, of all the people who wrote about television, the late John Lardner in occasional pieces for The New Yorker was virtually the only person who viewed and wrote about and tried to analyze intelligently the bread-and-butter television (which is to say "Father Knows Best" in its umpteenth year).

Lardner could view the good guys fighting the bad guys with warm-hearted scientific curiosity like an entomologist looking at an ant hill. But he alas, is gone. I'm going to inflict bread-and-butter television on myself these next few months but I can't be detached about it. I get damned angry.

I have here a letter from a mother that ought to be tattooed on Desi Arnaz's chest for perpetrating "The Untouchables." Says this outraged woman:

"I am trying to teach my children Christian precepts. I am trying to teach them that violence breeds violence, and that we are distinguished from animals by our facilities of reasoning, and our love of our fellows. These things must be repeated over and over and even so it takes years before children truly believe for themselves.

"TV is systematically drilling into them: (1) Think only of yourself; (2) never think before you speak; (3) authority—parents, teachers, church, police, any authority—is a dope; (4) in any argument, use a weapon, not your brains, commonsense or respect for others."

This mother is simply repeating—though she almost certainly isn't aware of it—what George Bernard Shaw said of our movies almost 40 years ago. In America, Shaw said, the solution to all problems is a punch on the jaw.

But that was long ago. Now we have the machine gun and those 20 prostitutes on a road. Drip, drip, drip into the little minds. Hours and hours of violence.

Just a couple of weeks ago, there was a headline "Juvenile Delinquency Increases by 175 Percent." Why not? We teach juvenile delinquency on television—sponsored.

Nanticoke, Pa., Jubilarian

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Wilkes-Barre Times-Leader, Aug. 19, 1960]

NANTICOKE JUBILARIAN

Fifty years ago tomorrow, the Reverend Roman A. Wieziolowski, native of the little Tioga County town of Antrim, was ordained to the priesthood of the Roman Catholic Church by the Most Reverend Michael J. Hoban, late bishop of the diocese of Scranton. On Sunday, a half century of faithful service to God and man will be marked at Holy Trinity Church, Nanticoke, where its pastor will observe his golden jubilee with the current ordinary of the diocese, colleagues in religion, parishioners, and friends participating in a Mass of Thanksgiving, a dinner, and other festivities. It will be a red letter day for Nanticoke as well as for the Reverend Father Wieziolowski himself.

The Blossburg area has produced 25 priests of Polish extraction for the diocese. It was here that the first Polish church in northeastern Pennsylvania was established by newly arrived immigrants. Against this background, it is easy to understand the dedication of the Reverend Father Wieziolowski.

Eight months after his ordination, he was a pastor at Throop. When he was transferred to Nanticoke in 1919, he left behind him in the Lackawanna County town an impressive record as a spiritual leader and administrator, having built a church and a rectory and established a cemetery.

The four decades he has labored at Nanticoke have been ever more fruitful. Holy Trinity, thanks to his able leadership, today has a new church, school, rectory, convent, and cemetery. More important from the viewpoint of its pastor and jubilarian is its spiritual progress as indicated by some 5,400 baptisms and the activities of 10 parish societies.

That does not begin to depict the impact of the Reverend Father Wieziolowski through his extracurricular activities. As a director of St. Stanislaus Institute and a chaplain of the Polish Union of the United States, he has made notable contributions to young and old. But, above all, have been his charities, known but to God and a few intimates. Thousands of refugees (yes, thousands) are indebted to him for shoes, clothing, and other gifts, about which the public has had no knowledge until these lines are printed.

This very humble man has never sought glory, but has been content to remain modestly in the background. His reward has been in the satisfaction that goes with good works and the knowledge that he has earned the affection of his congregation and commanded the respect of others.

Dedication of General Twining Park to Monroe's (Wis.) Illustrious Native Son on July 4, 1960

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. FLYNN. Mr. Speaker, Monroe, Wis., located about 40 miles from the capital city of Madison, lies in fertile green valleys which make up Green County, Wis. It is populated for the most part by thrifty Swiss pioneers who settled here more than 100 years ago and brought with them the knowledge of how to make swiss cheese by hand in copper kettles. This swiss cheese economy has been the basic industrial pursuit of Green County residents for the past 100 years. They still make the highest quality and finest swiss cheese in America and produce many times more swiss cheese than is produced any place else in America.

Monroe is the birthplace of Gen. Nathan F. Twining, and on July 4, 1960, this beautiful city paid its highest tribute to its most illustrious son. Under the direct leadership of the junior chamber of commerce and with the cooperation of every civic organization in all of the cities of the community, the city of Monroe dedicated a 40-acre park which is properly dedicated to Gen. Nathan F. Twining and will hereafter be known as Twining Memorial Park. Dedication of the park was conducted by Mayor Orville R. Evans with response by General Twining who attended in person. The dedication was preceded by remarks made by Col. Bruce Thomas who represented Gov. Gaylord Nelson. There was a review of the F–86D sabre jet memorial project by John F. Kundert, president of the Monroe Chapter of the junior Chamber of Commerce. He also made presentation of the memorial to the city. There was response by A. Lee Mitchell, park board president.

Preceding the dedication, a reception was held at the Idle Hour Mansion. General Twining attended in person and following the celebration, a community dinner was held in honor of General Twining at the Monroe Country Club. I personally had the privilege of attending this celebration and could not help but think of the thoughts that were passing through General Twining's mind as he returned to the beautiful and peaceful small community lying in the heart of a prosperous country land—one of the most beautiful spots that the mind could imagine. I wondered what this man of advanced years, with great responsibilities and world problems weighing upon his mind, must have been thinking as he returned at his present age to the home of his boyhood and as he saw his neighbors of old, few of whom he still remembered, leading their peaceful and pleasant lives in this city which I am sure he has always loved. I feel certain that he must have felt that the local residents were fortunate, indeed, to have the privilege of living in such a peaceful and prosperous community in close association with each other with their families and loved ones—and I am sure that there must have been a longing in his heart for the opportunity in retirement of gaining the peace, the calm, the gentleness, and the closeness to nature that existed in the town of his birth.

I am certain, too, that in the general's mind he was certain, as this park was dedicated in his honor on July 4, 1960, that all the suffering and hardship and death and privation that he had witnessed throughout the world in the various struggles to protect and preserve our way of life and posterity was well worth the terrible price which we have paid to maintain our form of government. There is no better example of American democracy at work and the meaning of the institutions that have made this country great than there is in Monroe, Wis., the beautiful city which is the birthplace of the Chairman of the Joint Chiefs of Staff of the United States.

The ceremony was impressive, the dedication was memorable and I am sure that the day will long be cherished and remembered by General Twining and by the proud citizens of Monroe who properly call him their most illustrious son.

Sound Analysis

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. IRWIN. Mr. Speaker, in the New York Times of yesterday morning there was an editorial "Perspective in Space," which in my opinion contains a sober and sensible commentary on the space race between the United States and the Soviet Union and which I believe would be of interest to members of the Congress. Under permission previously granted, I include the editorial:

PERSPECTIVE IN SPACE

Whatever else may happen during the rest of this month, it is already clear that August 1960, will go into history as a period of major advance in man's penetration of outer space. Both the United States and the Soviet Union have demonstrated the capability of returning safely to earth objects which had been put into orbit, and Echo I has demonstrated the feasibility of using balloon satellites for communications. Of all these feats the Soviet success in returning safely to earth the living organisms which had been in orbit is technically the most impressive, but our own scientists' achievements were also of first-rate importance. In both nations very rapid and important progress is obviously being achieved.

In all candor, it must be recognized that the Soviet feat this month suggests a continued substantial lead over the United States in a number of major areas of space research capability. The huge size of the latest Soviet sputnik testifies again to the Soviet lead in the rocket power needed to send very heavy vehicles into orbit. And if the Soviet claims that the flying menagerie was landed on earth within a few miles of a preassigned point is true—and there is no present reason to question this claim—then Soviet capabilities in this important respect are obviously greater than the relatively crude recovery techniques which we have demonstrated this month. The Soviet Union, in short, seems closer to manned space flight than we are and it may accomplish that feat before the year is out.

Before the latest Soviet space accomplishment some wishful thinkers had suggested that we had forged ahead in the space race. The more accurate perspective, it is now clear, shows that we are still behind because our competitor is himself moving rapidly even as we forge ahead. Much hard work and much expensive research and experimentation lie before us if we are to make up for the advantage gained in the late 1940's and most of the 1950's, when the Soviet Union created the prerequisites for the space lead it has enjoyed ever since Sputnik I went into orbit.

But we may also hope that some day in the not too distant future the present rivalry will be turned into a fruitful cooperation which will speed humanity's common progress into space and cut the cost for that progress.

Joint Chiefs Escape Paper Jungle

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. FORD. Mr. Speaker, the Defense Reorganization Act of 1958 placed heavy emphasis upon the Joint Chiefs of Staff as the military planning agency at the seat of government. Because the Joint Chiefs of Staff system is the central military planning feature of defense organization, it is extremely important that the system be effective.

While Congress, which established the Joint Chiefs of Staff system in law in 1947, has consistently realized the basic soundness of the Joint Chiefs of Staff, and has understood not only its war-proven efficiency, but also that it is in harmony with our form of Government. Obviously, it is important that the JCS function with a high degree of efficiency. This it has done. Consequently, it is reassuring to learn that the JCS system has been brought to an even higher degree of efficiency through the leadership of Secretary of Defense Thomas S. Gates, Jr.

On Sunday, August 14, 1960, there was a very informative article by the distinguished analyst, George Fielding Eliot, appearing in the New York Herald Tribune, entitled "Joint Chiefs Escape Paper Jungle—Via Gates Civilian Decisions at Meetings." This analysis explains how, as a result of Secretary Gates' historic decision to sit personally with the Joint Chiefs of Staff, the work of that organization is now completely current, with no backlog of unsettled problems.

As the article points up, the author "has been unable to find a single informed individual who remembers any previous occasions when such a condition prevailed."

Here is another salient example of how our national security has directly benefited from the professional ability and strong leadership of the present Secretary of Defense, Thomas S. Gates, Jr.

Because of the tremendous importance of this enhanced efficiency of the fundamentally sound JCS system, I wish to insert in the Appendix of the RECORD the text of George Fielding Eliot's article. It constitutes reassuring reading for all those having an interest in military efficiency, leadership, and the overall defense of our Nation:

[From the New York Herald Tribune, Aug. 14, 1960]

JOINT CHIEFS ESCAPE PAPER JUNGLE VIA GATES' CIVILIAN DECISIONS AT MEETINGS

(By George Fielding Eliot)

The Joint Chiefs of Staff have escaped from the paper jungle.

The backlog of unfinished (or unfinishable) business which for years has cluttered their procedures and hampered their effectiveness as military advisers to the President and the Secretary of Defense has been cleaned up.

All their work is now on a current basis and being disposed of with due regularity.

NO PRECEDENT

Some Pentagon old-timers can't quite believe it. It's hard for anyone who has had longtime acquaintance with the work of the Joint Chiefs to think of them otherwise than as men struggling with a mountain of insoluble problems which can be disposed of only by agreeing to disagree, or by logrolling[3] compromises which fall far short of constructive accomplishment.

So revolutionary is the present and far happier state of affairs that this writer has been unable to find a single informed individual who remembers any previous occasion when such a condition prevailed. It's never happened before, say these voices of experience. There have always been hangovers that had to be swept under the rug or stowed away in bottom drawers to await better times, or started on one more circular journey among staff committees and departmental agencies in the hope that somebody might think up some acceptable means of disposing of them.

Yet today—as the writer has confirmed from reliable sources—there are only two major questions pending before the Joint Chiefs, and both of these items are current business.

GATES' DECISION

The magic touch which has accomplished this miracle—and miracle is the word that is being applied to it by more than one old hand who knows the facts—is the decision of Secretary of Defense Thomas S. Gates, Jr., to bring the element of civilian decision right to the Joint Chiefs' council table. Previous Secretaries had sat afar off and waited for the JCS to produce military decisions and send them upstairs for approval—or to send word by their chairman that they couldn't agree.

The hard fact that there is no such thing, at the Joint Chiefs level, as a purely military decision was what caused the accumulation of unfinished business. When you get to the top in this vastly costly and vitally crucial business of national defense, all decisions have economic, financial, and political as well as military ingredients.

That, indeed, is what the established constitutional principle of civilian control of military affairs is all about. Final decisions in our military affairs are a civilian responsibility. The military function in this area of decision is advisory.

CIVILIAN DECISION

What Secretary Gates did was to bring the two elements—civilian decision and military advice—together in close and regular association. He sits down with the Joint Chiefs every Tuesday—and oftener if necessary. He listens to each Chief in the presence of the others. He asks his own questions—with a background of 6 years of high-level Pentagon experience. He takes part in whatever discussion is going on. When decisions are required, he makes them—either on the spot, or after further consideration and another round or two of discussion with the Chiefs. But before he decides, he makes certain that he understands the viewpoint of each of the armed services, expressed through its military chief, so that he has a well-rounded understanding of what he is doing.

It is this simple process which has freed the Joint Chiefs from their paper jungle.

It has done something else—it has made an essentially sound system work as it was meant to work, as F.D.R. and Winston Churchill made it work during World War II, both in this country and in Britain, by themselves providing the essential element of civilian decision.

The result speaks for itself. It comes at a most fortunate time, when the international skies are darkened with threatening clouds.

QUESTION MARK

Some admirers of Mr. Gates' accomplishment, however, are disturbed by another sort of cloud—this one on the political horizon in the shape of a question mark.

Senator KENNEDY, who may become President next January, has appointed Senator SYMINGTON, of Missouri, to head a committee charged with making recommendations as to the reorganization of the Defense Department. This comes just at the moment that the present Defense organization has begun to function more effectively than it has for a good many years. Since Senator SYMINGTON is known to believe that we should have a single military Chief of Staff to make decisions, and since Senator KENNEDY's experience of defense problems is limited, there is evident some anxiety lest another reorganization that would negate the promise of today may be in the making.

One Pentagon veteran remarked that Senator KENNEDY would do more for national defense, and more to give pause to the gentlemen in the Kremlin, if he eliminated any prospect of a decision gap in our military affairs by announcing that, in case of his election, he intends to ask Mr. Gates to stay on as Secretary of Defense.

That might be an idea well worth thinking about.

Statement on Behalf of the California Olive Industry

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I wish to include a statement by Mr. Daryl Hutchins, of the California Olive Industry, which he made before the Tariff Commission and the Committee for Reciprocity of Information.

This statement points out the dire distress in which this specialized industry in my State of California finds itself due to a series of tariff reductions over the past several years. They are now faced with a possible further reduction at the forthcoming meeting of GATT in Geneva. This all comes about by the constantly increasing cost of production in this country as opposed to the low wage scale paid in Spain, the main source of competition. Many of the California olive orchards are between fifty and a hundred years of age. This represents a substantial investment to bring an olive orchard into production only to have its existence threatened by further tariff reductions.

The lemon industry of California is also in difficulties due to the heavy and unrestricted imports of lemon byproducts from Sicily. While these two industries may be considered specialty crops, they are certainly entitled to the same protection given to other basic crops produced in this country. My sincere hope is that our negotiators going to Geneva will examine very carefully the effect of additional tariff reductions on these American industries.

The statement follows:

On behalf of the olive industry, I would like to place before you data to guide your thinking in any resultant recommendation you may tender the President on this investigation of item No. 744.

The olive industry in planning for needs must take into consideration a period of 8 years in advance for said needs. Production from trees which grow to be over 100 years old do not produce, technically speaking, until 8 years of age. So you see any tariff modification nullifies plans made 8 years ago.

This, of course, pinpoints one particular peculiarity of our industry as against a great number of other agricultural commodities which can switch plant at the end of a given crop season. Eight years of labor, 8 years of costs, 8 years of thought, dissipated as the result of decisions that could hinge on this Board's preliminary findings.

It is conceivable that this Commission may hold a few mental reservations that the industries appearing before it do not have the overall broad view that this Commission may have, but I would like to point out, as a spokesman for one industry that it is conceivable that this Commission's perspective may also have a limited view and that the work of this Commission could have far-reaching effects on the economy of America, because the dealings of this Commission could be compared to one piece of an enormous jigsaw puzzle, and that when the jigsaw puzzle picture is put together there is evidence that it will not reflect the picture of America, eocnomically and socially as we have known it. Let me give you a few factors for consideration as they effect our industry and when considered in the light of the economy as a whole, will convey in essence, the intent of my comments today.

Agriculture is California's biggest commodity. Agriculture in California is greater than any other State. Olives are one of California's biggest agricultural products. Now consider this: I would like to remind the Commission that we in the industry under law are compelled to pay as much in 1 hour to those working our crop as the European counterpart received in 1 full day and on the other hand under another law we are forced to live with a tariff that allows this tremendous labor differential to dictate the destiny of our industry. Unlike other industries that are now feeling the pinch of low tariffs, we have stood idly by for 30 years with a tariff that was set on item No. 744 in 1930, and watched some 27 olive oil pressing plants go out of business, while our country imported unemployed Americans. Thirty cents per gallon as originally set for tariff in

the thirties represents something around the 10-cent mark today. In 1930 it was possible to buy a quart of milk for a nickel, but today it costs 25 cents. Bread and other items were similarly priced. I cite this as an example to show the inadequacy of the 30 cent a gallon tariff in the light of present day values. If the tariff were reduced one-half this would mean our growers would be put to $109 disadvantage per ton. I would like the Commission to know that the industry would like an investigation to be made to bear out our contention that any concessions on tariff would expedite our demise, economically speaking, that we are already beyond peril point, that growth in the industry has been arrested, that the original intent of the tariff, if properly adjusted, would represent 90 cents per gallon as of today. The Commission should realize that we have not kept pace with the original monetary intent of the tariff as initiated 30 years ago.

The industry is faced with a first-class case of fiscal d.t.t.'s. Agricultural land in California is the highest taxed in the Nation. We not only pay local taxes, but, of course, we pay Federal taxes, part of which winds up in foreign aid, to enable our Government to sustain those who would take our very living from us through the vehicles of low tariff, low foreign labor, and all this in the name of reciprocity.

This is just one of the many pieces of the jigsaw puzzle, when considered individually which means very little compared to the broad view, but pictured together, coupled with other factors, can spell a difference in labor conditions as we have known them and will not bring up labor standards in foreign countries, but will bring ours down.

Between the delirium of taxes and tariffs the issue of socialism will be forced upon American labor and agriculture. Whatever benefits may be derived will not beneficially effect foreign labor as such, but will profit, as pointed out in our brief, entrepreneurs and governments at the expense of our farmers and our laborers.

The industry does not appear before this Commission with hat in hand, but does appear to question the economical sanity of pursuing such a course of concessions. When the facts are placed before this body and when the recommendations are considered, I believe it will be obvious that friendships never can be purchased, and that one industry's economical survival should not be used as a bargaining tool, as a tentative benefit to any given country through tariff benefits, but such assistance to foreign countries, if need be tendered, would be better borne by the country as a whole through other instruments at the Government's disposal, assuming that these concessions are to be considered as benefits and handouts, which I believe they are. Our industry has been discouraged by the commercial attaché of countries producing olives and, in fact, have been told they cannot consider importing items which they themselves produce. Is this reciprocity?

We are just an industry fighting for survival against an inequitable tariff and an inequity in foreign labor which is paid some 15 to 35 times less than American labor. An industry that must market its entire crop, an industry where labor costs consume upward of 75 percent of the producing and processing dollar with a product that is handled laborwise more than any other tree product. It would take a good portion of this day to fully orient the Commission to all aspects for harvesting and processing. We cannot compete with foreign labor and maintain our living standards. It is important that the Commission know that we are being forced to divert our own crops to allow the importing of olives from Europe. What other agricultural crop does this?

We are forced to accommodate countries that would not allow us reciprocity. The Government does not buy olives and store the same, such as they do tobacco, wheat, corn, and many other items. We do not ask them to. We do not seek handouts, nor parities, but just an opportunity to maintain our market and through tariff preserve American labor standards for this is wherein they can compete.

Would this Commission ask American labor to accept 90 cents to $1 per day? Would this Commission ask American labor to restrict their diets to roughly 25 percent varietywise to what European labor has? Would this Commission request American labor to live in accommodations such as we had 50 years ago? Would this Commission ask American labor and American farmers to regress 30 years? I think the answers are—No. We request the Commission to cause to be investigated our perilous situation and effect a recommendation under section 3 that an increase in duty and import restrictions be invoked to avoid further serious injury that has already effected the livelihood of the olive industry. We further request that the Commission institute an escape clause investigation to verify that imports of item 744 have been directly competitive with California olives, ripe, not green in color, and the tariff be increased to a minimum of 70 cents a gallon for reasons mentioned herein.

Olives must be considered in a little different light than most items. The best olives go into California ripe olives. Those that are not canned go into oil and some green. In 30 years because of the low tariff on olives, oil, and green olives, some 20 plants have closed down. We must have a tariff adjustment on item 744 because chains throughout America feature the cheaper olive which is the imported olives.

The Commission should consider the following salient points:

That olives must be utilized for canning, bottling, and oil. Divorcing anyone of the trinity can take the farmer's profit from him. The low tariff on oil and green olives has left the American farmers with nothing but the ripe olives and now the low price because of low labor costs of Spanish imports are so directly competitive to ripes that they are periling the one source of processing olives left open to the American producer. To realize profit from olives this tri-cycle of return must be preserved. Two-thirds of the cycle have been disrupted because of low tariff. This must be corrected. The industry is intent on bringing this to the attention of the American public and its elective body, the Congress. We feel it is high time after 30 years of unrewarded patience with this situation which has been arbitrarily thrust upon the industry that it be corrected. That our industry not bear the brunt of coercive diplomatic expediency, to be forced through so-called friendly alliances which have arrested domestic growth, should be apparent to all present.

We do not directly or indirectly approve or disapprove of any Mediterranean policies that may or may not prevail. We are not here for a discussion of such, but it should be said: Let not our American magnanimosity, generosity and benevolency reach such high levels as to only turn upon us and destroy our domestic industries. Vast sums of money have been given to subsidize foreign industries which compete directly with American free enterprise and above all are most perilous and disastrous to us in our most valuable market, the market which we developed, the United States. These funds have provided efficient plants in foreign countries while many of our own plants are not allowed sufficient depreciation to replace obsolete equipment.

We have many strategic bases in foreign countries which could be immobilized overnight by a change in government. We are told that foreign aid is essential to underwrite part of this mutual cooperation. When this foreign aid is under the guise of tariff concessions to specific and strategic areas then it should be called reciprocal treaty and not reciprocal trade.

Congressmen have stated to our industry that the Commission has paid little attention to expressions of views of Congressmen along these lines and there has been difficulty in having the application and the administering of the provisions of our reciprocal trade laws which were designed to afford the protection to American agriculture and industry, which Congress intended in enacting these laws.

As spokesman for the industry, I do hereby express the feeling of the industry that through these laws we have strayed from the original spirit and essence in which they were enacted by Congress and are using them in the nature of a political barter, creating a situation of gambling with economies and nullifying reciprocal trade as such. Can we buy friendship with tariffs? Perhaps recent incidents in Japan can answer this question.

It is our opinion that now is the time for a reexamination of the reciprocal trade and tariffs as they apply to the olive industry, and upon this examination that the Commission recommend to the President that an adjustment in tariffs is in order to protect the domestic producer from inequities of foreign labor from a directly competitive item that jeopardizes the livelihood of the item described in 744.

Twentieth Anniversary of the Ukrainian Congress Committee

EXTENSION OF REMARKS

OF

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. GLENN. Mr. Speaker, I feel honored in being able to extend greetings to the Ukrainian Congress Committee of America and to its chairman, Dr. Lev E. Dobriansky, upon the 20th anniversary of its founding. Though the Ukrainian Congress Committee of America is a young organization, the sentiments it expresses and the ideals it espouses so courageously are age old, for freedom is ageless. The committee has dramatized for us the plight of the more than 40 million Ukrainians under the Soviet heel. It has shown us that the Ukrainian cause of freedom plays a vital role in our never-ending struggle against Soviet imperialism.

To the 2½ million Americans of Ukrainian ancestry who comprise this organization and to its directors, I wish to express my most sincere thanks for their help in informing our fellow Americans about the heroic struggle of the captive non-Russian nations in the U.S.S.R., for showing us the true nature of Russian totalitarianism and expansionism, and for recommending possible courses of action to cope with these threats to our national security.

I am sure that the Americans of Ukrainian ancestry in my second district of New Jersey join with me in expressing my appreciation for the endeavors of the committee during the last 20 years, and ask for their continuation.

Congressman's Dream About To Come True

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, many Members of the Congress remember with great admiration their former colleague, Harold Knutson, of Minnesota. I am sure they will all be interested in the following news story that appeared in the Minneapolis Sunday Tribune of July 31, 1960:

CONGRESSMAN'S DREAM ABOUT TO COME TRUE

MANHATTAN BEACH, MINN.—"Neglected unfortunate, deprived and handicapped children" were the concern of the late Representative Harold Knutson, Republican, of Minnesota, when he gave his nearby lake home to the Evangelical Lutheran Church (ELC).

Next Sunday, 7 years after the Congressman's death, Jeannette Holm Knutson Camp will be dedicated to just that purpose.

Among the guests at the camp 30 miles north of Brainerd, Minn., are the blind. So are the deaf. The mentally retarded, too, have come. Children from institutions in five States are brought here for the sunshine and lake life.

They learn to water ski—even the blind. They fish, swim, hike, play, camp outdoors, or just lie in the sun and get tanned.

Among the youngsters coming from children's homes are those with emotional problems as a result of unfavorable family environment. Hence the staffing is especially heavy. And the living arrangements allow counselors to check closely on their charges at all times.

Most of the members of the staff of 10 are college or seminary trained. The Reverend Mark Ronning, a 1960 graduate of Luther Theological Seminary, St. Paul, is camp director.

To the original summer home, duplex guest house and other buildings on the 45-acre peninsula between Big Trout and Lower Whitefish Lakes, the ELC over the past few years has added the following:

Sleeping cabins divided into compartments of four bunks each, a dining-recreation hall and extensive remodeling. The cabins have counselors' rooms, hot and cold running water, indoor plumbing and heat.

A mile-long shoreline with shallow, sandy beaches invites swimmers. Fishing boats with motors are provided, and a powerful runabout takes the children water skiing and on excursions.

In ceremonies Sunday, the camp will be dedicated to the Congressman's mother who died in 1925. Among speakers will be Dr. Magnus A. Dahlen, Minneapolis, executive secretary of the ELC's board of charities who arranged the gift with Knutson.

Knutson, whose home was in Wadena, Minn., served 32 years in Congress and was chairman of the House Ways and Means Committee at one time. He never married.

The dedication address will be given by Dr. Arthur E. Hanson, Moorhead, Minn., president of the ELC's northern Minnesota district. Participating in the service will be deaf children from Minneapolis, Faribault, Minn., and Sioux Falls, S. Dak.

Significant Remarks on Television Programing

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. MOSS. Mr. Speaker, there appeared in the Washington Post this morning a column by their radio and television editor, Lawrence Laurent, that raises a question about the programing of television stations that deserves to be brought to the attention of the Members of Congress. Mr. Laurent's significant observations about the public's apparent lack of confidence in television programing should be of concern to the Congress, in view of the responsibility it holds for the regulation of the industry:

RADIO AND TELEVISION: AUDIENCES TV FORGOT ARE TURNING THE TABLE

(By Lawrence Laurent)

If I were in the business of making up television schedules, I'd begin worrying.

There's increasing evidence of a changing public attitude toward the electronic peep show, a growing conviction that television is a minor vice, something to be viewed in secrecy after one has carefully turned off his brain.

Yes, I have seen the audience survey reports that claim Americans spend more time looking at television than they do at any other activity, except working and sleeping. I suspect the pollsters have confused sleeping with viewing, activities that are increasingly synonymous. I suspect, also, that the same pollsters are hired to prove that an audience in the millions does really exist and one is going to be found. After all, no pollster is eager to prove that there are no noses for him to count.

At neighborhood gatherings, I am being assailed by strangers who identify themselves, first, as someone "who used to watch television." They make TV sound like a stage of development, a phase, something like growing pains and acne, through which every maturing adult must pass.

Just 2 weeks ago, an architect and his wife and their four children came to my home. The architect said that the family television set had not been used for 4 months. The set blew a tube last May and the family, including the kids, had voted against spending money for repairs. The children concentrate on games, music, and the radio. The parents have gone back to conversation and reading. The architect told me that he would never have the set repaired.

What has gone out of the television schedule, for too many viewers, is the magic and excitement that was so much a part of the early years. The networks have arrived at mechanical perfection. The shows come out of Hollywood with a production lustre and a chromatic brilliance. Local programing has been forgotten.

Well, perhaps "forgotten" is not the right word. In years past, a local program was one that responded to the needs and wishes of the local community. It reflected the community's ambitions, its drives for funds or civic improvements, its elections, and its controversial issues. It was produced by a local station, using local facilities and performers who were a part of the community.

Now, a local program is one that is not fed through the network's coaxial cable. A local performer reads the commercials, true enough, but his artistic performance is limited to an introduction of a filmed program that flopped in network competition.

For variety, a local program is a motion picture that was exhibited in theaters sometime prior to the Korean war. Even the commercials are exhortations that were filmed in New York or Hollywood.

We have come, in this second TV decade, to a state that would delight the automation expert: The station can operate almost without performers and the receiving sets can blare without an audience.

The producer and the consumer are on a steady diet of tranquilizers. Neither is interested in stimulation, excitement, or energy. Television has become a ghostly business with phantom viewers feeding on flickering images.

Television, in short, seems to be willing to settle for the role of comforter to the very old and toy for the very young but the ancients are merely taking a sedative and the kids can't be fooled for long.

Ukrainian Congress Committee of America

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. HOSMER. Mr. Speaker, this fall the Ukrainian Congress Committee of America will be celebrating the 20th anniversary of its founding. This committee is a uniquely united national organization reflecting the thoughts and sentiments of some 2½ million Americans of Ukrainian ancestry.

It is dedicated to the task of serving the national security interests of this country by first, advancing the strategic value of all the captive nations, particularly those in the Soviet Union itself; second, informing the people of this country about the independence struggles of the dozen captive non-Russian nations in the U.S.S.R.; third, exposing the many current myths about Soviet unity in all its alleged ramifications; and, fourth, proposing concrete ways and means to defeat imperialist Moscow in the cold war, the chief mode of which is psychopolitical and propagandistic.

I pay tribute to the Ukrainian Congress Committee of America and the Ukrainian people in this country and throughout the world who are dedicated to the belief that freedom is the right of all nations. It remains for us of the free world to help them sustain their faith in God and humanity, in their own survival and in their inevitable freedom. Words of encouragement and sympathetic expressions of understanding of their plight will mean a great deal to these people in their dark hours of desperation.

We must work diligently in support of freedom everywhere so all freedom-lov-

ing people of the captive nations may continue to hope fervently that they may soon enjoy the God-given right of independence with justice which should be the national heritage of all mankind everywhere.

Why There Is a Need for Housing Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the August 27, 1960, issue of Business Week magazine. It points up the need for this Congress to approve housing legislation:

PLYWOOD JAM HURTS OREGON PURSES—OVERCAPACITY, SOFT PRICES, AND LAYOFFS IN THE INDUSTRY ARE RESPONSIBLE FOR THE DROP IN THE STATE'S PERSONAL INCOME

The slump in homebuilding is being felt all across the United States, but nowhere is it hurting more than in Oregon, ranking State in the production of lumber and wood products.

In the fir country west of the Cascades and in the pine country to the east, sawmills and plywood mills have had to lay off countless workers and put others on short workweeks as they cut back production closer to demand. Save for the recession of 1958, there have not been fewer workers in the woods and mills during this season in years.

Because of the degree to which the forest products industry dominates Oregon's economy, the slowdown quickly made itself felt. Business Week's measure of personal income [not printed in RECORD] shows, for example, how Oregon's income is dipping at a time when the U.S. total is going up.

Overall, the industry employs around 75,000 persons in Oregon—more than any other sector outside agriculture and half of all manufacturing workers. Thousands of others earn their livelihood selling to the industry or to its workers.

Oregon accounts for 26 percent of the Nation's softwood lumber (particularly fir and pine) and 65 percent of its fir plywood. Both lumber and wood products such as plywood have been hit by the decline in homebuilding, but the hard knocks suffered by the plywood makers have been more dramatic.

Squeeze play: Caught between the housing slump and its own overexpansion, the plywood segment of the industry has had to lay off or put on a short workweek several thousand of its workers. Plywood makers expanded several years ago partly because they needed more efficient mills to ride out low prices. The industry's new, burgeoning capacity enabled it to turn out sheets of plywood faster than it could sell them. Then came the added problem of a downturn in homebuilding.

Early this month, plywood manufacturers took steps to work off their inventories and to stave off further softening of prices. U.S. Plywood Corp., the largest marketer of plywood and one of the largest manufacturers, announced that it would cut production by 20 percent by going on a 4-day week. Several smaller companies followed, and later big Georgia-Pacific Corp. jumped on the bandwagon.

Brighter spots: Of course, not all of Oregon is hurting. Construction employment, ironically, is up, as are services, trade, and government. Electrical machinery shows a gain over a year ago—thanks to the gradual growth of electronics—but in lower paying jobs. Food processing, the second largest employer in the manufacturing sector, has been stable. All of this is helping to cushion the slump in lumber and wood products.

Trouble spot: When you take a close look at Oregon's lumber industry problem, plywood emerges as the real trouble spot.

Production of lumber (mostly softwood) in recent years has zigged and zagged, and never regained the peak it hit during 1955's housing boom. But plywood production has climbed to new highs annually almost without interruption. And while mechanization and elimination of marginal producers have cut employment in sawmills, the number of jobs in plywood and veneer mills also has been setting records.

Plywood production in Oregon almost doubled from 2.7 billion square feet in 1955 to 5.1 billion square feet in 1959. During that period, 23 new mills were built, bringing Oregon's total to 73. Another five were added this year.

Growing demand: In enlarging the total industry capacity to 9.1 billion square feet, plywood makers were motivated by (1) growing demand and (2) growing costs of producing.

The housing boom of the 1950's unleashed a big demand for plywood, but sheer number of dwelling units don't explain the whole demand picture. Plywood manufacturers have been getting more of their product into each house, cutting into the markets of other lumber products. And with a greater percentage of total housing going into apartments, the industry has benefited even more because a multi-family dwelling uses more plywood than a single-family unit.

If the construction boom had been the only spur to building new mills, it would seem that the plywood people were shortsighted in not anticipating housing slumps.

Cost factor: That's where the other factor—the cost of production—comes in. With timber prices rising steadily the manufacturers have to get the maximum yield from their logs. So, to minimize waste and get the most from their byproducts, they had to build more efficient plants.

They started on this wave of expansion at a time when plywood was bringing in $90 or more per 1,000 square feet, also at a time when small independents could make money in the business. Since then, the price has been fluctuating between $64 and $60. At such low prices, the efficient producers have been able to do more than just operate. They have been able to shut down their least efficient mills as a means of achieving a 20 percent cutback, instead of putting all their plants—efficient and inefficient—on a 4-day week. Roseburg Lumber Co., for example, has found it desirable to keep its new capacity running on a 5-day schedule but closed its old one at Bandon to achieve greater saving.

Indefinite cutbacks: The industry made an abortive attempt in May to cut production by prolonging vacation and temporarily going to a shorter workweek. These measures, plus the summer pickup in homebuilding, succeeded in jacking prices up to $64. But orders failed to keep up with production, and increasing inventories forced the price back to $60.

This episode also resulted in some name-calling within the industry. Small operators blamed big plywood producers for bringing prices down by dumping plywood on the market. And the big ones,' in turn, accused the smaller firms of shaving prices because they couldn't afford to keep inventories.

One independent said he thought a number of firms cut prices because they thought they could open new markets for plywood that way, but such efforts were futile. "There has been no increase in business in relation to increase in production," he said. "They have just priced themselves down to where a lot of them are in trouble."

Today, nobody is talking—as they did in May—of the cutbacks being for a limited period. The only concern is to bring production more in line with demand, however long that takes. Many operators feel they can't afford to shut down 1 day a week; others are just as sure that they can't afford not to shut down. This situation is particularly critical to smaller mills, where cash flow is vital. To keep the cash coming, they are prepared to keep operating and cut the price—even to $60 per 1,000 square feet.

Who gets hurt: To an outsider, the difference between $60 and $64 may not seem like much. But plywood men say they can't make any money at $60, while at $64, says one, "we can operate but we can't pay our bills."

So it's clear that while a 20-percent cutback in production may help firm up the price of plywood, it's just as clear that some people may get hurt in the process. The voluntary cutbacks at 60 mills mean shorter work weeks—or no work at all—for 7,500 west coast plywood workers, most of them in Oregon. Their thinner pay envelopes, in turn, mean lost sales in the mill towns.

In Eugene, for example, most of the 17 mills in the area are down to a 4-day week, and the community is feeling it. Retail sales are off from 12 to 15 percent from a year ago, according to the chamber of commerce, and the collections of professional men such as doctors are down 10 percent. Bank debits, which for the first 7 months ran 7 percent ahead of 1959, have fallen to the lower level of August 1959.

First decline: If the production cutbacks continue for an appreciable time—as now seems likely—this could be the first year that plywood production has declined from the previous year. During other housing slumps, plywood stayed level. Even in the first half of this year, when housing starts were off 18 percent, Douglas-fir plywood sales were up 1.5 percent. The fir people aren't exactly sure why this happened, but they point out that plywood is finding more uses in home construction, and is being used more in apartment house building.

Long-range hopes: Although there are signs of an upswing in new housing, the plywood industry doesn't expect to benefit immediately. It is heading into what is normally a slack season. Consequently, it will be several months before the industry will be in a position to work off its inventories, pick up enough new business to sustain higher operating rates, and get its production curve going back up. In the meantime, few people in Oregon would be surprised if there were some structural changes in the industry. There is considerable gossip already about small mills, unable to weather the decline, talking merger with other small ones or absorption with some giants.

Volume Feeding, One of America's Great Industries

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. ANFUSO. Mr. Speaker, a very interesting study on volume feeding has come to my attention. This study deals with food consumption outside of

the home and shows what a tremendous industry it constitutes. The study was made by the research department of Volume Feeding Management, published by Conover-Mast.

Under leave to extend my remarks, I wish to insert into the RECORD a brief release on this study which should be very interesting to all my colleagues:

EIGHT-BILLION-DOLLAR VOLUME FEEDING MARKET ANALYZED IN CONOVER-MAST STUDY

Sales of meals to the public by volume feeding units will total more than $17 billion in 1960, of which $8 billion represents the wholesale cost of food, according to an analysis by Volume Feeding Management, a Conover-Mast publication.

The analysis is believed to be the most definitive yet conducted of an industry which is notably hard to pin down statistically.

The study indicates that at least 20 percent of food consumed in the United States this year will be eaten in some kind of volume feeding establishment—which is defined as any eating place not in the home. The percentage has been rising in recent years and will continue to rise due to the increasing pace and complexity of our economy, Volume Feeding Management concludes.

Restaurants, cafeterias, and lunch counters represent 43.6 percent of the volume feeding market, based on the food cost element. Schools, grade through university, represent 12.3 percent. Next comes taverns, drugstores, department stores, delicatessens, and other places which serve food incidental to other business, with 11.3 percent. Hospitals, nursing homes, and other institutions (including prisons) take 10.4 percent (hospital employees, incidentally, outnumber patients on an eating basis). Other segments are Armed Forces in the United States, 5.3 percent; clubs, 4.5 percent; hotels and motels, 4.4 percent; employee feeding, 4.2 percent; all other, 4 percent.

The survey drew upon statistics of the Department of Agriculture, Department of Commerce, Census Bureau, and other sources. It includes detailed breakdowns of market segments and a projection of the market for 1970.

Communist Propaganda in Asia

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BOGGS. Mr. Speaker, recently while waiting in a barbershop in New Delhi, India, I looked around as one does in our country for something to read.

I picked up a magazine with a beautiful colored front. It was printed in English.

It was called Soviet Land. It was published in Moscow.

I glanced through it quickly. I immediately recognized a superb job of Communist propaganda.

It was not all. There were others in the pile. One was entitled "China Reconstructs." It told of the Red Chinese Communist experiment in vivid and dramatic language. It was published in Peiping. There were still others, all gorgeously prepared periodicals, from Communist satellite countries.

My curiosity was aroused. I was there as a U.S. Congressman, chairman of a committee which seeks to promote American private investment in the underdeveloped nations of Asia and the Middle East, hoping to improve the climate for such investment.

But the literature in the barbershop was a real barrier to my mission. I asked the barber where he got it. He said it came in free every week. I looked around for something to counteract this massive display of Communist propaganda.

There was nothing. Not a single publication from the United States or any other free world nation.

The next morning, I was back at our embassy in New Delhi, asking questions. Our officials there told me I had not seen anything yet. I had not. I was shown a file packed with propaganda—Communist propaganda. It literally amazed me. It was also depressing. I knew that my mission was being hamstrung by such material. I felt that the first thing we must do is to portray our country as it is and not as this propaganda claims us to be.

The Communist propaganda portrays America as a land where a few millionaires exploit the masses by getting rich on the production of armaments, and that the rest of the world is threatened by our warmongering. The Communist countries are, of course, shown as dedicated to peace and progress and capable of producing all the good things of life in a new world Communist society.

The distorted propaganda has a tremendous effect. Such material is a vital weapon, and a firstline enemy, in the underdeveloped lands in the crescent from Turkey to Japan.

The reasons for this are easily seen when one visits these countries, as I did on this tour to encourage investment.

In these countries, the people depend on the media of propaganda for much of their information, and education. The village center with its few periodicals, the community radio, and the small library are the intellectual focus for millions of these impressionable people. Whoever provides the periodicals, the radio broadcasts, the books, has the best chance of winning the minds of these people who do not have the means to pick and choose among a great range of such material.

The Communist propaganda effort can subvert millions of minds. It is a deliberate, conscious, well-conceived, and well-financed campaign to do just that, and in doing so to destroy the correct image of America as a land of political freedom and economic opportunity.

What are some of the methods used by the Communists in this propaganda battle?

Everything.

Periodicals? One hundred and eighteen Communist publications are available in India, and most of them circulate throughout Asia and the Middle East. Soviet Land, my barbershop reading fare, has a circulation of over 1 million copies.

Books? Thirty-seven Communist publishing houses operate in India alone. A quarter of the space in the university library in Thailand is taken up with Communist books. Iran bookstores bulge with Communist titles.

The sum total: Communist publishing aimed at the underdeveloped nations in Asia and the Middle East increased 150 percent from 1957 to 1959.

The free world effort? Only a tenth of this.

An especially dangerous part of this publishing propaganda is a series of books for children which have come from Communist presses and are now flooding bookstores. One hundred titles are available in India alone. The Communists are putting major emphasis on this for obvious reasons.

Motion pictures? Communist films are increasingly competing with American commercial productions in Asian theaters. Communist bloc countries are producing films in Pakistan. Red China has turned out pictures in eight Asian languages.

Radio broadcasting? This country is far outstripped. Communist broadcasting overseas is three times that of our Voice of America. Red China alone beams nearly half as much time overseas as the Voice, all of it to the countries of Asia and the Middle East.

What does it add up to?

Dr. Robert Johnson, president of Temple University, recently estimated the total Communist propaganda effort amounts to $5 billion a year. I can readily believe this. The night skies in Indian cities are lit with great red signs urging people to "Read Soviet Books and Periodicals." Theater marquees invite people to see Communist movies.

The effects of this massive campaign are seen in every strata of Asian life. Attending a reception at an Asian university, I had a conversation with a student.

He told me: "We're going all the way down the path of socialism. Our country will be one of equals, not of very rich and very poor, as in your country."

I asked him how this would be achieved?

"We will break the back of the reactionaries in government, and pass laws. These laws will provide for the needs of the people, but nobody will be allowed to have more than he really needs," he replied.

I recognized the Communist line that is the theme of all the periodicals, the broadcasts, the books and the movies.

What is our response to this? What are we doing to present America as it really is, a nation of peace and democratic processes and of a free enterprise economic system?

Not much, not as much as we must do. In comparison to the Communist propaganda campaign, ours is feeble.

We have two periodicals which circulate in Asia and the Middle East. They are American Reporter—250,000 in India—and the New World—less than a million in 15 countries. We have participated in big international fairs and exhibitions. We have helped provide some textbooks for universities. We have a modest program of book translation.

The total budget of our U.S. Information Agency, our major information and education tool, is about $100 million a year. We support 60 cultural centers in the Middle East and Asia. Many of these are one-room affairs. They are spread thin. There is 1 for every 35 million people in India.

The effects of the big Communist effort shows. The Communist voting strength in India has tripled in the last 5 years. In other nations, the Communists are continually making new gains.

We must join in this battle for men's minds with a positive and sustained campaign.

What are some of the things we must do? I do not pretend to have all the answers. But in talking with knowledgeable people in Washington, including many of my colleagues in Congress, I find some things on which there is general agreement.

A basic need is more financial support.

The answer does not lie in money alone. But more money can be used and used intelligently.

Millions are available, in a form that would not cost the American taxpayer another dollar. These are counterpart funds, money which this country has earned through the operation of several aid programs, notably the Agricultural Trade Development and Assistance Act of 1954.

These currencies can only be spent in the oversea nations. There are more than $100 million in such currencies lying idle in oversea banks. Millions more are becoming available every year.

Why haven't they been put to work? Congress has restricted their use. Ridiculous legal restrictions do not allow us to use small amounts for publishing, student exchange, or broadcasting and film production. Only $3.5 million of these funds are budgeted to be spent in 1960.

I have introduced legislation to remove these restrictions. They are vital to our information and education effort. They are needed tools in the battle for men's minds.

The unleashing of these currencies is the first step in our battle. American taxpayers should demand that these funds be put to work.

With this money there are several programs which could be started, others greatly expanded.

For instance:

Publishing: Expansion of our periodical coverage is vital. Further, expansion of the textbook translation program is a key effort to export democracy. I especially favor a program of publishing children's books. All kinds of books, the tools of education and truth, should certainly be a major American weapon in the propaganda battle.

Higher education: We should establish chairs of American studies in Asian universities. We could provide scholarships for students to attend these universities, to take courses designed to show America as it is. We should help in the construction and stocking of college libraries and student centers.

Motion pictures: Educational films, and films showing how America has contributed to the overseas countries, could be produced in the countries themselves, paid for with counterpart currencies.

Science education: New methods of teaching the basic sciences, developed in this country, should be exported to help the growing public school systems of Asian countries. The simple materials used in these teaching methods, and the training of teachers to use them, could be supported by local currencies.

Committee centers: We should support the construction of thousands of community centers in the villages of the Asian-Middle Eastern area. They are the focus of community life and we should have a part in their success.

Educational television: This modern method is being used slightly in colleges and universities in India. It could be expanded to include the public school systems and become a quick means of overcoming the problem of mass illiteracy.

Exhibits: We have made a bit hit with big exhibitions. We should develop a program of small, village-size exhibits for constant use. One such exhibit, on small industry possibilities, is now showing throughout India. It has been praised by Prime Minister Nehru on the floor of the Indian Parliament. Counterpart funds should develop and support other small exhibits.

Exchange: We have developed a great number of exchange programs. But these could be expanded fourfold and still not meet all the needs. We could support thousands of American students, teachers, and technicians with counterpart currencies.

All these programs could be carried on with idle money which this country desperately needs to put to work. This could be done without additional cost to American taxpayers.

To me, this makes sense.

Lodge Quits U.N. to Chorus of Council Acclaim

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, August 27, 1960

Mr. WILEY. Mr. President, on September 3, Ambassador Henry Cabot Lodge will leave his post at the United Nations.

During his tenure of service, since 1952, the distinguished Ambassador has won the gratitude of our country, the admiration of his colleagues in the United Nations, and the respect of those who oppose freedom—for which Mr. Lodge has served as such an effective standard bearer.

As U.S. Ambassador at the U.N. he shouldered well the great responsibility of presenting the U.S. Government's position on a wide variety of issues coming before that body, affecting the interests of peace.

Among the U.N. debates in which Mr. Lodge played an important role were: negotiations at the end of the Korean war; return of 15 American fliers held by Red China after the Korean war; the Suez and Hungarian crises in late 1956; presenting President Eisenhower's U.S. open skies proposal; U.N. investigation of the situation in Laos; effectively battled the attempts to seat Red China in the United Nations; effectively refuted the charges of the Soviet Union against the United States on the RB–47 reconnaissance flight.

Recently, the Christian Science Monitor published an article by William R. Frye entitled "Lodge Quits U.N. to Chorus of Council Acclaim."

The fine article not only reviews the high respect with which his colleagues at the U.N. esteem his capable performance as U.S. Ambassador, but also presents in a new light the character, ability and attributes of the Ambassador, himself. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Christian Science Monitor, Aug. 25, 1960]

LODGE QUITS U.N. TO CHORUS OF COUNCIL ACCLAIM

(By William R. Frye)

UNITED NATIONS, N.Y.—U.S. delegate Henry Cabot Lodge bade a sentimental farewell to the United Nations August 23 and received an unprecedented accolated from all 10 other countries on the U.N. Security Council—including the Soviet Union.

Mr. Lodge has resigned as of September 3, to run for Vice President. Unless the Congo crisis explodes anew, diplomats do not expect any meetings of major organs before that date; hence the early sendoff.

The tall, handsome American representative made what was expected to be his last appearance arguing for the admission of newly independent Cyprus to the U.N.

It was one of his easier tasks in nearly 8 years at the U.N. No one opposed the step. The Security Council unanimously recommended it. When formally approved by the General Assembly next month, Cyprus—long the site of bitter guerrilla war—will be the U.N.'s 97th member.

WADSWORTH STEPS UP

Mr. Lodge's deputy, James J. Wadsworth, will replace him, at least for the duration of the Eisenhower administration. Stepping up into Mr. Wadsworth's shoes will be James W. Barco, who at 44 will be one of the youngest full ambassadors in the U.S. Foreign Service.

The accolade for Mr. Lodge was obviously a surprise to him. It came without warning at the end of a more or less routine U.N. Council session.

Armand Bérard, the white-haired French president of the Security Council for August, said he did not wish to adjourn the meeting without a few words of farewell to his American colleague, who leaves, he said, with "our unanimous regret."

COMMUNISTS INCLUDED

One after another, the other delegates all echoed Mr. Bérard's words. Harold Beeley of Great Britain said the U.N. "will not be the same without him." Eugenio Plaja of Italy declared that it was because of men like Mr. Lodge that the U.N. had "been able to grow and assert its prestige and authority."

Even Platon Morozov of the Soviet Union and Jacek Machowski of Poland added gracious words. Mr. Morozov, who is a new-

comer, said he had heard that there "had been some divergences of view" between Mr. Lodge and Soviet delegates, but that he would "like to think not of that which separates us but of that which unites us."

The American representative, whose deep baritone normally booms out with full assurance, replied with emotion and some unaccustomed hesitation. He began in French, thanking M. Bérard. Then in English he responded to the others, saying he was "really quite bowled over."

PEACEMAKING STRESSED

The world, he pointed out, "is full of tension, full of danger, and full of mystery." Events often require vigorous defenses of national points of view, he said.

"But of course there is another side to this (U.N.) work. It is the side which is expressed in the Holy Bible by the words, 'blessed are the peacemakers,' which I am sure finds its counterpart in the other great religions.

"(This) job of getting common action and of getting consent is, of course, the type of work that epitomizes the best hopes of mankind."

Several delegates had praised Mr. Lodge for, as Sir Claude Corea of Ceylon put it, "tolerance" and "readiness to understand the other man's point of view."

This is a side to Mr. Lodge which much of the public does not know. He has won his reputation as a man who tells off the Russians. But U.N. people also know him for behind-the-scenes conciliation. It is a role he did not appear to come by naturally at first, but one which he learned in the caldron of experience.

These peacemaking activities, he said are "the things, I think, by which posterity will judge us all."

What About Depressed Area Legislation?

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. SAYLOR. Mr. Speaker, I opposed the recess which split the 2d session of the 86th Congress into two parts. I am convinced that, had politics been set aside in favor of serious legislative procedure, adjournment could have been achieved without difficulty in ample time before the beginning of the conventions in Los Angeles and Chicago. Perhaps, however, there is a saving grace to the strategy calling for a return to Washington in order that campaign speeches may echo out from the Halls of the Senate. If Congress—at long last—enacts reasonable distressed area legislation, then the split session can be considered worthwhile.

For all too long, the bills to relieve this chronic unemployment have been subjected to political tinkering of ridiculous proportions. Surplus labor regions could certainly have escaped at least 2 discouraging years of dismay and distress. Had not our distressed area bill been loaded down with omnibus amendments to destroy the basic intent of the legislation, we could today be enjoying industrial progress in many if not all of the communities now listed in the surplus labor category. I have been over a large part of the 22d Congressional District in the past several weeks. In some communities and in some industries business is brisk and pay envelopes are plump. What is immediately apparent, however, are the valleys of inactivity and unemployment that mar what would otherwise be a very satisfactory relief map of economic conditions in our business district. You have the same conditions in regions of West Virginia, Kentucky, and in a number of other States.

To correct the situation would not require exceedingly heavy expenditures. I have proposed $75 million for industrial loans and $25 million for public facility loans. By foreign-aid standards, this dispersement would be extremely modest. Millions upon millions of dollars are provided annually by the International Cooperation Administration, whose source of income is the U.S. Treasury, to nations all over the globe for the purchase of materials—everything from soybeans and yarns to scientific instruments and industrial machinery. If you will but glance through a procurement information bulletin issued regularly by the ICA, you will be appalled at the number of listings of six- and seven-figure disbursements that permit the recipient nation to buy his promised trinkets and gadgets and automobiles and manufacturing plants wherever he wishes in the world market. Those are the items in which not a cent comes back to us, because the country enjoying our generosity is automatically relieved of any obligation to purchase the products of American industry and agriculture.

Then of course there is the Development Loan Fund which specializes in making available many millions of dollars so that nations other than the United States might enjoy the fruits of what the American taxpayer sends to Washington. The three brief announcements issued by the Development Loan Fund on June 3 recounted the approval of a $9.7 million loan to Vietnam for railroad cars and equipment, a $20 million loan to India for a thermopower plant, and a $23 million loan to Yugoslavia for a plastics and chemical plant. To a resident of an area where pockets of unemployment abound, such reports are most disturbing, particularly in view of the fact that the United States insists on making dollars available to Communist Yugoslavia at a time when certain American industries vital to the national defense are suffering for want of action by the Government.

An additionally alarming statement was released by DLF on June 13 when it announced that loan applications totaling $3,679 million had been received from 59 countries during the agency's first 26 months of operation. The report proceeds to list numerous categories in which loans have far exceeded the amount to be appropriated in the distressed area bills that I have before Congress.

The money to be used in carrying out the stated purpose of my latest bill would provide the means of getting American workmen back on the payroll. These citizens would buy needed clothing and household materials and equipment from the processing and manufacturing plants of my State and yours. They would employ the services of electricians and plumbers and carpenters to provide long neglected repair work in their homes.

The money to be made available for a resurgence of industrial activity in specified communities and regions would generate business in other areas of the United States. It would not be sent abroad to be spent indiscriminately at the whim of foreign politicos.

While I have never subscribed to the theory that increased industrial and business activity is reflected in direct ratio to the amount of money allotted for public works and/or matching funds for stimulating employment, there is no question but that such appropriations will come back to us in many ways as compared with the donations that go to foreign nations. My proposal will not only make it possible for our people to return to work and once again assume the social and economic status that should be available to all of our citizenry; it will also once more enable them to begin contributing an important share of local, State, and Federal tax revenue. In addition, they will again be able to give to their churches and to charities, as has been their custom until economic inactivity set in.

Mr. Speaker, I appeal to you and to every Member of this legislative body to put into law as quickly as possible the distressed area legislation which I have proposed.

Airline Service in Tennessee

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, August 27, 1960

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Give Southeast a Chance," published in the Memphis (Tenn.) Press-Scimitar of August 20, 1960, relating to the subject of airline service in Tennessee.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GIVE SOUTHEAST A CHANCE

Southeast Airlines, which suspended its service after 3½ years operation, has asked Civil Aeronautics Board for a certificate to help it resume its air service across Tennessee.

Southeast wants the CAB certificate so that it will be eligible to carry airmail and receive a Federal subsidy.

A CAB examiner, after a study of Tennessee's needs, recommended that Southeast be given a certificate months ago. Southeast offered the lowest bid by asking a smaller subsidy than the other bidder. The CAB voted against its own examiner's recommendation and the lower bid and awarded the

routes Southeast was serving to another airline.

Now Southeast asks that the CAB delay its final decision on these matters a year to give Southeast a chance to resume its service in Tennessee without the handicap that lack of a CAB certificate puts on it.

We think the CAB should correct its past mistakes by granting this latest, reasonable request of Southeast. Tennessee needs the service and fairplay requires that Southeast be given a chance to render it.

Civil War Echo

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the entire Nation is participating, during the opening years of this decade, in plans for Civil War Centennial observances of all kinds to commemorate the great conflict which began almost a century ago. Many heroes will be remembered; many battlefields will be revisited; old memories will be revived.

An Associated Press story from Trenton, N.J., on August 24 described just two of those efforts. One concerns a great general, Maj. Gen. Phillip Kearny, for whom a town in New Jersey is named. Another concerns a monument in Salem Church, Va., where troops from New Jersey and Alabama fought in 1863. If present plans are fulfilled, the monument could be rededicated as an example of North-South friendship.

The conflict 100 years ago tested the principles of Americans, as well as their courage. It is a pleasure to read of the growing plans to mark the centennial of that conflict. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL WAR ECHO—PROJECT BEGUN ON PHIL KEARNY

TRENTON.—In a rural country spot in Virginia, behind a house, stands a small plot of ground and a monument.

No one knows who owns the plot. Few care. A tree and bushes have sprung up between the four corner posts.

But the New Jersey Civil War Centennial Commission decided yesterday to try to provide proper recognition for the monument.

It marks the spot near Chantilly where Confederate bullets killed New Jersey's Maj. Gen. Phillip Kearny, a gallant veteran of four wars, as he tried to rally his Union troops on September 1, 1862.

In 1915 six persons, three from Virginia and three from New Jersey, bought the site of the monument which was erected by the 1st New Jersey Brigade and friends.

But they all have died and apparently did not deed the land to their children. The New Jerseyites were Charles F. Hokkins, of Boonton; Theodore W. Allison, of Newark; and John W. Bodine, of Camden.

TOWN'S EFFORTS

Officials of the town of Kearny, named after the general, have tried to spur interest in the monument over a period of years but had little success. The State commission hopes it can do better.

Members talked yesterday of possibly setting up a nonprofit corporation to buy the site. First, Attorney General David D. Furman will seek to determine if the land has been escheated back to Virginia.

A commission representative went to Virginia to search for it recently and spent all afternoon trying to find it.

Kearny and Maj. Gen. Isaac Stevens of New York were the first major generals to die in the Civil War, he discovered. Both fell the same afternoon as the Union Army was withdrawing after being thrown back at the Battle of Second Manassas.

SALEM CHURCH MONUMENT

The Civil War Commission also heard plans to rededicate a monument in Salem Church, Va., which commemorates the services of the 23d New Jersey Volunteer Regiment in the battle of Salem Church on May 3, 1863.

This monument, a tall spire with the statue of a soldier on top, was erected in 1906 by the New Jersey Legislature.

Oddly enough, it also involves a Union defeat. The northerners were retreating through Fredericksburg when the 23d was ordered to block the Confederates..

The commanding officer, Col. E. Burd Grubb, of Edgewater Park, reported later that the enemy was firmly entrenched in a brick church and delivered "a most galling fire."

Everett Landers, the commission's executive director, said the monument includes a plaque lauding the opponents who met the New Jersey troops.

It reads: "To the brave Alabama boys, our opponents on this field of battle, whose memory we honor, this table is dedicated."

Landers said he is contacting Alabama officials to try to work out a rededication of the monument as an example of North-South friendship.

Why Oregon Men Are Out of Work

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item which appeared in the August 22, 1960, edition of the Eugene (Oreg.) Register-Guard:

DEMOS BLAME GOP FOR CUTS IN PLYWOOD

Four Lane County Democratic candidates charged Monday that Republican policies relating to tight money and housing legislation are to blame for layoffs in the plywood industry.

This statement was isesued after a complaint was made last week that Japanese plywood imports are damaging American producers and are instrumental in the closure of two mahogany plywood manufacturing mills in Lane County.

In a joint statement, James Weaver, Richard Eymann, Richard Kennedy, and Ed Fadeley, Democratic candidates for the State legislature, said:

"America needs houses and the plywood workers and plywood industry are prepared to help them but the Republicans through their artificial policies are causing industry layoffs."

The candidates pointed out that the Japanese imports may be hurting the hard plywood market and that if this is true something should be done about it.

The candidates said that the vast majority of Lane County's plywood industry is Douglas-fir and other soft plywoods and these products are not being hurt by these imports.

However, the candidates added that "every house not being built because of Republican policies is damaging both hard and soft plywood sales and keeping men out of work."

Harold R. Jones, Eugene, president of Jones Veneer & Plywood Co., said Friday that his firm was shutting mills in Eugene and Junction City, and he blamed heavy Japanese imports of mahogany plywood for much of the trouble.

Recognition of 40th Anniversary of Women's Suffrage

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. WILEY. Mr. President, 40 years ago the 19th amendment—granting women's suffrage—became the law of the land.

After a long struggle, the women of the United States attained a new privilege of freedom and equality, in keeping with the spirit of our Nation.

Achieving such a fundamental but highly significant change in our way of life required the concerted, dedicated effort of a great many people.

Regrettably, the tide of history, running upon the shores of time, has long stilled the voices of many of those who fought for this well-deserved privilege of citizenship.

Among those who stand out as the symbols of spirited leadership, however, is the life of Susan B. Anthony. Because of her historic effort to make the voice of womanhood felt stronger in the affairs of our Nation, we are today a better country.

Indeed, the voting power—if the women of the Nation exercise the privilege—surpasses that of male voters.

Reflecting the spirit of the dedicated Miss Anthony in her unrelenting efforts for recognition of womanhood, there is inscribed on her bronze bust in the Hall of Fame at New York University, "The time will come when man will recognize woman as his peer not only at the fireside—but also in the councils of the Nation."

More and more, this is coming true—not only in national but also in international affairs.

Yesterday, August 26, marked the 40th anniversary of woman's suffrage. In recognition of this significant anniversary I ask unimous consent to have a brief review of the life and work of Susan B. Anthony—a leader in the suffrage movement—printed in the Appendix of the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

LIFE OF MISS ANTHONY

She was born at Adams, Mass., February 15, 1820, and passed on at 17 Madison Street, March 13, 1906, in her 86th year. In her early youth she taught school. She was teaching in Canajoharie, N.Y., at the time of the first Woman's Rights Convention in Seneca Falls, N.Y., July 19 and 20, 1848, and also when the adjourned convention was held in Rochester August 2, 1948. Her interest at the time was in organizing Daughters of Temperance, and it was not until 1851, after she had met and talked with Elizabeth Cady Stanton, that she saw the need for woman suffrage and joined her in a lifelong crusade for the rights of women. Soon Miss Anthony became the driving force of the woman's rights movement, assuming the responsibilty of its conventions and of building up a strong woman's rights organization. On May 15, 1869, she organized the National Woman Suffrage Association with Mrs. Stanton as President.

HER WORK

Miss Anthony gave 55 years of devotion with singleness of purpose and unbelieveable persistence for the enfranchisement of women. Through her efforts and those of Mrs. Elizabeth Cady Stanton, woman suffrage was debated on the floor of the Senate in 1866 and a resolution was introduced in 1868 in both Houses of Congress providing that citizenship be the basis of suffrage. In the "Life of Miss Anthony" she says: "I have addressed the committees of every Congress since 1869, and our New York Legislature scores of times." Her friend, Senator Sargent, introduced in the Senate the first woman suffrage amendment in 1878. This amendment was reintroduced year after year through the tireless efforts of Miss Anthony. It was finally adopted as the 19th amendment and became the law of the land August 26, 1920—14 years after her death. Since it was the same amendment for which she had worked so long it was called the Susan B. Anthony amendment.

Because she believed that the movement for woman's rights and woman suffrage should be worldwide, she organized in Washington, D.C., in 1888, the International Council of Women, and in 1904, in Berlin, Germany, with the help of Mrs. Carrie Chapman Catt, the International Woman Suffrage Alliance.

In 1890, the National Woman Suffrage Association and the American Woman Suffrage Association united, forming the National American Woman Suffrage Association with Mrs. Stanton as its first president. Miss Anthony succeeded her in 1892 and she served as its president until 1900.

Her interests were wide and in addition to directing State and national campaigns for woman suffrage and attending hearings, she never lost an opportunity to speak, write, and work for the advancement of women in education, in the professions, in business, and to win for them full civil rights. Her scrapbooks which she kept for 50 years, she herself gave to the Rare Books Section of the Congressional Library. Each book has a special inscription written by her. These valuable scrapbooks give a record of her life work.

HONORS

The naming of the 19th amendment as the Susan B. Anthony Amendment is most fitting as it was the goal to which she had dedicated and devoted her life. A commemorative 3-cent stamp bearing her profile was issued August 26, 1936, on the 16th anniversary of the amendment. Governors of many States issue proclamations commemorating her birthday—February 15—and calling attention to her and her work.

In the Capitol at Washington, D.C., is the Woman's Monument by Adelaide Johnson. Rising out of an 8-ton base of Italian marble are the heads and shoulders of Mrs. Stanton, Mrs. Lucretia Mott and Miss Anthony—who were known as "The Great Triumvirate" in the work for woman suffrage. In the Metropolitan Museum of Art in New York City was the marble bust of Miss Anthony by Adelaide Johnson. It has been loaned to the Anthony House. There is a bronze tablet to Miss Anthony along the grand staircase of the capitol in Albany.

November 1, 1950, it was announced that she had been elected to the Hall of Fame at New York University in New York City—the first woman to be elected in the last 30 years. On May 18, 1952, the bronze bust of her by the famous sculptress, Brenda Putnam, was unveiled with great ceremonies.

Rochester memorials: Anthony Hall of the Women's College of the University of Rochester; Anthony Lounge in Cutler Union of the Women's College; bronze tablet to the two sisters in the Unitarian Church which they attended; bronze tablet in the chapter house of Irondequoit Chapter, Daughters of the American Revolution, of which she was a life member; Red Oak Tree in Genese Park—near the monument of Dr. Edward Mott Moore—dedicated by the department of parks in 1935; stained glass window in Zion A.M.E. Church on Favor Street; School No. 27—called the Susan B. Anthony School; marble bust in it of Miss Anthony made by Luella Varney, Rome, 1883; Anthoniana in Rochester Museum, Rochester Historical Society Headquarters, Rochester Library and at Library of the University of Rochester; Susan B. Anthony House with State marker on lawn, sponsored by Susan B. Anthony Memorial, Inc.

California memorials: Susan B. Anthony Memorial Collection in Los Angeles Public Library; Susan B. Anthony Tree in Sequoia National Park; Susan B. Anthony Day in the public schools; mementos of Miss Anthony in the Mission Inn, Riverside, Calif.; Susan B. Anthony Memorial Committee.

TRIBUTE

At Miss Anthony's funeral Mrs. Catt gave this tribute: "This woman for a large part of half a century was the chief inspiration, counselor, and guide of our movement. There were women associated with her from time to time, women of wonderful intellect, of superb power, of grand character, yet she was clearly the greatest of them all, the greatest woman of our century, perhaps the greatest of all time. We shall never see her like again."

Publicans, Watch Out

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the eloquent Speaker of the House has fought for many good causes in his long service to the Nation. Just the other day he had a few pointed remarks to make about an old abuse.

An editorial in the Bergen Evening Record, Hackensack, N.J., of August 8 commends Mr. RAYBURN and has a few pointed remarks of its own to make.

In order to keep our language pure on at least this one point during the campaign and in order to give a sharp warning to "publicans," I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bergen (N.J.) Evening Record, Aug. 8, 1960]

CAN'T WE JUST SAY WHAT WE MEAN?

Mr. SAM lost his temper. In eruption he is a majestic spectacle. The reporter at the barbecue slipped, and started to ask Speaker SAM RAYBURN, Democrat, of Texas, some question about Democrat candidates. Said the old gentleman:

"Now, damn it, it's Democratic candidates, not Democrat. That's what Republicans always say. I think I'll start calling them Publicans."

In Roman antiquity the publican was a collector of toll or tribute, a minor official often oppressive and greatly detested. "As Jesus sat at meat * * * many publicans and sinners came and sat down with him and his disciples" (Matthew ix: 10). It would not be a complimentary form of address.

Quite a few Republicans, here in New Jersey as well as in wickeder parts, seem to enjoy alluding to the opposition as the Democrat Party. Why they relish doing this, as well as why the Democrats respond so vigorously to the irritant, is not clear; inaccuracy or illiteracy does not always arouse such a flow of bile. Perhaps the Democrats' resentment traces back to Joe McCarthy's use of the term. Or perhaps it is the human reaction to any abuse—the vocabulary may not be clear, but the tone of voice is.

Let's grow up. We have serious things to talk about. We should be trying to preserve the precision of language as a delicate instrument, not using it as a bludgeon. Now, son, what was it you wanted to ask Mr. RAYBURN?

Asia, NATO, and the United Nations

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, August 25, 1960

Mr. MOSS. Mr. President, one of the most pervasive subjects in the world today is peace. It is the persistent hope and dream of all mankind.

The University of Utah has an Institute of International Affairs which offers a program of first, graduate and undergraduate educational training; second, research and publication in the international field; and third, service to the public and governmental institutions.

This institute is performing a scholarly and remarkable service. Recently the institute has published its International Study Paper No. 3, entitled "China, Asia, and the West," by Dr. Helmut G. Callis. Section IV of the study paper deals with Asia, NATO, and the United Nations.

Dr. Callis is a loyal patriot and a recognized scholar. His remarks on the subject are made with such clarity and lucidity that they deserve the attention of all thinking people everywhere. They are logical and realistic.

Mr. President, I ask unanimous consent that the preface to the paper by S. Grover Rich, director of the Institute of International Studies at the University of Utah, together with part IV of the

paper, be printed in the Appendix of the RECORD.

I am informed by the Public Printer that the insertion will make approximately 4¼ pages of the CONGRESSIONAL RECORD, at an estimated cost of $344.25.

I ask unanimous consent, notwithstanding the cost, that the study may be printed in the Appendix of the RECORD.

There being no objection, the preface and part IV were ordered to be printed in the RECORD, as follows:

PREFACE AND PART IV OF INTERNATIONAL STUDY PAPER NO. 3, ENTITLED "CHINA, ASIA, AND THE WEST"

(By Helmut G. Callis)

PREFACE

Statesmen everywhere shudder at the thought of China a decade from now. Under the domination of an ideology and a government which commands totalitarian control of its vast human and material resources, China is growing rapidly in population, industrial capacity, and military power. It may well come to dominate Asia, the world island, and perhaps the world itself.

Few American scholars are more competently prepared to discuss the vital problems concerning China's new role in world affairs than is Helmut G. Callis, author of the new, widely acclaimed work, "China, Confucian, and Communist," recently released by Henry Holt & Co. Professor Callis was educated, studied, and taught at some of the most prominent universities of Europe and America, notably at Leipzig, the Sorbonne, Geneva, the London School of Economics, Michigan, Yale, and Harvard. He has lived in all the major countries of Asia for extended periods and was for several years a resident of China's historic capital city of Peiping. During the Second World War, Professor Callis served as a consultant to the Far East Division of the Office of Strategic Services in Washington. He has served at the University of Michigan as director of the east Asia area program and at Yale in the Foreign Area Studies and Staff Officers School. Since 1947 he has been professor of history at the University of Utah. He has been the recipient of both Rockefeller and Ford fellowships and will spend the next academic year in India as a research scholar under the Fulbright program.

It is an honor for the Institute of International Studies to bring Professor Callis' contributions on this crucial problem to the American public.

S. GROVER RICH,
Director, Institute of International Studies, University of Utah.

PART IV. ASIA, NATO, AND THE UNITED NATIONS

Some time ago an unnamed official of a European country advanced the idea of creating a large pool of funds to which the industrial countries of the West would jointly contribute each year for a specified number of years. Grants would be made from this fund to underdeveloped countries without strings attached and for any use they want. The soundness of the uses made by each receiving country would be judged by an international team of experts which could include representatives from other underdeveloped conutries, competing claimants for the funds, and further contributions from the pool would depend on the jury's verdict.

However, to enable the West to win the competitive struggle with the Soviet Union for the hearts and minds of the underprivileged in the modern world, the creation of a substantial pool of capital funds needs to be paralleled by the establishment of a pool of trained men available for this specific task of aiding the underdeveloped countries in carrying out the industrial revolution. To attack this task efficiently, many thousands of scientists, engineers, doctors, mechanics, and skilled workers will be required for India alone. If we cannot spare them now (and we probably cannot), or if we cannot at least make them available in the foreseeable future. Russia will have a great advantage. For the Russians have for several years now trained specialists in science and engineering as well as in languages and culture for service in foreign lands.

If we are too shortsighted to see the writing on the wall and fail to take immediate steps to remedy shortcomings, we will have no justification for bewailing inevitable consequences. Time is running against us and the problem is too great and urgent to be solved in the manner of "business as usual." What is required is a large-scale special training program, instituted and financed by the American Government and similar to that adopted by the U.S. Army during the Second World War, which also trained people for specific countries. Other Western governments should do likewise.

In the spring of 1959 the Action Committee for the United States of Europe, under the chairmanship of its founder, Jean Monnet, adopted a policy resolution which contained a proposal for European Community relations with the less-developed countries of the world. The resolution advocates a new approach by the European Community to help raise living standards in these countries by 25 percent in the next 10 years. The Action Committee suggests three major fields of aid by the Community: (1) Recruitment of scientists and technicians to aid in training administrators and economists needed by the less-developed countries; (2) cooperation to stabilize the prices of raw materials in world markets; (3) encouragement to increase the supply of investment funds to the poorest countries. To meet the target of raising income per head by 25 percent in 10 years, the report estimates that the need for outside capital will amount to $7.5 billion. This represents roughly 1 percent of the total national income of the developed countries.

NEW ROLES FOR NATO

The responsibilities and burdens connected with the necessary measures to prevent a further drift of poor nations into communism should not rest on any single government or limited group of nations but on the Western community as a whole. So vast an undertaking should be looked upon as a cooperative task. NATO, which was never intended to be a military alliance only, could be an excellent instrumentality to deal with the problems and exigencies arising for the West in its relations with underdeveloped countries. Under NATO auspices permanent commissions and study teams could be formed to look into critical situations and search for the best ways of pooling Western science, expertness, and resources in a cooperative effort to close the widening gap between rich and poor nations in the modern world. This effort should include a search for and support of effective means of birth control in countries willing to introduce such measures, as for example in India.

Joint deliberations and efforts of the type described, however, should not stop on a technical level. To be really fruitful they must extend to close cooperation in policymaking. It is a well-known fact that serious disagreements in matters of Asian policy have disrupted Western unity and thus weakened the Western position. What is needed is a general clearinghouse for divergent views and interests which would allow Western governments to arrive at an understanding, in a spirit of give-and-take, as to what kind of order they would like to see emerge in Asia so that action need not be haphazardly improvised as unforeseen events take foreign offices by surprise.

It is unpleasant but important to recall that Britain and Canada, though as a rule anxious to work along American lines, have not seen their way clear to do so in the Far East on several occasions. These allies were distinctly unhappy to see the war carried into North Korea to China's frontiers. They dissociated themselves from all American moves which looked to them like participation in the Chinese civil war. They neither became signatories of the alliance treaty with Generalissimo Chiang Kai-shek nor promised help in case of a Communist attack on the offshore islands.

NATO delegations have also asserted that the United States was not taking sufficiently into consideration the needs and interests of its West European allies. Such feelings are natural and as a rule reciprocal, for each nation easily considers its particular interests to be the most vital for the whole community.

For example, Britain's attitude toward China was definitely influenced by its strategic and economic priorities for Europe and the Middle East as well as by its special interests in Hong Kong and Malaya. On the other hand, because of their commonwealth ties with India and Pakistan and their close historical affiliation with these and other Asian nations, the British have often been able to take a more understanding point of view toward Asian problems than nations lacking this experience in the past. Finally, the United Kingdom in view of its strategic and economic problems was more obviously guided by the belief that in the atomic age military strategy is less important than diplomacy and economic relations.

Adjustment of national interests is never a simple matter and if it is to be peaceful and permanent must always be mutual. Therefore, the more complex and divergent national interests are, the more reason there is for not acting unilaterally but for taking care of them in collaboration with congenial partner nations through organized mutual efforts in specialized agencies of a nonmilitary character under the auspices of NATO. There have been no serious attempts to date to develop the nonmilitary side of NATO envisioned in article 2 of the North Atlantic Treaty. Opportunities of initiating common projects of broadly human interest, which alone can make the Atlantic community a reality, have often been overlooked.

In realization of the serious shortcomings in western organization Mr. Dean Acheson, former U.S. Secretary of State, speaking at Godesberg, Germany, in the fall of 1959, suggested a wider Atlantic alliance with broader political and economic goals rather than only military ones, an organization that could embrace such countries as Sweden and Switzerland also.

Mr. Acheson urged the pooling of economic resources and the mutual quest of political aims through the creation of a Western "supercouncil" designed to draw up and supervise joint policy. Acheson pointed out that there have been many international councils in the past but that none of these was a policymaking body. Members of all previous councils have had to await instructions from their governments to take action.

In addition to the supercouncil, Mr. Acheson proposed a sort of control mechanism, a body aimed at keeping the treaty up to date and interpreting council policy. In the economic realm Acheson suggested fresh agreements between Western states in an effort to realize the following three basic aims:

1. To increase the welfare of Western peoples.

2. To furnish help to underdeveloped nations and thus lead to an increase in their own production.

3. To lump together economic resources of the free world in order to strengthen it in its global struggle with present and future offensives of the Communist opposition.

Determined moves in the directions proposed, Mr. Acheson felt sure, would greatly increase the productivity of the whole Atlantic community and also international trade in the rest of the world.

In reference to American reaction to moves toward European integration, Mr. Acheson took the position that the United States and Canada must join forces with Western Europe to pull their economies together and avoid the kind of split that has led to creation of two separate European economic unions.

There was too much of the practice of "going it alone" in the Western World and for too long a time. By indulging in that practice the Western nations have done themselves incalculable harm. For the price of disunity is high: any weakening of solidarity is serious. Indeed the Communists have reasons to fear Western unity even more than Western strength.

SHOULD RED CHINA BE ADMITTED TO THE UNITED NATIONS?

In the Far East, Western policy needs to be more closely defined through organized collaboration among Western states and closer Western contacts with the Asian governments primarily concerned. Otherwise, the split in the free world cannot but remain wide and Western influence in Asia will continue to wane.

There can be no real peace in the world before the serious problems of the economically depressed nations in the Far East, perhaps the most destitute part of the world, are brought under control, and they cannot be brought under control without the consent and voluntary cooperation of Asia's major nations. War, cold or hot, will not solve these problems; it can only make them more horrible and the Communists alone will be its beneficiaries, as they indeed were of the last war, and not only in China.

Economic distress was the underlying cause of China's Communist revolution, and it was also the main cause of the Second World War in the Far East. Asia's economic problems are so vast that they cannot possibly be solved by national efforts alone. Therefore, the only reasonable alternative is to solve them by international efforts. The logical place to bring Asian nations around a conference table for the discussion of their difficulties would be, of course, the United Nations. However, mainland China, in the aftermath of war and revolution is now in disgrace internationally, and is not at this time a member of the international organization—a circumstance which raises the crucial, but highly controversial question: Should Red China be allowed to become a member of the United Nations?

A MORAL ISSUE?

The problem of admission, however, is not the kind of question which can be intelligently discussed with reference only to one state, no matter how large, because its significance is in the principle. The principle has been hotly debated almost every year since the beginning of the United Nations Organization and its predecessor, the now defunct League of Nations. The question of admitting member states to the United Nations is sharply different from that of diplomatic recognition of one state by another. The latter is a unilateral act fully within the sovereign control of an independent government. No government can be forced to enter diplomatic relations with a regime with which, for reasons of its own, it does not wish to deal.

But when it comes to a decision of a member state in the United Nations pertaining to the admission of a would-be member, other considerations than sovereign rights or political standards of judgment have to be taken into account. In voting for or against admission, the member state does so under the provisions of the United Nations Charter. Hence not only the qualifications of the applicant state are to be considered, but also the interests of other states having relations with the applicant state, as well as the population the latter represents, and last, but not least, the interests and purposes of the international organization as a whole.

THE INTERNATIONAL POINT OF VIEW

The principles and other pertinent criteria by which an internationally responsible policy of admission ought to be guided were most aptly and concisely summarized in 1952 by Trygve Lie, then Secretary General of the United Nations, in his annual report to the Seventh General Assembly. Mr. Lie wrote:

"In supporting the admission of states now kept outside I am not proposing a 'deal.' I am proposing real universality. Let us remember that we are concerned with judgments about states, not merely about governments. The conduct of governments of states that are already members is as frequently the subject of strong criticism on one side or another in the United Nations as is the conduct of governments of nonmember states. But the question is not simply one of admitting what are believed to be good or bad governments, but of admitting states. It is the interests of the peoples of the applicant states that should be the main concern.

"I do not believe the remedy for governments one may dislike is to condemn the peoples under them to exile from the world community. This is to leave barred the doors to such influence for peace and freedom and human rights as the United Nations can exercise."

Mr. Lie's statement reflected his belief that only if all existing states are represented in the international organization can the latter fulfill the purposes for which it was created, namely to maintain the peace, to develop lawful relations between states, to strengthen respect for human rights, and to protect the weak and oppressed. In other words, universality of membership is the precondition of a strong organization which is able to function properly.

Hence the point of view of the Secretary General on admission was strictly matter of fact. In a memorandum presented to all permanent United Nations delegations in March 1950, he suggested that any regime that exercised effective authority within a state's territory and was habitually obeyed by the bulk of the population should be seated in the United Nations even though individual members might not recognize it in national dealings. The only necessary and sound criterion for admitting a state to the organization was evidence that the applicant state was "able and willing to carry out its obligations" (art. 4 of the charter).

Obviously, acceptance of this point of view would exclude from membership governments which have lost control over most or all of their territory and are therefore no longer capable of carrying out charter obligations. At the same time, a de facto position on matters of admission would eliminate all uncertainties regarding the legal status of states on racial, ideological, social, or moral criteria. During the days of the League of Nations, no state was denied membership for these reasons, but a few were rejected as not capable of maintaining a stable government over their whole territory (such as Azerbaijan).

THE DIPLOMATIC AND LEGAL POSITION

Until strong political pressures were brought against him as Secretary of State, John Foster Dulles publicly affirmed the de facto position in matters of admission to United Nation membership. He wrote in "War or Peace": [1]

"If the government of China in fact proves its ability to govern China without serious domestic resistance, then it too should be admitted to the United Nations. Some of the present member states, and others, that might become members, have governments that are not representative of the people. But, if in fact, they are governments—that is, if they "govern"—then they have a power which should be represented in any organization which purports to mirror reality."

When this was written the late John Foster Dulles still shared the universalist position which the U.S. Government had taken at an earlier date. For in August 1946, the U.S. representative submitted a resolution in the Security Council recommended to the General Assembly that it admit eight states that had thus far applied for membership, namely, Afghanistan, Albania, Iceland, Ireland, the Mongolian Republic, Portugal, Sweden, and Jordan. He then confessed he had misgivings about some of the applicants, particularly Albania and Mongolia, but he was willing to overlook these in order to support the move toward universality.

At a later date the Soviet violation of the peace treaties led to a shift of American policy from a universalist to a restrictive position in matters of admission; but it should be realized that this change of policy was caused by extraneous motives of supposed national interest and was definitely not in line with an advisory opinion rendered by the International Court of Justice in 1947. For in that year the Court answered the question whether a nation is entitled to make its decision in the Security Council dependent on conditions not expressly provided by paragraph 1 of article 4 (on membership) entirely in the negative.

During his terms of office Secretary-General Dag Hammerskjold has at all times upheld his predecessor's stand on matters pertaining to admission of member states. He has said, in effect, that Communist China—and all other de facto governments—should be seated in the United Nations, because "a truly universal world organization is implicit in the logic of the charter" and such an organization must represent all major antagonists. He called it a "true expression of United Nations principles to bring around the conference table government leaders of all those nations with the greatest power over the issues of war and peace." [2]

PRACTICAL CONSIDERATIONS ON ADMISSION

This line of argument, far from being an excuse for would-be aggressors, should rather point up the enormous dangers of leaving existing states unrepresented in the United Nations, especially, of course, states of the size and political weight of mainland China with its population of 650 million. China is not just another country: the vastness of its territory, the enormity of its distressed population, the magnitude of its other explosive problems make it a concern of the whole world in every respect—political, economic, social, and cultural. As a world problem the existence of China raises precisely the type of questions nobody can or should deal with except the United Nations.

The peace organization was especially created to make possible the peaceful coexistence and cooperation of the world's different social systems. It was meant to be a place to help people to talk out their problems rather than shoot them out. But if a vast proportion of mankind is not allowed to be represented, the United Nations is frustrated in all three of its main functions:

---

[2] Annual Report to the General Assembly for the Year 1953–54.

namely, as a system of international political communication, as machinery for the solution of disputes, and as a forum for the expression of world opinion.

The admission of a state to the United Nations is not a stamp of moral approval but simply a means of communication so that governments can talk to each other. It is not true that talking between states accomplishes nothing. Discussion between governments under United Nations auspices functions as a kind of international safety valve. The tone and subject matter of negotiations may sound the lifesaving danger signal before the political explosion; or discussion may extinguish the sparks which threaten to burn the house down. In the case of Red China we must realize that a nation with a net increase of 14 million a year cannot but expand, peacefully or not so peacefully. The ways and means for making this expansion as safe for the peace of the world as possible can be found only in the United Nations and its specialized agencies. These means include discussions and ultimately agreements in regard to world trade outlets, protection of minorities, immigration, and access to food supplies and raw materials. The last two great wars have proved that the world cannot stay long at peace if agreements on such issues cannot be reached. Yesterday the culprits were Germany and Japan; today it is Red China.

But negotiations, formal and informal, within the framework of the United Nations have not the harshness of unilateral negotiations between potentially hostile powers. If exchanges of opinion take place within the United Nations framework it means, in the words of Secretary General Hammarskjold, that "the United Nations Charter as a whole emerges as the background of the deliberations. It means that the negotiating parties accept as guiding them those basic rules of international coexistence of which the charter is an expression."

If Red China as a member of the United Nations were enabled to negotiate privately and independently with other nations, there would be also a far greater possibility that she would gradually veer away from the influence of the Kremlin. For in the international atmosphere of the United Nations, with the "give and take" of opinions and suggestions, political doors may be opened which otherwise would remain closed. Furthermore, the many-sided international contacts which the United Nations provides are bound to help dissolve calcified thought patterns and the clichés of political orthodoxy.

The admission of Red China to the United Nations, to repeat once more, should not be looked upon as a means of appeasing an aggressive regime. On the contrary, it is advocated here as an indispenable step to prevent aggression and to protect the potential victims of aggression. These victims would include, no doubt, the Chinese people themselves, i.e., 635 million non-Communists whose lives and happiness are now wagered on a neck-breaking race for national power and personal survival. China's masses are no doubt much more interested in being fed calories than Communist doctrines, and any relaxation of international tensions may bring to the hard-working people of China a measure of relief and thus temper their hatreds against the outside world now so easily stirred by Communist propaganda.

In a predicament like that of the downtrodden and regimented Chinese themselves are the foreign minorities living under Chinese Communist rule and brutally oppressed by it, such as the people of Tibet. It is quite possible that if Red China had been a member of the United Nations and had been exposed to the moderating influences of interested neighbors, the sufferings of the Tibetan people could have been alleviated. Moreover, if an alleged aggressor is not a member, the United Nations is greatly hampered in investigating and acting upon the petitions of parties which appeal to the organization for the redress of wrongs, such as the refugee Dalai Lama or guerrilla-infested Laos.

Finally, policies in regard to the admission of states to membership in the United Nations should also in fairness consider the interests of their immediate neighbors who have entered diplomatic relations with a nonmember. In the case of Red China, it should be noted that all the nations bordering on China, including Pakistan, a member of SEATO, have recognized the Communist regime in Peiping, and that the largest of them even vigorously champions mainland China's admission to the peace organization. The powers who have recognized China have not necessarily done so because of lack of courage or political acumen, but because, with a major power of their region not represented in the United Nations, they have experienced an impairment of their political communication system and a weakening of the international support which they as members have a right to expect in their dealings with other states. The states in question have, no doubt, many serious reservations regarding Red China, their big, sprawling, and powerful neighbor; but in spite, perhaps because of these reservations, they strongly feel that their own security is being endangered by leaving regional problems unsolved which can only be solved, or can better be solved, through the United Nations and with the cooperation of the government now kept out of the peace organization.

Instructive in this respect is the wording of a recent letter from India's permanent representative to the United Nations, proposing that the representation of Communist China be included in the agenda of the General Assembly. The letter reads:

"The Government of India * * * have for the last few years sought proper representation of China in the United Nations. * * * No major measures of peace and security can successfully be undertaken without proper consultation with and cooperation of China and in the view of the Government of India all possible efforts must be made to secure the representation of China in the United Nations."

It should be noted that this letter, drafted after and in spite of several border infractions by Communist Chinese troops in northern India, not merely reflects political self-interest but also expresses great trust in the United Nations. It is trust based on the experience that the United Nations has been able to preserve peace and restrain overzealous governments on other occassions in the past; for had the United Nations not been in existence it would have been far more difficult to get the Russians out of Azerbaijan in northern Iran, and it might have been much more difficult to bring about Indonesian independence in circumstances which would not have resulted in a long drawn-out conflict. It is also known that the United Nations was instrumental in the armistice in Kashmir—in stopping the fighting and in obtaining respect for the armistice—and also in Palestine. In all these cases the United Nations showed its potentialities as a peacemaking agency and India and other neighbors of China hope that it will prove its restraining authority again.

However, we should note that in practically all cases in which the United Nations succeeded in settling disputes the parties involved were members of the United Nations. This was to be expected, for it is difficult to see how the peace organization can get a recalcitrant nonmember, let us say Communist China, to cooperate with a United Nations decision.

Especially if the state in question is a major military power, the problem becomes in practice unsurmountable. Red China of today is the fourth or fifth strongest military power in the world; but in a few years, when the Communist Chinese armies will be equipped with the most destructive forms of modern gadgetry for warmaking, China will be second to none militarily. At that time, if not already, any international agreements on general disarmament will be utterly useless unless they have the approval of Communist China. Of course, this will be the case also in regard to other agreements of world importance. But since the only place where such agreements of a truly global type can be sucessfully concluded is the United Nations, it can be anticipated that the political pressures for mainland China's admission to the United Nations will mount steadily and in the long run discredit powers which obstruct that admission. Therefore it is much wiser to prepare in time for the inevitable because in this way there will be no costly loss of political prestige. Moreover, it is difficult to see why it should be considered dishonorable for a democracy to bow to a majority opinion in the world community by abstaining from an unpopular veto in the Security Council.

It goes without saying that admission of Red China to the United Nations need not be granted without some substantial quid pro quo; in fact, it should be proceeded by an understanding of nations concerned in the Far East as to what this quid pro quo should entail. The path toward such an understanding is already prepared by a resolution of the General Assembly adopted on February 1, 1952, which stipulates that in regard to admission to membership it is not possible "to deny candidates the right to present proof" that they are willing to accept and honor the obligations of the Charter. The nations vitally interested in the Far East might well agree among themselves beforehand what kind of concrete proofs they wish to have submitted by Communist China.

Aside from political assurances, such as the renunciation of military force as an instrument of policy, agreement to a Formosan settlement, and the reopening of the door in China to all friendly nations, admisison may also be made conditional on the bona fide granting by the Peiping regime of reciprocal diplomatic rights and personal safeguards which are the bases of relations between civilized nations.

Since Formosa has become the object of an international dispute endangering the peace, the United Nations seems to be the proper agency to deal with this controversy and the only one able to find a practical solution. To deprive Peiping of the argument that Formosa is a security threat to mainland China, Formosa might be placed, at an opportune moment, under a United Nations trusteeship. If at some later date, conceivably after Chiang Kai-shek's death, a majority of the Chinese on Formosa should seek a compromise with the Chinese on the mainland, such a new relationship could be worked out under the auspices of the international organization.[3] Meanwhile admission of Red China might well be made dependent on the latter's acceptance of an interim solution regarding Formosa, and American de facto recognition of Communist China may follow in due course.

To bring real and permanent peace to Eastern Asia without the consent and cooperation of the government that rules more than half of the population of the region is an impossibility. And politics is the art of the possible.

---

[3] Authorities familiar with the situation on Formosa believe it probable that the majority of the Chinese and other groups living on the island would now vote for independence. Thus Stanley K. Hornbeck, former Chief, Far Eastern Division, Department of State, in an article in Foreign Affairs, fall, 1955.

On the other hand, to leave the boiling cauldron simmering in China without controls would mean courting disaster if not provoking it. China in its present condition is a powder keg; it is understandable that its neighbors are anxious to bring the regime administering the world's largest nation to the conference table and under the rule of law. It is also understandable that these nations are apprehensive of the danger of having the powder keg blown up, inadvertently or otherwise, by powers not indigenous to the Far East.

STRENGTHENING OF THE UNITED NATIONS BY REGIONAL ARRANGEMENTS

This acute danger points up the urgent need for strengthening the United Nations by regional arrangements. Many of the explosive situations and tensions in world affairs endangering the peace in recent years can be traced to the fact that the two atomic superpowers, on grounds of their supremacy in industrial strength and arms, attempted to substitute themselves for the world organization as self-appointed global guardians and policemen. Paradoxically, these were the very same powers that stood more or less aloof from international affairs before the Second World War; the United States refused to become a member of the League of Nations, and the Soviet Union was a member for only a few years. Both followed a policy of going it alone practically up to the very eve of World War II.

But after this war was won through the enormous sacrifices of the peoples involved, the governments of the superpowers both switched suddenly to a policy of total and worldwide intervention which could not but bring them into conflict with each other and thus endanger the peace. To complicate matters, in this postwar period regional military alliances were formed which, if in letter, were certainly not in spirit consistent with the purposes of the United Nations. Instead of instruments for settling disputes, they were constructed as powerful agencies for the preparation of war. In fact, their existence has distorted the meaning of the Charter of the United Nations and has hampered the functioning of the organization.

We may argue that the result of these unfortunate circumstances, which is well known to us under the name of cold war, was more the fault of one power than of the other; but it seems obvious that the remedy for this situation cannot be found in copying the irresponsible behavior of another government but in strengthening the rule of law through the moral influence and power of one's own government.

The military alliances of the NATO and Warsaw Pact nations to which we refer here are, of course, regional arrangements of a sort, and the United Nations Charter does provide for regional arrangements in articles 52 and 53; but the organizations the charter contemplates are of a very different kind from the alliances just mentioned. The regional arrangements which the founders of the United Nations had in mind were meant to be auxiliaries to the United Nations and were designed to fortify the peace by setling disputes within a particular world region. They were not conceived to be hostile blocs pitted against other such blocs; they were supposed to be cooperative groups of states in a limited geographical area of the world where neighboring or culturally related nations have more principles and traditions for united action in common than are found in the broader society of the world as a whole.

The wording of chapter III of the charter, dealing with regional arrangements, makes it quite clear that it was the idea of the founders of the organization to leave the settlement of international disputes first of all to the initiative of the States primarily concerned and reserve only disputes of global importance to the jurisdiction of the world organization. The purpose of the charter was to prevent local disputes from flaring into worldwide wars. But this original purpose was perverted in practice by policies of global military intervention and politically motivated patterns of economic assistance, which largely ignore the proper channels and agencies of the United Nations for both the execution of military sanctions and the improvement of economic welfare. In the Far East nonmembership in the United Nations of a nation of the importance of China makes regional arrangements of the kind envisaged by the United Nations Charter impossible. Obviously, China's absence from the United Nations does not allow China's neighbors to settle disputes with the Chinese under United Nations auspices. On the one hand it turns important affairs concerning the region over to powers not indigenous in the region and on the other it does not give the parties primarily concerned a sufficient voice in the solving of their own problems, of which an increasingly powerful and explosive China is one of the most important.[4] In the Far East today there again glows the red-hot spark which may set the world afire. There is no time to lose. Destiny leads those willing to follow it, but drags along those who resist it.[5] The representation of mainland China in the United Nations is the most urgent and inevitable step for ending the cold war and preparing for a just and enduring peace.

THE ORGANIZATION OF PEACE

To function, a world organization which, in the words of John Foster Dulles, "purports to mirror world reality," must be representative. Furthermore, as long as war between the world's great powers threatens global destruction to all of humanity, a veto in the hands of these powers as permanent members of the Security Council, in all questions directly related to war and peace, is necessary to prevent a world catastrophe. The veto as it now stands is nothing but an expression of defacto great power status and as such reflects the reality of world power relationships, which cannot be ignored in our atomic age in any attempt to preserve the peace.

On the other hand, the settlement of regional disputes through regional arrangements is also essential as an expression of geographical proximity and common interests and hence of "world reality." In our time peace has been endangered and the meaning of the United Nations Charter distorted by unilateral policies of global intervention.

For the sake of peace it is absolutely vital that such worldwide interference be henceforth kept down to the absolute minimum and that dealings of the great powers with regions which are culture-alien to them be strictly channelized through the proper agencies of the United Nations.

Some years ago Sir Winston Churchill, then Prime Minister, was asked in the House of Commons what steps he would take toward a revision of the United Nations Charter and a strengthening of the organization, and he made the following impromptu reply:

"If I had had the power, which I should have relished and which I should have been very glad to assume, I should not have made the United Nations organization in its present shape or form. On the contrary I always said that it ought to be based on regional organizations which should aim at drawings the largest and most important minds from large groups of nations and bringing them to a sort of super assembly at the summit. But this view I was not able to put into force at the time, and I have not had any opportunity since."

Sir Winston would probably be the first to agree that the United Nations is still unfinished business and that it is never too early to do what is right and necessary. The strong racial, cultural, and economic ties which bind the nations of eastern Asia together, as well as the similar ties which connect those of America, the Middle East, and Europe, suggest implementation in organized form.

In the Far East, and not only there, regional arrangements under United Nations auspices might well offer the safest framework for the establishment of a fruitful and rightful relationship between large and small neighbors. In regional councils the smaller nations could also be much more adequately represented and could carry far greater weight than is possible now in the General Assembly of the United Nations.

In Asia and elsewhere regional groupings of states naturally interrelated by culture and common interests could become a meaningful substitute for today's haphazard methods of splitting the world into opposing alliances led by great powers in a perpetual cold war atmosphere. In place of armed camps and contentious blocs, genuine regionalism under the protecting wings of a strengthened United Nations Organization could greatly help to create a truly international community in which small nations would live freely under law in an organized relationship with their powerful neighbors. Let us also recall that both the League of Nations and the United Nations were designed to do away with special alliances, that they were to be universal in membership, that they were to protect the smaller nations, and they were to be used, not bypassed on grounds of expediency.

It follows that security arrangements in particular should be made exclusively within the collective framework of the United Nations. As to small nations, lest they become satellites, most fair-minded people will agree that both colonials and Stalinist schemes are thoroughly out of date and ought to be abandoned; but if this is done it will be necessary to contrive other, more reciprocal, more organic relations to express the steadily increasing interdependence of big and small nations in the modern world. Regionalism, within the framework of the United Nations, offers such a possibility.

As long as the world's great powers are not yet politically mature enough to take their international responsibilities with appropriate seriousness, as long as the ways of life of peoples continue to be sharply different, because history made them so, and as long as the economic inequalities between world areas are as glaring as they still are, peace will remain precarious. Given these unhappy circumstances, the superpowers may have to deter each other for sometime from suicidal aggression by the threat of missiles and atomic bombs.

But time is running out on us. In whatever little time is left we must work fast and hard to eliminate the evil causes which endanger our survival and to create the conditions which will assure our lives, liberty, and happiness.

Under the prevailing conditions of a precariously poised balance of nuclear terror the immortal words of Adm. Alfred J. Mahan, America's great soldier-philospher, are of the gravest import for all of us. "The purpose of military power," said the admiral, "is to provide time for moral ideas to take place."

---

[4] For instance, the four-nation factfinding commission on the situation in Laos (1959) consisted of Japan, Argentine, Italy, and Tunisia. Not one of China's immediate neighbors was represented on it.

[5] Translated from the Latin: "Fata volentem decunt, nolentem trahunt."

Humane Treatment of Animals

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. WILLIAMS of New Jersey. Mr. President, two New Jersey newspapers have given recent editorial support of S. 3570, a bill to help insure humane treatment of animals in those research laboratories that have received Federal funds.

As one of the cosponsors of the bill, which was introduced with the leadership of Senator COOPER, of Kentucky, I was particularly gratified to read the vigorous expressions of support given by the Bergen Evening Record in its issue of June 20 and the Asbury Park Press in its issue of June 14. The editorials point out clearly the need for rational and responsible thinking on the proposed legislation.

I ask that unanimous consent be given to have the editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bergen (N.J.) Evening Record, June 20, 1960]

IN JUSTICE TO A SERVANT

As has been demonstrated by the suppression in the New Jersey Assembly of a bill directing that the slaughter of meat animals be made as humane as possible, there are two sides of every question. And we shall be hearing from both sides about a bill (S. 3570) of Senator COOPER, Republican, of Kentucky, whose purpose is to provide for the humane treatment of animals used in research by the recipients of grants from the U.S. Government or its instrumentalities. The measure will exasperate people who oppose all vivisection and diligently choose to deny any relationship between animal vivisection and the century's massive breakthroughs in surgical technique and chemotherapy. It will also exasperate people who deem the animal irrelevant to human welfare and who will consider the bill's Federal licensing and inspection requirements another specimen of bureaucratic meddling. The bill dictates that animals be given a comfortable resting place, adequate facilities for normal exercise, adequate light and heat and food and water, and a surcease from pain through neglect or mishandling, plus merciful dispatch when their own merciful work is done. It may be said that researchers should guarantee these things without having to be told. It would have to be replied that not always do they do so. The bill would put into words our guarantee to living creatures that when in necessary woe they serve us they will not be compensated with cruelty. Great Britain adopted such legislation a century ago at the instance of such distinguished scientists and humans as Darwin, Huxley, and William Jenner. It is time we see that a clear line is drawn between two humiliating extremes.

[From the Asbury Park (N.J.) Press, of June 14, 1960]

ANIMAL EXPERIMENTATION

A bill is pending in the House of Representatives, H.R. 12587, and another in the U.S. Senate, S. 3750, which would assure humane treatment to laboratory animals. These are animals used for experimental purposes in science's effort to find cures for human disease.

These bills do not ban the use of animal experimentation. They merely seek to make it humane as, we assume, every decent person would like to see it. It must be recognized that through animal experimentation stupendous discoveries have been made which have greatly improved man's health and extended his longevity. It would be difficult to rationalize the abolition of such experimentation. It is equally difficult to rationalize the continuation of such experimentation without adequate assurance that cruelty will be outlawed.

The development of sound, healthy bodies and the conquest of disease are goals worth striving for. The physical growth of mankind is of compelling importance, but it is no more important than his mental and moral development. Physical hulks, with no sense of right or wrong, or with no thought for anything but their own well-being, would make a cruel shambles of the world in a short time. It is only as man develops a sense of compassion for other living things that he may be said to have emerged from the brute stage. Kindness to other living things is a mark of civilization.

Thus, the conclusion is obvious. If man can further his battle for survival through animal experimentation he can scarcely be condemned for employing it. But if he does not surround that experimentation with every safeguard against needless suffering he has fallen far short of the destiny he has so confidently assigned himself.

A Needed "Refresher"

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. BARTLETT. Mr. President, since the abortive collapse of the Paris summit conference last May—and increasingly so almost every day since—the acuteness of the tensions dividing the free world and Russian dominated nations has become more and more painfully apparent to each of us. From both sides of the aisle, and, indeed, from the President himself, we have heard recitations of concern and many suggestions as to how we can best cope with this menacing state of affairs.

However meritorious and virtuous these suggestions may have been—and I do not doubt for a moment the sincerity of my respective colleagues and their motivations—it strikes me that we all could use a bit of a refresher on Soviet intentions, and perhaps, a reminder of how deadly serious the Russians are, not alone in respect to the immediate issues of today, but also concerning those of the future, as well.

It has long been my contention that the hallmark of Communists' successes in all fields—educational, scientific, political, and economic—has been their remarkable capacity for organization. And to combat this great organization of theirs we need to put even better organizations—and a wider variety of them—into the fray.

Accordingly, it was with considerable interest that I recently noted a new book, "You Can Trust the Communists," written by an acknowledged American expert on Communist activities, Dr. Fred Schwarz. At first blush, the title of Dr. Schwarz' book might be misleading. But it is not. His theme is simply to state that no matter how far-fetched, evil, or ambitious a stated Communist program may appear to be, one can most certainly trust them to at least try to bring that program to fruition.

But especially in respect to this matter of organization, Dr. Schwarz has made some particularly pungent comments. It is a short section of the book. I ask unanimous consent to have these few brief passages of Dr. Schwarz' book printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU CAN TRUST THE COMMUNISTS
ORGANIZATION

Organization is the genius of communism. Communism is the triumph of organization over undirected economic and social forces. It is a truism that organization will prevail over disorganization. An anticommunism program needs organization.

A commonly held view is that unity is the great need in this organized anticommunism program. An argument such as the following is assured of a tumultuous reception with almost any group of businessmen: "Communism is the universal enemy. It is the enemy of every segment of a free society. It is the enemy of both management and labor. It is the enemy of all religions; Protestant, Catholic, Jewish, Hindu, and Moslem. Since it is the enemy of all free political parties, it is the common enemy of Republican and Democrat. Since it is our universal enemy, it should cause us to submerge our differences and unitedly throw ourselves into the struggle against it." Such an argument will be cheered to the echo yet it is as phony as a three dollar bill. When groups submerge their differences, they frequently submerge their motivating forces and the organization so formed is like an automobile without gasoline because the dynamics of action reside in the submerged differences.

Suppose, for example, a joint Catholic-Protestant organization is formed. The liberty of the Catholic conscience necessitates freedom to propagate the doctrines of faith. The liberty of conscience of an evangelical Protestant depends upon his freedom to preach the gospel of Christ. If the Protestant gets into an organization where he must refrain from preaching the gospel, and the Catholic in that organization must refrain from advancing Catholicism, both are embarrassed, and rendered so much less effective. If, however, they are in different organizations where the consciences of both are clear, they can do far more effective work.

The Christian anticommunism crusade held a school for anti-Communists in the educational building of the Tower Grove Baptist Church in St. Louis, Mo. The school was attended by a considerable number of Catholics. After the school, the Catholics were very eager to form a joint Protestant-Catholic anti-Communist organization. I replied that, should we do so, each would paralyze the effectiveness of the other. Each group has a dominant purpose. The emotional attitudes of the members are tuned to the fulfillment of that purpose. Unless the message is in tune with that purpose, it will not produce the maximum result. Opposition to it may be unconscious, but it will be real nevertheless. If the message against communism is tuned to the basic purposes of the organization, it will rally the enthusiastic support of the group. When an organization consists of elements with contradictory purposes, it is difficult

to mobilize the enthusiastic support of all elements. Maybe this should not be so, in relation to such a universal enemy, but as a practical issue, it is so.

I suggested that the Catholics form a Catholic organization so that they could speak to Catholics without the embarrassment of a Protestant leader. Rather hesitantly, they agreed, and formed the Cardinal Mindszenty Foundation. This organization is now doing a most effective work and its leadership is now convinced of the wisdom of the course pursued. Instead of uniting, Catholic speaks to Catholic, and Protestant speaks to Protestant. Information is shared. Joint projects may be undertaken. But organizational unity is not sought. Neither infringes his conscience. Each has the dynamic of his faith, and can be much more effective than if a united organization had been formed.

Organizational unity is a mirage. The great need is multiplicity, not unity. The unity of a free society resides in its diversity. Movements must be formed which conserve the motivating forces within each group and channel them into the struggle for freedom and survival. The Communists understand this very well. That is why they operate through a great number of fronts without survival virtue. They are convinced that the average citizen of the free world is so intellectually lazy and dishonest, so greedy and selfish, so intoxicated with entertainment, so consumed with his immediate problems that no matter how clear the evidence of impending doom, that evidence will never be acknowledged, and the organizational steps necessary for survival will never be taken.

We categorically reject this claim. We are not the helpless victims of our environment, doomed to destruction. The fault lies not in our environment but in ourselves. The political, judicial, educational, and cultural organizations of a free society can function only when the individual citizens have enlightened minds and are dedicated to the foundations of freedom. The basic responsibility rests on each one. The success of this book can be measured by the number of readers whose attention has been redirected from the responsibility of others to their own responsibility; who are asking the question, "What can I do?" Upon such a foundation the political, legislative, and cultural programs necessary can be built.

Material forces alone do not determine the destinies of men. The resources of an infinite God can change the balance of material assets. These resources are liberated through the prayer, the sacrific, and the intelligent organization of people filled with the love of God. Fundamentally, the problem is a moral and spiritual one. The foundations of freedom must be girded with a moral and spiritual revival. As free men humbly seek God and present their bodies, minds, and hearts to their country and the cause of all mankind, we may well believe that tyranny shall not triumph and freedom shall not perish from the earth.

Labor Facing Critical Era

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, August 27, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Commissioner of Labor Statistics of the United States recently described the challenges facing the American labor force in the 1960's. At a meeting organized by New Jersey State Labor Commissioner Raymond Male, the commissioner described the need for greater training efforts and greater educational opportunities. His predictions would seem to bear out the arguments of those who claim that this Nation must make more strenuous efforts to provide extensive opportunities for advances in school training. An August 23 dispatch from United Press International describes the talk. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

LABOR FACING CRITICAL ERA—UNEMPLOYMENT MIGHT BE ON INCREASE

PRINCETON, August 23.—A Federal official said that sharp changes in the Nation's labor pattern could lead to substantial unemployment in the 1960's together with labor shortages.

Ewan Clague, U.S. Commissioner of Labor Statistics, told a group of State labor and management leaders that demands were increasing for trained workers but decreasing for unskilled employees.

He said he anticipated substantial increases in professional, clerical, and sales work.

Clague said there would be no increase in jobs for unskilled workers. He added there was likely to be a substantial continued decline in the number of farm jobs.

Clague said it would become more difficult for workers with only high school educations or less to get jobs.

Clague said more older workers were determined to remain in the labor force and many women over 45, their children grown, would also seek employment.

Clague said a major factor in the changing labor picture was the large number of young workers looking for jobs.

In June 2.2 million young persons sought work, 300,000 more than last June, the Federal official said.

"In summary, industry and labor will both have to face the fact that during the 1960's, the labor force, with respect to age and sex, will not be as well balanced as it has been," Clague said.

He said that unless an effective job is done in education and training, it was likely there would be a shortage of skilled, technical and professional personnel with a surplus of unskilled workers.

"Thus it is possible that substantial unemployment could exist side by side with labor shortages," Clague told representatives of the State CIO and AFL labor organizations, the New Jersey Manufacturers Association, and the State chamber of commerce.

The session was organized by State Labor Commissioner Raymond Male, who is also mayor of Princeton Borough.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

A Great Newspaper Speaks Out on the Connally Amendment

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. SCHERER. Mr. Speaker, it is often charged and lamented that today there is a dearth of courageous and dynamic editors, writers, and newspapers like those of a generation or two ago who are willing to stand up and be counted on the great issues of the day.

In this connection, Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD for the benefit of the Members of the Congress and the American people, a letter sent to many of our fellow Americans by Mr. Roger Ferger, president and publisher of the Cincinnati Enquirer dealing with the current campaign to repeal the Connally reservation. With his thought-provoking letter Mr. Ferger enclosed a timely and significant editorial from his paper, together with a series of articles by Mr. Forrest Davis, the Enquirer's able and discerning Washington writer:

THE CINCINNATI ENQUIRER,
Cincinnati, Ohio, August 26, 1960.

DEAR FELLOW AMERICAN: I am certain that you share my interest in the nationwide debate concerning the Connally reservation and its relationship to United States participation in the Internal Court of Justice.

In my judgment, it is a matter of urgent importance that the Connally reservation be retained until there is a universally accepted body of law upon which the International Court of Justice can base its deliberations. A frank appraisal of today's world must lead to the conclusion that no such body of international law exists. It should be equally clear that merely wishing for it will not create it.

I am taking the liberty of enclosing for your consideration an editorial from the August 12 issue of the Enquirer as well as a series of seven articles by Forrest Davis of the Enquirer's Washington staff. The editorial elaborates upon the Enquirer's opinion that the Connally reservation should be retained for the foreseeable future, and Mr. Davis' series is the result of his exhaustive inquiry into the International Court of Justice and its work.

I know that your judgment on the Connally reservation rests upon convictions as sincerely held as mine. But I beg you to weigh your convictions with a realistic understanding of what is best for the United States as the last stronghold of freedom under law.

Sincerely yours,

ROGER H. FERGER,
President and Publisher, The Cincinnati Enquirer.

CONNALLY AMENDMENT AGAIN

There is reason to suspect that one of the items to be called up for consideration during the renewed session of Congress will be Senate bill 94 whose aim is the repeal of the Connally amendment and the end of the reservations to the U.S. participation in the World Court.

First proposed by Senator Tom Connally, of Texas, during his service as chairman of the Senate Foreign Relations Committee, the Connally amendment exempts from the jurisdiction of the World Court any matter that the United States may regard as internal in character.

Ever since its adoption as an amendment to the measure through which the United States subscribed to the World Court, there has been a vigorous campaign for its elimination—a campaign that has been renewed in recent weeks as Congress prepared to resume its work.

There is one crucial difference, we think, between the World Court, on the one hand, and the various domestic courts with which Americans are familiar, on the other. That difference is this: At all levels in the United States, there is a clearly existing body of law for the courts to interpret. In most cases, the law was created first, the court second. On the international level, by way of contrast, there is no unquestioned body of law. Whatever international law the World Court would be called upon to interpret and apply to the solution of specific problems, consequently, would largely be law of its own making.

That consideration—combined with the wholly political manner in which World Court judges are elected—makes it unwise, we think, for the United States to choose this particular moment for giving the World Court unreserved powers in cases in which the United States is a party. The case for the Connally amendment's retention seems doubly strong in view of the fact that the Soviet Union insists upon similar reservations.

The time may well come when there is a real body of international law to which all nations can subscribe without reservation. When—and if—that day arrives, it will be time enough for the United States to take a second look at the World Court and to give it the unreserved support and participation it will then deserve.

CONNALLY'S "SIX LITTLE WORDS" AND THE WORLD COURT—1

(By Forrest Davis)

WASHINGTON.—The prophets of the Republic's decay would do well to lift their sights from fin-tailed, two-toned jalopies to a tendency corrosive not only of the national will but of the traditional good sense of the American people. I refer to the substitution among the liberal enlightenment of cliche, or slogan, phrasemaking for cool, ad hoc reasoning on political issues as they evolve week by week, month by month.

The argument by cliche is especially obfuscating in foreign affairs, which, while vital to every man, woman, and chick, may only be seen by nonprofessionals through a glass darkly on account of geography, the bewildering cultured differences among races, peoples and systems, and the obscurity frequently veiling the interests involved.

The Congo affair looms at the moment as a terrible judgment on the light-minded democratic fetish of one head, one vote. What a caricature of the liberal dogmas of self-determination, the "rights" of all peoples everywhere to enjoy political freedom via the ballot box irrespective of what the process visits in the way of rapine, social disintegration, bankruptcy, and hunger upon the innocent in suddenly liberated areas and their neighbors.

The transcendence of slogans over judgment is no new thing with us. Witness "making the world safe for democracy," under which banner we fought World War I. Witness the stupefying nonsense of Wendell Willkie's proclamation of one worldism. Consider the persistent fallacy that the United States must negotiate with Moscow, whenever Moscow bids, despite the bleak record of successive retreats into which the council table has ushered us since Pearl Harbor. The operative slogan here is that "it is better to talk than to fight," a piece of casuistry flying in the face of the record; a record demonstrating that our defeats at the hand of the Soviet empire have all resulted from talk.

Specifically, I am concerned with the current attempt to cozen and delude the public into a delivery of our liberties to an exotic World Court in the name of such cliches as "universal justice" and "world order under law." Underpinning these chimerical slogans is the extraordinary delusion that permanent peace will come about if, as and when the United States shows the way to the Communist empire by "trusting" the Court at The Hague with complete jurisdiction over its justiciable affairs, domestic as well as foreign.

Should our Senate waive the Connally amendment, the pitch goes, all other States will gladly yield their own sovereignties, the cold war will dissolve as Nikita S. Khrushchev and Mao Tse-tung refer their ambitions in Berlin, the Middle East, Latin America, Tibet, the Straits of Formosa, Korea, etc., to quiet adjudication by the Court of International Justice.

The fact that Moscow contemptuously declines to recognize the Court's jurisdiction whatsoever does not discourage the newly sprung but powerful lobby agitating for repeal of the Connally amendment. The fact that the Connally reservation does not deny the Court's jurisdiction in litigation over issues truly international, merely safeguarding Americans from the Court's intrusion into our domestic concerns, is steadily minimized by advocates of repeal.

What is the Connally amendment? It is a brief addendum, six little words, to a resolution introduced by Senator WAYNE L. MORSE, Democrat, of Oregon, binding the United States to the compulsory jurisdiction of the World Court. The six little words conclude the amendment, which stipulates that acceptance of the Court's jurisdiction "shall not apply to disputes with regard to matters which are essentially within the jurisdiction of the United States, as determined by the United States."

Former Senator Tom Connally, Democrat, of Texas, chairman of the Foreign Relations

Committee, introduced the reservation. As amended the resolution carried by 51 to 12 votes on August 3, 1946, the minority agreeing with MORSE that the United States cede to a new, untested court exclusive determination over its competence to hear any or all cases brought against us at whatever cost to our sovereignty.

Because the questions opened in this debate are so vital to the preservation of the American constitutional system, so varied, so affected by the determination of the United Nations bureaucracy to create a universal state, they call for far more extensive discussion than the space of one column affords. The great questions, such as whether the World Court is in fact a court or merely a political arm of the U.N., are to be ventilated hereafter.

WHAT MAKES THE WORLD COURT LOBBY RUN?—2

(By Forrest Davis)

WASHINGTON.—The coincidence of Nikita S. Khrushchev's rancorous renewal of the cold war and the emergence of a powerful lobby in behalf of repeal of the Connally reservation and total submission of the United States to the International Court of Justice at The Hague (the World Court) is perhaps purely fortuitous. Senator HUBERT H. HUMPHREY, Democrat, Minnesota, scarcely could have foreseen Khrushchev's squalidly profane provocation at the May summit, when, last December, he introduced his resolution for repeal of the Connally amendment of 1946 reserving to the United States determination of whether matters raised against it at The Hague were of domestic or international import.

Nor could Charles S. Rhyne have been aware that the implacable rift between the two worlds of Washington and Moscow would be so dramatically disclosed in 1960 when he began his lobbying activity for world peace through law. Mr. Rhyne, an energetic, youngish Washington attorney, a former president of the American Bar Association, is chairman of a special committee of the Bar Association functioning under the foregoing title.

Operating munificently under grants of $375.000 from the Ford Foundation and $225,000 from the International Cooperation Administration, Chairman Rhyne has made of his committee an influential force on public opinion. Mr. Rhyne's promise, that lawful settlements of international disputes beat war is fairly unassailable. As president of the Bar Association in 1958, Mr. Rhyne procured the designation of May 1 each year as Law Day. The purpose of the nationwide observance is to inculcate a new public understanding of and respect for the central function of the law to a civilized community.

It is when Mr. Rhyne, his coadjutors, allies and disciples, attempt to apply the precedent of the United States, where recourse to the courts and an accepted body of law are habitual, to a grievously divided, revolutionary and anarchic world, that his counsel degenerates into sheer nonsense. The ideal of a world court founded on a universal concept of law, commanding the trust of all human societies and deciding issues with urbane objectivity, is one which in the obvious nature of things must be long deferred.

The ideal inspires the casual adherence of all men of good will. President Eisenhower, former President Truman, Vice President RICHARD M. NIXON, many other public men, eminent jurists and the academic and communicating intelligentsia subscribe to that ideal. The trouble arises when Rhyne and others attempt the impossible leap from aspiration to here-and-now fulfillment.

Rhyne goes so far as to assert that, but for the Connally amendment, the World Court could now function as a keeper of the peace among nations. That amendment, limiting the U.S. submission to the compulsory jurisdiction of an untested arm of the United Nations, speaking with many tongues out of widely contrasted legal systems, Rhyne describes as a "sham." Thoughtful analysts of Rhyne's exaggerated naievete suspect that it is his refusal to acknowledge the simple facts pertaining to the World Court which constitutes a "sham" before the American people.

The lobby failed last winter in the Senate. Hearings called by Chairman J. WILLIAM FULBRIGHT of the Foreign Relations Committee on the Humphrey repealer produced such intelligently adverse testimony that the committee failed to act. FULBRIGHT, who swallows every nostrum put forward as a palliative for the cruel malignity of the world struggle, announced the committee's refusal to report with regret.

Yet we may expect new assault on the amendment in the next Senate. The campaign, abetted by the New York Times, the Washington Post, and other liberal journals characteristically mistaking ends for means, is being stepped up. A committee, to which the venerable and respected Judge Learned Hand lends his name, has moved into the field.

What makes the World Court lobby run? What circumstances have arisen changing the Senate's objections to a court for which a power-hungry U.N. bureaucracy is the sole legislature? In succeeding articles I shall endcavor to cite those objections and present the contra arguments of the lobby.

THE OBJECTIONS TO AN ALL-POWERFUL WORLD COURT—3

(By Forrest Davis)

WASHINGTON.—The Court of International Justice, established as an annex to the United Nations in the charter promulgated at San Francisco on June 26, 1945, posed no overt threat to American institutions and historic liberties. According to chapter XIV of the charter, the World Court was to have no compulsory jurisdiction. It was, further, excluded from jurisdiction over purely domestic matters in the member states. Members, indeed, although all could refer international differences to the Court, were ceded the right to specify the extent to which they wished to acknowledge the Court's competence by means of formal declarations of acceptance.

The Connally amendment to the U.S. declaration of acceptance, reserving to this Government the say as to what issues were international, which domestic, grew out of two major objections to compulsory jurisdiction. The first was general, the second specifically alarming.

As to the second, the U.N. itself through the General Assembly alerted the Senate in February of 1946 to a tendency toward power grabbing at the expense of member states. The Assembly successively adopted conventions conferring immunities on the U.N. and its agencies. It thereupon provided for enforcement of these immunities through the World Court. As the Court had been set up it could deal only with disputes between or among states. Moreover, it had no enforcement arm. The Security Council, hedged by the veto, could not enforce Court decisions and, in any case, the idea of mandatory action by the U.N. or the Court outside of narrow limits was repugnant to the text and spirit of the charter.

There was a provision for advisory opinions, meaning just that, from the Court. But the Assembly, seeking to strengthen itself and its agencies, legislated that, in case of a dispute between itself and a member, either side could request an advisory opinion which, when given, should "be accepted as decisive by the parties." This, of course, established a form of compulsory jurisdiction through the back door over all sorts of unpredictable differences between the ambitious agencies and members.

This factor weighed with the Senate in August of 1946. The Senate had adopted the U.N. charter in 1945 with only two dissenting votes. In July of 1946, the Foreign Relations Committee, still taking the charter at face value, recommended passage of a declaration of acceptance moved by Senator WAYNE L. MORSE, Democrat, of Oregon, without reservation. In floor debate however, a more prudent counsel made its appearance and the Senate finally, by 51–12, accepted the amendment offered by Chairman Tom Connally, Democrat, Texas, of the Foreign Relations Committee. Most of the committee had reconsidered.

A more compelling factor, however, was a growing dubiety about the nature and competence of the Court itself. The Court, although consisting of 15 judges politically appointed as to region and bloc, should base its decision upon a recognized body of law. International law, diffusive and organic, had no constitutional nor statutory warrant. It was, in effect, Western law, evolving through the centuries from treaties, conventions, declarations and scholarship assertions. That was the law of consent to which the International Court at The Hague before and after World War I had deferred.

But the U.N. Court contained among its judges two from Communist countries, the U.S.S.R. and Poland, bound to reject all Western jurisprudence as "bourgeois." Two judges were from Moslem lands, Egypt and Pakistan, where Islamic law prevails. Four judges were Latin American, one Chinese, one each from France, Greece and Norway.

Only three of the judges derived from British common law countries: The United States, Great Britain, and Australia.

The question confronting the Senate then and now is whose law will the World Court administer? Additionally, after adoption of the Connally amendment, the U.N.'s agencies launched on a course of enacting international law by treaty, much of which powerfully cut across American concepts and vested liberties. This process we shall examine in the next installment.

RHYNE'S "SOAP" AND KHRUSHCHEV'S "LAW"—4

(By Forrest Davis)

WASHINGTON.—The chief evangel of the crusade to submit American institutions, values, and liberties to the whim of an alien, experimental World Court, is a former president of the American Bar Association, a Washington attorney named Charles S. Rhyne. On July 2, 1958, Mr. Rhyne, urging repeal of the Connally reservation of 1946 on an American Association of Law Libraries convention, identified his crusade with the worthy but inappropriate hucksterism of Madison Avenue, saying:

"There is no reason why peace through law cannot be sold with the same verve and enthusiasm that we sell soap and other products and programs."

Mr. Rhyne's ecstacy proved too much for another Washington attorney, former Secretary of State Dean Acheson, who promptly commented with characteristically mordant pessimism:

"While it may be that peace through law be offered for sale with the 'same verve and enthusiasm' as soap, the chances of a consummated sale seem to me infinitely less. If you think of yourself as ringing Mr. Khrushchev's doorbell with two packages in your hand, you can, I firmly believe, have no doubt as to which is salable and which is not."

Mr. Acheson's reference, no doubt, was to the fact that the Soviet bloc, unlike the United States, has refused with some contempt to acknowledge the World Court's jurisdiction, competence or, indeed, its existence except to station one of its own bu-

reaucrats on the 15-judge panel to look after Soviet interests. A Polish Communist functionary also adorns the Court. Mr. Acheson piled ridicule on commonsense, adding:

"'Whose rule of law?' he (Khrushchev) would ask. You with 'verve and enthusiasm,' 'Rhyne's grade A fancy,' approved by the American Bar Association.

"'You have a nerve,' he shouts back, as he slams the door. 'I'm the proprietor of Khrushchev's rule of Khrushchev, grade triple A, supercolossal, guaranteed to bury you. Use it as a tonic or embalming fluid, or both. Ask the Poles.'"

What Acheson illuminated was the impossibility of reaching a consensus on fundamental law upon which the Court of International Justice could found a jurisprudence. One example of the polar divergencies between Communist and the common law basic to English-speaking countries may be found in the show trial of the reconnaissance pilot Powers in Moscow. As the eminent political philosopher James Burnham noted in a recent National Review, there are in an American court four interests: the judge, the jury, the prosecution and the defense. In a Soviet court only one interest obtains, that of the state. This is to say nothing of the other safeguards thrown about the accused in an American court, notably the presumption of innocence.

Yet over and beyond the wholly different concepts of law as between Soviet and Anglo-Saxon systems and the peculiarities of Islamic law, there is the prospect that, the World Court's judges being selected for regional and political reasons, we may soon find international law being dispensed by jurists from the numerous new African states with no tried and traditional concept of non-tribal law whatever.

Somewhere among the more than 200 conventions, declarations, etc., drawn up by United Nations agencies for ratification by member states, there is a proposal for an International Court of Criminal Justice to try Americans and other nationals for offenses under the UN's treaty law.

It is not, of course, quite accurate to say that the World Court does not have at hand a body of law for its guidance. The U.N. agencies, busily legislating, have provided a complex of laws governing almost every conceivable political, social and economic relationship of human beings regardless of their settled constitutional, statutory and customary ways of doing things within their separate states and societies.

Americans have so far been immune to the U.N.'s domestic laws because, first, the Senate has declined to ratify treaties embodying these laws and, secondly, because the Connally amendment reserves to our Government the right to repel such intrusions via the court. In the next column we shall examine some of the perils to which we would be exposed if a future Senate ratified such law and/or the Connally reservation were repealed.

WORLD COURT COULD IMPAIR BASIC AMERICAN INSTITUTION—5

(By Forrest Davis)

WASHINGTON.—Without the Connally amendment, limiting the World Court's jurisdiction to matters the U.S. Government deems international in character, a citizen exercising his constitutional right to decry personality or policies of a foreign government could be held to answer before the World Court. The American critic could be so haled should the foreign government charge that the comment was "unfair and disruptive of cordial international relations."

That is to say, the vested right of Americans freely to discuss the behavior of Nikita S. Khrushchev, Patrice Lumumba, or Fidel Castro could be put unqualifiedly to question if the Senate had ratified a convention of the United Nations Commission on Human Rights dealing with freedom of information. But in any case, without the Connally amendment of 1946, the World Court at The Hague could entertain an action brought by Congolese tribal chiefs functioning as a government against Joseph Alsop or David Lawrence.

The U.S. Government would then face an ad hoc decision whether to flout the jurisdiction of the World Court or submit its citizens to trial and possible punishment for offenses which could not be offenses under the Constitution and U.S. law.

Plainly, the Commission on Human Rights, whose first chairman was Mrs. Eleanor Roosevelt, thinks it the business of the U.N. and its judicial organ, the Court of International Justice, to censor the utterances of Americans respecting foreign governments.

Nor is that by any means all. The Human Rights Convention on Freedom of Expression, put forth as treaty law binding all signatory states, seriously abridged the provisions of the first amendment to our Constitution. In deference to the overwhelming majority of U.N. members which hold, contrary to our Constitution, that political rights are parceled out to subjects by the government, the citizen have no inalienable rights, the convention circumscribed the freedoms of assembly, petition, utterance, and religious choice.

That convention would impose a whole new body of law repugnant to our constitutional safeguards, tradition and liberties should it be ratified along with a host of other legislative acts by U.N. agencies in a future Senate.

Nor is this danger academic. President Harry S. Truman urged ratification of the genocide convention in 1948 and he was strongly backed in the Senate and a formidable section of the press. Under that loosely drawn and emotion-charged convention, a citizen could be dragged before the World Court for an offense tainted with racial discrimination and unknown to our law. There has been powerful support for the various Human Rights Commission's conventions as for numerous statutes enacted by the International Labor Organization, intruding on our time-honored and organic practices.

At Los Angeles, the Democratic convention declared for repeal of the Connally reservation. Although President Eisenhower and Vice President RICHARD M. NIXON have been bemused by the slogan, "World Peace Through Law," the Republican convention of 1960 was silent on this issue.

I lack space to thread the maze of legislation offered by U.N. agencies, nearly all of which would unconscionably intervene in our way of doing things, many of them reducing our liberties. An articulate coterie of internationalists, typified by Adlai E. Stevenson, yearns for ratification of these conventions as a means to an world order, obliterating systematic differences between civilized and uncivilized states and putting the United States order on a parity with that of Ghana or Red China. Whether Candidate JOHN F. KENNEDY'S "new frontier" extends so far remains to be seen.

Meanwhile, without the Connally reservation, the World Court could assume jurisdiction over such matters as tariffs, offshore rights, immigration and mutual assistance. The U.N. in various measures has described such questions as international—transcending the interest of the country concerned. Moreover, conforming to Communist protests, human rights legislation is mute on the right to own property free from Government expropriation without due process.

In their arguments, the repealers, as we shall see, ignore these perils, resting their case on wishful rhetoric and invective.

CONNALLY REPEALERS PLAY ON EMOTIONS OF HOPE AND SHAME—6

(By Forrest Davis)

WASHINGTON.—Former President Harry S. Truman and President Dwight D. Eisenhower are on record for dispensing with the Connally amendment (described by an organ of repeal, the Washington Post, as "shabby" and "mischievous") which reserves to the United States judgment as to which cases brought against it in the World Court are international, which domestic in purview. Mr. Eisenhower's generalized espousal of repeal seems merely a diffused response to Charles S. Rhyne's shibboleth: "World peace through law"—a slogan presupposing that a world divided six ways from Sunday in the axioms of law, constitutional or other basic procedures and political philosophies can be brought to concurrence by a judicial arm of the United Nations which is not, in truth, a court of law.

Mr. Truman's advocacy moved him to a false analogy. Suggesting that Kansas and Colorado, if embroiled over Arkansas River water, would not make war on each other but refer the dispute to the Supreme Court, the former President reasoned that the United States could, with equal confidence, appeal its differences with other nations to the World Court.

Mr. Truman ignored the fact that the Supreme Court is at the apex of a vast edifice of constitutional, common and statutory law together with a wealth of Anglo-American precedents which in riparian matters affecting the Arkansas River affords justification for expecting an objectively just decision. As we have seen in this series, the 15-judge court sitting at The Hague, lacks a body of agreed law, its jurists derive from widely varying traditions, it is not obliged to honor stare decisis (indeed it is virtually bare of precedents) and its only statutory references are to the voluminous legislation of U.N. agencies, much of it designed to override our own domestic law.

So much of repeal literature rejects depth analysis. The repealers generally appeal to two emotions: An unwarranted hope that wishing for a world ruled by law will make it so combined with cries of shame against those who insist on facing facts. Charles S. Rhyne, debating the issue with another former president of the American Bar Association, Frank E. Holman, in the Christian Science Monitor of April 28, specifically introduced a fear psychology in behalf of repeal, saying:

"The world today is poised between hope for total peace and fear of total war. Ending war is mankind's greatest need. A frenzied unchecked race is on to improve nuclear warheads and their delivery via intercontinental missiles. * * * A new method is urgently essential to avoid atomic holocaust."

To Mr. Rhyne the Connally amendment blunts the world's hope for peace. To him the fact that the World Court is "empty," having disposed of only 10 cases in 15 years, is due almost solely to the Senate's refusal to code the court blanket jurisdiction over our organic and evolving systems of law and custom. His argument blurs the larger fact that U.N. member states have shown a decided preference for settling disputes through diplomacy and the conference method. It ignores also the Soviet bloc's blunt refusal to accept the court's jurisdiction in any event and our own qualified adherence to it. Mr. Holman soberly replied:

"The causes of war are often political or economic and not usually justiciable. * * * As a result, not only has the court been bypassed but other United Nations agencies also. * * * The reservation has existed for 14 years. Until recently resurrected by Senator HUBERT H. HUMPHREY, a world-government enthusiast, nobody was suggesting that it adversely affected world peace."

Mr. Holman forebore reference to his antagonist's crusade, with its half-million-dollar purse, aimed at lobbying repeal through the Senate. Nor did he mentioned the singular circumstances that internationalist movements, such as Rhyne's, invariably are able to tap the till of the great American foundations. Causes dedicated to preserving our constitutional heritage usually are denied that privilege.

That is perhaps because the latter are unfashionable in certain quarters. As the New York Times tendentiously observes, "Isolationism is almost dead in the United States but there are a few vestiges left." The Connally reservation, as the Times sees it, is just such a "vestige" and "it is past time to get rid of it."

AMERICAN BAR ASSOCIATION RENT BY WORLD COURT DISPUTE

(By Forrest Davis)

WASHINGTON.—A freshet of the highest forensic talent in the land is scheduled to be loosed in Washington at 2 p.m. on Wednesday, August 31. The scene will be a hotel ballroom, the participants mighty advocates among the house of delegates of the American Bar Association meeting in annual convention. The issue: Shall the American Bar Association recommend to the U.S. Senate repeal of the Connally amendment reserving to the U.S. Government the final say in determining whether actions brought against it at the International (World) Court of Justice, The Hague, are properly international in character.

This crucial debate will in all probability revolve around three reports brought before the house at that hour. First, and most challenging, will be the Rhyne report, so called because Charles S. Rhyne, a former president of the American Bar Association, is chairman of the special committee on world peace through law counseling repeal. Ten days before the debate Mr. Rhyne expected a minority report from his committee adverse to the majority recommendation.

A third report, supporting the Connally reservation, rendered by five members of seven on the bar association's committee on peace and law through the United Nations, likewise will lie before the House of Delegates. As of this writing, it was considered unlikely that the committee minority of two would file a report.

At its 1947 annual meeting, the American Bar Association adopted a resolution favoring repeal of the Connally amendment—an action increasingly regretted through the years as U.N. agencies pursued legislative adventures via the treaty route. Although that resolution was not, through some quirk of apparent misgiving, referred as customary to the Senate, it affords a precedent of which the Rhyne faction has made much. In the intervening 13 years, years during which the American Bar Association was engrossed with the campaign for the Bricker amendment, the Connally reservation found no organized opposition.

The revival of agitation for repeal at a time when, with the abandonment of Western colonialism, the U.N. is being inundated with new, fragmented, and politically immature African States, has an unclear motivation. Bearing in mind the political method by which World Court judgships are awarded to blocks and regions, there seems to many thoughtful observers more reason than ever to preserve U.S. sovereignty over causes deemed domestic by us. The U. N.'s hasty admission of new members from countries by no stretch of the imagination either nations or civilized soon will aggrandize membership to more than 100. Some 30 of these member states will be African, chiefly contrived political entities such as the former Belgian Congo, the Soviet protectorate Guinea, and the unpredictable Ghana.

An Asian-African bloc comprising a majority of the General Assembly scarcely can be expected to exercise moderation in demanding judgeships to which their votes will entitle them. For this reason, if no other, prudence would enjoin against discarding our one safeguard against hazarding our liberties before a World Court inherently hostile to the Western societies. For it should not be forgotten that the eight votes of the Soviet imperium and those of certain neutrals chronically opposed to the West are available to the ambitions of the new Asian-African rulers.

Advocates of repeal, adept at cloudy sophistries, have been less than candid. One gathers from the Rhyne literature that the United States alone obstructs "world peace through law" when, in truth, no great power has unreservedly committed its destinies to the U.N.'s judicial organ. The Soviet States contemptuously deny the World Court's jurisdiction. France pitches its reservation on any "crisis affecting the national security or * * * any measure relating thereto." Great Britain's adherence is modified by nine clauses and further hedged by the express assertion of its right to "add to, amend, or withdraw any of the foregoing reservations" or cancel its obedience to the Court at a moment's notice to the Secretary General.

A study of the repeal arguments leads to the conclusion that they are unsophisticated and illusionary. While the American Bar Association's house of delegates legislates and resolves primarily on professional concerns, it also exercises its right to advise the Government and the country on wider issues. The public, therefore, has the right to expect that this year's conclusions will be sophisticated, judgmatical, and duly regardful of American liberties in a kaleidoscopic and infinitely dangerous world.

Atlanta Flag Dedication Exercises

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, August 29, 1960

Mr. TALMADGE. Mr. President, on Saturday, July 9, flag dedication exercises were held at the Atlanta Confederate Soldiers' Home under the auspices of the Dorothy Blount Lamar Chapter of the United Daughters of the Confederacy and the John B. Gordon Camp of the Sons of Confederate Veterans. The highlight of the occasion of the presentation of U.S. and Confederate flags by the businessmen of West End Atlanta and the principal address was delivered by Charles Stelling, staff member of the Georgia Civil War Centennial Commission. I ask unanimous consent, Mr. President, that the text of Mr. Stelling's remarks on this significant occasion be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

ATLANTA FLAG DEDICATION EXERCISES

(Text of address delivered by Charles Stelling, staff member of the Georgia Civil War Centennial Commission, at flag dedication exercises held Saturday, July 9, 1960, at the Atlanta Confederate Soldiers' Home under the sponsorship of the Dorothy Blount Lamar Chapter 2104, United Daughters of the Confederacy, Mrs. Milton W. Davis, president, and the John B. Gordon Camp of the Sons of Confederate Veterans, Stiles Mellichamp, commander, in cooperation with the Sons of Confederate Veterans represented by National Aide Clyde Boynton and National Inspector in Chief Charles A. Moran)

It is a great pleasure for me to talk to you today about Georgia's role in commemorating the War Between the States.

Like all wars, this was a tragedy—a conflict in which men fought and died for a principle.

Therefore, the 100th anniversary is to be commemorated—not celebrated.

This centennial of the War Between the States is a rebirth of the past, clarifying the concept upon which our democratic freedom depends—that individual responsibility is based on faith in God and service to country.

During the centennial, the spotlight will be on character in men—for war is the ultimate test of character. The stories of conflict and sacrifice are full of lessons for today's living. By the examples set in them, children and adults will be reminded of the moral values upon which our country is founded.

The centennial is not confined just to Georgia. It is nationwide with 41 States involved. It starts January 8, 1961, and lasts until 1965.

The centennial is an opportunity to sell Georgia—and the story of Georgia—to our countrymen. Because of the role it played in the War Between the States, Georgia is a natural for the centennial.

Georgia played a key part in organizing the southern government. It provided some of the Confederacy's most able statesmen.

Some of the most important battles of the war were fought on Georgia soil.

Chickamauga—one of the bloodiest battles of the war—was fought on September 19 and 20 in 1863. The Confederacy lost 18,000 men in this battle; the Union, 16,000.

Resaca, fought from May 13 to 16, 1864.

New Hope Church.

Peachtree Creek.

The Andrews Raid—involving the Great Locomotive Chase—was one of the most dramatic and thrilling incidents of the war.

The Battle—and burning—of Atlanta is known over the world—not only from history, but from the novel, "Gone With the Wind," written by Atlanta's own beloved Margaret Mitchell.

These are only some of the major engagements which answer the rollcall of history in Georgia.

All in all, some 289 actions—raids, skirmishes, and battles—took place on Georgia soil.

Many areas which were not battle sites played important roles in the conflict by sending thousands to the front.

All told, Georgia furnished about one-tenth of the fighting men for the Confederacy.

Georgia was the breadbasket of the Confederacy. Its arms and supplies served the southern cause before these supplies were cut off by General Sherman's incendiary march to the sea.

And certainly not to be forgotten are the Georgia women who did so much for the war effort. Their courage will forever be enshrined in the annals of history.

It is this spirit of sacrifice—and this devotion to cause—that we seek to bring back during the 5-year period of the centennial observances.

And it is important to remember that all the men who fought were fighting for principles.

Far beyond historical features, the centennial will seek to impress the tremendous significance of the spiritual aspects of this great struggle we are commemorating.

For, more than a test of arms, the war was a spiritual proving ground as eternal as the human spirit.

Churches will focus attention on the centennial with special services and sermons on January 8, 1961, when the centennial officially starts.

In Georgia, our centennial commission will strive to accomplish a five-point program:

(1) To honor the valor and sacrifice of Georgians who fought for a principle;

(2) To perpetuate a knowledge of the deeds and traditions of a valiant people;

(3) To educate the public on the campaigns, shrines, and the human story of the war in Georgia;

(4) To preserve the monuments, graves, and ruins of the wartime past;

(5) To locate and preserve valuable documents, diaries, manuscripts, photographs, and other records of the War Between the States.

This is a vast undertaking. It will take the efforts of all Georgians to accomplish these aims.

Believing that this commemoration will remind us of our great heritage—and strengthen us in this time of world strife and turmoil—Georgia begins planning with the thought:

Let us not forget the valor of the Confederacy.

Hugh Bennett Has Passed to his Reward

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. JENSEN. Mr. Speaker, I should like to pay tribute to the memory of one of our greatest Americans, Hugh Hammond Bennett, man of the soil.

Dr. Bennett, the first Chief of the Soil Conservation Service, died July 7 at the age of 79 and was buried in Arlington National Cemetery.

Our country, and the people of the world as well, owe him a great debt for his lifetime crusade against soil erosion and on behalf of an action program to conserve our soil resources.

More than any man, Dr. Bennett was responsible for our national soil and water conservation and small watershed protection and flood prevention programs that extend into nearly every corner of the Nation, and for the development of similar programs in some 43 other countries.

Dr. Bennett's great crusade began some 55 years ago when, as a young soil surveyor just 2 years out of college, he identified the process of sheet erosion. This is the gradual removal, with every heavy rain, of a thin sheet of topsoil. Gullies were common and accepted as a "natural" event, but Bennett's theory of sheet erosion—the forerunner of gullies—was a new concept.

The young scientist's concept did not impress anybody, least of all his superiors in the Department of Agriculture.

But young Hugh Bennett was undismayed. He kept at it. He gathered additional data as he continued his regular work—studying the soils of America across the length and breadth of the land. He talked about soil erosion. He wrote about it. He argued. But his road was a lonely one for more than two decades.

In 1928 he finally got his full story into a Department of Agriculture pamphlet, "Soil Erosion a National Menace." That was the beginning. People began to listen. People who counted, such as a congressional committee that called on him to testify and then appropriated a small sum to start investigations into soil erosion.

Hugh Bennett, who almost singlehandedly aroused the Nation to the dangers of soil wastage, was the man chosen to develop and direct a program of research and action in soil conservation.

He directed the early research starting in 1929. He headed the Soil Erosion Service, an emergency depression agency. He headed its successor, the Soil Conservation Service when it was established in 1935 by the Congress without a single dissenting vote. He established the principles and concepts that today guide our national programs. He retired from active service in 1952 after 18 years as Chief of the Soil Conservation Service, and after nearly a half century of magnificent service to his country and to the world.

But Hugh Bennett continued to be a messiah of the soil in the 8 years of his life after formal retirement. He accepted assignments to other nations, as health permitted. He continued to speak and to write.

His last public appearance, where he spoke briefly but with his usual eloquence and humor, was on May 5 at a banquet here in Washington sponsored by the National Association of Soil Conservation Districts in observance of the 25th anniversary of the Soil Conservation Service.

It was my privilege, along with others, to share the platform with him on that occasion.

I knew this man well, and there was no man I respected or admired more. He was simple and direct. He had no time for pompous or scientific posture, yet he was a scientist and a great one. Essentially, this man was an evangelist, who, by the force of his personality, his ability to speak and write simply but eloquently, and his ability to adapt himself to any group or occasion, gained widespread support for a noble ideal—to safeguard our land for present and future generations. He was of that rare breed of men who can translate knowledge into action and achieve results.

It was my sad privilege but I deemed it a great honor to represent the Congress as an honorary pallbearer at his burial rites in Arlington National Cemetery.

As I traveled slowly with the horse-drawn caisson bearing his body to its last resting place, I reflected on the greatness of this man who fought so long and so alone, but who lived, as few men do, to see his dream come true.

And it came to me then that the good works of this man to whom we owe so much should be perpetuated by a memorial for the benefit of generations unborn—the generations that will profit most from his lifetime of service to all mankind.

I understand many of the national agricultural and conservation organizations, soil conservation districts, and conservation farmers and ranchers everywhere want to erect a suitable memorial to the memory of this great and good man.

I hope that their efforts will come together and emerge as a single suitable memorial to the man of whom Louis Bromfield said, "Hugh Bennett deserves the greatest honor from the American people as one of the greatest benefactors since the beginning of their history." Our hearts go out to his wonderful wife and family.

God rest his soul and may the same God who took him to his heavenly home give Mrs. Bennett and family strength to bear the great loss they have suffered in the passing of their dearly loved one.

West Virginia Boasts an Impressive Capitol

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. BYRD of West Virginia. Mr. President, those who have visited my State of West Virginia need little convincing of the beauty and charm which the Mountain State offers. Writing in the Washington Post, yesterday, August 28, Mr. Walter W. Hubbard describes the attractions the vacationer can enjoy in and around the State capital, Charleston.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR MOTOR TOUR—WEST VIRGINIA BOASTS AN IMPRESSIVE CAPITOL

(By Walter W. Hubbard)

Ninety-nine years ago this summer, West Virginia held a loyal-to-the-Union convention after having previously rejected secession, and 2 years later—while Robert E. Lee's army was marching toward Gettysburg—it officially became a separate State.

Charleston, located at the confluence of the Elk and Kanawha Rivers, became the capital of the Mountain State 90 years ago. Its capitol is one of the most impressively beautiful of any of the 50 State capitol buildings.

The city is 358 miles from Washington over good highways and is the northern entrance to the comparatively new West Virginia Turnpike, shown on the accompanying American Automobile Association map. Charleston was founded at Fort Lee shortly after the Revolutionary War, but it was not incorporated as a city until 1870. It is the center of the largest natural gas region in the Eastern United States.

Motorists will find that three representative views of Charleston are afforded by the three highway bridges across the Great Kanawha River. From the Kanawha City Bridge, recreational Charleston at its best may be observed, including boathouses, neat river craft, the baseball stadium, golf course, bridle

paths for equestrians, tennis courts, and an ice skating rink.

From the South Side Bridge, the major part of the capital appears to be a colorful mass of maples, elms, and sycamores pierced by the gold-leafed capitol dome, church steeples and tall buildings.

From the Patrick Street Bridge, there is an impression of industrial Charleston—tall smokestacks, brick factories, and aluminum-painted towers. The Kanawha Valley region, comprising Charleston and the neighboring communities of Nitro, Belle, Dunbar, and South Charleston, is a world center in the production of organic and inorganic base chemicals by synthesis. These plants are very interesting.

The State capitol, Cass Gilbert's architectual masterpiece, is worth visiting, including the museum in the basement, which contains Indian relics, historic documents, paintings, antiques, and locally made glassware. Other points of interest include Kanawha Airport, 4 miles northeast off State 14; Holly Grove, a postcolonial brick house built in 1815; Kanawha Riflemen's Memorial Park; the site of Fort Lee and the Patrick Street Market.

Traveling south on the turnpike, the motorist passes Beckley, an industrial community surrounded by rich agricultural lands. It is the largest city of the important smokeless coal region of southern West Virginia. Little Beaver Park, nearby, is a popular recreational area and one the youngsters will enjoy. Facilities are available for boating, canoeing, swimming, and picnicking.

Bluestone Canyon, a 14-mile stretch of lovely river country, may be visited south of Beckley on U.S. 19 and 21. Fishermen will find trout and bass in the Bluestone River.

Princeton is the center of a prosperous farming and coal mining country, as well as being the southern terminus of the West Virginia Turnpike. It was burned May 16, 1862, by the Confederates.

Top off your vacation in this part of the Mountain State with a trip to Lake Shawnee, named after one of the Indian tribes which used to inhabit the area. It is 4½ miles northwest of Princeton, and a swimming pool and cozy cabins are available.

Help From Hoffa

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. KEARNS. Mr. Speaker, I am pleased to report that in the current issue of Jimmy Hoffa's new political publication, the Drive Reporter, I have been signally honored with a long and emotional denunciation as a horrible example of what a Congressman should be.

This being an election year and campaign expenses being what they are, I consider myself fortunate indeed to have been given such attention.

I say this, Mr. Speaker, because most of us know what is a horrible congressional example to Mr. Hoffa more often than not is considered the epitome of legislative virtue elsewhere. Modesty prevents my placing this exact interpretation upon the Hoffa remarks and their effect, but I believe most of my colleagues will agree that being inscribed on Jimmy Hoffa's personal political purge list considerably enhances a political candidate's chances.

Without going into detail concerning the Hoffa analysis of my voting record and character, I can say that Mr. Hoffa expresses grave fears as to what would happen in the event the Republican Party were to take control of this body in November.

If the Republicans elect a congressional majority—

The article states—

KEARNS will chairman the Committee on Education and Labor. This they should not inflict on the rest of the Nation.

I can understand that this would worry Mr. Hoffa, for he knows that in the past I consistently have voted to protect the rights of the rank-and-file workingman against abuses by union bosses.

The workingmen and women of my district—many of them members of the teamsters union—are aware of this and are familiar with my work in their behalf. I do not think that they who so recently have been freed of the coercive burdens of labor bossism, will forget.

They will remember that I pushed through for them the first school lunch bill in the history of Pennsylvania. They will remember, too, that I was instrumental in this body, in obtaining the first $1 minimum wage bill.

A responsible union leadership—that of the International Association of Machinists—said at the time that the minimum was raised to a dollar in a miracle of the 84th Congress.

The official publication of the Machinists' Union stated that Representative CARROLL KEARNS, Republican of Pennsylvania, was one of the principal miracle makers.

Mr. Speaker, I believe Jimmy Hoffa is peeved with those of us who have attempted to guarantee the workingman his God-given rights, because among these rights are freedom of speech and action.

These, of course, are two things Hoffa would rather not have in his organization.

I believe he is unhappy, too, because most of the Members of this body banded together in the past year to free the workingman from labor totalitarianism and give him, instead, representative unionism.

He is particularly angry at me, I feel, because I was active in this legislative battle and because I am, as he has noted, the senior Republican member of the committee which drafted the labor reform bill.

He is unhappy because that bill gives equal rights to all union members in the conduct of their union affairs.

He is displeased because that bill allows rank-and-file members to speak up at union meetings without fear of reprisals from union bosses such as himself.

He is irked because union members are protected against arbitrary dues increases under terms of that bill.

He is disconsolate because the labor reform law I helped write protects the union member's right to sue union bosses for abuses.

He is plagued with the reality that because of this legislation he cannot arbitrarily impose fines and penalties on his membership.

His ambitions have been thwarted noticeably by the provision making free and fair union elections mandatory.

He perhaps is spending many sleepless nights because the bill makes it possible for a union membership to purge itself of crooked officials.

He is irate because union funds now are protected and trusteeships are regulated.

He is indignant because I gladly helped in the outlawing of blackmail picketing.

And, most significant, he perhaps is downright enraged because the bill bans hot-cargo agreements in labor contracts, one of Jimmy's favorite weapons of destruction.

He is displeased with my voting record because I have voted in the public interest and against the selfish interest of a labor boss whose operations led to the expulsion of his union from the AFL–CIO.

He is wrathful because Civic Affairs Associates, a nonpartisan organization which analyzes voting records of Members of Congress, has given me a rather high performance rating, as noted in the Pittsburgh Press. On August 13, Douglas Smith, distinguished Washington correspondent for that newspaper, wrote of the Civic Affairs Associates' poll:

The western Pennsylvanian most pleasing to the scoring group was Representative CARROLL D. KEARNS, Farrell Republican, who scored .786.

Mr. Speaker, I believe it is obvious that what is a horrible example to Jimmy Hoffa fortunately is not that to more responsible persons.

In conclusion, I should advise my colleagues that boss Hoffa is very likely to single out others in the House for attacks of the type made against me. Nevertheless, I am sure that in a spirit of charity all Members of this body join me in wishing Mr. Hoffa a recovery—sometime after November 8—from the condition which produces such outbursts as his intemperate attack upon me.

Prior to that date, however, these outbursts can be a great asset to the cause of good government. They will show the American people that any vote is a vote in the public interest—provided it is a vote directly contrary to the interest of one James R. Hoffa.

Economically Converting Sea Water to Fresh Water Will Mark Important Advance for Mankind; Freeport, Tex., Plant Pioneers Work

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. YARBOROUGH. Mr. President, if America can be the first to develop a cheap way to give the arid areas of the

world fresh water from salty or brackish water, it will mean invaluable prestige for the forces of democracy. Water which would make the deserts blossom as the rose would mean food for hungry tens of millions and it would dwarf most other technological achievements of recent decades.

One of the important studies in this national program will be carried out in a plant at Freeport, Tex. Dedication ceremonies will be held at Freeport tomorrow.

Another phase of this important research involves experiments to improve the solar distillery process. This work is being carried out at Franklin Institute in Philadelphia.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the August 24, issue of the Corpus Christi Times, entitled "Solar Distillery Problem Solved."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOLAR DISTILLERY PROBLEM SOLVED—WILL REDUCE COST OF MAKING WATER FROM SEA DRINKABLE

PHILADELPHIA.—Franklin Institute says it has solved a key problem in reducing the cost of using the sun to make sea water drinkable.

Institute researchers have developed a new method of using chemically-coated plastics, in place of glass, in the manufacture of solar distilling apparatus.

INITIAL COSTS CUT

By eliminating the more expensive glass, the initial costs of the apparatus—and hence the overall costs of producing the fresh water—can be cut down, an institute spokesman said yesterday.

The Office of Saline Water, U.S. Department of the Interior, is trying to develop large-scale stills that could be used in converting salt water into fresh water in many areas of the country where there is a growing shortage in normal water supplies.

Thus far, all of the big solar stills in operation in the Nation are experimental.

A solar still is essentially a rather simple apparatus. It consists of a container with a black-painted bottom into which the saline water is poured.

Over this container is a roof of glass or plastic—something like the roof of a hothouse.

The solar rays, shining through the roof, heat the water. The black-painted bottom helps to absorb the sun's energy better.

As the water heats it becomes steam, which rises to the top and hits the underside of the roof. Since the roof is considerably cooler than the steam, it condenses the steam back into water—this time into pure water.

The pure water runs down the underside of the roof and collects in troughs or gutters. From them the water is collected in containers and is ready for use.

PROBLEM MET

The problem before the Franklin Institute researchers was this:

Glass is a more efficient material than plastic when it is used in solar stills. It has a "water wettable" surface, which means that the condensing steam transforms itself into a smooth film of water on hitting the glass. This film rolls easily into the gutters.

Plastic, however, does not have a "water wettable" surface. Institute researchers, after a year of study and experimentation, however, came up with the idea of coating the underside of the plastic roofs with a film of titanium dioxide. This is a simple mechanical compound used in white paint.

The titanium dioxide is deposited on the plastic in a transparent sheet, and this sheet becomes "water wettable"—the same as glass.

Hatch Act—Fear Phobia

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. LANKFORD. Mr. Speaker, I wish to call to the attention of this body an incident which, in my opinion, is a most flagrant misinterpretation by the Civil Service Commission of the Hatch Act and applicable regulations thereunder. Recently, Mr. William C. Doherty, president of the National Association of Letter Carriers, was charged with a violation of the Hatch Act by the Civil Service Commission as a result of his name appearing in an advertisement urging the selection of Senator LYNDON B. JOHNSON as a nominee of the Democratic Party for the Presidency. On August 10, I brought this situation to the attention of the Subcommittee on Elections of the House Administration Committee, which has been given the responsibility by this body to conduct a thorough investigation of the Hatch Act and recommend necessary changes in the law or regulations. The trumped-up charge against Mr. Doherty has all the appearances of a reprisal action directed toward him as a result of his fine efforts on behalf of the recently enacted Federal pay raise. I feel this situation demands the immediate attention of the Congress and I would like at this point to include in the RECORD a resolution adopted by the Association of Letter Carriers unanimously at their convention this week in Cincinnati:

RESOLUTION—SUPPORT OF PRESIDENT WILLIAM C. DOHERTY

Whereas the officers and delegates to this 42d NALC Convention have read with surprise, resentment, and disgust the specious and politically inspired charge of the Civil Service Commission against President William C. Doherty wherein he is alleged to have violated the Hatch Act; and

Whereas a reading of President Doherty's reply to this charge clearly indicates that he did not violate the Hatch Act or appropriate rules and regulations of the Civil Service Commission, that he did, in fact, act pursuant to his inalienable rights as a free American citizen and in harmony with the Hatch Act to express his opinion freely on political subjects and candidates: Therefore be it

Resolved, That this 42d convention of the NALC soundly condemns this action of the Civil Service Commission as nothing more than an attempt to harass and embarrass President Doherty for his leadership in the recently successful effort to improve wages in Federal employment, the objections of the President of the United States notwithstanding, and be it further resolved that we enthusiastically reaffirm our complete confidence in and full support of William C. Doherty, and pledge to him every assistance required to answer to these malicious charges and to vindicate his good name and reputation.

I would also like to include Mr. Doherty's address to the convention which clearly sets forth how the Hatch Act is being used to intimidate Federal employees far beyond what Congress originally intended when the Hatch Act was enacted.

ADDRESS BY WILLIAM C. DOHERTY, PRESIDENT, NATIONAL ASSOCIATION OF LETTER CARRIERS, BEFORE 42D BIENNIAL CONVENTION, NALC, CINCINNATI, OHIO, AUGUST 22, 1960

Brothers, fellow Americans, deeply cherished friends, I have chosen the foregoing salutation carefully since, this morning, you have once again proven yourselves, in magnificent fashion, to be all three.

Brothers in the most meaningful sense of the word.

Fellow Americans in your passionate and unanimous insistence that the fundamental rights of our citizenship will not be torn from us by greedy and despotic bureaucrats.

And, deeply cherished friends.

Well, frankly, during the 37 years I have had the honor of being a member of the National Association of Letter Carriers I have been blessed with constant assurances of your friendship. I have rejoiced in this; I have even exulted in it. But never in all those years have I been permitted to experience such a manifestation of affection and friendship as I was shown this morning in this hall.

Even if there had been the time to address you this morning I would not have been able to do so. The emotions were bubbling up too close to the surface. Eloquence or even articulate expression would have been impossible. I am not entirely certain that articulate expression is possible now.

So, let me preface my remarks this afternoon by saying, from a heart overbrimming with humility and devotion: Thank you for being what you are, the greatest human beings that God ever made.

It is a new experience for me to stand before you as one accused of a violation of the Federal laws which govern this great land of ours.

If there were a scintilla of truth in the charges preferred against me it would be an unpleasant experience. But, considering the source of those mendacious charges, and considering the reasons behind those charges, I consider the accusation a compliment, a distinction, a proof of my loyalty, my integrity, and my devotion to my country and to every letter carrier in the United States.

And, if this is a new experience for me, it is also a new experience for the U.S. Government.

For, never before in our Nation's history has a Cabinet officer stooped so low in an attempt to achieve personal revenge.

Never before, to my knowledge, has a Cabinet officer wallowed so shamelessly in the slime of personal animosity.

Never before, to my knowledge, has a Cabinet officer attempted to appease his wounded vanity by attempting to pervert the Federal laws, and even one of the quasi-judicial bodies of government, into instruments of personal retribution and persecution.

And, have no fear, my friends, we shall triumph over this vicious attack upon our civil rights. We shall win, even if we have to carry our plea for justice all the way to the highest legal tribunal in the land, the U.S. Supreme Court.

During the 8 years he has served as Postmaster General, Arthur E. Summerfield has been responsible for some notable firsts. Some of these firsts have been highly commendable. But, in the perspective of objective judgment, they will be blotted from the pages of postal history by other firsts which shall live only in infamy.

Arthur E. Summerfield is the first Postmaster General in history to induce four Presidential vetoes of postal pay bills.

He is the first Postmaster General in history to canonize the accountant, and to give complete precedence to statistics and financial statements over the rights and the needs of human beings.

And, now, Arthur Summerfield is the first Postmaster General in modern times to try to make the suppression of free speech a way of life in the Postal Establishment of the United States. He is the first Postmaster General in modern times to consider honest disagreement an act of subversion and the exercise of a man's sacred constitutional rights, a Federal offense.

To me, and to you, those constitutional rights are sacred. When someone attempts to lay a despoiling hand on them, that amounts to an attempt to rip apart the very fabric of our American freedom.

There is no group of individuals more patriotic than the letter carriers of the United States. There is no group which takes the obligations of citizenship more seriously or with more passionate intensity.

There is nothing in the Hatch Act or any other Federal law which holds that a letter carrier must give up his citizenship, with all its rights and obligations, when he joins the Federal service. If there were such a provision, this hall would be empty today since citizenship is dearer to us than any job could possibly be, and nothing in the way of reward or compensation would ever induce us to forego our basic rights under the Constitution so nobly conceived by our Founding Fathers.

Certainly Arthur E. Summerfield is the first Postmaster General to seek to deny those rights not so much on the grounds of partisan political activity on the part of the intended victim, but because of his own partisan political prejudices.

These are the firsts which cry out to heaven for justice, and which will blot the pages of the Summerfield administration with indelible shame.

When I compare the philosophy of this administration with that of previous administrations, I know whereof I speak. As you all know I have written a book, "Mailman, U.S.A.," which is being published officially today. It is a book for letter carriers and about letter carriers and it tells, with all the frankness I possess, the whole grim and exciting story of our long fight to achieve economic equality despite the oppression and suppression of various postal administrations.

There have been some excellent Postmasters General during those years. Not enough of them, it is true, but some. There have been some Postmaster Generals who were mediocre, and there have been some who have been beyond belief and almost beyond the human limits of forgiveness.

During the 19 years that I have had the honor of serving as your President, we have come a long way together, you and I.

I do not say this through any sense of vain glory. We of the National Association of Letter Carriers are a team, the most glorious team of its kind in any comparable field of endeavor in or out of Government. What has been accomplished so far has been accomplished through teamwork, through the combined and exquisitely integrated efforts of your national officers, your State, district, and branch officers, and of every single member of the association. No one person could have done it; no small group could have done it. This required the hard work and the selfless dedication of every letter carrier in the country and every member of their families.

But, you know, during these past 19 years we have been, as it were, climbing a mountain together, with our eyes directed steadfastly at the snowcapped summit of ultimate achievement. We have been concentrating solely on the distance still to be traveled, rather than on the distance we have traveled thus far. So, today, at this convention, for just a few moments before resuming our journey upward, let us imagine for a moment that we have reached a kind of ledge on our mountainside, and as we catch our collective breath, let us cast our eye back over the distance we have already traveled.

On September 6, 1941, when I stood before you and took the oath of office for the first time as your national president, there were fewer than 68,000 members of the NALC. As of today we have more than doubled that figure. We have almost 140,000 members in almost 5,500 branches located in every corner of the land.

In 1941 regular letter carriers were receiving a minimum of $1,700 a year and a maximum salary of $2,100 a year. Worse than that, there had not been a single postal pay raise in 16 years.

For those of you too young to remember, those were hungry years. Those were 16 years of famine and hardship and suffering for letter carriers and for their families.

In the 19 years since that time there have been nine postal pay raises.

Today, thanks to our magnificent friends in the Congress of the United States (many of whom will be here at this convention), we are now receiving a minimum of $4,345 a year and a maximum of $5,605 a year, an increase in pay of more than 250 percent.

In 1941 substitute letter carriers were receiving 65 cents an hour. (Well do I remember that statistic, as well as the day it came into being. The legislation which raised the wage of substitutes to 65 cents was signed into law by President Coolidge on February 23, 1925, 5 days after I, as a substitute carrier in the Cincinnati Post Office, was joined in holy matrimony to my beloved wife.)

As a result of our crusade for economic equality, substitute letter carriers today receive a minimum of $2.16 an hour and a maximum of $2.78. That represents an increase of considerably more than 400 percent.

As you know, I am the last person on earth to claim that letter carriers are receiving adequate payment for the work they perform. But, we have once more advanced within rifleshot of economic parity, and, certainly we have come a long, long way along the economic road since 1941.

But, just as man does not live by bread alone, so we who are in the postal establishment should not count our blessings solely in terms of salary.

Mind you, I'm not minimizing the importance of money. God forbid. But, nonetheless, there have been many other advances during the past 19 years which are not directly connected with your wages, but which have made the job more pleasant and which have made the future more secure.

I would like to list, for the record, just a few.

Uniform allowances. (You all know what a struggle it was to achieve this. The allowance is not nearly large enough, but the principle has been established and the passage of this legislation in 1955 was one of the most wholesome things that ever happened to us.)

The health benefits law of 1959.

The terrifically improved retirement and compensation laws which affect us all.

And, a particular project of my own, our additional annual and sick leave provisions.

This is just a partial list of achievements. But, let me say this in no uncertain terms.

Each one of these improvements was earned through hard work, hard fighting and hard thinking. Not a single one was given to us. If postal management had been allowed to have its way, not a single one of these improvements would have come into being.

And let me say one other thing.

Not a single one of these improvements would have come into being if it had not been for the strength, the courage, the vision and the energy of the National Association of Letter Carriers.

We, and by we I mean you and I and all your officers, spearheaded each fight and implemented each victory.

We did it each time in the past just as we did it in 1960 through our successful and glorious victories in the crusade for economic equality and in operation override.

Oh certainly there were others who took the bows after all the votes were counted and who made expansive claims as to what they had achieved. But, you know and I know who did the work, who got the job done, the National Association of Letter Carriers.

But, that is enough of retrospection. In this business we cannot afford the luxury of basking too long in the warm glow of self-congratulation.

There is always the future; we must never lose sight of the fact, we must never stop planning to face the problems and enigmas that lie ahead.

We have, if you will, hacked out for ourselves a sizable clearing in the forest. We can live and breathe and move in that clearing, but we must never lose sight of the fact that the bureacratic jungle which surrounds us is always proliferating and awaits the opportunity to engulf us.

So, in these final moments of this talk, let us direct our eyes upward to that snow-capped summit called ultimate achievement.

What are the principal obstacles which lie in our way before we can implant the pennant of victory in its virgin snows?

Of course, there is the continuing problem of pay. This is a problem that will always be with us and one that will never be forgotten or ignored.

Second, restoration of multiple deliveries wherever needed. We all know that there can be no meaningful or permanent improvement in the postal service until this is accomplished. The 10 years since April 17, 1950, when Postmaster General raped the postal service by curtailing deliveries, have been a decade of decadence in the postal establishment. The only way we can make the next 10 years a decade of dynamism is to get the service restored.

Third, union recognition. This is an absolute must, not only insofar as our own development is concerned, but it should be, also, insofar as the Department, the service, and the public welfare are concerned.

Fourth, increased annuities and health benefits for retired postal employees. This is a vital step in our march to ultimate achievement.

Fifth, the creation and development of a modern, continuing, and comprehensive public relations program which would bring home to every American citizen the importance and the problems of the postal service and of those who work in that service.

Sixth, limitation of the areas of activity of the postal inspection service.

Several years ago I wrote an editorial in the Postal Record entitled "Back to the Coop, Inspectors." I meant every word of that editorial and I mean every word of it today.

Inspectors are not management. They should be prevented from interfering in the management of post offices and postal operations.

Inspectors are policemen. They are in some ways the equivalent of bank examiners. Their influence and activity should be restricted to these fields exclusively.

I do not want to take up too much time on this subject. I have a lot to say about it in "Mailman, U.S.A." and I sincerely hope you will read it carefully and take it to heart. The entire future development of the postal service depends upon the restriction of the Inspection Service to its true functions. For too many years they have laid on the postal service the cold, dead hand of reaction. That hand must be removed before we can ever give the American people truly modern service. You cannot have a 20th century service if you continue to have 19th century managers.

And, lastly, we must, we shall amalgamate all the postal unions into one big union.

We have been patient. Perhaps we have been too patient.

We have seen, time after time, the clever and coldblooded conniving of certain departmental officials in playing upon the traditional craft jealousies of our fine postal unions in order to divide and conquer us.

And, frankly, we have seen, too often, some other postal organizations who have been riding to legislative victories on our coattails, yielding to the pressure of such jealously and attempting to knife us in the back while still clinging desperately to those coattails.

This is silly. It is wasteful. It is inefficient. If continued it could be disastrous to our hopes.

There is no room in the postal union movement for craft jealously or for any other divisive element.

We all share the same objectives. We all share the same idealism.

The laws which govern us come from the same department and the same committees of the Congress.

In one big postal union each craft and each group would receive equal representation and fair treatment. There would be no submersion of interests, no loss of identity, no compromise of ideals and objectives. But there would be strength; there would be power; there would be unanimity; there would be intelligent consolidation of effort.

Every step we take on our long climb upward is complicated by the diversity of postal organizations, the complexity of union operations which exist today. We must cleanse ourselves of jealousies; we must rid ourselves of unnecessary complications and impediments.

Ever since the earliest days of this century postal union leaders have talked about the pooling of our organizational interests into one big union.

The constitution and bylaws of the National Federation of Post Office Clerks, in its second article, has insisted for 50 years that the objective of their organization is to fold all postal workers into one organization.

I say the time has come to stop talking and to start acting. The time is now.

We shall move forward in this area and we shall continue to move forward until we do have a single massive, harmonious and powerful union of postal employees, working with consolidated effectiveness toward a common goal.

So, brothers, fellow Americans, friends, we come to the end of this discourse.

We have come a long way together, we have a long way still ahead of us.

As we gather here today we can see before us a land of unlimited promise, a land of no horizons.

We have conquered in the past the powerful administrative forces which have sought to prevent our passage into that promised land.

We shall conquer these pernicious administrative forces which seek to impede us today.

We shall inherit that promised land because that land is ours. Nothing will prevent the progress of justice and decency and the God-given inheritance of honest endeavor.

So let us rededicate ourselves today to the task ahead. Let us lift up our eyes. Let us march into that bright and singing land and let us march into it hand in hand, and together. From the bottom of my heart, thank you and God bless each and every one of you.

The Anatomy of Cold War

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 29, 1960

Mr. WILEY. Mr. President, the history of man's progress continues to reveal that, even in a changing world, one of the basic laws of life is that of self-preservation.

Today, we in the free world—as well as the so-called neutral or uncommitted nations—are faced with a severe test to our survival.

Communism day-by-day extends its tentacles—ideological, economic, military—overtly and covertly, in every direction in which it meets no, or too little, resistance.

Technological progress—epitomized in jet power and missiles—has diminished time and space between both friendly countries and those with ideological differences. Recognizing the influences which such power has upon world thinking, the Communists continue to attempt to utilize rocket-missile threats as influence.

To counter the military threat to security, we have developed great jet-nuclear-missile prowess—second to none in the world.

With the resultant military standoff, however, we cannot expect that everything else will be safe and secure. To the contrary, we must develop among our people a knowledge of the widely diversified tactics by which the Communists plan to conquer the world.

Years ago, Nikolai Lenin—the dogmatist of the Communist philosophy—stated:

First, we will take Eastern Europe. Next, the masses of Asia. Then we shall encircle the last bastion of capitalism, the United States of America. We will not have to attack. It will fall like an overripe fruit into our hands.

Today, we find that the Communist policies—adopting variations of the Leninist theme—are aimed at carrying out these objectives. To counter such a thrust, we—of the free world—not only need to be prepared militarily, but also ideologically and spiritually to meet and effectively counter this offensive.

Recently, the San Diego Union, of San Diego, Calif., published a special report, "Communism: The Clear and Present Danger." A crystallization of major factors we must face in the ideological battle with communism was contained in an article entitled, "The Anatomy of Cold War." Among other things, it reemphasizes that only by knowing communism, its goals and tactics, can we effectively stop the outspreading of this ideology and preserve freedom. At this time, I ask unanimous consent to have this informative article printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the San Diego Union, Aug. 21, 1960]

THE ANATOMY OF COLD WAR

The cold war is more than a political phrase. It's a reality, and potentially decisive skirmishes are being fought right now, today, this moment. It's as close as a short jet run, measured in geographic terms. Cuba is only 90 miles from the United States. Since the admission of Alaska, the Soviet Union itself is less than 50 miles from our own borders. Over the pole by subsonic jet, Moscow is 7 hours to New York or Detroit. San Francisco is 30 minutes' missile time from Kamchatka Peninsula. San Diego is 20 minutes from a missile-bearing submarine 500 miles at sea.

But the important characteristic of the cold war is not the physical threat, great as that may be.

What is important is that this war could be won without a single shot. It could be won by encirclement—to the point where the United States is helpless. It could be won by nibbling at our own strength and that of our allies—to the point where we and they are exhausted. It could be won by the invisible softening attack—to the point where an entire nation is brainwashed into believing surrender is proper and regimentation is good.

The Communist threat, like disease, knows no international boundaries. It can—and is intended to—take its toll from within. Within means within the United States as well as within our alliances.

Three facts are vital to understanding Communist strategy. If you don't recognize them, much that happens in today's world will appear all but inexplicable.

Fact No. 1 is the nature of the Communist's prime target. It is not any geographical area. It is the human mind. Communist dogma acknowledges that the only lasting conquest is the conquest of the human spirit. If you conquer a man's spirit, you don't have to fight with him physically.

Fact No. 2 is the nature of the Communist's political tactics. Perhaps of all the things about the cold war, this is the most difficult for the average American to realize, for most of us have been reared in a climate of Anglo-Saxon and Roman law, melded with American frontier and British Victorian concepts of fairness, playing the game. The Communist does not achieve his objectives by normal partisan politics. No Marxist believes in nor accepts open debate and free elections.

When the Communist pays lipservice to democracy and people's republics, he is indulging in an ironic twist of words. Communist dogma has no abiding faith in the people. It states repeatedly that a proletarian elite must make decisions for the people. What Americans and Western allies understand as constitutional and democratic processes are regarded by the Communist as unrealistic.

Realism is permitting a display purporting to be a popular choice only after the election, the cabinet change, the court ruling has been rigged. The Communist only bets on a sure thing, and his tactics are designed to bring that sure thing about. Method doesn't matter.

Fact No. 3 is the nature of Communist timing. The Commnists are playing for keeps, and they are willing to take as much time as necessary, fluctuating with the immediate times whenever it is expedient.

They have alternated between talk of peace and war since the end of World War II, depending upon what best suited the long-range Communist objective—complete domination of the earth. In fact, the only area in the world today that is not a war zone, from a Communist's viewpoint, is Soviet Russia and her satellites. This area covering one-sixth of the earth's land mass is already under Communist control.

Related to this fact of a "protracted struggle" is the very nature of democratic processes. Free choice through free institutions after free discussion can function properly only in a climate of order. The Communists recognize this and go to practically any lengths to maintain a worldwide climate of disorder, violence, and unrest.

This helps explain their jamming of allied broadcasts, their demonstrations in Caracas, Tokyo, and Leopoldville, their barrage of publications into unsettled areas like Latin America, Southeast Asia, and Africa.

Mao Tse-tung, ruler of Communist China, is fond of quoting an ancient Chinese militarist, Sun Tzu, who lived in 500 B.C. Sun wrote: "To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting." Mao, in his own "strategic problems of China's revolutionary war," quotes Sun again: "Avoid the enemy when he is full of dash, and strike him when he withdraws exhausted." But perhaps the most pointed is this one, quoted by Mao: "Make a noise in the east, but strike in the west."

Colloquy Between Former Congressman Murdock of Arizona and Congressman Toby Morris

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. MORRIS of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a recent colloquy between former Congressman Murdock of Arizona and me.

Mr. John R. Murdock is truly a gentleman and a scholar. He holds an AB and a master's degree, and the Arizona State University recently in 1960 conferred upon him the honorary degree of doctor of law. He is eminently worthy of these honors.

Mr. Murdock served 16 years as an outstanding member of the U.S. House of Representatives and was chairman of the Interior and Insular Affairs Committee in the 82d Congress, during the years 1951 and 1952. He was a great chairman, respected and beloved by all his colleagues.

He has studied, worked, and effectively pushed forward many important bills and programs for the benefit of his beloved State of Arizona and for our entire Nation. For over 40 years he has given intense study and consideration to many matters of public interest and importance, and particularly to Colorado River water problems. He has become and remains one of the greatest authorities in regard to water problems, in the West, and is an outstanding specialist on the great Colorado River and its tributaries.

I am honored and my life has been enlightened and enriched in associating with and in having served on that great committee with him. I herewith set out our colloquy relative to some of the matters with which we dealt:

Congressman MORRIS. In the closing session of the 86th Congress I'd like to get a few statements from you, Mr. Murdock, of mutual interest for the record. What do you think, would you answer some questions?

Chairman MURDOCK. Yes, Judge; gladly if I may ask you some. I agree with you that we should briefly summarize some high points of our long cooperation in Congress, our many joint activities, what comes to your mind as most significant?

Congressman MORRIS. Well, that was my question. I notice you call me Judge. I am proud of that title as a former district judge.

Chairman MURDOCK. Yes, Judge; our many activities together in Congress have been varied. Sometimes they have been regarded as of minor importance, little noticed by the public press. Sometimes they have been strenuously hectic and were spread all over the country by a section of the press, as, for instance, Arizona's struggle with California over water from the Colorado River.

Congressman MORRIS. I well remember parts of that struggle and am proud of the part we played in it, but that is a long story and I fear we could not brief it. What are those apparently "minor" things you mentioned? Perhaps they were not so "minor"?

Chairman MURDOCK. By that I was thinking of the "seed" we placed in the fertile soil of American social and industrial life from which we hoped for great future growth. I like to think of those bills we introduced and hearings we held as "little acorns from which mighty oaks may grow," perhaps long after we are gone. To name a few bills and hearings and only a few: (1) Your bill for rehabilitation of the Navajo and Hopi Indians; (2) my bill and hearings on Dr. Percy Thomas' power proposal; (3) my hearings on several so-called salt-water bills.

Congressman MORRIS. During the 81st and 82d Congresses you and I worked together on several matters of legislation pertaining to the great West. Since then I have gone to other House committees and have not kept full track of the results of our former united efforts. Will you bring me up to date on the most important results of our legislative measures?

Chairman MURDOCK. Yes, Judge, you and I did work as a team, and I believe effectively—during the 4 years 1949, 1950, 1951, and 1952—I as chairman of the House Public Lands Committee and later of the House Interior Committee, and you as a member of that committee and as chairman of the Indian Affairs Subcommittee on numerous bills and proposals. I shall never cease to be grateful for your energetic leadership, especially on Indian bills. So far as action in the House is concerned I am giving you full credit for the enactment of the Navajo-Hopi rehabilitation bill which authorized a $90 million project for those two tribes of Indians in northern Arizona over a 10-year period. Of course there were other measures, too, on which we cooperated. Naturally I was greatly concerned about Indian water problems—on which you helped very much. Water for the vast Navajo Reservation was one of a dozen pressing problems for those Indians which you handled admirably. That $90 million authorization for a 10-year period has come nearer being fully implemented by later appropriations than an optimistic prophet might have prophesied—probably thanks to Senator CARL HAYDEN—and it is a delight to see what improvement has resulted on that big reservation for present and unborn generations.

Congressman MORRIS. It is pleasant to hear you say that, even if exaggerated. I do remember the subcommittee trips to the West and hearings held at Window Rock and farther West, and especially our hearing at Phoenix and our trip to the Papago and the Pima Reservations. I shall never forget Phoenix and its fine Indian school.

THE NAVAJO SHOULD HAVE A FUTURE

Chairman MURDOCK. Before leaving the Navajo, you will remember that we crossed the reservations from Window Rock to Tuba City, and then turned south to cross the Little Colorado River at Cameron. We stopped to get our evening meal at that trading post and I told you then that the suspension bridge at that place was not the only unique thing about that typical western stream—that the canyon river itself, especially the stream's physical possibilities from Cameron 50-odd miles toward the west to the main Colorado River could be an important theme for a whole book of facts, and also another whole book of plausible prophesies. I have given many years of close study to that unique stream—the Little Colorado River in northern Arizona—and you have helped me.

Congressman MORRIS. I remember the suspension bridge way out on the Navajo Desert, but cannot recall much mention of the Little Colorado in our hearings. Oh yes, you wanted a silt control dam, called the Coconino Dam, on the Little Colorado River, which was about the only thing the Californians didn't object to. Is that significant?

Chairman MURDOCK. Yes, as I see it that is very significant, but the Coconino Dam on the Little Colorado is only a starter on that tributary. Turning from the larger question of water in a thirsty land, with all its intricate and agonizing phases of infighting of States and communities to divide a limited supply, as you have suggested, I want to tell you how you helped me without knowing it on an important development that hasn't happened yet, but must happen in some form in the future. Do you remember in 1952 two hearings—one a small subcommittee hearing at which you were present, and the other a full-fledged hearing September 19, 1951—recorded and printed—at which Dr. Percy Thomas and three other high authorities from the Interior Department and the Federal Power Commission stated the proposal of Dr. Percy Thomas to make a highly modern use of windpower? This was especially for conserving water for hydroelectric power production throughout the West.

Congressman MORRIS. Yes, I remember Dr. Percy Thomas and his model powerplants. I was enlightened and amazed at what those men said about possible power that can be obtained from variable and changing winds, as they contrasted their proposals with our well-known small windmills on the farms. How did that help you? Has anything been done with it?

Chairman MURDOCK. No. Not yet. Dr. Thomas at that time was an elderly man, retired after many fruitful years in a department in Government service. He is now deceased. You helped me—in spite of your first doubts about the usefulness of fluctuating and changing winds—by giving me sympathetic support at that first hearing so that I called a full hearing September 19, 1951, in spite of the ridicule which I expected from some committee members. But even the three California members of the committee, who always strained themselves to take a dim view of any proposals of mine touching water, sat up and took notice. The one member most connected with power said: "Sounds good if it works." Well, I am more

and more convinced that on the Little Colorado watershed it would work. That is a great prospect for the future, requiring a book to picture it.

Congressman MORRIS. John, I once heard you say that if you could have your way you would lift the face of northern Arizona. What did you mean by that? From what I've seen nature has already done that.

Chairman MURDOCK. It was a brief way of my saying that I thought man could work with nature in changing the topography of Eastern Coconino County, Ariz., containing the lower 50 miles of the Little Colorado River. It has taken millions of years of running water to carve the canyons of that tributary. I would stop that running water and let nature reverse the process of cutting those deep wrinkles on the face of the land and smooth them out instead. That would be the effect if that part of the Little Colorado Basin could be made into what the geologists call a "closed basin."

Congressman MORRIS. Just what do you mean by "closed basin"? I should think that only nature could do that.

Chairman MURDOCK. Yes, we have numerous "closed basins" in the West which have no drainage or outlets of their waters to the sea. If those great volcanoes north of Flagstaff thousands of years ago had spit out a few more millions of tons of molten lava into the mouth of the Little Colorado it would have accomplished in short order what, I think, man should accomplish through many future years. That would mean sealing off the Little Colorado tributary from the main Colorado River, and that would make its lower basin in effect a "closed basin."

Congressman MORRIS. Would not that destroy the scenic canyons in that part of Coconino County?

Chairman MURDOCK. Well, yes, eventually, but Coconino County has canyons to spare with several hundred miles of such within the Grand Canyon National Park of mile-deep canyons, which are greater by far than the canyons that I would let nature fill up during the next 1,000 years. This stopping of erosion and filling up the canyons on that tributary stream would make feasible one phase of Dr. Percy Thomas' power proposal and, in my judgment, is basic to the water conservation work needed on that watershed.

BEGINNINGS OF SALT-WATER BILLS

Congressman MORRIS. John, when you mentioned salt-water bills you were getting close to one of my greatest interests. What can you remind us that is both pertinent and interesting?

Chairman MURDOCK. One interesting fact to me is that California Congressmen took an early lead in introducing the so-called salt-water bills. Three Members from San Diego, alone, while I was in Congress, introduced such bills, and those Members were from both major political parties. It doesn't take much reasoning to figure out why that was so. On the other hand, some California Members shied away from such bills—and thereby hangs a tale which is too long to tell here.

Congressman MORRIS. Didn't you hold the first hearing on such a salt-water bill in the House about 10 years ago relative to "sweetening," taking the salinity out of salt water?

Congressman MURDOCK. To the best of my knowledge that is correct. It was on August 29, 1950, and you were present and participating. At that time I was chairman of the Subcommittee on Irrigation and Reclamation, but the next year I was chairman of the full Committee on Interior and Insular Affairs, and I as such, backed the legislation which was passed in 1952. I was officially responsible.

In fact, the very fast of my efforts in Congress was to work for the meager appropriation to implement the salt-water bill we had just passed. After midnight of the last full day of the 82d Congress I remember saying to Congressman GEORGE MAHON and Congressman ALBERT THOMAS of Texas—what they already knew and had probably said to me—"The man or set of men who can treat sea water, or saline waters, effectively, and cheaply, will have performed a greater service for mankind than the man or set of men who split the atom." On the following Tuesday, July 8, 1952 I was thanked by Secretary Oscar Chapman for my help on his pet salt-water bill.

Pardon me, Judge, for monopolizing the time on this topic, but I know your interest in it and activities on it and commend them. What a sturdy "oak" this "acorn" has become in 10 years under the fostering care of several western Senators—not now a meager $100,000 appropriation and no pilot plant, as 10 years ago, but now four big pilot plants—located on Atlantic coast, gulf coast, Pacific coast and one in the interior, with millions to finance them, as should be. While this "acorn" through 10 years has become a "sturdy oak," it is still only a sapling. What is it destined to become in the future of our Nation?

Congressman MORRIS. How well satisfied are you with our work together in the 81st and 82d Congresses on the matters we have here briefly discussed?

Chairman MURDOCK. On these three items I am more than satisfied. To change the figure of speech from the acorn and the oak, I truly feel that you and I have presided at the laying of legislative "corner stones" of three magnificent superstructures, the building of which will require years and generations to finish. The designs, though dim, are subject to change, and improvement with greater knowledge and wisdom than we posssessed. These superstructures are certain to be useful to the fast growing State of Arizona and the Nation through a long future.

Peril in Connally Reservation Repeal

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, August 29, 1960

Mr. TALMADGE. Mr. President, one of the most penetrating analyses of the basic considerations involved in proposals to repeal the Connally reservation to the jurisdiction of the International Court of Justice is found in the column by the able and respected journalist, George E. Sokolsky, printed in today's issue of the Washington Post. Mr. Sokolsky correctly points up the vast differences between American judicial concepts and safeguards and those which prevail in other nations and convincingly concluded that to place the United States under the compulsory jurisdiction of the World Court would be to make of it "a perfect target for weak and backward nations." I ask unanimous consent, Mr. President, that the text of Mr. Sokolsky's column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 29, 1960]

THESE DAYS—THE CONNALLY RESERVATION

(By George E. Sokolsky)

When the house of delegates of the American Bar Association meets here this week, one of the questions before it will be the Connally reservation. Of course, the American Bar Association is not the Congress and its determination will be obiter dicta, but it will be influential. The lawyers will understand what a reservation means and that is more than many who favor its discontinuance grasp. Great Britain and France have stronger reservations than we have and there is no movement in those countries to revoke their reservations.

At issue is only one question: Does the World Court or the United States decide what is a domestic question within the United States? The continuance or repeal of the Connally reservation raises no other question. It does not withdraw our membership from the International Court of Justice. It does not lessen our interest in adjudicating international questions by juridical rather than military decision.

Those who favor the removal of the reservation believe that the peace of the world can best be assured if all nations accept the World Court as the final arbiter of international issues. If the world were different than it happens to be, this could be the best device for reducing or avoiding wars.

There are now 82 members of the World Court. The membership will increase. Many of the members represent Soviet states and other anti-Western bodies. There are 15 judges in this court, no two from any one country.

It will take many years before the Court can work out a system of international jurisprudence that will not be based on local custom and tradition, but on written legislation. Meanwhile, we must maintain this one little safeguard, the Connally reservation, to protect ourselves. The statute of the Court is a surprisingly ambiguous document. For instance, it deals with general principles of law as recognized by civilized nations.

What is a civilized nation? If Great Britain, the United States and Canada are civilized, are France, Soviet Russia and Saudi Arabia civilized? The systems of jurisprudence of these countries are not identical nor do they have a common source. Until there is an agreement as to which law is to prevail or if a new law is to prevail, how can any major nation leave its national security to a majority vote among representatives of nations who require obedience?

For instance, an American judge is not regarded as a traitor to his country if he renders a decision against it. Actually, in this country, we have a court of claims for precisely that purpose.

Imagine bringing before a court which makes decisions by a majority of those present, such a question as the seizure of American property in Cuba or the beating up of Canadian officials in the Congo. Only 14 nations have ever accepted the compulsory jurisdiction for a fixed period; without the Connally reservation, the United States would accept such compulsory jurisdiction for a fixed period on all subjects. The United States, as the leading country on earth, would be a perfect target for the weak and backward nations.

The real peril to the United States lies in the Asian-African bloc of nations which is playing for opportunity for growth. Out of 82 members, 29 are in the Asian-African bloc. It is expected that this number will increase to 43. The day is not far distant when such a group can be a majority in the United Nations and that a majority of the judges on the World Court be of the Asian-African group. Can we afford, in the present circumstances, to risk that?

A Monolog of Courage

EXTENSION OF REMARKS
OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks, I am proud to insert in the RECORD the amazing and inspiring story of Dwight D. Guilfoil, Jr., who was named Outstanding Physically Handicapped American of the Year. The article, entitled "A Monolog of Courage," contains the remarks of Mr. Mark Evans before the annual meeting of the President's Committee on Employment of the Physically Handicapped, held in Washington, D.C., on May 5 and 6, 1960:

A MONOLOG OF COURAGE

(Remarks of Mr. Mark Evans, vice president, Metropolitan Broadcasting Co., before the annual meeting of the President's Committee on Employment of the Physically Handicapped Washington, D.C., May 5 and 6, 1960)

"This is your life," says Ralph Edwards on television.

The life we're talking about today is not your life or my life. It is our life. It belongs to all of us here in this departmental auditorium; to all the men and women and children walking in the sunshine this May morning, or in school, or going about the housework, or doing whatever men and women and children happen to do before lunch on a morning in spring.

When a life gives us a little inspiration; when it gives us a little extra grace note of hope and courage to meet our daily problems; when it makes us feel just a little better—that life no longer is the exclusive property of one person, its owner.

It becomes a part of the public domain, as the lawyers say. It has no copyright. Copy from it freely, if its lesson will help you.

"This is your life."

It begins in Evanston, Ill., on November 19, 1922.

Or does it? When does life begin? With the first squawl from that tiny squirming red body in the hospital maternity ward? With the mixtures of genes and chromosomes? With parents? Grandparents? Adam and Eve?

What about the owner of this life? In his soul you could find traces of his father, his father's father. Both were heroes.

You can read about the father in the military archives of the United States; how he built bridges under scathing fire during the Meuse-Argonne battle. Do any of you remember how far back that was?

His father's father was a captain of the Iowa Militia in the Civil War. He was killed in action in the Battle of Vicksburg.

And this little fellow, the owner of the life we're looking at today, what about him?

He was an artist. Even as a little shaver, crayoning pictures on the living room wall, he was an artist. And when he got a little bigger, and turned to using paper and torn-apart shopping bags for his artistic endeavors, his folks would marvel—"This kid has talent."

But little shavers have a way of turning into big shavers, and pretty soon this fellow was in school. Lane Technical High School in Chicago, and then thoughts of college. Or for him, something better than college.

The Chicago Art Institute—a dignified building with high pillars, standing in front of Lake Michigan—offered him a scholarship. He studied art.

Two happy events after he graduated. One was that he landed a fine job as a commercial artist. The other was that he landed a charming young lady named Margaret Cullerton, and married her.

So life was sunny for this young man. A good paycheck. A loving wife to help him spend it. And just as a guarantee against having a few bucks left over before the next payday youngsters started to come.

But life wasn't so sunny on the other side of the world. Hitler and his sidekick Mussolini in Europe and Tojo out in the Pacific had some mighty ambitious plans to carve up this globe among themselves. Attack. Invasion. Destruction. Then, that bitter morning of December 7, 1941—Pearl Harbor. War.

Came September of 1942, and this young fellow kissed his wife and kiddies goodby and enlisted in the Army Air Force, a private.

"Off we go, into the wild blue yonder."

Yes, off he went into the skies, an aerial photographer. They didn't keep him a private for long. Three months in service, and they handed him three stripes and made him a sergeant.

And then, 1 year after his enlistment, it happened. He wasn't feeling well. He went to the hospital. The doctors didn't smile. Neither did they pull any punches. They let him have it straight. Spinal meningitis. And infantile paralysis.

Two years in the Army-Navy Hospital at Hot Springs, Ark. Two years of trying to get off your back, trying to pull yourself up from the bed with whatever muscles you have left; of trying to shove senseless legs from the bed to the wheelchair; of trying, trying, trying.

Then, one fine day the wheelchair rolled out the front door of the hospital. He was discharged. He was a paraplegic.

What to do? I'll tell you one thing he did not do—sit around, feeling sorry for himself. He tried freelancing as a commercial artist for a couple of years, but frankly, it wasn't easy. The competition is tough.

Then he put his talent as an artist in mothballs and took out another of his many skills—accounting. He joined the Veterans' Administration Insurance Office in Chicago as a fiscal accountant.

But this man didn't have his mind on his work. At least not all of it. He had an idea. A business of his own. A dream? Perhaps. Not just another business, but something special. A business that would give other handicapped people a break. People like himself.

He started talking it up. Here and there ears perked up. Before he knew it, he was the general of a very exclusive army of 60 other paraplegics, all of them bitten by his enthusiasms; all of them raring to go.

This was a "put up or shut up" proposition—and these men put up. Every penny they could scrape together. Every cent they could go in hock for.

And so it was born: Paraplegics Manufacturing Co.

A one-story factory building; its address, Franklin Park, Ill., a suburb of sprawling Chicago.

Our friend started out as treasurer of the company. Then executive vice president. Then they named him president and chairman of the board of directors.

Right from the beginning, he had some very definite ideas about how to run the plant. Listen:

"We decided from the start" (he's speaking now) "that we were not going to weave rugs or make baskets, or indulge in any of the usual sheltered workshop enterprises."

The firm held to it. Instead, it got into one of the roughest, toughest, most highly competitive areas imaginable. It became an assembler of mechanical, electrical, and electronic parts.

It would be nice to report that money poured in. It didn't. The young firm struggled. It lost ground a couple of years. Then, around 1955, things started to improve. For the last several years, the company has been in the black—way in the black. It has been paying dividends on its stock—but don't ask your broker for any. The employees hold most of it.

Volume of business? Now $750,000 a year. It might, it just might, hit a cool, even million bucks by the end of this year.

Secret of success? There's no secret. Our friend is quite insistent on that score. But pin him down and you'll get these answers:

Hustling does it. And high quality of workmanship. And doing a better job than your competitors. And paying your workers an honest wage, at least as high as they'd pull down elsewhere.

There's no other way, there's no shortcut to Shangri La—particularly for the handicapped. Here's our friend, speaking again:

"Handicapped workers can and must compete in today's mechanized industry—to bring themselves a full measure of self-respect and self-sufficiency."

Is this the whole story of why we are honoring a life here this morning? Far from it. This is just chapter 1. Let me give you the chapter headings of the rest of the book.

President and founder of the Valiant Development Association. This is a private housing development for the disabled. Or rather, it will be soon; it's still in the planning stage.

President of the Paralyzed Veterans of America—a small veterans' organization as veterans' organizations go; but a respected one. When it speaks—you listen.

You fathers who think you deserve a medal because you stay home Saturday afternoons to mind the baby while your wife goes shopping—you hear this:

The man whose life we're dissecting today has seven children, a motherless nephew and a mother-in-law. With that crowd in his house, he still managed to keep calm, collected, and pleasant enough to have been chosen Chicago Father of the Year, several years ago.

He was selected as "Mr. Illinois" in 1957.

He was named one of the outstanding young Chicagoans of 1957 by the Chicago Junior Chamber of Commerce.

The same year, the U.S. Junior Chamber of Commerce selected him as one of the 10 outstanding young men of the United States.

He received the "Human Relations Award" in 1958 from the Dale Carnegie Clubs International.

He was given certificates of merit by the Disabled American Veterans and the Veterans of Foreign Wars.

If he paid dues to all the organizations he belongs to, he wouldn't be able to buy shoes for the kids. Luckily, most of them don't charge dues: President's Committee on Employment of the Physically Handicapped; Illinois Governor's Committee on Employment of the Handicapped; Industrial Relations Committee of the Illinois Manufacturers Association; Elks; Air Force Association; National Rehabilitation Association; Illinois Commission To Investigate Hospitalization of Paraplegics; Knights of Columbus; Illinois Small Business Committee; many, many more.

This is the life of a man who has been living not for himself; not for his wife and seven kids and nephew and mother-in-law alone; not for the hundred-or-so handicapped men and women who now work at the Paraplegic Manufacturing Co.—but for all the handicapped of this world; for all, whom he considers his brothers and sisters.

This is the life of a man who seems to have been put on this globe to dispense hope to those who need it so much.

This is the life of a man, with all his courage and drive, has never forgotten that he is in the service of a Higher Being; the God of all mankind; a churchgoer each Sunday, even if he does have to take his children in two shifts, since they won't all fit in the car at once.

This is the life of a man who, appropriately and rightly and justly, has been named Handicapped American of the Year—and who is here today to receive his rightful honors.

This is your life, Dwight D. Guilfoil, Jr., Handicapped American of the Year. This is your life.

Cutting Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. KEATING. Mr. President, we are hearing more every day about juvenile delinquency. The United Nations has recently held a conference on the subject. On this subject as on few others, the United States and the Soviet delegate were able to agree on the need for action in eliminating the problem.

The town of Cohoes, N.Y., has devised one answer. A plan for making well-behaved youngsters honorary members of the police force has had the effect of cutting delinquency in half. The boys themselves welcome the sense of responsibility that their new position gives them, and as a result only three of those who joined have been forced to return their cards for bad behavior since this last January when the idea was put into effect.

In view of the importance of this subject and the success of the Cohoes scheme, I would like to take this opportunity to congratulate both the originators and the proud participants of this arrangement. I ask unanimous consent that an article entitled "Boy Police Plan Cuts Youth Crime in Half" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOY POLICE PLAN CUTS YOUTH CRIME IN HALF

COHOES, N.Y., August 24.—American cities with juvenile delinquency problems might do well to keep an eye on this town of 20,000 just outside Troy.

The police department here has cut the juvenile crime rate 50 percent since last January by making 1,000 boys honorary members of the force.

The youths, all between 8 and 16, are card-carrying members of the department's honorary junior juvenile bureau, the first of its kind in New York State.

The bureau was the idea of Lt. Michael F. Afinowicz, director of the police juvenile bureau, and it was put into operation in January in cooperation with the State youth commission.

SENSE OF DUTY

Since then juvenile crimes and nuisance complaints caused by the 8–16 age group have been reduced to just half of what they were in a comparative period last year. And the police have had practically no new troublemakers to deal with during this time.

The boys themselves are the most enthusiastic supporters of the plan. They are given a sense of duty and responsibility because the bureau operates completely under the honor system.

Almost all eligible youths in the city belong, so it's not a question of the bureau being for "informers" or "goody-goodies."

Membership in the bureau is not automatic, however. To join, a boy must fill out an application and the police check to see that he has not been in any serious trouble with the law.

The youth must continue to meet high standards of behavior and citizenship while he is a member. But the honor code substitutes for police checkup or surveillance.

Only 6 of the 1,000 members have been called in by the police since the bureau has been operating, and of these 3 were given back their cards when they promised to resume good behavior.

The department at first supplied free the boys' photographs which go on the cards, but so many have joined the bureau that they must now furnish their own.

Lieutenant Afinowicz ran the bureau as a one-man operation for a short time but he is now asisted by Detective Sgt. Michael Rogich and John J. Walsh, confidential investigator.

Lieutenant Afinowicz says: "Kids have a natural desire to belong, and it's our job to give them something to belong to which will have a beneficial result in character-building."

The Cohoes plan has been progressing so well that police officials from other cities have been studying it.

Construction Contractors' Difficulty in Obtaining Loans

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. AYRES. Mr. Speaker, the recent article appearing in the magazine Construction Equipment, a Conover-Mast publication, is a most interesting article regarding the construction industry outlining the difficulty contractors themselves often have in borrowing money.

Having worked very closely with the GI housing program I can appreciate how reluctant some bankers are to loan money at current interest rates.

One quote from the Conover-Mast publication says:

If the bankers would take the trouble to learn more about this dynamic industry, they would find that contractors are good risks.

Our GI's have proved to be good risks also. I hope the entire construction industry can be helped.

I direct your attention to the May issue of Construction Equipment magazine and the article on "How To Get Money." A copy of this can be obtained from Conover-Mast.

Progress in the Rural Area Development Program

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. SCOTT. Mr. President, at recent hearings upon the area assistance legislation, a statement was made that the President's veto message on earlier legislation, S. 722, completely eliminated rural area development.

In his testimony at that time, Secretary of Commerce Mueller offered to submit to the Banking and Currency Committee information on the rural area development program which is in effect by the Department of Agriculture.

As this information may not be brought to light, except in the committee's printed hearings, I ask unanimous consent to have inserted in the Appendix of the RECORD, the attached letter from Under Secretary of Agriculture, True D. Morse, in which is given a State by State breakdown of the excellent progress being made under this program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 22, 1960.

Hon. PAUL H. DOUGLAS,
Chairman, Subcommittee on Production and Stabilization, Senate Committee on Banking and Currency.

DEAR SENATOR DOUGLAS: In the hearing on the area assistance legislation, of August 18, 1960, over which you presided, certain questions were raised which need to be answered for the record.

Please insert this letter into the record of the hearing at the point where the rural development program was under active discussion.

You stated in the hearing "the rural development program is now carried out by the Department of Agriculture and contains no such provision and consists merely of advice, conversations."

The facts are that many State and Federal departments and agencies, along with many private organizations, are joined together in the rural development program. I refer you to the records of the two previous hearings, over which you presided, in which there is rather complete documentation.

You stated further, "But no loans to assist in the construction and operation of these plants." Please refer again to the records of your hearings. For example, the Small Business Administration is loaning many millions of dollars for just such purposes—and works actively as part of the rural development program.

Senator PROXMIRE said, "There are still 30 pilot counties. We have pleaded over and over again with the Department of Agriculture to step up this program. They have refused repeatedly."

The facts are there have been more than double that number of pilot counties and the work is spread well beyond 200 counties.

Rural development work is going forward in over 30 States and Puerto Rico.

Even though there has been much encouragement and helpful support by Members of Congress, regardless of political affiliation, we have been unable to get full appropriations of the small amounts requested

for the rural development program. This has impeded progress materially.

For the current fiscal year the Department of Agriculture requested $3 million increase for the rural development program. But the conference report of the Congress emphasized the use of the funds for increasing salaries instead of for the program.

Senator PROXMIRE asked for "specific instances"—"positive results."

Here are the facts supplied for the record, as you, Senator DOUGLAS, requested of Secretary Mueller.

It is just 5 years ago that the rural development program was making a modest start. Now, 5 years later, reports show the cumulative results. They are far beyond expectation.

Incomes of low income farm families are going up.

Poor rural nonfarm families are living better—they have higher income.

Entire underdeveloped areas are benefiting—with expanding incomes and more business activity.

There is a new and brighter outlook for the future of people and wide areas for which there was previously no special program—no direct attack on the lowest incomes.

The facts speak. Progress is being reported from all the 30 States and Puerto Rico where the rural development program has been underway. Here is what State, county, and other local leaders are saying at the end of 5 years:

Missouri: Dean J. H. Longwell, chairman of the State rural development committee, says, "Many other areas in Missouri are wanting to know how they can get started in a development program. There is no doubt but that this will be a great stabilizing influence as small farm operators are able to combine farm and nonfarm income, improve their level of living, and add stability to the economy of their community and the Nation as a whole.

"Within the next year, almost 1,000 new full-time jobs and over 300 part-time jobs, with an annual payroll of $2,750,000 will be available to the people in the six rural development counties."

Georgia: Secured the establishment or expansion of industry which provided employment for more than 820 people.

Organized a peach-packing plant which increased peach shipments from 83 cars annually to 390 cars.

Florida: In Suwannee County during the past year four new industries have begun operations and the plant for a fifth is under construction. These employ over 200 workers with annual payrolls well in excess of half a million dollars.

Tennessee: Anyone wanting a boost in their faith in people should visit any of the five Tennessee counties in the rural development program.

New industries are going in, new businesses springing up. Agriculture is bringing in new money; there are new schools and better homes; new health centers, municipal water systems, library service, telephone systems.

In the past year alone new and expanded industry employed an additional 400 people with an estimated payroll of $1 million.

Maine: The total additional annual income realized by Washington County people, resulting directly or indirectly from rural development program activities or emphasis, has been conservatively estimated at $1.5 million.

Illinois: The idea that the program can be used to develop all the resources in the county has begun to catch on with the leaders. A quarter-of-a-million-dollar woodchip mill has been established. Increased off-farm income is beginning to be noted.

Indiana: Has eight pilot counties. Such convincing results come from the original pilot county, Perry, that steps have been taken to use the rural development approach all through southern Indiana where people need more income and greater opportunities.

New Mexico: The rural development program is no longer in the infant stage. It now encompasses 14 counties which cover approximately one-half of the land area of the State.

Arkansas: Batesville is the center of a rural area development program in the Ozark Mountain area. Early this year the area had the opportunity to get a rubber plant. Governor Faubus convened the State legislature and enabling legislation was passed so that areas could meet financial requirements for new industries.

Madison County has several new and expanded industrial enterprises, including a garment factory employing 150 people.

Washington: Stevens County has a new junior college along with new industries and more tourist business as a result of the rural development program.

Nevada: Lincoln County has a new plant under construction that will employ 75 workers.

Mississippi: Tippah County has a number of new industries.

Wisconsin: Price County was among the first to report more industry and off-farm employment.

The foregoing are but a few examples of new industries and additional sources of income for low income people in low income areas, as a result of the rural development program.

The Canadian Government through a Senate committee of its Parliament sent economists and other senior officials to study our rural development results. They investigated the work in seven widely separated States: Kentucky, Wisconsin, Minnesota, Michigan, Washington, Montana, and Maine.

They were convinced "The program has galvanized institutions and people into action."

The Honorable Douglas S. Harkness, Canadian Minister of Agriculture, early this year stated that "A rural development, or redevelopment program somewhat similar to the one you are carrying on in the United States" is one of the parts of the agricultural program for Canada.

The Organization for European Economic Cooperation requested that a U.S. representative come to their meeting in Paris, June 1959, to report on progress of the rural development program and to answer questions. Their response was favorable. Their report said, "Prospects of a better livelihood for low income farmers must depend upon an improvement of the general economic conditions in the area."

People from some 30 foreign countries have visited Butler County, Ky., to see the amazing progress. Foreign visitors study results in other counties too.

Senator KENNEDY, in his Des Moines, Iowa, address of August 21, endorsed the approach of the rural development program that has been underway for the past 5 years. One of the four points for a farm program he stated as "a long-range program for low-income farms, credit, research, and new rural industries."

The rural development program is much broader and more inclusive than "credit, research, and new rural industries," in getting at the problems of low income and general welfare of people in low income rural areas.

As you know, the following Federal departments and agencies work together on the rural development program under a directive of the President's Executive Order 10847:

Department of the Interior.
Department of Agriculture.
Department of Commerce.
Department of Labor.
Department of Health, Education, and Welfare.
Small Business Administration.
Council of Economic Advisers.

The problems of low income rural areas are being attacked broadly—income—both farm and nonfarm, such as income from businesses and industries—credit, education, health, welfare, research, and total resource development.

The Small Business Administration is making large numbers of loans to businesses and industries in low income rural areas.

In fact, with the thousands of local and State development corporations that have loan funds, plus the lending authority of the Small Business Administration, I know of no area that has had the opportunity to get a sound new industry that has not been able to work out the financing.

The great contribution that SBA can and is making toward helping such rural areas, with loans and related services, is well set forth in the address of the Honorable Philip McCallum, Administrator of the Small Business Administration, of August 3, 1960.

Sincerely,

TRUE D. MORSE,
Under Secretary of Agriculture, and Chairman, Committee for Rural Development Program.

What's Happened? They Don't Hate Us—They Love Us

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. DAGUE. Mr. Speaker, the exclamation with which I have captioned these remarks was reportedly made by a woman spectator at the opening of the Olympic games in Rome this week.

At the opening ceremonies each delegation marched on the field behind their national colors and when the U.S. group moved out with Old Glory borne aloft by Rafer L. Johnson—the first Negro ever to carry the American flag in an Olympic parade—the crowd literally went wild. Cheers followed cheers and, as our reporter implied in his article, the collapse of the summit conference, the Powers trial, the cataract of Communist abuse all seemed to fade into insignificance. Literally, the people—the ordinary folks like you and me—are not mad at Uncle Sam and as DICK NIXON learned in Warsaw there is a wealth of good feeling for the United States. And this fact was further emphasized at the Olympic spectacle when when the Russian athletes marched on the field and were given polite but a very minimum of applause.

It seems that the time is here when political candidates and partisan politicians should stop trying to downgrade the United States and refrain from trying to make it appear that we are hated everywhere overseas. That idea is exactly what Communists are trying to promote both here and abroad and it certainly does us no credit when in seeking political advantage some of our people brand our Nation as a second-rate

power and minimize the influence that both President Eisenhower and Vice President NIXON have had in promoting good will around the world.

Styles Bridges: The Man Who Works for America

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. COTTON. Mr. President, James P. Lynch, a well known and able editor and columnist in New Hampshire, wrote an article entitled "Styles Bridges: The Man Who Works for America," which was published in the Exeter Newsletter, Exeter, N.H.

I take pleasure in asking that it be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STYLES BRIDGES: THE MAN WHO WORKS FOR AMERICA

(By James P. Lynch)

STYLES BRIDGES—the man who works for America. A fearless leader and a couragerous statesman. Brief but factual, the senior Senator from New Hampshire is a living symbol of a dedicated public servant.

His opponents fear him but they respect him. They realize his fight is in the interest of the American people. His greatness has been earned by his courageous leadership.

There is no compromise between right and wrong with him. Self interest does not take precedence over that which is good for the country.

He is an ardent fighter for legislation that strengthens the Nation in peace as well as war. His record is secondary to none.

FORTUNATE CIRCUMSTANCES

New Hampshire indeed is fortunate to have a man of his stature in the United States Senate. More important, the people of America and the freeworld are assured that in Senator BRIDGES they have a valiant crusader for their rights.

To many in New Hampshire, as well as the Nation, the name STYLES BRIDGES is synonymous with leadership. Yet his foes would like to erase this statesman's contribution to the free world by defeating him at the polls this year.

Let's not take the election for granted. Even with this outstanding Senator with years of service to the public in our midst, there are those who would prefer to replace him with inexperienced candidates.

The motive certainly is not for the betterment of the State or the Nation. Surely no one can convincingly prove that the defeat of the senior Senator would give this State better representation. Quite to the contrary.

STRICTLY POLITICAL

Their plan is strictly political and indeed quite harmful. There is no choice in the senatorial race this year. Replacing BRIDGES would be the most dangerous act ever committed by the electorate in the State.

A victory for BRIDGES' foes would be hailed in the Kremlin not because his opponents sympathize with the Soviet but because a defeat of the senior Senator would erase the strongest voice against the Communists in the U.S. Senate.

STRONG VOICE

No man has ever raised his voice or acted more forcefully than BRIDGES in repudiating the bloodthirsty Kremlin murderers. His voice has penetrated throughout the world and his actions are largely responsible for the world leadership in military power which this Nation enjoys.

While the voice of the opposition has been decrying BRIDGES' exemplary and bold leadership, the senior Senator has been exerting every power at his command to fight that we may enjoy freedom.

IN DUE TIME

History will recognize in due time the contribution he has made to world leadership, but the voters must not overlook the fact that they, too, are making history by keeping STYLES BRIDGES in the U.S. Senate.

History is not fiction but facts, and it is being written today and every day. There is no halt or recess. It continues around the clock. Surely this is no time to attempt to stop the clock by sacrificing leadership for inexperience.

Our world conditions make it imperative that the Nation has the strongest statesmen serving in public office. Men who have been proven through experience; men who have a record for strength and courage should be retained in Washington. Surely the senior Senator has no equal for his outstanding capabilities.

Many of Senator STYLES BRIDGES' great contributions are known to the electorate here and elsewhere. He has frequently been the subject of national recognition for his devotedness to public service.

UNTOLD CONTRIBUTIONS

Yet many phases of his public service are filed away as classified material. This concerns mainly his untiring fight to make certain that this Nation's military strength has no equal.

He has fought valiantly down through the years for air and sea power. In this strategically located state, results of his never-ending battle to keep the Nation strong are vividly demonstrated.

The Senator does not look for credit for his fight. He looks for action. He has achieved results down through the years solely because he placed the security of his Nation first.

MAN OF FORESIGHT

In short, Senator STYLES BRIDGES is a man of foresight. He has proven this time and again. He has never been fooled by false promises from the Kremlin nor will he be caught in their snare.

While some preach appeasement, his uppermost thought has always been strength. He has never been placed in the position of apologizing for this stand as history has proven he has been right on all occasions.

He does not waiver or falter. His position is firm as was evidenced the time Khrushchev came to this country. His refusal to participate in welcoming the Russian illustrated he is a man of wise judgment.

AN ASSURANCE

Senator BRIDGES knows the problems of the Nation and the world. More important, his firm convictions are an assurance that he will continue to fight courageously and fearlessly to make certain that this country will not yield to the opportunists and the appeasers. There is no justification to alter our course.

BRIDGES' answer as to how to face the continuous threat of the Communists was illustrated where it counts, not just in words. He has been a leader in the program for Polaris missile submarines as the record will show.

The stepped-up battle for the B–70 program of the Air Force was led by Senator BRIDGES and in due time, when credit is being given, BRIDGES will be entitled to the greatest recognition. BRIDGES was determined to get the B–70 program underway and this determination was backed by quick and valiant action on his part which spearheaded the successful fight.

The Senator does not boast of his contributions to military might for he realizes that he is battling for all the free peoples of the world.

INTEREST IN MEN IN SERVICE

His interest in the military is not confined exclusively to the weapon and its conveyance. He takes a great interest in making certain that the men in uniform are the best trained and the best equipped in the world. He is concerned with their safety and their well-being.

An example is the interest he has shown for the alert forces who man the bombers and their facilities. A man with a heart, he wants these men to have good quarters while they are serving on alert duties.

His recent successful fight to get the Defense Department to recognize the need for air conditioning the alert quarters at Pease is an illustration of his ardent desire to help the crews who are dedicated to the cause of freedom.

This air conditioning is not a luxury but a dire necessity. As a matter of fact, the Senator has constantly fought for what is needed but frowns on the luxuries.

WANTS THE FINEST

The interest in the B–70 program is typical of his years of interest in having the finest in the Air Force. Most people are well aware of his hard-fought battle to get an installation at Portsmouth. He was determined to win this fight when it was proven that it was a necessity.

It was not surprising that the base was selected as a Strategic Air Command installation. This command is acclaimed as our greatest deterrent to war and daily proves that it has no equal.

REFUSED TO BE PRESSURED

A leader lacking foresight would have yielded to the pressures exerted when a site for this base was being considered. The senior Senator refused to be pressured.

Again, time proved him to be right as it has done on so many previous occasions. BRIDGES, though, is not looking for laurels on the outcome as he prefers that the men and their mission at Pease be given all the accolades.

The senior Senator does not attempt to rest on past accomplishments but is one of the most diligent Members of the U.S. Senate. There is no doubt of his great leadership for he has proven down through the years that regardless of whether the administration is of Republican or Democratic Party he will fight for the cause of the people of the Nation.

NO OTHER INTEREST

He cannot be badgered or pressured by political chieftains. Although many have wanted him to seek higher offices in government he has always felt that the greatest reward was being elected as U.S. Senator from New Hampshire.

He has never failed to represent his State in the best possible manner yet he does not attempt to restrict this matter on a sectional basis. He has always made it clear that he is a Senator of the United States and thus he acts for the betterment of the Nation.

CONVENTION RECOGNITION

BRIDGES does not attempt to push himself to the forefront as was just recently evidenced at the Republican convention in Chicago. Although he played one of the most important roles at the affair he avoided much of the publicity.

His primary objective was to do what he personally felt was in the interest of the pub-

lic. Thus when it became to a discussion on selecting a candidate for the Vice Presidency, party leaders relied heavily on the opinion of Senator BRIDGES.

He was constantly in conference with the top leaders including President Eisenhower and Vice President NIXON His quarters at the Sheraton-Blackstone was the meeting place of many of the Nation's leading Republicans.

PRESENT CAMPAIGN

As a veteran leader the senior Senator is not taking this campaign lightly. He fully realizes the hard battle the GOP faces and he will campaign vigorously.

His fight, though, is not primarily for STYLES BRIDGES. He is campaigning in the interest of the American people for assuredly the BRIDGES' program down through the years has proven to be such.

STYLES BRIDGES deserves another term more than any man in the U.S. Senate. More important though, the people of the United States are deserving of this recognition—a recognition which can be bestowed only by the voters of New Hampshire.

Indeed STYLES BRIDGES is a dedicated man. He works for America.

Conference Report on H.R. 12619

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

The House had under consideration the conference report on H.R. 12619 making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961.

Mr. O'HARA of Illinois. Mr. Speaker, as chairman of the African Subcommittee I am especially pleased that the contingency fund has been increased to meet the situations as they may arise in the unfolding of independence on the continent of Africa. Our stake in Africa is large because as new sovereign nations emerge they become part of the world to which we belong. It is a world of government for, by, and of the people. It is a world in which the dignity of man and the faith in an Almighty that looks over all men, and all races, go hand in hand.

We are glad that the long reign of colonialism is over, and we take satisfaction in the thought that our country, our Union of States that once were colonies, is a pattern. What is transpiring in Africa today is a reflection in the 20th century of what transpired in our land when we were experiencing birth pains as we emerged from colonialism to sovereignty.

I have never questioned the right or the propriety of any Member of the Congress speaking his mind. Inded, it has seemed to me that in the exercise of that right was the very strength of our representative Government. But I do hope that the peoples in other lands will understand as well as do we in the Congress and, in large part, the American people. Yet I can recall occasions when some Member of the House of Commons in England, exercising his right to speak his mind and of course speaking only for himself, said something uncomplimentary about the United States and the American people did not like it. But the repercussions were not too harmful to the amiable relationships of two friendly countries because we knew that, in the final analysis, the legislator that reflected upon us was just an individual speaking for himself.

I do not criticize, and certainly I am in no position or in the frame of mind to set myself up as censor over another Members' utterances, but I do regret when any Member of the Congress in either body unnecessarily injects the personalities of friendly governments in the heated debates of the Congress. We are too far away and our information is too scant for us to attempt appraisements. Every new country must go through the experience of birth pains. The leaders in those new countries will rise and fall and new leaders will rise and fall according to the appraisement of the peoples of their own respectvie countries. It has been that way in our United States, and so it will continue as long as we have free and independent government. The discussion in the Congress of foreign personalities I appreciate is not so intended, but too often it is interpreted in the propaganda of the enslaved world as interference in the internal affairs of other countries.

As chairman of the African Subcommittee I have had the privilege and the pleasure of meeting many African leaders, and I can truthfully say that without an exception they have impressed me as being dedicated to their tasks. This does not mean that I would approve of everything that they did or that I would approve of everything that they said. Men and women, being human, are not infallible, and this is true in our own country as well as in the new countries of Africa, but the best check on human weaknesses we have found in our own experience comes from the people themselves passing judgment on their own leaders and their own governments. I have said on other occasions, and I repeat it now because it is so important for our people to remember, that the good neighbor in any community is not the one who goes into his neighbor's home to scold but it is the neighbor who runs his own home so happily that he sets a pattern for neighborly deportment that becomes contagious throughout the entire neighborhood.

I am content that the peoples of Africa should work out their own national destiny. They have taken upon themselves the responsibilities of free government, and I think they have taken on those responsibilities with the same spirit of dedication as moved our forefathers, and I have the faith that they will not fail. I shall not attempt to sit in judgment on the qualifications of their leaders. I would not wish them to project themselves into the Second Congressional District of Illinois and to seek to pass upon my qualifications as the representative of my own neighbors. To me the comparison is irrefutable. If we respect the sovereignty of another friendly nation we must show the same respect to the people who select the leaders and who in a democratic world are alone responsible for the governments they place in office.

Mr. Speaker, I speak now for the Subcommittee on Africa. We have faith in Africa's tomorrow. We have faith in the peoples of Africa. We appreciate that the problems of the present, the problems that always will attend the leaving behind of one status quo to gain a higher plateau, we appreciate that these problems will be many and will be trying, but we do have the faith that the problems one by one will be met and will be conquered, and that the tomorrow of Africa under government of, for, and by the people will be as bright as the sunshine itself.

People Talk Peace in Every Land

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. WILEY. Mr. President, as a leader of the free world—attempting to pool its resources to withstand the pressures of communism and to promote progress among its people—it becomes increasingly important that we understand and become knowledgeable of the thinking of people elsewhere in the world.

There are, of course, a great many reasons why this should be done. Major among these is to assure that the policies determining our relationships with other nations—though well intentioned—do not offend, rather than create friendship and cooperation.

Recently, Mr. Frank Douglas, a high school teacher at Janesville, Wis., traveled nearly 40,000 miles in 65 days, around the world. The venture is reflective of many of our citizens who—as they can—are attempting to better understand the climate of global thinking. A major conclusion of Mr. Douglas' travels, however, confirms other reports that—despite world threats of war and serious domestic problems in a great many lands—the people universally want and talk peace.

Recently, the Janesville Gazette published an article by Peg O'Brien reviewing the itinerary of Mr. Douglas. Reflecting an interprising effort by this Wisconsin high school teacher to gain a better understanding of the world about us, I ask unanimous consent to have excerpts of the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Gainesville Daily Gazette, Aug., 26, 1960]

PEOPLE TALK PEACE IN EVERY LAND—TEACHER AT JHS ENDS GLOBAL TOUR

(By Peg O'Brien)

Around the world in 65 days—transported 34,000 miles by plane and 4,000 miles by bus, train, boat, camel, and ricksha—Frank Douglas, 326 North Terrace Street, took a re-

fresher for teaching world geography which is a new subject in Janesville Senior High School curriculum this fall. He taught world geography at Deerfield High School for 7 years before he became a member of the local high school faculty.

His previous travels over the North American continent, World War II service in France, Belgium, and Germany, Europe revisited in 1952, a tour of Hawaii in 1953—and now the Daggett junket from which he returned last week—have convinced him that regardless of diverse cultures people have mutual goals—"health, peace, and some degree of happiness."

Forty enplaned June 17 with Prof. Clay Daggett of Whitewater State College. The educational tour got off to an appropriate start with the group attending United Nations sessions in New York before flying the Atlantic and then across the Baltic Sea to Stockholm, Sweden.

RESTRICTIONS ON PHOTOS

In Helsinki, Finland, 10 of the tourists left the group for the journey to Russia. Frank Douglas was among those who flew to Leningrad with Dr. Henry De Wind, Whitewater history professor.

They had a Russian guide for daytime sightseeing, but at night were able to roam the streets at will. Picturetaking was prohibited at airports, railroad stations, or from planes. They flew in a TU-104 with 110 aboard. Fare for 800 miles was $13 in American currency.

"The Russians were curious about the Americans," said Douglas, "being particularly interested in our clothing. Some men offered to pay up to $5 for American-made sport shirts, which had been purchased here for $2.95.

"Russian children, many speaking English, tried to trade us Lenin medals for chewing gum. While most of the Russians were wearing poorly made clothes, the girl guide in Leningrad was dressed like a Fifth Avenue model."

They attended the ballet in Moscow and on June 21 joined the celebration on the Neva River where at 1 a.m. the sun was still on the horizon. While awaiting the fireworks demonstration the Americans spotted a group of teenagers barreling down the street singing "Rock Around the Clock."

THRILLED BY ATHENS

En route to Africa the group stopped in Greece, where they were thrilled with the ancient buildings of Athens and the beautiful seacoast. The Holy Land and Egypt also were on the itinerary.

In Uganda they saw history in the making, meeting up with Belgians fleeing from the troubled Congo to Mweya Lodge. The lodge, in Queen Elizabeth National Park, is an exotic spot where they saw native boys chasing the elephants off the premises with spears and were awakened at 7 a.m. by servants pulling back the mosquito netting on their beds and greeting them with "Your tea, Sir."

While ensconced in a lovely spot on Lakes George and Edward in southwest Uganda they took game and boat runs to see big game and bush animals and fantastically colored tropical birds.

Walking by the Stanley Hotel in the modern city of Nairobi, Kenya, Mr. Douglas saw a man who looked vaguely familiar. He asked him if he was a Maryknoll Father and learned that he was indeed one of the priests who appeared in "Twelve Tribes of Tanganyika," the film which was narrated by Perry Como. One of Mr. Douglas' students, Jim Tortorici, had brought the film to high school when the class was doing a unit study on Africa.

While in New Delhi the Daggett travelers were invited to the palace to have tea with the President, Dr. Prasad. The President's message for his guests to take back to America was "Tell your young people to become good citizens of your community, of your country, and of the world, and in that way we will eventually have peace."

IMPRESSED BY CEYLON

They found Ceylon truly the "pearl of the Orient" for it has wonderful climate and exquisite topography. They took a drive up Kandy Mountains where they viewed lovely waterfalls and exotic gardens.

"Bangkok, peopled mostly by Siamese and Chinese is the 'Venice of the East,'" said Mr. Douglas. "The floating markets which ply their trade over many canals, the royal barges festooned in gold leaf and studded with semiprecious stones, and the king's palace are out of this world sights."

In Thailand they were introduced to highly stylized native dances, and in Hong Kong they made for the shops where everybody "went crazy buying and ordering custom-made dresses and shirts." A grateful Hong Kong merchant invited them to a 14-course dinner, eaten with chopsticks.

Hong Kong, great center of world commerce in the Far East in a potpourri of many cultures. In the last 3 years more than 1 million refugees have come in from Red China. The British are trying to take care of them by building four-story apartment buildings on the mountainside. One room is allotted to each family.

PHILIPPINES AND JAPAN

On a brief tour of the Philippines the travelers noted the great progress made in rebuilding since the war.

In Japan the Daggett travelers were the first Americans to occupy a de luxe inn in Beppu Bay on the west side of the Inland Sea. Here they slept on floor pads covered with silk sheets and were given "oversolicitous" attention by Japanese maids. They took a boat ride through the Inland Sea, flew over Mount Fuji, and inspected the gardens gleaning the secret of the Japanese gardener—simplicity. While in Japan 9 days they saw highly industrialized cities, ultramodern buildings, and the cutest little kids in all the world.

From Hawaii they took off for the mainland after island hopping to Formosa and Okinawa.

Former Janesville residents Viola Howard, Chicago, and Betty Bull, Joliet, Ill., were among the 40 on the tour.

Small Business Assistance Act of 1960

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. DONOHUE. Mr. Speaker, it has been always an unquestioned American tradition that this Government shall aid, counsel, assist, and protect the interests of small business in order to preserve our democratic system of free competitive enterprise.

That is why I advocated and voted for the passage of the original legislation establishing a permanent, independent Small Business Administration agency. Recognizing the importance of our small businesses in defense production efforts and the national economy I have consistently urged every reasonable Federal assistance and guidance to them throughout my congressional service.

Over these past 2 years I regret to say the fate and the fare of American small business has discouragingly declined, while the Congress concentrated attention largely upon international issues and domestic security. In partial recognition of this neglect this body passed, last June, approved H.R. 11207, designed to increase the Small Business Administration's revolving fund for its regular loan program, to provide for a wider participation by small business concerns in the subcontracting phase of Government procurement and to authorize the agency to set up a small business subcontracting program.

While this bill does not offer the complete assistance a good many of us have advocated it does contain elements of material encouragement and aid desperately needed by small business to survive.

Mr. Speaker, the House-passed measure, together with a Senate-passed version is now in conference. I most earnestly hope the leadership on both sides, in both Chambers, will use their combined influence in having the conferees reach sensible agreement and report the bill back for congressional action before adjournment.

I consider it my conscientious duty to speak here today for the small business people of my own district and the Nation. The only voice they have in Federal legislation is ours and we will be neglecting our obligation if we fail to grant this limited assistance to this patriotic segment of our economy.

Our American Flag—Beacon of Hope

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an address delivered on June 14, 1960, by Daniel Edward Lambert of Orrington, Maine. Mr. Lambert is the district commander of the fifth district of the American Legion, Department of Maine, and his address was presented before the annual Flag Day program of the Bangor Lodge, Elks Club, Bangor, Maine.

Commander Lambert is a four-time wounded veteran of the famed "Darby's Rangers" of World War II, and he directs the American Legion activity in the Penobscot, Hancock, and Piscataquis County areas.

He is a past State chaplain of the Maine Disabled American Veterans, and a member of the Norman N. Dow Post 1761, VFW of Bangor, and the Daniel E. Geagan Post No. 98, American Legion of Brewer. Mr. Lambert is active in the social and fraternal groups in Maine, and he is also a member of the National Ranger Battalions Association and the 1st Armored Division Association.

Mr. Lambert's address entitled "Our American Flag—Beacon of Hope" follows:

My fellow Americans, heraldry is as old as the human race. The carrying of banners has been the habit of both the barbarian and the civilized in all ages. Before we became a nation, our land knew many flags. Columbus carried a Spanish flag across the seas. The Pilgrims carried the flag of England. Native Indian tribes had their totems and other insignia. Immigrants of every nationality and race, in seeking a new allegiance, brought their symbols of loyalty to our shores. During the period of our growth, we have embraced parts of the banners of many countries.

At once, the U.S. flag is a history—a declaration—and a prophecy. It is unique in the deep and noble significance of its message to the entire world. It is a message of national independence, of individual liberty, of idealism, of patriotism. To 177 million Americans it is a mosaic ribbon of beauty and a beacon of hope.

It represents America as it was at its birth and as it is today—a symbol of freedom in a world besieged by the new slavery of communism.

Flag Day, June 14, is a time for us to reflect on our national emblem and its glorious history. Our banner, an honest and righteous one, is the third oldest national flag in the world—older than the Union Jack of Britain or the Tricolor of France.

The U.S. flag was first authorized by Congress on June 14, 1777. This date is now observed as Flag Day throughout America. The original resolution adopted by the Continental Congress in Philadelphia read:

"*Resolved*, That the flag of the United States be 13 stripes, alternate red and white, that the union be 13 stars, white in a blue field, representing a new constellation."

According to many historians, the banner received its baptism of fire at Fort Schuyler (formerly Fort Stanwix) on August 3, 1777, which is presently the site of Rome, N.Y. Supposedly, the officers of the garrison hastily put together a banner using a blue cloak, red petticoat, and a white ammunition shirt. This was flown the following morning in the face of the British and Indian besiegers.

The story of Betsy Ross and her connection with the first American flag has become as traditional in the minds of our American youth as the legend of George Washington and the chopping down of his father's cherry tree. Unfortunately, neither story can be proved as having actually taken place.

According to legend handed down by word-of-mouth, it was in June 1776 that a committee composed of George Washington, Robert Morris, and George Ross called upon Betsy Ross, a young Philadelphia widow who supported herself and her family by her needlework. They described a flag they had in mind and asked Mrs. Ross if she could make one for them. She agreed. This first flag is said to have been made almost a full year before the congressional resolution of June 14, 1777.

If the story cannot be proved to the satisfaction of the historians, neither can it be conclusively disproved. For this very reason it will probably continue to be an essential part of our American tradition.

The colors of our flag may be thus explained:

The red is for valor, zeal, and fervency.

The white is for hope, purity, cleanliness of life, and rectitude of conduct.

The blue, the color of heaven, is for reverence to God, loyalty, sincerity, justice, and truth.

The star is a symbol of dominion and sovereignty, as well as lofty aspirations.

The constellation of the stars within the union (one for each State) is emblematic of our Federal Constitution, which reserves to the States their individual soverignty, except as to rights delegated by them to the Federal Government.

The original 13 stars and 13 stripes were intended, of course, to represent the Thirteen Original Colonies. In 1795, because of America's expanding frontier, two additional stars and two more stripes were added, representing Vermont and Kentucky, which had been admitted to the Union.

It was a flag of 15 stars and 15 stripes, that withstood enemy bombardment at Fort McHenry, Md., in 1814, and inspired Francis Scott Key to write the immortal "Star-Spangled Banner."

Later, when other States were added to the Union, Congress feeling that more stripes would blur the basic design, returned to the original 13 red and white stripes. Since 1818, the admission of each new State has added one more star to our flag. The growing pattern of stars reflects the growing dimensions of our country, as the 13 stripes still reflect the constant strength of our country's tradition.

With the admission of Alaska to statehood on January 3, 1959, a new 49-star flag made its appearance on July 4, 1959. On August 21, 1959, Hawaii was admitted to the Union as the 50th State. The flag which rose over 13 States along the Atlantic seaboard with a population of some 3 million now flies over 50 States, extending across the continent, and over great expanses of water.

On July 4, 1960, the 184th birthday of our country, a new 50-star flag will become the official flag of the United States of America.

Many times we refer to our flag as Old Glory. This name was given to our national banner on August 10, 1831, by Capt. William Driver. History tells us Captain Driver who moved to Nashville just before the Civil War, took with him the flag from the brig *Charles Dogett* that he had commanded. It was his flag which eventually was raised over the capitol there. He is credited with saying "I have always said if I could see it float over that capitol, I should have lived long enough; now Old Glory is up there gentlemen, and I am ready to die."

Old Glory has seen a wilderness welded into a Nation, one and inseparable, united in its spirit of liberty and its ideals of human freedom—not the freedom of unfestraint or the liberty of license, but an ideal of equal opportunity for life, liberty, and the pursuit of happiness.

Our flag might be interpreted in many ways:

It is the roar of big city traffic in New York and Chicago, and the hissing of molten steel in Gary, Ind.; it is the soda fountain of the neighborhood drugstore or the filling station on the corner; it is the grandeur of the West and the Grand Canyon; it is a fisherman casting a fly, or a farmer plowing his field; it is listening to your favorite radio program or watching a television show.

It is the right to freedom of speech and the freedom of the press; it is the right to feel secure in your home and possessions. It is the protection afforded us by the Constitution.

It is a group of schoolchildren reciting:

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands; one nation under God, indivisible, with liberty and justice for all."

From the lofty pinnacle of American idealism, our flag is truly a beacon of enduring hope that floats over an essemblage of people from every racial stock of the earth. Its spirit is the spirit of America, and its history is the history of the American people. We are the weavers of our flag and everything that it stands for.

Every member of the American Legion—every veteran—realizes just what love of God and country and respect for the flag mean. Legionnaires consider it their duty to see that the people in their community know how to respect it and how to display it.

In conclusion I would like to remind you of these words by President Woodrow Wilson who said:

"I always have the same thought when I look at the flag of the United States for I know something of the struggle of mankind for liberty. When I look at that flag it seems to me as if the white stripes were strips of parchment upon which are written the rights of man, and the red stripes the streams of blood by which those rights have been made good.

"Then in the little blue firmament in the corner have swung out the stars of the States of the American Union.

"So it is, as it were, a sort of floating charter that has come down to us from Runnymede, when men said: 'We will not have masters; we will be a people and we will seek our own liberty.'"

Right-To-Work States Outgrow the Others

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 29, 1960

Mr. THURMOND. Mr. President, the August 28, 1960, issue of the Spartanburg (S.C.) Herald-Journal contained an excellent editorial entitled "Right-To-Work States Outgrow the Others." This editorial points out that workers in States with right-to-work laws fared better during the 5-year period of 1953–58 than workers in States which have no right-to-work laws.

I ask unanimous consent that this editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT-TO-WORK STATES OUTGROW THE OTHERS

State right-to-work laws are a top-priority target of big labor bosses. The statutes exist in 19 States, principally in the South and border areas.

The objection of big union leaders is that the laws won't allow them to throw a worker off his job for refusing to join their organizations. Compulsory membership is a very effective weapon to enforce big labor's will over a worker or a community.

In 1958, right-to-work proposals were fought out in direct elections in six States. The law won only in Kansas. It lost in California, Colorado, Ohio, Idaho and Washington.

The World Almanac says that the Teamsters alone spent $800,000 to defeat the proposal. In California, it was estimated that unions poured out $1,500,000 to beat the law.

It's no wonder the bosses were elated that Walter Reuther and company were able to get the Democratic platform to declare: "We will repeal the authorization for 'right-to-work' laws."

The intent is to deprive States of their privilege of passing these laws to protect their workers from terror tactics of union organizers.

What has been the experience of States which have adopted right-to-work laws? Have they progressed or faltered in their economic development?

Statistics are available for the 5-year period between 1953 and 1958.

The number of jobs available to workers increased 9.62 percent in those States having the law.

Job opportunities in the other States decreased .35 percent during the same period.

Of course, it might be said that States which have adopted the law possess a general progressiveness not common with the others. That is true. This particular factor is only one of many which produce progress.

But what about wages?

During the same 5-year period, the increase in workers' pay for right-to-work States averaged 25 percent. For those which allow enforced union membership, the increase was 21.5 percent.

Big union leaders have no love for the South. Economic expansion here is a real threat to their domination. Right now, Federal oppression of States rights in the field of labor relations is their best hope of conquering this last stronghold against them.

There is a great deal more at stake in national politics than civil rights, party label, committee chairmanships, and the individual who will be our next President.

Korea's New Reform Administration Speeds a National Reconstruction Program for All the People

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BROYHILL. Mr. Speaker, Mr. John Van Ginhoven, a constituent of mine, has just returned from one of his many trips to South Korea. He has a very interesting report to make on the programs concerning the new administration there. Under leave to extend my remarks, I am including a portion of this report, which I believe will be of interest to the membership:

KOREA'S NEW REFORM ADMINISTRATION SPEEDS A NATIONAL RECONSTRUCTION PROGRAM FOR ALL THE PEOPLE

The April revolution and recent elections have brought to Korea a long-needed new era of honesty and democratic government, replacing the incompetent and corrupt former administration.

The Korean Government and the people recognize all of their responsibilities to strengthen democracy and oppose communism, typified by President Eisenhower's recent visit to Korea when about two million persons welcomed him as their friend from the United States. Thus, the new government plans a reconstruction and development program which will ensure the country's sovereignty and economic growth. The planned program will embrace the nation's material life from electric power expansion, to agriculture, to industrial growth of her basic industries. This will be accomplished by a self-imposed austerity and America's friendly assistance.

Under the direction and forceful leadership of the Ministry of Reconstruction and Development, industrial and technical projects are being planned in all areas. The first phase of this program should require about 5 years. Electric power expansion, marine shipping, petroleum refining, chemical and gas plants, cement and fertilizer factories, modern agriculture practices, the mining of heavy minerals, rayon, nylon, and textile production are but a few of the economic activities to be stepped up immediately. To overcome Korea's persistent lack of scientific management, technical know-how and long-range economic planning, is a primary objective of the new regime.

For example, the Nation's acute shortage of electrical power has long been an obstacle to her commerce, industrialization and the raising of living standards. To overcome this obstacle, the new Government has energetically adopted a 10-year power development program. The first projected phase of the plan centers around the construction of two massive hydroelectric powerplants at Chunchon and Soyang within 3 years. Aggregate kilowatt plant capacity will be of 140,000 units. The cost of $102 million will be borne jointly by the U.S. Development Loan Fund and Korean national funds. This realistic projection of the country's power needs will enable Korea's industry and materially raise the standard of living for Korean people.

Similarly, the Government has given prompt encouragement to such basic projects as an oil refinery, cement plants, fertilizer and chemical factories, and various expenditures covering a housing development, railroad modernization, public utilities, and telecommunication expansion. Thus, under a Government determined to correct the past abuses and to inaugurate the soundest political practices at the present, the Koreans will be able to establish a sound and workable economy.

Under this new climate of honor and opportunity, the revolutionary progress will continue. This will be speeded by the continuing U.S. grants-in-aid and foreign investments. It will be underscored by the recently assured austerity program to combat idleness, self-indulgence, and conspicuous consumption among certain high-income brackets. The program for economic development will be further strengthened by the state counsel's carefully planned "Policy Measures for Efficient Utilization of Aid Resources." More than anything else, Korea's long-delayed emergence as a democracy in the Orient now seems assured by a combination of a sympathetic understanding by the people in the United States, and by the Koreans exerting skilled statecraft, use modern technology in their industries, and moral fervor to succeed in their efforts to develop a sound economy and to raise the living standards of her people.

Disastrous Underground Fires

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. FLOOD. Mr. Speaker, Mr. Paul Trescott wrote a highly informative column on the serious aspects of coal mine fires and as a native of and Representative from the anthracite region of northeastern Pennsylvania I can personally attest to the terrible consequences of such disastrous and damaging fires. Mr. Trescott's column, which I quote as part of my remarks today, appeared in the Sunday Bulletin of Philadelphia on July 10, 1960.

Mr. Trescott is an editorial writer for the Philadelphia Evening and Sunday Bulletin. His excellent, widely looked-for column appears each Sunday in the Bulletin.

Mr. Trescott is a native of Columbia County, Pa., his ancestors having migrated to adjoining Wyoming Valley, Luzerne County, from New England about 1767. An alumnus of Akron University, Ohio, he worked on newspapers in Akron; several in Wilkes-Barre, Pa., and in Berwick and Bloomsburg, Pa. (city editor of the Press) before affiliating with the Philadelphia Bulletin some years ago.

Authorship apparently is a natural gift in the Paul Trescott family. His wife, the former Louise Adams of Berwick, Pa., is a noted fashion consultant and writer of a nationally published syndicated column.

A son, Paul B. Trescott, associate professor of economics at Kenyon College, Gambier, Ohio, is the author of numerous magazine articles. Recently Dr. Trescott's book, "Money, Banking and Economic Welfare," published by McGraw-Hill Co., received wide acclaim.

But others of the Trescott family are successful in different professions. Alfred P. Trescott is a physician attached to Robert Packer Hospital, Sayre, Pa., as a radiologist. A son of Mrs. Trescott, Clarke Bachman, is a prominent Philadelphia architect.

The elder Trescott of the Philadelphia Bulletin has been active in affairs of the National Conference of Editorial Writers from its inception, and served in several offices.

Mr. Trescott's column follows:

DISASTROUS UNDERGROUND FIRES

(By Paul Trescott)

Fires are often spectacular. But some of the most damaging are not. Throughout the country today some 147 fires are still smouldering away, and no fire chief daresay any one of them is out. One has been burning for more than 100 years.

These are fires in coal mines. They can be even more deadly than the spectacular fires which trap a family or two.

The oldest of the known fires is near Summit Hill, Pa. That started in 1859, and the cause has never been determined. Plenty of others have been going for 50 years or more, and some have taken a terrific toll of life.

One of the worst was in the Jersey mine in Plymouth township, Luzerne County. On September 6, 1869, a mine furnace used to ventilate the Avondale mine ignited a wood partition separating the main air intake from the hoisting shaft. The toll was 110 dead, one of the worst in coal history.

This mine was sealed in 1905, when the fire covered 12 acres, but the blaze was not confined. In 1952, the latest available record, the fire covered 338 acres.

A fire in West Carbondale has been raging since 1940, and its gas fumes have repeatedly sickened people. Another in the vicinity of Mount Carmel has been a source of repeated trouble.

Georgetown Mountain, outside of Wilkes-Barre, has a fire which started before 1907 and is still going. Tower City, in Schuylkill County, has long had what is commonly known as a "burning mountain" even though it might not be a mountain. A culm bank near Tamaqua has also been burning for years.

In 1953, a number of residents of South Scranton were sickened by the fumes coming from a subterranean fire. These fumes are known in many localities as "black damp." They are deadly in seconds.

These mine fires start from a great variety of causes. One near Wilkes-Barre broke out in 1917 when a mule driver left his lighted lamp hanging on a wooden prop. Others have started through forest fires on the surface which have ignited outcroppings of coal, and the fires then have gone underground.

Explosions have started other fires, and they are some of the most defiant in existence. Science still hasn't learned how to cope with them.

Flooding has been tried. Digging out the burning coal has been attempted. Sealing off the smouldering areas with clay and other materials hasn't worked. Neither has the idea of building walls around the underground fires. Millions have been spent, but without results. One fire has ranged more than a mile since it broke out, and has burned through one barrier after another.

The coal veins which have been attacked by fire run up to 40 feet in thickness. Just imagine how much heat can be generated by 40 feet of coal on fire, and you can readily understand why these fires penetrate barriers and are so hard to control. Still, a great many have been put out before they have reached tremendous proportions.

Fighting a mine fire is far different from the attack on any other conflagration. Unless communities and people are threatened, the problem is an economic one. Is the coal worth saving? Will the cost of putting out the fire make it unprofitable to continue mining?

The study of mine fires is an interesting one. An old friend, Jim Corrigan, of Wilkes-Barre, a one-time newspaperman, collects information on mine fires as avidly as some people do stamps or coins, and it was from his private papers that most of this information on mine fires was obtained.

Endorsement by the AFL–CIO and the ADA

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. DEROUNIAN. Mr. Speaker, under previous consent, I place in the Appendix of the RECORD, for the attention of the Members of Congress, an article by David Lawrence, which appeared in today's New York Herald Tribune, in which he discussed some of the factors involved in the endorsement of a presidential candidate by the AFL–CIO and the ADA:

AFL–CIO BACKING SEEN AS "LOADSTONE" TO KENNEDY

(By David Lawrence)

WASHINGTON, August 28—Some endorsements in a political campaign could mean the "kiss of death" to a presidential candidate among groups of voters who are antagonized by the action.

The AFL–CIO has just endorsed Senator KENNEDY, the Democratic nominee, and so has the radical organization which calls itself "Americans for Democratic Action" but which believes in centralized government.

There are 13,500,000 members in the AFL–CIO and, while the general board which voted the endorsement cannot deliver the votes of its members, the impression sought to be conveyed is that it can. In fact, the AFL–CIO mantains a close watch on rollcalls in Congress and in every campaign points to whether a Member has gone down the line for union labor or has failed to support its proposals.

The citizens are supposed to reward by their votes in the presidential and congressional elections the candidates who have supported the cause of labor. It isn't a bought-and-paid-for arrangement in the sense that a money bribe is offered or accepted, but the truth is that many millions of dollars are collected from union members by the AFL–CIO leaders acting in behalf of supposedly separate political organizations. These funds are contributed to State and local, as well as national, election campaigns in support of those candidates who have a record of doing the bidding of the trade union leaders.

PLATFORM ON JOBS

Senator KENNEDY says he is proud of the endorsement, and one wonders if this means that, if elected, he will feel beholden to the AFL–CIO. The Democratic platform has already pledged that the next Congress will enact legislation taking away from 20 States their right to keep on the statute books—and in their constitutions—a provision enabling a worker to join or not join a union without risking punishment through the loss of his job. The custom is for the labor unions to threaten costly strikes against employers who refuse to sign an agreement to fire anyone who doesn't join a union.

If the National Association of Manufacturers or the U.S. Chamber of Commerce, using the prestige of their positions in the business world, were to announce that they endorsed Vice President NIXON, the labor press would be the first to jump on them as having made a deal with the Republican presidential candidate to help him get elected in return for the support he would give measures they favor.

AFL DIDN'T TAKE SIDES

While many businessmen as individuals will be for the Nixon-Lodge ticket, they do not in their trade organizations make any such endorsement or formally call on their members to support a candidate. In fact, until recent years the American Federation of Labor itself would for the most part avoid endorsement of any presidential nominees. This policy was proclaimed for the AFL by the late Samuel Gompers who, though making no secret of his own preferences, avoided any commitment by his national labor organization.

It is ironical that the Gompers doctrine is now being reversed in many other ways. Thus, Mr. Gompers argued for years that no employer should have the right to make nonmembership in a union a condition of employment, and finally Congress wrote such a prohibition into law. But now the labor unions themselves favor discrimination as long as it is in their favor.

They oppose right-to-work laws on the specious argument that those who favor such laws would be able to interfere with collective bargaining, which simply isn't so, as the present laws guaranteeing the right to organize would not be changed.

Another paragraph in the AFL–CIO's endorsement of Senator KENNEDY has caused a raising of eyebrows among many people who hitherto have regarded that organization as a stanch ally of the anti-Communist cause in America. The paragraph says:

"Quibbles over precise wording cannot conceal the fact that NIXON impunged the loyalty of a Congressman, a nominee for the Senate, a Secretary of State and a President of the United States in his various electoral adventures."

UNIONS ALSO CRITICAL

This is all the more surprising because the AFL's own statements were critical of the failure of various officials during the Truman administration to deal more vigorously than they did with the Communists. To say now that criticism of this kind "impugned the loyalty" of anybody is to indulge in a guilt-by-inference technique which the new AFL–CIO pronouncement itself professes to condemn. One wonders if George Meany really knew who was behind the insertion of that paragraph in the AFL–CIO's statement. For it doesn't sound like anything he has ever said in the past against Communist activities in this country or against those who have pooh-poohed the Communist menace.

As for the campaign of 1950, which is so often the pretext for criticizing the kind of speeches Mr. NIXON made about his opponents, Adm. E. M. Zacharias, a retired naval intelligence officer, wrote a letter to the New York Herald Tribune last week pointing out what many people have not known—namely, that the opponent of Mr. NIXON in that campaign had spoken from the same platform with a known Communist, who organized the meeting, and that it was this which drew the fire of Mr. NIXON at the time.

Baring Questions New York Port Authority Part in Narrows Bridge Promotion

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD the following telegram by a citizen to Hon. Nelson A. Rockefeller, Governor of the State of New York, March 31, 1959, so that all people may better examine the association between the Port of New York Authority and the administration of the Federal interstate highway program and may be apprised of the necessity of their giving expressions of their support to Congressman EMANUEL CELLER, chairman, House Judiciary Committee, and to Congressman JOHN A. BLATNIK, chairman, Special Subcommittee on the Federal-aid Highway Program, so that the investigations of the port authority and of the interstate highway program may supplement each other and proceed most effectively.

I am informed that the statements and charges contained in the telegram have neither been acknowledged nor refuted.

The telegram follows:

NEW YORK, N.Y., *March 31, 1959.*

Re assembly bill introduction No. 1718, Print No. 1726.

Hon. NELSON A. ROCKEFELLER,
Governor of the State of New York,
Executive Chamber, Albany, N.Y.

As explained by telephone today to Mr. William Rand of your legal staff, there has not yet been afforded me sufficient presentation and demonstration time to properly display and explain the rest of relevant data and evidence in support of charges against the port authority, Triboro Authority, New York State Department of Public Works, New York City Planning Commission, and New York City Board of Estimate of misstatement of fact, intent to needlessly destroy public property, misplanning, misrepresentation of traffic and engineering fact, and cooperation in suppression of fact which I have presented.

It is not easy to believe you are correctly reported to intend supporting the objection-

able Seventh Avenue, Brooklyn, approach without your hearing or causing to be heard complete evidence on the failure of the authorities and agencies to show public use and necessity for 12 lanes of capacity on a narrows crossing structure, for 12 lanes of capacity on a Seventh Avenue approach, or for the Seventh Avenue location itself, without your causing the authorities and agencies to supply objective factual statements and reports as a minimum requirement in proposing to provide due process of law in a proposed condemnation procedure to acquire the property which they are seeking, and without your entertaining consideration in this matter of a reasonable and superior liberty bridge-narrows tube combination alternative proposal which will provide equal or up to 12-mile shorter trips for all motorists, first direct freight rail connection from the southerly and westerly transcontinental railroads to the 9½ million people in Brooklyn, Long Island, Bronx, Westchester, and southern New England, all while affording a saving of about one-third billion dollars in public and investment funds.

Respectfully remark desired shore road approach proposed by assembly bill is ideal for narrows tube which provides easier vehicular grade than narrows bridge as proposed. Submit good-faith official request by interested authorities and agencies to U.S. Bureau of Public Roads for shore road approach approval has never been submitted, that in absence of such submission all statements referring to alleged Bureau of Public Roads position in matter are incompetent and invalid.

The waste in public funds involved in the Narrows Bridge arterial program amounts to about one-fifth of this year's entire New York State budget.

The enormous amount of public funds and needless human suffering involved certainly warrant reasonable field demonstration and further interview opportunity, which is hereby respectfully requested.

In view of the existing pattern of misstatements promulgated by the authorities, the opportunity to rebut is also respectfully requested.

HENRY SUCH SMITH.

"Teaching Opportunities in Africa," an Address by Raymond J. Smyke

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. BOLAND. Mr. Speaker, America today is standing on the threshold of our relationship with the newly independent peoples and countries of Africa. There has been an energetic drive by Africans for freedom and independence during the past 2 years, and many of them have looked toward the United States for inspiration and leadership. We must not turn them aside. We must be willing to give them the benefits of our own hard fought freedoms, civilization, knowledge, and techniques.

Teaching is the one field that offers tremendous challenges. The majority of today's African political leaders came from the teaching profession. But the newly emerging African countries need many more teachers, both foreign and indigenous, if they are to adequately staff needed schools and train citizens for civil service government posts.

Mr. Speaker, I would like to have printed with my remarks in the Appendix excerpts from an address entitled "Teaching Opportunities in Africa" given by Mr. Raymond J. Smyke to the oversea service meeting at the 19th National Catholic Students Mission Crusade Convention on the campus of the University of Notre Dame, South Bend, Ind., August 25–28. Mr. Smyke, who addressed the 57th annual conference of the American Teachers Association at Tuskegee Institute, Ala., on July 24, is the special assistant for Africa for the World Confederation of Organizations of the Teaching Profession. This is an international nongovernmental organization of professional teachers' associations whose secretariat is in Washington, D.C. Mr. Smyke was formerly associated with the African American Institute in Washington where he organized and conducted the teacher placement program. I am sure that my colleagues will find his address most informative and interesting:

TEACHING OPPORTUNITIES IN AFRICA

(Address by Raymond J. Smyke to the oversea service meeting at the 19th National CSMC Convention, University of Notre Dame, August 25–28, 1960)

The statement that best describes teaching opportunities for Americans in Africa is that countless openings exist in many areas; but for a number of very good reasons it is extremely difficult to place American teachers in Africa.

Difficulties arising from teacher placement are common to both government and nongovernment groups, and while solutions at the present time are governed by resources available to any one group—sectarian or nonsectarian—it appears that a pooling of available resources will provide the only lasting solution to the problem of placing teachers in sufficient numbers fundamentally to assist education in Africa.

For Americans most opportunities are confined, at least for the time being, to the English-speaking areas of Africa. Eventually, of course, teachers must be found for French and Arabic-speaking areas. This is so, not because we consider these areas less important or more backward, but simply to begin where compatibility of language, culture and educational background already exist.

There is at this time no perceptible demand for general subject teachers in Arabic-speaking countries. Openings do exist for teachers of English, especially English as a foreign language. English language instruction in north Africa, as well as in other parts of the world, is ably handled by a group called English Language Services. ELS contracts from the U.S. Information Service and the International Cooperation Administration, both agencies of the U.S. Government, the establishment and maintenance of machine translation English language centers. For example, the Bourguiba Institute in Tunisia operated by ELS conducts a 9-month, double-stream, intensive English course with a capacity of 800 persons. It is reported that those selected generally speak no English whatsoever but come out at the end of the course with very good fluency. ELS is constantly in need of qualified teachers of English, especially those with experience in teaching English as a foreign language. Since the United States is unable to provide Arabic-speaking teachers, the next most valuable contribution is made.

Also active in Arabic-speaking countries of Africa as well as in many other parts of the world is the International Schools Foundation. By maintaining liaison with over 50 international schools it works to circulate teaching vacancies in schools dedicated to the children of the American community in a foreign country. Both ELS and the International Schools Foundation provide peripheral opportunities for teaching in Africa, since the opportunities are definitely limited and involve relatively few teachers.

Teaching positions in large numbers of recently independent French-speaking countries offer a stimulating and interesting challenge. Although vacancies definitely exist for French-speaking teachers in all subjects, Ministries of Education in many cases have not considered requesting expatriate teachers other than from France. Since most of these countries have close links to France after independence, they are hesitant to seek American teachers when French expatriates are available.

In the former Belgian Congo it is quite another matter. French language teachers are in demand and sought after, but the situation is too unsettled to attract interested and qualified persons. The Minister of Education of Léopoldville Province, a teacher of 30 years' experience, is also president of Centrale des Enseignants Congolaise, the largest teacher organization in the Congo. Both organizationally and officially one of the top educational priorities in the Province at the present time is to replace the European educational administrators by retraining Congolese teachers. When the Ministry is able to address itself to other problems the need for French-speaking American teachers will be taken up. Since the African-American Institute has taken steps to establish an office in Léopoldville under the direction of Donald Edwards, a missionary with long experience in the Congo, it can be assumed that teacher placement will play a part in the institute's Congo work. It must be emphasized, however, that there are at present no formal or even informal facilities to place teachers in the Congo, despite the apparent need for them. One quite natural obstacle, from the American point of view, is the tendency of European and European-trained African education administrators to look for teachers with a common educational philosophy, who are coreligionists and generally of the same nationality.

An answer to educational problems in French-speaking areas may soon be found in Canada. Leading educators there, especially in Quebec Province, are taking bold steps to utilize their French-speaking educational resources to assist Africa. The University of Montreal is considering an African program both to train African leaders and provide special courses for French-speaking teachers before taking up assignments in Africa. This, in addition to the generous scholarship assistance provided by Canada to African Commonwealth countries would make the total Canadian contribution in this field second only to the United Kingdom.

The areas in Africa where Americans can make the greatest contribution are the present British territories, and the former British territories now independent. Unfortunately there is no time here to go into the history of Anglo-American educational relations, both in the United Kingdom and in Africa, for these have influenced to various degrees the readiness of Africans to accept Americans as teachers. It is evident that the most receptive areas are in west Africa, where they have had longer contact with America and have larger numbers of men and women who have attended American schools and who go home singing the praises of their respective alma maters. The

recent action by the three governments of east Africa—Uganda, Kenya, and Tanganyika—in appointing an east African liaison officer in Washington to look after the interests of east African students studying here, will go a long way to facilitate the eventual placement of teachers in east Africa. In the Central African Federation the little experience Northern Rhodesia, Southern Rhodesia, and Nyasaland have had with American teachers has generally been good. This opens up future possibilities of more teachers going there.

Teaching opportunities in the area under discussion are practically all restricted to secondary education. Here education is patterned on the British system. The school leaving certificate in the African secondary school is called the Cambridge overseas school certificate or in west Africa the west African school certificate. Teachers follow meticulously a syllabus issued by the examinations council covering each of the five forms or grades. Examinations are set in London for east and central Africa and locally in west Africa. When one considers the historical development of education in England it is not too surprising to note that the Cambridge and West African School Syllabi are almost identical in content with the New York State Regents Syllabus. This gives some idea of the level of Cambridge school certificate work. The school certificate itself is comparable to the average American high school diploma.

Governments are trying diligently to extend the better secondary schools into sixth form schools, the sixth form being a 2-year addition to the normal 5-year secondary school. Thus, the student who goes through sixth form normally spends 7 years in secondary school, the last 2 years being roughly equivalent to the first year of a university course; so that those who pass their higher school certificate examination do not have to sit for the intermediate degree examinations of a British university or university college, but proceed to read for the degree itself. Holding the higher school certificate or its equivalent, the general certificate of education, advanced level, is the way university entrance is gained. In Kenya today there is no facility for Africans to do sixth form work. In almost every country concerned, the difficulty hampering development of sixth form work is lack of qualified staff.

Teaching opportunities are restricted to the secondary or postsecondary level (that is, sixth form) for several reasons. Considering the three main levels of education—primary, secondary, and higher—it may generally be said that primary education is in a comparatively sound position, especially so in west Africa. The government concerned have put a great deal of thought, work, and money into the development of primary schemes aimed at universal primary education; these schemes are bearing fruit. Although the rate of development varies with each country, the intent is certainly there and implementation follows as quickly as local teachers can be trained and money for buildings becomes available. It should be said that educators concerned with primary education, as well as the various ministries of education, are not satisfied with the progress to date: this in itself is a healthy sign. The need for American or other expatriate primary school teachers does not have a high government priority since most governments are increasingly able to cope with the problems in primary education.

University teaching has been adequately cared for by the various British organizations sending teachers to oversea territories, for example, the interuniversity council in London. Where short-term vacancies do exist, American Fulbright and other scholars coming out for a year or more of lecturing and research are able to fill most of the gaps.

There is still a shortage of lecturers in the critical disciplines of the physical and natural sciences and an oversupply of people on the university level qualified to teach only in the social sciences. Since all the university colleges in British affiliated areas are organically linked to London University or some other British university, the primary source of lecturers is from the United Kingdom. Thus, it is quite understandable that most vacancies are advertised in the United Kingdom and that agencies recruiting for university colleges look first to the United Kingdom for qualified people.

When one talks about the areas of critical educational need in Africa the training of teachers always heads the list. Many governmental and nongovernmental agencies such as the World Confederation of Organizations of the Teaching Profession are concerned with this problem, but all available resources concentrated on teacher training would not train adequate numbers of well-qualified teachers for a long time to come; on this there is universal agreement.

The crux of the problem is that, given a smoothly operating system of primary education and given the excellence of the several university colleges, there are not sufficient secondary school and higher school facilities to give those finishing primary school an opportunity to go on to higher education. A definite bottleneck exists in staffing secondary education with no immediate hope of relief.

Since many of the schools in which properly qualified American teachers are needed come under the heading of Government grant-aided schools operated by missions, a teacher's salary, allowances, and in many cases transportation is paid by Government. The minimum academic preparation here is a B.A. and M.A. degree, preferably both in the same discipline.

Let me close with my observations on what makes a good teacher for Africa:

Compared to the United Kingdom, the United States lacks a tradition of overea service. People going out from the United Kingdom in any capacity—as colonial servant, teacher or businessman—have an intangible asset in the tradition for oversea service which has so long been a part of life in the United Kingdom. Most young people who go out today from the United Kingdom have a friend, relative or neighbor who has gone to the colonies, and quite probably there are members of the immediate family who have served in the past. There is an unspoken urge for many people to go abroad to the colonies, and an acceptable climate for oversea service is a part of everyday life in the United Kingdom. Since the total population of the United Kingdom is relatively small, a high proportion have served in oversea posts in one capacity or another. It is quite evident that no such tradition or climate for oversea service exists in the United States. Given our total population, the number of people who have gone abroad in foreign service, business or missionary capacities has been infinitely small. The links that have been established in South America have been so recent and the total numbers involved so small by comparison that it is safe to say a tradition just does not exist here.

For the teacher going to Africa the adjustment is great, and the element called "cultural shock" is very evident. Thus, in the absence of a tradition for oversea service, recruitment and screening processes assume increased importance in order to select only the best qualified people. This is done in several ways. Programs which require candidates to study under observation for a period of 6 months or more are, in effect, self-screening mechanisms. An alternative is to subject the candidate to panel interviews and examinations covering professional, medical, emotional and social suitability for service abroad. This is subjective, and the evaluator finds himself in the position of judge and jury, unable to call upon a large body of information or experience because for the United States as a whole the determination of suitable candidates to serve abroad in any capacity is a most recent phenomenon. People involved in making the final decisions as to who should go and who should not go to backward areas find themselves acting more and more conservatively; for an error in placement resulting in a traumatic experience for the candidate may well affect him for the rest of his life, as well as doing incalculable damage to our relations with the host country.

I am not attempting to paint a grim picture to discourage likely candidates, but simply to emphasize that the answers to many of the questions concerning those who should teach in Africa often are not known.

Among the most needed qualifications appear to be excellent health and a history of emotional stability—and here let me say that the normal test and measurement procedures have proven less than useless. The safest practice developed to date seems to be a depth interview by a psychiatrist with actual experience in the area to which a person is being sent—nothing less. In addition to a history of emotional stability, a candidate must have a real regard and love for people of all kinds; being on an "African kick" is not enough. Patience is also an imperative: patience with the established order and the disorder; adaptibility to changing circumstances; and where required, respect for a superior whose education may not be equal to that of the teacher.

These are the personal and social requirements. Professionally, you must have at least a master's degree. Sometimes a B.A. with long teaching experience will satisfy, but gradually all ministries are adopting the rule that Americans should have an M.A. You must remember that the object of going to teach in Africa is to raise the general level of education. You will be expected to provide educational leadership and assist, formally and informally, less qualified teachers. Thus there is no substitute for professional excellence.

Qualified teachers with the right frame of mind will find the contribution they can make to Africa far in excess of their expectations. The immediate rewards are few, certainly not monetary; and the hazards must be recognized. But the feeling you sense among your students and the community, their wonder and gratitude that you have come from that "Valhalla," the United States, to work with them—in this way a rapport and bond is established that neither of you will ever forget.

Thank you.

Award of Special Citation of the Public Health Service in Vessel Sanitation to Farrell Lines, Inc.

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. DORN of New York. Mr. Speaker, as deserved recognition of the outstanding record in maintenance of sanitation achieved by the Farrell Lines, Inc., it is fitting that the attention of the U.S. House of Representatives and of the public generally be called to the special citation awarded by the Public Health

Service, U.S. Department of Health, Education, and Welfare.

Especially is it noteworthy that Farrell Lines, Inc., has earned the coveted award for the fourth consecutive year.

The citation was presented to Adm. George Wauchope, executive vice president of the company, by Dr. Arnold B. Kurlander, Assistant Surgeon General of the Public Health Service, at ceremonies on board the company's vessel, the SS *African Lightning*, on Thursday, August 11, at the 33d Street pier in Brooklyn.

The special citation was awarded because, in 1959, each of the 14 vessels operated by Farrell Lines earned a rating of 95 or better on an official Public Health Service inspection involving 166 separate items of sanitary construction and maintenance.

Farrell Line vessels operate between the east coast of the United States and all three coasts of Africa.

America and Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the remarks made by the Honorable Robert F. Wagner, mayor of the city of New York, at the opening session of the 63d Annual Convention of the Zionist Organization of America at the Statler-Hilton Hotel, New York City, on August 25, 1960.

It was indeed a brilliant address, which I am sure all of our colleagues will enjoy reading:

Reverend clergy, Senator KENNEDY, Mr. Redelheim, distinguished guests, my fellow Americans, 4 years ago the Zionist Organization of America convened amidst great tension and apprehension.

In the Middle East, Communist arms poured into Egypt. Marauders stole across Israel's frontiers, raiding, pillaging, and killing. Forces of hate blocked the Suez Canal in defiance of international law. Torrents of scurrilous abuse were unleashed against all who decried this injustice.

Today, you convene again and we may well ask:

Have we progressed since the eventful days of Sinai, 1956? How far have we come since the free people of Israel rose in rightful wrath to drive the evildoers from their doors?

Have we achieved the international comity and friendship for which all humanity hungers?

The answers are a matter of history. The Suez still remains blocked to Israel. Communist arms still flow—not only to the Middle East, but also to a once friendly island off our southern shores. The quiet imposed on the frontiers in the Holy Land is still an uneasy one.

Regrettably, the dream of a true Zion for all remains unredeemed.

For we are in need today of a great moral renaissance. We must reaffirm the principles that relations between states must be founded on mutual respect for national sovereignty, equality, and territorial integrity.

We must acknowledge the desire of all peoples to build their own free destinies, unencumbered by fears that mighty powers—be they of the left, right, or center—still harbor grasping ambitions to continue economic subjection.

We have watched bastions of liberty crumble or grow weak. We have grown too complacent at times in the comforts of our own household. We have tended, in too many ways, to forsake old friendships, taking them for granted.

We have entered an era of Echo-gazing in heavenly reaches, but appear reluctant to focus our hearts and minds on the plight of millions of underprivileged, hungry, ailing and ill housed on our earthly planet.

Yet, how beautiful and gracious is the dream of Zion, whence brother embraces brother; where each faith lends courage and understanding to its legions; where weary and burdened humanity can once more lift its shining countenance in prayerful hope of peace.

I am keenly aware as I again welcome your great convention on behalf of the city of New York that uppermost in your hearts and minds is your undying devotion to peace and to the eternal spiritual link forged between our beloved America and Eretz Yisroel.

Blessed are those who were privileged to play even minor roles in the rebirth of Israel. Doubly blessed am I indeed, for I know you will understand the pardonable pride I share in following in the footsteps of an illustrious forebear.

I know, too, you will understand my reiteration of a few brief thoughts which it was my privilege to express recently in Los Angeles; recalling how my father brought a heart warming message of hope from President Franklin D. Roosevelt to the Jewish National Fund at a convention of the ZOA in Atlantic City.

The brief words perhaps bear repeating tonight. For the ZOA, just as all great American organizations dedicated to humanity, has always respected and remembered its friends; always remained alert against false entreaties from sources interested primarily in courting friendships for expediency and selfish purposes.

Yes, it was a message of hope—from a friend—which my father brought from President Roosevelt. Hope for what? A homeland in Palestine.

For out of the travail and suffering and darkness of an era of unparalleled bestiality, a people cried out for justice and redemption. Weary, downtrodden, they held fast to their faith. Persecuted as no people have ever been, they stood erect in the face of tribulation and death with the dignity of a Job.

Out of the black hold of frustration and despair they crept, stumbled, walked, fought and then ran toward the light—the light of Zion.

Up from the hell holes of Eichmann's Nazi cruelty they stirred themselves, wrapping their faith around emaciated bodies, lifting their voices in thanks for redemption. It was nobility of the highest order. This was the rebirth of a nation dedicated the principles upon which our own American heritage is founded. This was the glory of the Kingdom of Brotherhood.

It is neither my purpose nor intention to delegate to myself the task of pleading once more with Israel's neighbors to cast aside bitterness and join in a fellowship to restore the glory of the region where civilization first came into being.

But, I would be remiss, if, as mayor of the city with the largest Jewish population in the world, where people of all faiths live together in harmony; where Christian, Moslem and Jew share the blessings of abundant democracy, if I did not again voice my prayer and hope for lasting peace in the Middle East.

I have beheld the wonders of Israel with my own eyes. I have knelt beside tender seedlings in a forest bearing my name in the hallowed hills of Judah. I have seen the glory of a people reborn from the waters of the Dan below snowcapped Mount Hermon in the north to the copper-red hills which fall away gently at Eilat.

I have seen the Bedouin shepherd raise his arms in a brotherly greeting of Shalom; I heard my heart sing as the children of Israel turned empty desert into gardens of honey and vines, of swaying palm trees and golden flowers. For such is the song of brotherhood and achievement one hears in Israel reborn.

You, the ZOA were among the foremost composers of the Song of Israel. No detractor can wrest that glory from you. No enemy can smite you into the dust, for you have borne the cherished burden of bringing hope to an undying people.

As we embark at home on momentous decisions in the months ahead; as we face the future together unafraid with all free people; as new leaders are about to take the helm of America and restore it to its rightful pinnacle on this earth as well as in the reaches of space, I welcome you to the city of New York.

You will, I know, again fasten your dreams to the high ideals which have inspired you since that historic day in Basle in September 1897, when Theodore Herzl envisioned the rebirth of Israel.

Hold fast to your dreams, my fellow Americans. Hold fast to your courage. Together, we shall reach for noble heights for America; for all who wish to share the abundancy of brotherhood and peace.

Dream, my fellow Americans, not of yesterday but of tomorrow; when East shall meet West; when together we shall wrest the best of yesterday, mingle it with the strength of today and build for a better tomorrow.

May your deliberations be fruitful not only for your people; but for all mankind.

Shalom.

John Cardinal O'Hara

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mrs. GRANAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Philadelphia Enquirer, August 29, 1960:

THE LEGACY OF CARDINAL O'HARA

Philadelphians of all faiths—and peoples throughout America and the world—are grievously saddened by the death of John Cardinal O'Hara on Sunday morning.

He was a kindly man beloved by all who knew him. He was a dedicated servant of God and a compassionate friend of all humanity. He was brilliant and he was also humble.

It was in this city that Cardinal O'Hara rose to the summit of lifelong service and achievement. It was while serving as spiritual leader of the archdiocese of Philadelphia that he first wore the red hat of a cardinal. It is here that his death is mourned most deeply.

The cardinal's good works in Philadelphia will stand for time without end as monuments to his wisdom and selfless devotion to the betterment of man.

As a conscientious clergyman who knew well and at first hand the needs of the un-

fortunate and the ill, the underprivileged and the undernourished, the orphans and the elderly, Cardinal O'Hara mobilized mighty forces of assistance. He organized the annual Catholic Charities Appeal in the Philadelphia area which helps to support a hundred institutions, providing a variety of benefits to persons of all ages. He founded the annual archdiocesan Christmas party that is given for needy and abandoned children.

In the field of education Cardinal O'Hara provided inspiring leadership and performed enduring service of incalculable value to the people of Philadelphia. Every level of parochial education was expanded and improved to meet not only the community's growing needs but the cardinal's high standards. Seventy-four elementary and high schools were newly founded or newly constructed under his direction. Hundreds of existing schools were enlarged. Additions to both the physical plant and the academic curricula of Catholic colleges in the area were promoted and encouraged by Cardinal O'Hara.

His interests in educational and charitable work were combined in numerous projects providing special instruction for the mentally retarded and the physically handicapped.

The cardinal's extraordinary accomplishments in the field of education in Philadelphia were a natural culmination of many years of experience. As a graduate of the University of Notre Dame, class of 1911, he served that institution in successive capacities as instructor, professor, dean, vice president, and president. He founded the university's school of commerce and was its first head.

During his presidency of Notre Dame he directed a broad expansion program that included new buildings and additional courses of study. Emphasis placed in the 1930's on expanding facilities for scientific research and the teaching of science—as well as for liberal arts and other subjects of fundamental education—is testimony to the cardinal's foresight and wisdom.

Cardinal O'Hara was a teacher to the end—a teacher of men and women as well as boys and girls. He taught unforgettable lessons in the goodness of life, by his own example and through divine inspiration.

The legacy of Cardinal O'Hara is his good life and good works for God and man. It is a priceless treasure.

THE EARLY YEARS

A never-ending yen for knowledge and a boyhood desire to be a priest were two of the many facets of the early life of John Cardinal O'Hara.

The prelate was born May 1, 1888, at Ann Arbor, Mich. He was one of five brothers and three sisters.

Cardinal O'Hara's father was the late John W. O'Hara, an attorney. Before embarking on a law career, his father had been a school teacher, a country newspaper editor and a U.S. consular official in South America.

The cardinal's mother, the late Ella Thornton O'Hara, was the daughter of the proprietor of a general store near Logansport, Ind. She also taught school before her marriage. She died in 1944.

The father—son of an Irish-born farm couple—taught school and edited a newspaper at Bunker Hill, Ind., immediately after graduating from high school. Later, he moved his family to Ann Arbor, where he furthered his studies at the University of Michigan.

After completing these studies, the father and his family settled in Peru, Ind. There, the O'Hara children attended parochial and public schools.

In 1950, the cardinal's parents made a decision that was to broaden considerably the outlook of their sons and daughters. Mr. O'Hara accepted an appointment to the U.S. consular service and was sent to Montevideo, Uruguay.

The family often recalled in later years that they "had to lease a whole small ship" to make the long journey.

The other family members also related in subsequent years that Father John—as the prelate always was known to them—discussed at length with them during the voyage his hopes of entering the priesthood.

In the Uruguay city, Cardinal O'Hara attended the Jesuit school, Colegio de Sagrado Corazon. Between sessions, he served as secretary to Edward C. O'Brien, then U.S. Minister to Uruguay.

Ill health interrupted Cardinal O'Hara's activities, however. Physicians suggested that a stay on a ranch would aid him. He regained his health while spending 3 months on a cattle ranch in Argentina.

On his return to Montevideo, the future priest made business surveys for the American Bureau of Commerce.

His father was transferred to the U.S. consulate at Santos, Brazil, in 1907. The family went there with him.

The years spent in South America were to prove fruitful to Cardinal O'Hara throughout his career. He gained a firsthand knowledge of the needs of Latin America and often assisted in programs which aided these countries and their residents.

It was in 1908 that the cardinal returned to this country. The following year—after his father opened a law office in Indianapolis—he enrolled at Notre Dame University in South Bend, Ind.

HIS YEARS AT NOTRE DAME

The gold dome atop the main building at Notre Dame University is said to hold a special lure for young men who show a special love for the Blessed Virgin Mary. John Francis O'Hara was no exception.

From young manhood, the future cardinal proudly proclaimed his "love of God and the Immaculate Heart of Mary." His motto became "Follow her, you shall not go astray."

Cardinal O'Hara entered Notre Dame in 1909. It was natural for a son of two former schoolteachers to show an aptitude along those lines. So while studying for a bachelor of philosophy degree, he taught other students elementary Spanish.

The tall, red-haired future prelate remained as a lay teacher at the school after receiving his degree in 1911. Then, on August 8, 1912, he entered the Seminary of the Congregation of the Holy Cross—the teaching order at Notre Dame.

It was part of a continuing series of events which continued for more than three decades and which saw Cardinal O'Hara and Notre Dame University become synonymous. He devoted much of his great energy to the institution and its thousands of students.

When he left Notre Dame, he did so reluctantly, he often admitted later. But, greater honors were to be his and his greater feats made him the school's most illustrious alumnus.

For a year after his ordination to the priesthood, Cardinal O'Hara was away from Notre Dame. He was ordained on September 9, 1916, in the Cathedral of SS. Peter and Paul at Indianapolis, Ind., by the late Bishop Joseph Chartrand.

Immediately, he undertook post-graduate work in Latin American history at the Catholic University of America at Washington.

He also studied banking at the Wharton School of the University of Pennsylvania. While taking this course, he was in residence at St. Francis de Sales Church, 47th Street and Springfield Avenue.

In September 1917, Cardinal O'Hara returned to Notre Dame. He was appointed secretary of the faculty there and also head of the university's department of commerce.

Three years later, he founded the School of Commerce and became its first dean. He also served additionally as professor and prefect of religion.

A skilled writer, Cardinal O'Hara founded the Notre Dame Daily Religion Bulletin.

Written in a down-to-earth style, it put religion in the vernacular and made it a living part of the day-to-day life of the college student. The publication soon became nationally known. Students would send it home to parents or forward it to parish priests or teaching sisters.

Cardinal O'Hara—calling on his expert knowledge of Portuguese and Spanish—also conducted a daily Latin-American news service for a time. His releases went to 75 newspapers.

While a faculty member at Notre Dame, Cardinal O'Hara again visited South America. This time, he established a student exchange program with leading universities there. Later, he started Notre Dame's Latin American course.

Fond of all sports and in particular football and swimming, Cardinal O'Hara was known as an intricate part of the famed teams of the school at South Bend.

The late Knute Rockne—most famous of all Notre Dame grid coaches—often told visitors:

"Here comes Father O'Hara. He's my assistant. He keeps the players spiritually fit."

At its 1933 meeting, the Provincial Council of the Holy Cross Fathers selected the future cardinal as vice president of the university.

The council met again July 5, 1934, and this time picked Cardinal O'Hara as president of the university. He was named to succeed the late Father Charles L. O'Donnell.

In taking the high office, the new president advised the faculty and students:

"Prayer is wise. So is sacrifice."

For much of Cardinal O'Hara's tenure as head of Notre Dame, this country was gripped in financial depression. All colleges found problems multiplying.

But, Notre Dame's president displayed amazing administrative skill. As a result, the university became larger.

A new science building, two new student residence halls and a recreation center were constructed. Various new courses of study were introduced. The student body increased steadily.

In 1936, he conferred an honorary degree on Eugene Cardinal Pacelli, then Vatican Secretary of State. Cardinal Pacelli later became Pope Pius XII.

The late President Franklin D. Roosevelt named Cardinal O'Hara as a member of the U.S. delegation to the Eighth Inter-American Congress at Lima, Peru, in 1938.

While in South America, the visiting university head made special studies of educational systems there. He was especially lauded for his work by President Lopez Contreras, of Venezuela.

The faculty and students at Notre Dame showed mixed emotions when Pope Pius XII announced on December 11, 1939, that the future cardinal had been chosen titular bishop of Mylasa and appointed military delegate, auxiliary bishop of the Army and Navy diocese.

They were overjoyed at the honor bestowed. But, they were saddened at the prospect of Notre Dame without "Father John."

AS A BISHOP

Against a background of medieval splendor, Father John Francis O'Hara was consecrated a bishop of the Roman Catholic Church on January 15, 1940.

The ceremony took place in Sacred Heart Church on the campus of Notre Dame University.

More than a third of the church's hierarchy in the United States attended. They were joined by hundreds of priests and laymen. Many of the latter were Notre Dame alumni, who traveled great distances.

The consecrator was Archbishop, later Cardinal, Francis Spellman, of New York. He was assisted by Archbishop Joseph E. Ritter, of Indianapolis, and the late Bishop John F. Noll, of Fort Wayne. All three were long-time friends of the new bishop.

In a sermon at the time, Rt. Rev. Msgr. Thomas V. Shannon, of Chicago, likened the spirit of the new bishop with that of the school which he had headed.

"Bishop O'Hara has presided over an institution that has always connoted a brave spirit, copartner in the militancy of the church," Monsignor Shannon said.

"We know him to be a man of peace. Storms may beat about him, but his bark is well ballasted. No one can teach others who is not himself taught of God."

In his new high position, the future cardinal headed a special diocese for Roman Catholics in the Army, Navy, and Marine Corps.

Under his jurisdiction were approximately 1,000 civilian auxiliary and commissioned Catholic chaplains. His new duties took the prelate to practically every military installation.

He continued these visits as often as possible during the Second World War.

Chaplains everywhere soon considered the bishop to be a close friend. He carried on extensive correspondence with each of them, sending at least one letter a month.

Thousands of soldiers and sailors were baptized and confirmed by Cardinal O'Hara.

Headquarters of the military delegate were in New York. The then Bishop O'Hara was in residence at St. Cecelia's Church.

He found that the parish included a number of Puerto Rican families, newly arrived in New York. His familiarities with Latin-American languages enabled him to learn of their many problems.

Despite his busy schedule, the prelate directed part of his efforts to aiding these families.

On March 10, 1945, the military delegate was named Bishop of Buffalo, N.Y. He succeeded the late Bishop John A. Duffy.

Installation ceremonies were held on May 8, 1945, in St. Joseph's Cathedral, Buffalo. Presiding was Cardinal Spellman.

As head of the upper New York State diocese, Cardinal O'Hara added to his already great reputation as an administrator.

The diocese's educational system was enlarged with numerous new grade and high schools being opened.

An annual campaign for Catholic Charities was begun. Despite high goals, it always succeeded—the only drive of its type to do so in the vicinity. When asked for an explanation, volunteers pointed to the inspirational leadership of the bishop.

On Nov. 28, 1951, Pope Pius XII appointed the prelate as Archbishop of Philadelphia, one of the Nation's largest Sees.

It was the second time the Bishop succeeded to a See formerly headed by the late Dennis Cardinal Dougherty. Cardinal Dougherty had been Bishop of Buffalo from December 1915, until May 1918, and Archbishop of Philadelphia from May 1918 until May 1951.

AS ARCHBISHOP OF PHILADELPHIA DIOCESE

John Cardinal O'Hara's espiscopate in the Archdiocese of Philadelphia was characterized by an active and vigorous administration.

He was appointed fifth archbishop and ninth ordinary of the archdiocese on November 28, 1951. At the same time, he was named Metropolitan of the Ecclesiastical Province of Pennsylvania.

The archdiocese is comprised of Philadelphia and the counties of Berks, Bucks, Carbon, Chester, Delaware, Lehigh, Montgomery, Northampton, and Schuylkill. It covers 5,043 square miles.

In addition to this archdiocese, the province includes the dioceses of Harrisburg, Pittsburgh, Erie, Scranton, Altoona-Johnstown, and Greensburg. It has a Catholic population in excess of 3,400,000.

Cardinal O'Hara was installed at the Cathedral of SS. Peter and Paul on January 9, 1952, by Archbishop, now Cardinal, Amleto G. Cicognani, then Apostolic Delegate to the United States.

At that time, the cardinal set forth the keynote for his activities.

"If you will kindly tell me your needs, I shall do my best to meet them," he told the assemblage.

"I know no other way to serve. Working together, with the assistance of God's grace, we can help one another save our souls."

Much of the program he spearheaded centered around education, the home, and charity.

Although the school system of the archdiocese had attained a fine reputation for leadership, Cardinal O'Hara found that additional facilities were needed.

He directed the opening of more than 60 new parish schools and the improving and expanding of 300 existing schools. Fourteen new high schools were constructed to house 35,000 more pupils.

Parochial elementary and high schools in the archdiocese now are attended by approximately 280,000 students.

The seven existing Catholic colleges and universities in the area also were greatly improved. Three new institutions of higher learning—Cabrini College, Holy Family College, and Blessed Sacrament College—were opened.

The cardinal also directed that St. Charles Borromeo Seminary at Overbrook be opened to students for the priesthood from nearby dioceses.

To aid the mentally retarded, Cardinal O'Hara founded four special schools. A new school for the blind was opened and facilities for the deaf and hard of hearing were enlarged.

Nearly 40 new parishes were established, most of them in newly developed suburban communities. The Catholic population of the archdiocese now exceeds 1,500,000. In 1952 it was 1,114,122.

The Cathedral of SS. Peter and Paul was redecorated. A Spanish-speaking center was opened.

Cardinal O'Hara also fostered Catholic action. An information center was opened in midcity. Activities of the Confraternity of Christian Doctrine were widened. A new printing plant was built for the Catholic Standard and Times, the archdiocesan newspaper.

Family life was the focal point of an extensive program. Women's groups in parishes, known as the Committee for Christian Home and Family, were organized.

The premarital instructions program was started under the sponsorship of the Archdiocesan Family Life Bureau. Family holy communion Sundays were encouraged.

The practice of blessing babies each Sunday during May was inaugurated. Thousands of children were blessed by the Cardinal and his Auxiliary Bishops at the Cathedral and in various regional churches.

Formation of the Cardinal's Committee for Charity was announced early in 1958. The committee has representation in every parish.

Each year, a campaign for funds is conducted. Most of the money is raised on a single Sunday afternoon when a door-to-door canvass of Catholic families is conducted.

Annually, the appeal has amounted to more than $2 million. It benefits about 100 institutions, child care centers, and homes for the aged.

In December 1956 Cardinal O'Hara held his first Christmas party for needy and abandoned children. It has become an annual event.

To Cardinal O'Hara, the size of the project or the possible difficulties to be encountered never seemed insurmountable.

His characteristic comment usually was: "If it's God's will, and God's work, He'll find the way and see us through."

AND FINALLY AS CARDINAL

John Francis O'Hara had been a priest for 42 years when Pope John XXIII named him a Cardinal of the Roman Catholic Church on November 16, 1958.

"The news made me numb," the new Prince of the Church said at that time.

As a member of the Sacred College, Cardinal O'Hara became an adviser to the Pontiff. As such, he was named to three congregations of the Roman Rota—the Congregations of the Council, of Religious, and of Seminaries and Universities.

Cardinal O'Hara was the second cardinal in the history of the Archdiocese of Philadelphia. His immediate predecessor was Dennis Cardinal Dougherty, who had been created a Cardinal on March 7, 1921.

The reserved and scholarly prelate also became the first member of his religious order—the Congregation of the Holy Cross—to become a cardinal. The order is popularly known as the Holy Cross Fathers.

The cardinal was one of 21 newly designated cardinals to attend a consistory at the Vatican from December 15 to 18, 1958. At a public function, the new Princes received their traditional red hats from the Pope.

At the consistory, Cardinal O'Hara was assigned one of Rome's most beautiful churches as his titular church. It is the Church of SS. Andrew and Gregory on the Celian Hill.

Upon his arrival in Rome for the consistory, Cardinal O'Hara shunned public acclaim and appearance. Instead, he went directly to the Chapel of the Blessed Sacrament in St. Peter's Basilica. There, he knelt in prayer.

Thousands braved chill winds for several hours to await his arrival home at Philadelphia International Airport on December 20, 1958. And his brief—yet significant—statement drew loud cheers.

He said simply, after stepping from the airliner:

"It's great to be home."

Tens of thousands lined Broad Street and other thoroughfares in south Philadelphia to greet his motorcade that day. Again, the Cardinal quietly acknowledged the homage.

Then he proceeded directly to the Cathedral to offer mass for the people.

Consumer Credit

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, on June 6, 1960, I addressed the 46th Annual International Consumer Credit Conference at Chicago, Ill. My remarks were printed in the Credit World of August 1960 and I have requested per-

mission to have them included in the Appendix of the RECORD:

CONSUMER CREDIT

(By THOMAS B. CURTIS, of Missouri)

Consumer credit has been a subject in which I have been very much interested for many years.

Soviet Russia is now following Western Europe in developing consumer credit. Western Europe has been slow in developing consumer credit; indeed it has been only since the Korean war that consumer credit has assumed any importance there, and yet today there are indications that its growth rate is matching that which has occurred in the United States.

Consumer credit in the United States has been growing at a very rapid rate. At the end of 1950 total consumer credit outstanding was $21,741 million. At the end of 1959 the total was $52,046. The figure by the end of 1960 will be close to $60 billion.

Even in the United States consumer credit may be regarded as a recent and modern phenomena. In 1929 the total consumer credit outstanding was $6.4 billion and in 1945 it was $5.7 billion. It is apparent, however, that World War II stunted the growth of this economic phenomena, because in the 1941 the figure was $9.2 and this should be related to the nadir of 1933 of $3.5 billion.

The most rapid growth has been in personal loans: $2.8 billion in 1950 to $9.97 in 1959, although automobile paper is a close second, $6.07 billion in 1950 to $16.59 in 1959. Repair and modernization loans jumped from $1.016 in 1950 to $2.704 in 1959. Other consumer goods paper rose from $4.799 in 1950 to $10.234 in 1959. Noninstallment credit, though showing continuing growth, is less spectacular. The 1950 figure was $6.768 billion in comparison to $12.564 billion in 1959.

Underlying this growth is its strange imperviousness to the postwar recessions. Also notable is the commendable increase in the installment credit repaid figures which rise from $18.445 in 1950 to $43.239 in 1959. Of course, without this factor, installment credit would not be in a business.

I believe it is about time that consumer credit receive the social and economic analysis that its importance deserves. Much damage can result, indeed has resulted, from a misinterpretation of what consumer credit is in essence.

For example, I believe that consumer credit is really not a proper tool for monetary control except in very short periods of time, and even then only in very specific ways. And yet it is one of the first items listed by economists and monetary authorities when they speak of monetary restraint. When standby controls are mentioned reference is immediately made to consumer credit as one of the major controls to be implemented.

I believe, aside from the evidence before our own eyes in the United States and Western Europe, if a Communist State like Russia is beginning to use consumer credit it must have some real basis in modern economics.

The inherent power behind this economic phenomena has to be very great to break through the Communist ideology which it basically contradicts.

Indeed, this economic force is great. It stems from the fact that an individual's needs and wants do not conform to the years in his life during which he is gainfully employed. Consumer credit is the counterpart of pensions and annuities and insurance. Both seek to spread the earnings of the individual more equally over his entire life, and not bunch it in the years when he is actually productive.

Much has been done in our society by way of spreading income over from the working period of a man's life to the years of his retirement and many devices have been developed to assist him in performing this desirable economic and human function.

Little, however, has been said of anticipating the income of an individual so that the earlier years before the earnings are sufficient may be adequately and economically financed. Yet if spreading income over a person's entire life more equally is important, and I believe it is, attention should be paid to both periods when the income is not being earned the period before it is earned as well as the period after it has been earned.

The income of a man should be permitted, if at all economically possible, to be related to his expenditures. We have learned that business cycles no longer, if they ever did, relate to the number of days it takes the earth to go around the sun. Similarly, we should realize that the individual man has only 40 working years out of a lifetime of three score and ten. The expenditures required of a man when he starts married life, for example, are on the average greater than his expenses after his family has been raised, particularly after he has acquired equity interests in his home, consumer durables, savings, etc.

The income of a man should be spread, if it can be done economically, to cover the period when he is still learning his profession, or trade. I might interpolate that either it is his anticipated income that is used or it is bound to come somewhere from within the society, be it the family, privately endowed institutions or the Government, if we are to have education. Indeed, the correlation between amount of education and amount of income has now been clearly established and money invested in education can be paid off as a relatively small percentage of the increased earnings resulting from the education. Society as well as the individual benefits from this process.

I do not believe our society, based as it is upon the theory that men should be permitted to rise to the limits of their abilities, is well served by an economic system where only those who have assisting parents or inheritance can gain the capital necessary to get the education they can absorb to establish for themselves and their families the standard of living which their abilities would permit. Nor do I believe our society is well served by the alternative system of having a political bureaucracy set up a system of endowments and scholarships and select through whatever procedures they might develop who shall be more fully trained and educated and who shall not. Consumer credit is the way to get off this dilemma.

There is no question of the added value to society from spreading income from the earning years to cover the later years of retirement from earning. This process requires savings. Capital accumulation which is required to finance economic growth is dependent upon savings.

SPREADING INCOME

However, there is this added value to society from spreading income from the future back to the present in order to train and educate the future entrant into the labor market, which I suggest. Furthermore, there is, I have suggested, the value to society from spreading income anticipated in the future back to the present in order to permit young families to have and rear children in an atmosphere and home life of reasonable high standards. To be specific, if a young mother can have a dishwasher and a clothes drier during the period she is trying to raise young children, she can do a much better job of rearing the children, and society definitely benefits from this process.

I believe the economists who look at the increasing amount of consumer credit in the United States with alarm should relax. The rapid growth should be related to the fact that consumer credit in the United States, if it is the economic and social phenomena I believe it is, has not yet matured, indeed it is in its infancy, and it will not mature until three full generations pass. Furthermore, as inherited wealth continues to decline in importance in our society, as I anticipate it will, I expect consumer credit to take up the gap. Consumer credit will reach maturity when the personal income of our society is fully spread both backward and forward relating the earning years to the full years of the individual's life.

There are many faults in our political economic structure which still operate at cross-purposes to the idea of spreading a person's income throughout their entire life as opposed to spreading it unevenly as we do over the working years of a person's life. Our tax laws still do not recognize this desirable feature, although in respect to savings and spreading income into the later years of life through annuities and other devices some recognition has been given to it. However, under our system of graduated income taxes we have no device which permits a person to spread his personal income for tax purposes over a period of years. The result is that those with fluctuating incomes like our farmers or those who amass most of their income for their life in a few short years like athletes and entertainers are taxed at higher rates in the years of great earnings and in the years of little or no earnings they frequently lose even the value of their personal exemptions. Accordingly, a great premium and one without any social values that I can see, is placed under our graduated income-tax laws upon a person with a more even flow of income.

We have seen the great efforts being made by our people to spread their income into their years of retirement through stock purchase plans, pension plans, insurance of all sorts, etc., which seek to avoid the impact of the high tax rate in their years of earning. This era has been one of insurance, one of prepayment, which is good. Now we are seeing an overlapping of a new era, that of postpayment, and it is important to examine it to see if it, too, is good.

I again point out that prepaying—saving—for retirement has received the social and monetary economists' sanction because it carries with it the desirable economic feature of generating savings. It also carries with it the sanctions of mankind's traditions developed over the centuries he has had to cope with economic laws based as they were upon scarcities. Therefore, the progress we are making in encouraging retirement programs has been widely acclaimed.

Unfortunately, postpaying * * * consumer credit * * * has not received this social sanction and indeed it is viewed as being something almost socially undesirable. One reason, of course, has been the thought that this is the reverse of saving. Another explanation is that we have not yet fully realized that base of all economic law of the centuries preceding us has been altered. Through the availability of electric power and technological advancements on a broad front, our society in America today is based upon plenty, not scarcity. But I can even speak to the subject in a traditional fashion and point up arguments which I think make credit respectable.

Some consumer credit may be the reverse of saving, but a great deal of consumer credit is in itself saving. Buying a consumer durable on time certainly is a device for gaining an equity investment in the consumer durable, and to this extent it is savings. Buying a home on time certainly has a large element of saving connected with it. I have suggested that buying an education on time is in essence a capital investment that pro-

duces an ample return on the investment. Therefore, even that has a large aspect of saving about it. Postpaying a trip to Florida or Europe seems to have little element of saving about it, and I can imagine other areas of use of consumer credit which on their face also seem to have little savings in them. Yet, I would not presume to judge hastily what is in reality a capital investment and what not. A trip to Europe to a budding young architect or a linguistic student might indeed be a very sensible capital investment and, therefore, have a real element of personal as well as social saving about it.

The most that can be said against consumer credit saving is that it does not provide accumulated capital for investing in economic growth. But even here we must pause to take stock. We are well aware of the fact that economic growth is dependent on something more than capital accumulation; it is likewise based upon human skills and capital must be used to train the skills if they do not already exist. It is not easy to separate capital from that which capital must be spent for. When we speak of capital being necessary to finance growth we certainly imply that the capital will be spent. Investing money in a company means that the company will use the capital for either building buildings, purchasing machines or in training human skills or at least in gathering together human skills that already exist.

Am I coming through on this subject of consumer credit? If I am, then it should now be apparent why I view with great alarm the idea that consumer credit controls is a desirable social tool for controlling consumer spending. If what we are seeking in utilizing credit controls is to curb inflation then I would urge that we deal directly with what we are talking about * * * prices of goods and services. Much as I dislike the idea of price controls because of the administrative difficulties connected with them and the interference that it imposes in the free marketplace, I would much prefer this type of control to an attempt to interfere with the economic function being performed in our society by consumer credit * * * as I have been outlining it. Nor is it sufficient to state that consumer credit control would be selective. Who indeed is capable of selecting what our individual citizens should have and not have.

However, I would like to go one step further in discussing inflation itself because inflation has been as much misunderstood, in my judgment, as has consumer credit. Real inflation is what I call a blood disease. It exists when we have tampered with the value of money as a measure of goods, services, labor, and savings. I have said "tampered." Perhaps a better statement would be this: when through our ignorance we have failed to preserve the dollar as an accurate measuring device of goods, services, labor, and savings.

ECONOMIC COSTS

Part of our tampering or failure to act wisely in our treatment of the dollar as a "weight and measure" has been our failure to understand economic costs. Our method of measuring inflation has been primarily through the consumer price index, the wholesale price index and other selective series. All of these statistical series though very valuable have obvious defects about them.

None of them measure increase in quality or the cost resulting from increased variety or choice. Furthermore, none of these indexes measures other increased real costs; for example, the economic cost resulting from the depletion of the Mesabi iron ore in Minnesota was bound to increase the cost of steel and this increase unless compensated for by increased productivity was bound to show up in the consumer price index. Yet, it would be economically unsound to refer to this increased rise as an element of "inflation."

The cost of rapid technological advancement is another real economic cost which is not measured in our economic indices set up to measure inflation. We talk about the increased cost of drugs and seek to relate that to inflation or to some group of individuals trying to gouge the public. Both references are equally unsound. Rapid technological advancement springs from increased capital spent in research and development. This cost must be recouped in the price charged for the product. Rapid technological advancement brings in its wake obsolete equipment and obsolete skills. The cost of this, too, must be borne somewhere, usually in the price of the product or service to be sold. Rapid technological advancement requires training of new skills and the purchase of new equipment. These costs too must be borne. The only recoupment of these costs other than in sales price of the articles or services is through increased quality, which is very inadequately measured in our indices and increased productivity which might be reflected in a lowering of the cost.

Consumer controls or indeed price controls will not help to hold in line this economic process, except to damage it. If a wrong diagnosis has been made the only effect of treating this as the disease of inflation would be to curb future economic growth as well as undermine the present standards of living.

MONETARY DISEASE

There is such a thing as inflation—a monetary disease. It occurs when more money is printed than the economic growth up to that point justifies. Credit control is not money control. It can be affected by the amount of money available and it can be controlled by those who have the power to control the amount of money in ways short of credit controls. Unfortunately, in the past those who have the power to control money have confused credit with money and with the economic process which I have attempted to describe. In so doing they have damaged economic growth as well as price stability.

Credit is controlled, in essence, by the judgment of those in the business of extending it. If they—and that means essentially this audience—relate it to the ability of the individual to earn and they look upon this as a method of income spreading then we will keep the process from being abused.

Furthermore, I believe the success or failure of the creditman's business is so wrapped up in making an accurate appraisal of potential earnings of their customers that there really is little danger of their overextending credit. However, as in any business there can be those who enter it to abuse it—to make the fast buck and then to flee. But I regard policing against this kind of operation to be the same as policing against any kind of piracy. We must maintain constant vigilance, but as long as the pirates don't control the police force we are on safe grounds.

CREDIT CONTROL

In this respect I want to discuss briefly a subject where I believe those in the credit control field need to tighten up. A congressional committee has already started looking into this matter. I do not believe I am telling any of you anything. All I am really doing is emphasizing it. There must be an end to this business of using a consumer durable business or any other business seeking to sell goods or services to the public as a front for what really is a business of extending consumer credit. However, these are rackets and like all rackets they cannot stand up against good competition. Indeed, the only way they can survive economically is gouging the public at high prices. I saw a great deal of this operation back in the thirties when I was chairman of the St. Louis Bar Small Loans Committee. And I am happy to state it was the good small loan companies who provided the force needed to curb the abuses and keep the matter in hand.

It is my opinion that you are in a new, growing, exciting and socially valuable economic operation. If you handle it well, as I believe you essentially have been handling it, you will be making a great contribution to the well-being of our society and to each individual who goes to make it up today and those who will be its composition three generations from now.

San Francisco Baseball Giants To Make Centennial Good-Will Tour of Japan

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. SHELLEY. Mr. Speaker, may I invite the attention of my colleagues in the House and the Senate to the goodwill baseball tour of Japan to be made this fall by the San Francisco Giants as the sports feature of the centennial celebration commemorating the signing of the first Treaty of Commerce and Friendship with Japan.

After stopping off in our newest and 50th State of Hawaii for a few exhibitions, the Giants will play 16 games in Tokyo, Sapporo, Sendai, Toyama, Osaka, Fukuoka, Shimonoseki, Hiroshima, Nagoya, and Shizuoka.

Most of us are aware of the tremendous interest that the Japanese have in our national pastime. But few of us, I am sure, have any idea of the influence that baseball has had on Japanese-American relations.

BASEBALL IN JAPAN 86 YEARS OLD

Japan is said to be the oldest nation outside of the United States to be playing baseball. Only 30 years after Abner Doubleday is supposed to have originated the game at historic Cooperstown, baseball was introduced to Japan. This was in 1874, so Japanese baseball is 86 years old this year.

Count Nobuaki Makino, one of Japan's most illustrious statesmen and father-in-law of former Prime Minister Shigeru Yoshida, who, probably more than any single individual, gave new Japan its pro-United States orientation, is generally remembered as Japan's first baseball player. Premier Yoshida, as most Americans recall, was the last Prime Minister during the period of the occupation and the first Prime Minister when Japan regained her sovereignty in 1952. He headed a special delegation to Washington this past May to participate in the centennial celebration here. He also headed the Japanese delegation that signed the peace treaty in San Francisco in 1951. Count Makino learned to play baseball when he visited Philadelphia in 1871 as a member of the

Prince Iwakura mission. On his return he introduced baseball, with its special terminology, to a Japan just emerging from its feudalism.

Within 20 years it had become a popular and well-accepted game, largely because of the promotional writings of Shiki Masaoka, who, though known as the foremost "haiku" poet of the Meiji era, is better remembered as the father of Japanese baseball.

In 1878, Ki Hiraoka, who was bitten by the baseball bug while studying in New York City, organized the first team, representing the Shimbasi Athletic Club, built the first baseball diamond in what is now the famous Ginza district in Tokyo, introduced the wearing of team uniforms, and threw the first curve ball seen outside this country.

In its early developmental period, baseball teams represented various athletic clubs or industrial plants. In a few years, however, the schools and universities took up the game and made it the spectacular spectator sport that it is today, when crowds of 80,000 are not unusual for a college championship.

In 1905, Waseda University came to this country to play a number of our colleges and universities. This was the first oversea trip ever taken by any Japanese sports team and was the forerunner of the many exchange good-will tours by various athletic stars and teams in the past half century.

SAN FRANCISCO IDENTIFIED WITH JAPANESE GAME

Two San Franciscans, Herb Hunter and Lefty O'Doul are the legendary baseball idols of Japan. The former helped develop college baseball, while the latter helped to organize professional baseball there.

The first all-star team to visit Japan was in November 1931, which included such baseball immortals as Lefty O'Doul, Lefty Grove, Larry French, Mickey Cochrane, Muddy Ruel, Lou Gehrig, George Kelly, Frank Frisch, Willie Kamm, Rabbit Maranville, Al Simmons, and others. In 1934 Babe Ruth led one of the greatest aggregations ever assembled, every member of which has been enshrined in baseball's Hall of Fame in Cooperstown, N.Y., to Japan, where they played to crowds of over 100,000. Connie Mack, incidentally, was the manager of that dream team, and his assistant was Lefty O'Doul.

Herb Hunter of San Francisco is known as America's baseball ambassador because he remained to coach the game at Waseda and Keio universities after visiting Japan as a member of a group of Pacific coast players in 1920. When he returned to the United States, he persuaded then Baseball Commissioner Landis to authorize major leaguers to visit Japan to conduct clinics to instruct the Japanese in the finer points of the game. Casey Stengel, currently the revered manager of the New York Yankees, was a member of the first contingent, which also included Waite Hoyt, Herb Pennock, Guy Bush, and George Kelly.

Lefty O'Doul, a native San Franciscan, is synonymous with the spirit of American baseball in Japan. While visiting Japan in 1934 with the all-star team, he advised Matsutaro Shoriki, president of the Yomiuri Shimbun, one of the "Big Three" national newspapers of the country with a circulation over 3 millions, in organizing what has come to be known as the Yomiuri Giants, named in honor of the then New York National League entry who are the San Francisco Giants of today. The Yomiuri Giants are known as the Yankees of Japan, however, for their perennial championships. The Yomiuri Giants were the first professional baseball club there, but others quickly followed and their version of a major league was established. Today, there are two major leagues, with the champions of each playing off for the Japanese title every autumn, much as is done in the United States.

As beloved as Lefty O'Doul is in his native city, where he managed the San Francisco Seals entry in the old Pacific Coast League for many years, he is probably better known in Japan, where his humanitarianism in helping orphan children is almost as legendary as his baseball contributions. The two-time batting champion of the National League enjoyed his greatest years in our national game as the star outfielder for the Brooklyn Dodgers and the New York Giants of the late twenties and early thirties.

During World War II, the militarists tried to "wipe out" baseball because of its American origin and its popularity among all segments of the population. After the surrender, baseball was among the first sports to regain its place in the minds and hearts of the people. Gen. Douglas MacArthur, as the Supreme Commander of the Allied Powers, recognized its potential as an invaluable instrument in building new Japan into a democratic, freedom-loving nation and issued a directive to assist in its revival.

BASEBALL'S FINEST HOUR

Probably baseball's finest hour, and its greatest contribution to international understanding and friendship, was in the fall of 1949, when Lefty O'Doul took his then San Francisco Seals over for a series of 13 games. That tour is credited with bringing the Japanese and the American people together in a spirit of mutual fellowship, for it was the first time since the end of the war that the defeated Japanese left their self-imposed shell to cheer Americans.

Just before Mrs. MacArthur threw out the first ball at Korakuen Park in Tokyo, for the first time after the war the Japanese Rising Sun flag was raised, and the band played their national anthem. Thereafter, the American flag was raised, and "The Star-Spangled Banner" was played. Also, for the first time, hot dogs and cokes were sold to the Japanese on that day.

Near the conclusion of their tour, Lefty O'Doul was invited to the Imperial Palace to meet the Emperor, who told him:

It is by means of sports that our countries can be brought together. I am glad that I can personally thank you for it.

At a reception for the team at the American Embassy where General MacArthur had his residence at that time, prior to its departure for the States, the Supreme Commander told O'Doul:

This trip is the greatest piece of diplomacy ever. All the diplomats put together would not have been able to do this.

Later, referring to the love and admiration in which he is held by the Japanese public at large, General MacArthur told him:

You've finally arrived home, Lefty.

Two years later, in 1951, Lefty O'Doul returned to Japan with the first postwar major league all-stars, who included Joe DiMaggio, then of the New York Yankees. Since that time, several all-star aggregations and several major league teams, such as the New York Giants, the Brooklyn Dodgers, the New York Yankees, and the St. Louis Cardinals, have played in Japan.

APPROPRIATE TEAM, APPROPRIATE YEAR

In this Centennial Year of Japanese-American relations, it is appropriate that the San Francisco Giants, heirs of the immortal New York Giants' heritage, are visiting Japan.

The American baseball team will be led by Baseball Commissioner Ford Frick, who long ago appreciated the significant role that baseball could play in international good will. It was he, by the way, who in a statesmanlike decree several years ago ruled that major league teams could visit Japan only on alternate years in order that there would not be too much of a drain on Japan's hard earned dollar exchange.

Horace C. Stoneham, longtime owner and president of the Giants, will accompany his team, which is among the most colorful and representative in sports. His Willie Mays is considered by many to be the best player in our national pastime today.

And, of course, Lefty O'Doul will again be with the team, for the Japanese identify baseball with this distinguished native son of California.

Appropriately enough too, the invitation to visit Japan was extended by the Yomiuri Giants, whose president is still Matsutaro Shoriki, recently described by his U.S. biographers Edward Uhlan, Dana L. Thomas, and Bob Considine as the "Miracle Man of Japan." Among his accomplishments are that he is a ranking member of the Japanese Parliament, former cabinet minister, Japan's first atomic energy commissioner, and the individual responsible for making television available to the rank and file Japanese.

Tsuneo P. "Cappy" Harada, an American-born Californian of Japanese ancestry who as a lieutenant during the occupation period contributed much to the revival of baseball after the surrender, served as the liaison in arranging this goodwill tour as the sports feature of this 100th anniversary year of diplomatic relations between the United States and Japan.

As our Nation and Japan begin the second century of diplomatic relations, all of us are aware of the increasingly important role that Japan must play as our partner and ally in the Far East. There are forces in the world today which would destroy the goodwill that

exists between the American and Japanese peoples. And so, in these critical times, I know that I speak the sentiments of the American people in paying tribute to the constructive character of baseball's contributions to Japanese-American friendship and understanding.

May the forthcoming visit of the San Francisco Giants, and their fellow citizens of the city by the Golden Gate who plan to accompany them as special individual goodwill ambassadors, be as successful in promoting goodwill as those in the past, for on the field of friendly competition, with friendly spectators, are sown the seeds of international comity and cooperation that are so essential to the peace and prosperity of the Pacific.

The Arsenals

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent article appearing in the July-August issue of Ordnance magazine. This article, I feel, makes an excellent case for the retention of the few Government-owned and operated establishments that are today playing such a vital role in weapons production and the development of the weapons of the future.

On April 21, 1960, I addressed the House in a 1-hour special order at which time I described in great detail the situation at the Naval Weapons Plant located here in Washington, D.C. Again, on July 1, 1960, I called the attention of Congress to this fine installation and continued my criticism of the administration, which is deliberately and maliciously destroying one of our Nation's most vital defense installations. Unfortunately, I have been unable to force the administration to change its views on the future of this plant even though I believe I have clearly proved that the action underway is not in the best interests of our defense effort. I do not intend to quit this fight, for I am confident that my position is sound and it is my intention to take the case against the administration to the people of the Fifth Congressional District of Maryland in the forthcoming campaign. I pledge to continue my efforts with the new administration to bring about a fair and impartial review of the situation.

The article referred to follows:

THE ARSENALS—THE POSITION OF THE AMERICAN ORDNANCE ASSOCIATION ON THE ESSENTIAL FUNCTION OF GOVERNMENT OWNED AND OPERATED WEAPONS CENTERS AS THE REPOSITORIES OF ARMAMENT RESEARCH, DEVELOPMENT, AND PILOT PRODUCTION

(Periodically a hue and cry is raised about our arsenals—those few Government owned and operated establishments where the art of designing and producing our military weapons is conducted by trained military and civilian personnel. Once again the question is being debated in high places. The slogan, "Keep the Government out of business," is being used erroneously, we think, when applied to those noncommercial products (call them ordnance, armament, or weapons, as you will) for which there is no normal peacetime private industry. Since its beginning 40 years ago, the American Ordnance Association has upheld the time-honored place of the arsenals in our national pattern of weapons preparedness. It has maintained always that arsenals, as copartners of American industry, are essential. It has never failed to support the arsenal system as the repository of weapons research, development, and limited pilot-line production together with the training of personnel incident thereto. This position of the association was officially restated to the Secretary of Defense less than 3 years ago. The report, prepared by nationally recognized experts and addressed to the Secretary of Defense, was forwarded by the executive vice president of the association under date of October 10, 1957. It is more timely now than it was then and is published below in the hope that all members of the association will assist in making it known to their fellows.—THE EDITORS.)

DEAR MR. SECRETARY: The "arsenal system" as a functaion of long-range armament preparedness in the United States has been and is a bulwark for the progress of research, development, and production engineering of American armament in time of peace. This is a truth which is frequently challenged and therefore which need restatement from time to time.

By "arsenal system" is meant the traditional organization of Government owned and operated establishments—always few in number—where the art of ordnance design and manufacture is kept alive. In normal times there is no arms industry in the United States.

The position which certain of these establishments hold in our national defense potential is well worthy of periodic review, especially at a time such as the present when new concepts of warfare and resultant new forms of armament are under constant study. Accordingly, with the approval of our board of directors, a group of exceptionally well-qualified members of the American Ordnance Association has reviewed this situation over the past several months, and I am pleased to transmit to you the consensus of their views.

All members of the group have had intimate and lengthy armament experience in peace and in war. The group consisted of the following members of the association:

Lt. Gen. Levin H. Campbell, Jr., U.S. Army, retired, Washington, D.C., a director of the American Ordnance Association and an officer of more than 30 years in the Ordnance Department of the Army who served as Chief of Ordnance, 1942–46.

Walter N. Howley, Morton, Pa., chairman of the Shell Committee, American Ordnance Association, and an authority on the design and production of artillery shell, whose direction of the Gadsden Shell plant, Gadsden, Ala., was an outstanding example of industry-arsenal liaison.

C. Jared Ingersoll, Philadelphia, Pa., a member of the advisory board, American Ordnance Association, and an industrialist who served for many years and during World War II as chief of the Philadelphia Ordnance District.

Adm. Albert G. Noble, U.S. Navy, retired, New York, N.Y., chairman of the underwater ordnance division, American Ordnance Association, and a career officer of the U.S. Navy who served for many years in positions of highest responsibility and who was Chief of the Bureau of Ordnance of the Navy, 1947–50.

The American Ordnance Association proposes the restatement and implementation of the time-honored national policy of maintaining these establishments, their personnel, and their operations as the key to our long-range capability to provide superior ordnance to our Armed Forces in time of emergency.

In its review the Association considered the following basic facts:

Ordnance is the generic term embracing all weapons, armament, and appurtenances for their operation and maintenance, whether land-based on or under the sea, or airborne, including:

All ammunition and its chemical, metallurgical, and atomic components.

All rockets, bombs, guided missiles, torpedoes, depth charges, and mines.

All combat vehicles, tanks, tank destroyers, and weapon carriers.

All vehicles for automotive transport of personnel and matériel on land.

All optical, aerial, mechanical, electrical, and electronic systems for locating and tracking targets on land, at sea, in the air, and in space.

The time-tested pattern of armament preparedness in the United States since our beginning as a Nation has been based upon a corps of trained technical military and civilian personnel in the Army Ordnance arsenals and Naval Ordnance plants.

These career technicians are skilled in the design, development, production, and improvement of all types of noncommercial military weapons. They have been responsible in great degree for industry-ordnance cooperation.

In large measure this also applies to the trained military and civilian personnel of our Air Force depots and matérial areas.

The career technicians and the machines necessary to the art are instantly available to transmit to American industry the techniques of armament design and production in time of emergency.

These men and the machines are the permanent sources of specifications, flow charts, and pilot-line know-how from which American industry can draw for engineering and manufacturing guidance in time of war.

Thus, essential norms of procedure, cost, and engineering detail become available when the services themselves have under their jurisdiction the necessary men, materials, and machines. They are adjuncts to American industry and serve as catalysts to inaugurate all our armament production in time of war.

This military pattern known as the arensal system has existed in our country for more than a century and a half and has provided through every decade of our national existence the skills and leadership essential for armament prepardeness. The arsenal system has maintained these plants and their personnel as the repositories of armament knowledge and art during all the peacetime periods of our history.

The arsenals have furnished the leadership which keeps the art abreast of military demands and, at the same time, consistent with engineering and industrial progress. They have provided the control at all times essential to the superior quality and performance of armament to meet the stated requirements of the military characteristics of the Defense Establishment.

In a word, the arsenal system, throughout our history, has proved these establishments to be an extremely important part of our preparedness program, for it is through them mainly that the art of munitions design, development, and manufacture is perpetuated. They are, when war comes, the guarantee of timely and adequate transition, through their assistance to American industry, in the effective conversion of the Nation from the needs of peace to those of war.

Mindful of the new forms of modern armament and the relatively meager peacetime production of armament by American industry, it is the considered judgment of the group that the basic philosophy of the arsenal system still applies and should be preserved at all reasonable costs to insure our long-range national security.

Accordingly, the association urges that a sufficient number of arsenals and ordnance plants be maintained, staffed by career military and civilian personnel, to accomplish the following objectives:

1. To make certain that there be available at all times military arsenals and plants at which the art of armament design and production is effectively maintained. In so doing, these establishments would not operate other than pilot lines and in no way undertake quantity production which could more efficiently and effectively be performed by private industry.

2. To assure through this means the direct training of officer personnel in all the technical details of armament design, selection of proper materials, and production—from the drawing board to the pilot line itself.

These officers, when later assigned to the administration of armament production and other logistical problems on a national scale, thus have the personal experience with actual working conditions, upon which real leadership and effective management depend.

3. To make certain that a reasonable staff of civilian engineers is likewise constantly trained and available at these establishments, not only for continuity of their operations in time of peace but especially to provide a cadre of trained artisans who can instruct and guide American industry when war strikes, to produce unfamiliar items in vast quantities and in a minimum of time.

These personnel are thus equipped to exercise the technical responsibility of design and production engineering so vital to the inauguration of earliest possible quantity production of special weapons by commercial industry in a national emergency.

4. To have available in these arsenals and plants the facilities where Reserve officer personnel on active duty can be similarly taught and trained in the techniques of armament design and manufacture.

5. To provide through these establishments standards of operating procedure and costs of production which will serve as a guide to alert industry and the Government for the production of equipment in time of a national emergency.

6. To maintain these establishments as sources for the pilot-line production of noncommercial items which, because of their special nature and composition and the small quantities required, could not be obtained as efficiently from private industry. Thus they will continue to be a means whereby the necessary engineering is performed between the phase of research and development of an ordnance item and the phase where private industry undertakes quantity production in time of war.

In submitting the above observations, the American Ordnance Association is not unmindful of our national policy following every war in which the United States has been engaged. We, therefore, urge that a sufficient number of arsenals and ordnance plants, Government owned and operated, adequately staffed and maintained, be kept in operation permanently for the design and pilot-line manufacture for the services in the following noncommercial fields:

Aircraft armament, combat and tactical vehicles, electronic fire-control and guidance systems, guided missiles and rockets, gun ammunition and bombs, guns and gun mounts, military propellants and explosives, small arms, small-arms ammunition, underwater ordnance.

Thus will be provided a safeguard for the technical training of military and civilian personnel which has existed throughout our history and has proved its value time and time again. The arsenal system, by providing continuity of knowledge, was of inestimable value in helping American industry to undertake production of quality armament in the First World War, the Second World War, and the Korean war.

The American Ordnance Association holds that should the arsenal system as described above be materially weakened the long-range armament preparedness of the United States would be jeopardized now and for years to come.

EDITOR'S NOTE.—On the question of arsenals, Lt. Gen. Levin H. Campbell, Jr., Chief of Army Ordnance from 1942 to 1946, states in his book about America's armament effort in World War II, "The Industry-Ordnance Team": "We have all been seriously concerned about the survival of our arsenals during the lean peacetime years when manufacturing orders for our small peacetime Army were few and far between. We have likewise gloried in the wonderful achievements of our arsenals in the war. Were it not for our arsenals, the defeat of Germany and Japan would have been greatly delayed. Industry alone, without arsenal know-how, could not have mass produced the weapons and ammunition in the incredibly short time it has taken.

"The transmission to the plants of industry of the essential know-how depended upon our arsenal employees and, in particular, upon those same men whose salaries, a few years earlier, had been slashed to the bone. If they had resigned back in those lean years rather than suffer severe salary cuts, there would have been a serious loss to our Ordnance Department and to the Nation.

"Just as England and the freedom-loving peoples of the world owe a great debt of gratitude to Britain's RAF, so also are America and the United Nations tremendously indebted to our arsenal military and civilian personnel who kept alive the science of munitions manufacture and who passed on to American industry the techniques required initially to produce, in gigantic quantities, the armament that has given all of us another and perhaps a final opportunity to build a better world.

"In the postwar era the arsenals will continue to serve as training schools for our Regular officers, and for our Reserve officers when they are called for brief periods of active duty. During the years of peace, the arsenals, in addition to preserving the science of armament manufacture, will carry on various types of forward-looking scientific research work necessitated by the successful employment of the atomic bomb.

"Although the arsenals are repositories of armament knowledge and carry forward from one war to another the techniques of manufacturing, their role as producers of certain types of ordnance materiel should not be minimized. Watervliet Arsenal, for example, is the largest cannon manufacturing plant in the country. It not only possesses the basic knowledge of how to use steel in the production of cannon and transmits this knowledge to selected manufacturers who must help increase cannon production in wartime, but it consistently maintains its preeminent position in the field of cannon production and during the Second World War outstripped all other plants. The same is true of Springfield Armory, the largest single producer of the Garand rifle.

"Frankford Arsenal likewise continued throughout the war the production of small-arms ammunition, although there were private plants and Government-owned, contractor-operated plants in the country producing all calibers of small-arms ammunition. Frankford also contributed greatly to the production of optical and fire-control instruments and maintained a production line for artillery ammunition shell cases.

"The arsenals are at all times prepared to supply production techniques to civilian manufacturers who have had no previous experience in the production of ordnance equipment. But it is equally true that our arsenals received many benefits from those industrial firms with which they have been associated. At the beginning of the national emergency, the arsenals were able to contribute their pilot-line techniques to civilian manufacturers. Later in the war, these same manufacturers were able to improve upon initial arsenal techniques, to speed up production, and to lower costs. Volume or mass production replaced laboratory or pilot-line production.

"In the early days of the war effort, our arsenals were thrown wide open to industry. At Watervliet Arsenal, for example, private firms learned for the first time such cannon-manufacturing processes as the boring of deep holes, rifling, and step threading.

"On some jobs it was advisable to have contractor personnel perform the duties of the operator in the arsenal to insure a successful beginning in the civilian plant. Sample cutting tools were made available so that they could be duplicated as to proper material, hardness, clearance angles, shear, lips, and grinding finishes. Facility and operating drawings were provided."

U.S. Citizens Commission on NATO

SPEECH

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the resolution (S.J. Res. 170) to authorize the participation in an international convention of representative citizens from the North Atlantic Treaty nations to examine how greater political and economic cooperation among their peoples may be promoted, to provide for the appointment of U.S. delegates to such convention, and for other purposes.

Mr. CARNAHAN. Mr. Chairman, the breakdown of personal diplomacy in the conduct of our foreign affairs during these past several weeks has sharpened the ideological, political and economic struggle now going on throughout the entire world. The situation is grave indeed, but not without real hope. Perhaps two things of positive good in the interest of freedom and justice across the face of the earth can yet be accomplished as a result of the diplomatic disappointments of the past several weeks: First, it might well be that we have had pointed out to us in a way more dramatic than otherwise might have been possible the aims and tactics of the international Communist movement. Writing in his book, "The Real Soviet Russia," the late Joseph Stalin said:

Words must have no relation to actions—otherwise what kind of diplomacy is it? Words are one thing, actions another. Good words are a mask for the concealment of bad deeds. Sincere diplomacy is no more possible than dry water or wooden iron.

Certainly the events from Camp David to the ill-fated summit meeting in Paris, to the postsummit events in the Far East, bear out in bold detail this statement. Second, it could bring about at an even earlier date than might have otherwise been thought possible a convention among NATO members to explore further NATO cooperation in the vitally important fields of economic and political action.

I believe, Mr. Chairman, that NATO is strong militarily and prepared for the military defense of Western Europe. However, all is not so muscular with other aspects of NATO endeavor and I refer to such matters as the various economic, monetary and political problems of the North Atlantic Treaty Organization. These economic, monetary and political factors are equally as important to the functioning of NATO as is the military strength of NATO. All of these facets are interrelated and go to make up the whole pattern of North Atlantic defense. The argument may be put forward, Mr. Chairman, that we have held numerous other NATO conferences and this is true. However, the fact is that these provious conferences have tackled the problem piecemeal and none have tackled them as a whole. If NATO is ever to function as an integrated entity with all its component parts making their own peculiar and significantly needed contribution to this defense alliance, we need a "Committee on the Whole" which will wrestle with the problems involved from the beginning to the end as a whole and not on a piecemeal basis.

I urge affirmative action on this proposal. If we seek strength today in the unity of the North Atlantic community we shall show Moscow that we are in no frame of mind to make huge unilateral concessions. Visible and within our grasp, we have the possibility of building such military, economic and moral strength that the Communists will not dare challenge our position of freedom in the North Atlantic community. We can yet prove this union to be one of the world's most potent influences toward peace.

Active Prosecution as the Key to Air Pollution Control

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a summary of an article by Dr. W. A. Quebedeaux, Jr., Ph. D., of the Harris County Health Unit, Houston, Tex., entitled "Active Prosecution as the Key to Air Pollution Control."

In the millenia in which man has existed in this world, he has had two vital requirements: pure air and pure water. Now, with tremendous expansion in population and in industrial use of both of these vital, lifegiving substances, the strain on the two resources is becoming almost intolerable and will grow worse with each passing day.

The article, summarized, appeared recently in an address published by Dr. Quebedeaux at the golden jubilee meeting of the Air Pollution Control Association, held in the Sheraton-Jefferson Hotel, St. Louis, Mo.

Dr. Quebedeaux has been an able and outstanding champion against pollution of streams, waters, and the air in his area, and his long experience in this field is carefully synthesized below:

ACTIVE PROSECUTION AS THE KEY TO AIR POLLUTION CONTROL

(By Walter A. Quebedeaux, Jr., Harris County Health Department, Houston, Tex.)

In common with other large cities in this as well as foreign countries, the problem of air pollution control is becoming more acute. It is one which must be solved if the moral integrity of the community is to be maintained and the property values as well as the health of those living close to the plant be protected.

INJURY NOT EXCUSED

Neither the fact that the trade is lawful, nor that it is needful, nor that the injury is unavoidable in the exercise of trade, will excuse its operation in a locality where it inflicts actual injury on others and that place for the operation of a trade is a convenient one, under the law, only when it is carried out where no injury results to others from it. Coupled with these decisions is the one handed down by the supreme court of Texas in 1951, holding that:

"Where the tortious acts of two or more wrongdoers join to produce an indivisible injury, that is an injury which from its nature cannot be apportioned with reasonable certainty to the individual wrongdoers. All of the wrongdoers may be held jointly and severally liable for the entire damages and the injured party may proceed to judgment against any one separately or against all in one suit."

By this last decision it is not necessary for a complainant to prove the percentage of damage from any particular source, but he may file suit against all suspected plants without dividing their responsibility. Therefore, under the above statutes and court decisions, in the State of Texas it has become relatively easy to obtain relief through the courts if desired.

With this legal background, on December 1, 1953, the Commissioners' Court of Harris County, Tex., organized a stream and air pollution control section within the framework of the Harris County Health Unit. The history of the growth of the program has been outlined in another paper. The purpose of this organization was to gather evidence of violations of either the State or Federal statutes which would then be of use in the prosecution of the violators.

A system of gathering this evidence had to be devised since these cases are of a special nature and depend primarily upon the individual citizen notifying the pollution control group of conditions which either are a nuisance to him or interfere with his health, comfort, and well-being. Immediately upon receiving this complaint, investigators of the stream and air pollution control section go to the place from which the complaint originated. At this step of the program speed is of the essence, because it is necessary that the investigator be able to experience and observe the condition of which the citizen complained. From this point it is the investigator's duty to trace the offending material to its source. Sometimes this is difficult or nearly impossible, but in any event, it is attempted. Once the source of the contamination has been determined, those responsible are informed and recommendations are made that they cease the operation which is producing the offending material or pollutant.

FORMAL COMPLAINT FILED

In the performance of the duty described above, the stream and air pollution control section enjoys the trust of both citizens and industries. This situation is aided by an informed commissioners' court who stand ready to help in any manner and, in addition, they take pride in pointing out our particular set-up to their counterparts in other countries.

It is through this citizen group that the tremendous amount of aid has been obtained since they, in effect, are the electorate who control the elections of the commissioner's court and the various judges. It has always been found that when public pressure is exerted the will of free people prevails.

PROSECUTION BASED ON LAW

We believe that another feature of our program is the fact that the prosecution is based on elementary law which for centuries has been passed down through the generations and forms the elementary cornerstone of the democracy of this country. There are no special acts which were passed by the Texas Legislature, and full confidence is placed in the enforcement of our basic law.

One of the distinguishing features of the Harris County program from those of other sections of the country is the lack of stated concentrations which are allowed. Sometimes this is termed as a code of operations, but it is the position of the Harris County group that the concentration or amount of any pollutant being discharged by a given plant is inmaterial until this pollutant interferes with the health, comfort, or well-being of citizens living in the area. It is only under these circumstances that the stream and air pollution control section enters the picture.

CRIMINAL PROCEDURES CAN BE USED

In addition to the basic State criminal statutes covering general nuisance and water pollution, there are several types of criminal procedures which can be used and will result in severe penalties to the defendant if he continues to violate these statutes. Of course, the first one is that which is known as the Habitual Criminal Act. Under this regulation it is possible to quadruple the fines and ultimately declare the defendant an habitual criminal, which automatically places him under an injunction and prevents him from continuing his plant operations.

The next procedure which is possible is that which can be taken by a justice of peace, where he constitutes a court of inquiry. In this situation, the justice of peace will issue subpenas to any individuals who might have knowledge of the conditions and require them to testify under oath as to such knowledge. After such a court of inquiry, the justice of peace then institutes a charge, should he find that there has been a violation of the State statutes.

Another procedure, which probably is one of the roughest, although it is not used to a large extent, is that of the prosecution asking the criminal county court for injunctive relief. Under this situation, especially when cases are filed under the general nuisance statute, the court, upon finding that the defendant is guilty of committing a violation of the general nuisance statute, can proceed in several different ways. A perpetual injunction can be declared and the party may be required to enter into a bond, with secur-

ity, or the judge may deem it sufficient to instruct the plant to conduct its operations in such a manner as not to violate the nuisance statute. The bond which is demanded should be a reasonable amount, as fixed by the court, and should be of such size as to make it unprofitable for that party to continue his violations. If a subsequent violation occurs, the court immediately declares the defendant in contempt and makes such additional requirements or penalties as it sees fit.

In all of the above cited statutes, there are none which are found in Texas law alone. A search of the statutes of other States will probably disclose their existence. It is our belief that with this legal basis there is sufficient basis in the law for stream and air pollution prosecution and that it depends entirely upon the attitude of the control officer involved.

In the prosecution of cases in the criminal courts, it has been our experience that testimony from one or more complaining citizens is imperative. There are decisions from the higher courts to the effect that:

"It is not necessary for the State to prove that there were actually any individuals harmed by the polluting material, but that it is sufficient to show that the polluting material is capable of affecting the health of the people."

Of course, the testimony of the control official and other experts is required. It has been our experience that the usual prosecutor from either the country or the district attorney's office is not familiar with this particular type of prosecution and that it is imperative for the control official to instruct the attorney in the engineering technicalities involved. Ultimately, these prosecutors will become familiar with these cases and will need little or no actual help from the control officer.

It is our opinion that the experience gained in the last 4 years indicates that active prosecution might well be called the "Key to Air Pollution Abatement."

The Expendable Industry

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. WHITENER. Mr. Speaker, for some time many of us have been undertaking to call to the attention of the Nation that there are some in our Government who apparntly feel that our great textile industry is expendable. We have also pointed out that the unrealistic policy of this administration toward the importation of low-wage foreign textiles is taking away the jobs of thousands of our people who earn their living in textile plants in North Carolina and other textile areas.

This feeling of many of our people was expressed in a very excellent manner in an editorial appearing in Southern Textile News on Saturday, August 27, 1960. This excellent trade paper is edited by my good friend, E. D. Lewis, whom I consider to be one of the outstanding journalists in the South. The editorial to which I have referred is of such excellent quality that I feel it should be read by every Member of the House of Representatives and, therefore, request that the same be printed in the Appendix of the CONGRESSIONAL RECORD of this date:

THE EXPENDABLE INDUSTRY

No serious consideration of long-range effect has ever been included in bureaucratic planning.

Cotton mills represented the quickest way to give employment to the most people in the underdeveloped nations. So, the foreign aid program financed cotton mills.

It was inevitable that the output of these cotton mills would exceed the demand of native populations and that the surplus production would find its way into international trade. This was not included in the thinking of our planners.

We now have a worldwide surplus of cotton textiles.

Native populations cannot afford and have no desire for 98-cent shirts. But the United States is a ready, profitable market for cheap cotton products. In fact, it is the greatest market in the world.

Tapping this market has become the most important objective in international trade. Every member nation of the GATT concentrates on securing concessions from the United States. We are accused of being a high tariff nation. We are charged with being unfair to the have-not nations.

Nothing could be further from the truth. Of 36 major trading nations, the United States ranks eighth from the bottom in average import duties. In the percent of money collected from imports, the figure is only 5 percent of declared values. For most nations this figure is upward of 9 percent with two major European nations ranging as high as 25 percent.

What is important? Up to now the United States has been more than generous to the rest of the world in reestablishing its industrial production, in providing a market for its surpluses. Britain, France, West Germany, Japan, and others are now prosperous.

But their prosperity, their continued existence, depends on the strength of the United States, economically and militarily. Should the United States fade they would be left naked in their opposition to Communist aggression. Diplomatically, they recognize that. Commercially, the United States is their patsy.

It is important that we reassess our position in world affairs and act our age and weight. It is no longer necessary that we give any concessions to any nation. Maintaining the United States in full military and economic strength is the most important objective of the free world. Nothing else counts.

Yet, our planners are willing to play ducks and drakes with the most important segment of American prosperity because some muddleheaded idiot decided a few years back that the American textile industry could be expended in the struggle for world friendship.

Vicious and Unfair Competition

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial as to our current policies on imports of textiles and footwear, which appeared in the Manchester (N.H.) Union-Leader on August 8, 1960:

VICIOUS AND UNFAIR COMPETITION

A matter that should be of serious concern to every citizen of New England is the danger to this area's economy that arises from our current policies on imports of textiles and footwear. Officials of both industries and unions connected with them are expressing increasing concern not only over past trade inequities but also over future prospects.

Leaders of the Textile Workers Union of America recently charged that administration proposals in current tariff discussions "invite the destruction of the American woolen and worsted industry." The union has sounded an urgent call to all woolen and worsted manufacturers to join in all-out opposition to new proposals which, the union says, would provide even less protection than the present formula.

Following closely on the heels of this protest was a demand for higher duties and establishment of quotas to protect the hard-hit shoe industry. In a statement presented to the U.S. Tariff Commission and the Committee for Reciprocity Information on August 2, Maxwell Field, executive vice president of the New England Shoe and Leather Association, representing 430 shoe- and leather-producing firms, warned of the serious impact of low-priced shoe imports on the New England economy due to the fact that New England mills produce most of the low- to medium-priced women's and men's footwear in the shoe industry.

Mr. Field expressed the association's strong opposition "to any reduction in the current duty of 20 percent ad valorem on women's and misses' and 10 percent on men's and boys' cemented footwear." Field warned that the total of leather and rubber shoe imports has risen from 11,028,964 pairs in 1955 to 80,468,39 pairs in 1959—an increase of 629.6 percent.

Nor does this alarming trend show any sign of stopping. "Imports of footwear during the first 5 months of 1960 continue to rise at an alarming rate—up 165 percent over the comparable period in 1959, reaching a total of 67,500,000 pairs," Field said.

Although the association primarily represents shoe manufacturers producing leather and fabric footwear on conventional machinery, Mr. Field also took time to point out that for the first time in the history of the rubber footwear industry imports actually exceeded domestic production—by 9 percent.

With wages in the footwear industry in Japan and Hong Kong averaging only 10 to 17 percent of U.S. labor rates, and with labor being a major item in production costs in our country—amounting to one-fourth to one-third of the manufacturer's selling price—it goes without saying that the industry cannot long survive such viciously unfair competition.

The New England shoe and textile industries have a right to expect that their interests and the interests of their employees will be given better consideration.

U.S. Citizens Commission On NATO

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the resolution (S.J. Res. 170) to authorize the participation in an international convention of representative citizens from the North Atlantic Treaty nations to examine how greater political and economic

cooperation among their peoples may be promoted, to provide for the appointment of U.S. delegates to such convention, and for other purposes.

Mr. ZABLOCKI. Mr. Chairman, I yield to the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, when Dr. Streit appeared before our committee in advocacy of the resolution now before us he referred to the fact that the Constitution of the United States was not the product of a convention of specialists. It was indeed far from that. It is doubtful that a convention composed exclusively of the ablest political economists of the age could have produced the imperishable document that the experience of the decades has proved to be the place among the political documents of the ages of the Constitution of the United States of America. The men who wrote the Constitution of the United States came from all the walks of life, and they had had the experiences of men facing many problems in many activities of human existence. These human experiences gave them understanding, and above all an understanding of good intentions but coupled with human frailties and from this understanding came the Constitution of the United States.

Dr. Streit pointed out two members of our committee, one the chairman and the other a top ranking member of the minority, Dr. MORGAN and Dr. JUDD. They are both pre-eminent in the medical profession and they are both family physicians. It is no disparagement of the specialist and of the great contribution he has made to medical progress, but it is the family physician who keeps the family on its feet and who ministers to its need for medical attention, in minor and in major ailments the clock around and on every day of the calendar.

Dr. Streit's presentment and his analogy made a tremendous impression upon me. What the world most needs today is an assurance of peace. I am 78 and I have very much less to lose than a young man of 18. Yet the young man of 18 is in exactly the same position as am I at 78 if on a flash an atomic war is sprung. I am 78 and I want to live. I do not want my future, however short it might prove along the way of natural causes, made shorter by an atomic bomb. How much greater is the stake of the young man of 18.

Mr. Chairman, you get people together from all of the NATO countries, and this thought I know will be uppermost in their minds. They need not be specialists. The big thing is that they would be human beings with backgrounds of human experiences. They would have no authority to authorize any sort of a program. Their principal function would be to get together and to talk together, and, Mr. Chairman, when you get people with good hearts and with a common interest and from many countries getting together and talking and thinking things out you are going to make real progress in finding the path to peace. That is my faith. If one does not believe in people one cannot believe in God, and if one believes neither in God nor people he is hopeless.

I hope the resolution will be adopted overwhelmingly. It may mean spending a little money. Perhaps as much as the wee fraction of the cost of an atomic bomb or a battleship, a wee wee fraction thereof. But it will be one of the best investments for peace ever authorized by this Congress. I repeat, Mr. Chairman, that I am 78 and I want to go on a little longer. In voting for this resolution I am voting for something that I think is a real contribution to my chance of not having my life abruptly cut short by an atomic war at the early age of 78.

Medical Care for the Needy Aged

EXTENSION OF REMARKS
OF
HON. JACOB H. GILBERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. GILBERT. Mr. Speaker, until the Congress has the benefit of strong leadership, which would be shown by a Democratic President, there will be no comprehensive, adequate plan to meet the medical needs of our senior citizens. Medical and hospital care for the elderly must eventually be devised as part of the time-tested social security insurance system. I am grievously disappointed in the bill we have just passed.

The measure which first passed the House was meager and miserly; the compromise measure which finally passed has been termed a shabby joke. It would cover some 2.4 million persons over 65 now receiving old-age medical assistance under State assistance programs, plus an estimated million more persons a year classed as medically indigent. Federal assistance grants would be stepped up under the bill to encourage States to develop comprehensive medical care programs. Participation of the States would be completely optional however, with each State determining the extent and character of its own program.

This is a paupers oath type of medical care. We have to wait until 50 different States, with varying abilities to finance such medical care decide what help they will give the elderly. It is believed that many States will adopt the programs and, equally, many will not. There is no guarantee that our elderly citizens will get any help at all in many instances. It means that those desperately in need of medical care might get some help if the States did their part and if the recipients proved themselves too poor to pay their own doctor bills. They will be subjected to investigation through the local departments of public assistance; they will be forced to answer embarrassing questions regarding income of members of the family; all dignity will be stripped from them at a time when they should have medical help free from harassment and worry.

Responsibility is placed on the States and this means that the entire program will be unwieldy and totally inadequate. A wise and efficient plan should have been made a part of our orderly, nationwide system of social security, to insure the medical aid which is sorely needed.

Several excellent plans were proposed, but defeated, and it is discouraging to have to accept a plan which, while it will do no harm, will not do much good, and falls far short of my expectations. The Forand bill would have provided insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits. Such protection is vitally needed, and should be given our senior citizens who now cannot afford such care and cannot obtain or afford private insurance. Inasmuch as they would have helped pay the costs during their working years, under the social security insurance system, they would have been entitled to medical assistance during the years when they need it most, and they would have had such help as a matter of right, rather than to have to beg for it. I introduced a bill identical with the Forand bill, in the House, to indicate my strong support. The Anderson amendment, backed by KENNEDY would have met the medical needs of our senior citizens and would have been administered under a workable, adequate, nationwide system.

As matters now stand, our elderly citizens will continue to be without adequate medical care and will suffer illness and pain without the assistance they should have, and which has been promised them.

I shall continue to give of my best efforts to the end that the situation will be corrected and our senior citizens will be given adequate help, just as soon as it is possible to secure passage of a good, effective medical aid bill.

J. A. Stilwell and Houston Rotarians Becoming Better Neighbors by Breaking the Language Barrier

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. YARBOROUGH. Mr. President, we read and hear a great deal these days about various plans to better our relations and strengthen America's friendships with the people of other nations.

One of the programs which has impressed me most as working toward a practical improvement of "good neighbor" relations has been instituted by the Rotary Club of Houston, under the leadership of its President J. A. Stilwell, which with 670 members is the second largest Rotary Club in the world.

In order to better understand the people of Mexico, and their problems, members of the Houston Rotary Club have

begun holding special meetings prior to their regular luncheon meeting to study conversational Spanish.

Recently Rotary President Jim Stilwell wrote a letter to the president of the Rotary Club of Saltillo, Mexico, outlining this study program. I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROTARY CLUB OF HOUSTON,
Houston, Tex., August 18, 1960.

The PRESIDENT,
Rotary Club of Saltillo,
Casino de Saltillo,
Saltillo, Coah, Mexico.

DEAR ROTARIANS OF SALTILLO: Six hundred and seventy members of the Houston Rotary Club join me in sending greetings and best wishes to all Rotarians and our friends in your country.

We wish to tell you about a project we have started which we hope will help to strengthen the bonds of friendship between our countries. The expression of friendship and good will knows no language barrier, yet we feel that we as individual Rotarians may better express our true feelings if we learn to speak the language of your country. We have, therefore, inaugurated conversational Spanish classes at our regular Rotary meeting each Thursday.

The members of our club participating in these Spanish classes arrive at the meeting each week 30 minutes early and are given instructions in conversational Spanish by competent teachers. They then go to the regular meeting and sit at special tables and continue their conversations in Spanish in order to practice what they have learned.

The members of our club are participating in this program with great enthusiasm and we hope that some of you will have the opportunity to visit with us at some time in the future and see this program in action.

Nosotros les deseamos con todo corozón éxito continuado, salud y mucha felicidad en compañía de los suyos.

Sincerely yours,

J. A. STILWELL.

Charity Is a Dirty Word

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, an editorial from the Wall Street Journal of August 24, 1960, entitled, "Charity Is a Dirty Word."

This article comments very wisely and compassionately upon the problem of providing medical care and assistance for our older citizens, while recognizing the necessity for preserving the innate dignity of the individual we seek to help.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHARITY IS A DIRTY WORD

In the days of our childhood there were three things to abide in men forever, and the greatest of these was charity.

For charity, in those days, meant a divine love for man, the benevolence of all men of good will toward their brothers. It was kind. It envied not. It vaunted not itself. It was not puffed up. It was not gained simply by bestowing all one's goods to feed the poor, because it was a thing of the heart without which man was nothing.

So it was a word such men as Thomas Jefferson could use with dignity, deeming it the duty of each man by himself and all men joined together to show it toward their neighbors. It was an honorable word with which to bespeak the responsibility of the whole community for those among it who were old, sick, or otherwise unfortunate.

But not any longer. First the word itself lost its meaning, and those who would translate the message of St. Paul were constrained to speak only of love, a word of so many meanings as to have no meaning at all.

And now, finally, charity has become a dirty word. In newspaper advertisements all across the land, paid from the rich coffers to the AFL–CIO, the word is spat out: Is medical care to be available for the needy as a handout, as public charity? It is a word from which good men shy as they arise to speak on the floor of the U.S. Senate.

There they have been speaking about a simple objective, to see that no old person goes without proper medical care because he lacks the means to provide it for himself. The question is, How?

Now this problem, be it noted, is only how to care for a small minority; among the blessings Providence has bestowed on this country is that those among us who are needy are the few, not the many. So it would not be too costly or too difficult to set up a system—even one run by the Federal Government, if that is insisted upon—under which those in need might have a formal and orderly way to receive aid from the whole community.

But to set a standard of need, we are told, would be public charity, and charity is an evil thing. It demeans a man to have to state that he is in need. So to care for this minority some people tell us we must put the medical care of every old person, fortunate and unfortunate alike, in the hands of the Federal Government.

Well, it's true that men of pride and dignity do not welcome a situation in which they must turn to others for succor. Indeed, it is the desire not to be "beholden" that makes freemen labor and save to provide for themselves and their own. But surely it is not "demeaning" for a man struck down by what he cannot help to be helped by his fellow human beings. There is no shame for the blind in being led by those who can see.

What is truly demeaning is for the hale man, the free and self-reliant man, to be beholden to the Federal Government for his food or his shelter or his care in sickness. For then he lives not by the charity of his fellow men in his distress but simply by taking from them. It is thus that men of good will are shamed.

Yet that is precisely what is proposed by those who treat charity as a dirty word. If all they really sought were succor for the unfortunate, charity would provide it. What they really seek is not succor for the needy, but a way to put all men upon the same level. If they can achieve a system where the Government provides all men with their needs, then no man shall have more than another. We will all, in time, take what Government provides.

We do not know the word for this new spirit. But whatever it is, it has no kindness. It rests on envy and it vaunts itself, puffed up in the belief that it can do for all men better than all men can do for themselves. It is the same spirit that already walks across wide areas of the world, where men are but numbers to be fed, clothed, and nursed for other purposes than humanity. Whatever it calls itself, it is not a thing of the heart.

And we are so old fashioned as to wonder, if charity is to be lost to this new spirit, then how long there will abide faith in every man's dignity and the hope that here we will preserve it?

Philipsburg, Pa., Hails Dr. Walter Roy Heaton, Prominent Centre County Physician, as "The Country Doctor of Today" on the 80th Anniversary of His Birth

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. VAN ZANDT. Mr. Speaker, a large throng of residents of Philipsburg, Centre County, Pa., aided by many persons from the surrounding area and from adjoining Clearfield County, gathered at Memorial Stadium in Philipsburg on Sunday afternoon, August 28, to pay a well-deserved tribute to Dr. Walter R. Heaton on the occasion of the celebration of his 80th birthday.

Various clubs and civic organizations were represented at the testimonial to one of Pennsylvania's best-loved physicians who during his active medical career has found time to serve as coroner of Centre County for 20 years. The chairman of the program committee, Rev. Harrison Price, pastor of the Woodland (Pa.) Evangelical Church, is among the 4,000 babies delivered by Dr. Heaton during his dedicated service to humanity. The fine program had a dual purpose in honoring Dr. Heaton and the medical profession in general.

During the interesting and enjoyable program, greetings to the popular Centre County physician were voiced by Mr. S. Z. Miller, burgess of Philipsburg, and by over a dozen representatives of business, civic, and service clubs present for the happy occasion. The medical profession was represented by Dr. Lester Luxenberg, of Philipsburg, while music was performed by the Centre County Hymn-Sing Association and the Sandy Ridge Methodist Bible Class.

It was my privilege and honor to deliver the principal address in tribute to Dr. and Mrs. Heaton and the medical profession which he has so nobly represented during his many years of service to Centre County residents.

The address follows:

ADDRESS BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE 80TH BIRTHDAY CELEBRATION FOR WALTER ROY HEATON, M.D., AT THE PHILIPSBURG STADIUM, PHILIPSBURG, PA., AUGUST 28

It gives me the greatest pleasure to be among my friends in Philipsburg today and to join with you in the celebration of the 80th birthday of one of the most exceptional

members of this community—Dr. Walter Roy Heaton.

I want to give my thanks to those who took part in arranging this event—for I can think of no more fitting way to show Dr. Heaton our gratitude and esteem.

He has served this community as few men have served it.

For nearly 50 years he has been "on call" in Philipsburg and you have all had the opportunity to observe his devotion to the task of relieving pain and suffering.

He has brought a unique spirit of confidence into your homes.

I am certain that everyone here today shares my feeling of deep humility before the productive way in which Dr. Heaton has spent these 80 years.

How many of us approach our chosen professions with so rich a background of experience as did Walter Roy Heaton the practice of medicine?

How many of us continue to take an active interest in civic affairs not having a direct bearing on our more narrow circle of interests?

Dr. Heaton's growing years were undoubtedly instrumental in giving him the broad and vital approach to life which delights us all.

He helped his father dig a farm and dwelling out of timber and brush.

He taught school at an early age and was led to seek out still more knowledge and education.

He studied law, graduated from law school, was admitted to the bar and practiced before the supreme court of the State of Indiana and the circuit court of the United States.

But the call of the medical profession had for Dr. Heaton an appeal which could not be postponed indefinitely—and he left the practice of law to attend Valparaiso Medical School from which he graduated in 1911.

He has practiced medicine in Philipsburg for more than 45 years.

These years have been marked by changes in medicine which are no less dramatic than the other scientific advances which have revolutionized our whole view of the world.

Dr. Heaton has had the opportunity not only to witness the product of these changes but to see their evolution.

I think this gives us all great confidence in the kind of medicine he practices.

Perhaps today we can all consider the transformation of medical science over the period in which Dr. Heaton has practiced in Philipsburg and ponder the advances likely to occur within the next few years.

I think even a hurried glimpse of the developments in medicine can help us to appreciate the enormity of the challenge facing Dr. Heaton and other physicians throughout the country in keeping up with the rapidly changing methods of diagnosis and treatment.

That he has performed his task so admirably is a tribute to his greatness as a human being and as a physician.

I would like to read to you what I consider to be an excellent description of these advances and of others we are likely to experience.

The following is a statement by the chairman of the section on pediatrics of the American Medical Association, Dr. Wyman C. Cole.

He states:

"Any doctor starting in practice 40 years ago might have found it hard to believe there would come a day when such diseases as rickets and scurvy would be textbook ones rarely if ever to be seen in practice, when he would treat pneumonia right in his office and essentially cure it in 24 hours, when he wouldn't see a case of diphtheria or tetanus in 25 years, when suitable formulas for 99 out of 100 babies would be available at any drugstore or supermarket.

"Looking ahead, well within the next 40 years cancer may have become relegated to medical history and the common cold forgotten, a single injection or tablet may immunize against all communicable diseases, many congenital defects will be avoided, and arthritis and other metabolic diseases will be easily controlled.

"I am sure this is only a small fragment of what will actually transpire."

Since the turn of the century and Dr Heaton's years of early practice—we have seen the lifespan of a child at birth extended by a full 20 years.

We have seen near mastery of medicine over the dangers of communicable diseases.

Sulfa drugs and antibiotics—greater understanding of the importance of nutrition—improved sanitation—immunizations—these weapons have helped conquer diphtheria, scarlet fever, whooping cough, typhoid, infectious diarrhea, tetanus, gonorrhea, and syphilis.

Probably no advance is more dramatic than the change in the methods of controlling and caring for tuberculosis.

We have so increased our diagnostic tools and so improved the treatment through various drugs that tuberculosis is no longer termed the "great white plague."

But if we have made great strides against infectious diseases since the turn of the century—the threat from chronic and degenerative diseases seems to increase each year.

Recently we have shown a growing awareness that this problem must be met with the same courage and strength as were the disease threats of the past.

We have constantly expanded our medical research programs; we have attempted to spread widely existing information on preventive measures which can be taken by the public; and we have tried to adapt our health services to changing needs.

I would like to single out some of the major disease threats which Dr. Heaton and his colleagues face today and consider with you both the remarkable progress of recent years and the great areas of hope for future progress.

Of course our vigilance against diseases of the past must be constant and we must not ignore or lessen our use of all methods of prevention and control now at our disposal, but I think that medical advances have freed us to spend more of our Nation's time and resources on the major hazards to our health today.

As you know, various forms of heart disease still account for more than half of all deaths each year.

At the same time we can be encouraged to note that many heart attack victims of a few years ago can be saved today.

Some of the advances against heart damage are familiar to you.

We have been warned of the necessity of preventing rheumatic fever through careful control of strep throats.

Penicillin has been invaluable not only in the treatment of strep infections but also in the prevention of recurrent attacks for those people with rheumatic hearts.

Dr. Heaton has watched quantities of new information pour out each year on ways to prevent hardening of the arteries.

Heredity, stress, high-fat diets, smoking, and lack of exercise have all been singled out as important factors in causing coronary attacks.

To the physicians weapons in this field have been added drugs which have the effect to thinning the blood and preventing the formation of clots.

These anticoagulants have already been effective in preventing heart disease in many who might otherwise have been attacked.

Other drugs have been instrumental in controlling high blood pressure.

The development of heart surgery has been characterized by the Director of the National Heart Institute, Dr. James Watt, as the "one field that you can specifically say is resulting in the saving of life today."

Most of us are scarcely able to imagine the heart operations being performed today.

Who can consider the possibility of the heart's being deliberately stopped so that the surgeon can work on it while the rest of the body is being run by a machine?

Add to this the fact that spare parts such as heart valves and arteries are now available and it seems that medicine has broken nearly every barrier.

We still have a lot to learn.

I understand that the hardening of arteries is a process still not completely understood although it is subject to a limited amount of control.

We can still make advances in isolating the factors which cause various heart ailments and in this way hope to forestall more effectively the toll of heart disease in our population.

Unfortunately, our progress against cancer has not brought us to a determination of cause in this disease enemy either.

But we are all glad to know that instead of only one in seven persons with cancer who could be saved 20 years ago, today we believe that only one in three persons who contact cancer must die.

Surgery and radiation are no longer a physician's only hope.

Drugs have delayed the course of leukemia; seem to have checked Hodgkin's disease; and occasionally have suppressed a rare type of uterine tumor.

The National Cancer Institute in combination with other governmental and private groups has been carrying on one of the most massive research projects ever attempted in order to screen thousands of compounds with the hope of finding a possible cure for cancer.

Air pollution, radiation, tobacco tars, and other substances are being carefully studied as suspected irritants which may cause cancer.

Some research workers are confident that viruses cause cancer and this leads us to hope that anticancer vaccine is not an idle dream.

In addition to encouraging signs in the search for a cancer cure—progress in the development of diagnostic techniques for the early detection of cancer has meant that control of this enemy through existing weapons has improved greatly.

The remarks of a member of the committee of consultants on medical research chosen to advise the Senate Committee on Labor and Public Welfare on the level of Government research spending are particularly encouraging with respect to our progress against cancer.

Dr. DeBakey stated at hearings before the Senate committee:

"I think there are two very important areas of progress in this field. One lies in providing a more concentrated attack of the many problems of cancer which will lead to an increase in our fundamental understanding of its causation.

"The other is that in the practical approach to treatment, we have combined several kinds of therapy to be used more effectively in the individual cancer cases."

Dr. Heaton has had opportunity to view developments in still another area, that of mental illness.

The occupancy of more than half of the hospital beds in this country by those afflicted with mental disorders in testimony to the importance of this disease problem.

But in recent years the number of persons discharged from mental institutions to resume normal lives has continued to rise.

This has been made possible in part by the various forms of tranquilizing drugs.

Experimentation with various hospital procedures especially suited to the treatment of mental disorders has also helped return the mental patient to his family with great speed.

We now have "open" mental hospitals with unlocked doors and no bars on the windows.

Night and day hospitals—so-called halfway houses and—in general a more understanding public have helped to bring about these changes.

The more than 10 million sufferers from some sort of rheumatic complaint in this country have watched the medical advances of past years with great interest.

There has been a rapid output of synthetic hormones and steroid drugs and these have provided some relief from the discomforts of arthritis.

We know, however, that these drugs do sometimes have unpleasant side effects, and sure relief for the arthritic is still not in sight.

Diabetics too, have had good reason to be encouraged by medical advances.

Today one out of five diabetics is able to take a pill instead of an insulin injection.

The oral diabetic drugs are unfortunately not useful for all diabetics, and here again future discoveries may further improve methods of controlling this disorder.

Dr. Heaton's years of medical practice have been marked by other breakthroughs.

Today 80 percent of all epileptics can be kept free of seizures with drugs, and surgical treatment has proven valuable for others.

Drugs and surgery are providing relief for Parkinson's disease; cortisonelike hormones are making the treatment of kidney ailments more effective; radioactive isotopes can be used to scan the brain for tumors before surgery; new relievers of pain and itching; scrutiny of possible vaccines for colds and viruses. I think I could go on endlessly simply naming encouraging advances in the field of medicine.

The drama of these medical gains is similar to the drama of other changes in Dr. Heaton's own life.

The frontier village of Philipsburg has given way to the modern community of today.

The railroads, lumber and coal industry, and countless other forces have altered this community.

I feel certain that as I have discussed these dramatic changes in medical practice there comes to the mind of Dr. Heaton and others in the audience another area of change no less pronounced and no less vital.

This is the change which has taken place in the practice of medicine.

Whereas in 1928, 75 percent of practicing doctors were general practitioners, today only about 40 percent are in general practice.

The increase in the demands of the public for specialized medical care, the increasingly technical nature of medical treatment—these and other factors have changed the character of medical practice throughout the country.

Many have raised their voices to plead for a return to emphasis on the art as well as the science of medicine.

This is a subject Dr. Heaton knows well for I am certain that he has never for a moment lost this art.

The importance of this factor was recently given recognition by the past president of the American Medical Association, Dr. Louis M. Orr, who stated:

"The G.P. (or general practitioner) is still the backbone of American medicine and is best able to preserve personal relationships in healing—85 percent of all illnesses are within the skills of the well-trained G.P.

"Consultants are available for the rest."

The personal relationship which Dr. Heaton has established with this community is a unique one.

We can never for a moment forget the lives he has saved, the babies he has delivered, or the suffering he has relieved.

He organized the local Lions Club; served as coroner of Centre County for 20 years; and has for 28 years been a director and vice president of the State Sabbath School Association.

Philipsburg area children have attended his Sunday school classes for well over 50 years.

We can never show our gratitude adequately, but I trust that as his friends gather about him today to celebrate his 80th birthday, Dr. Heaton senses a part of the deep respect and thankfulness they feel for his dedicated service.

I think that another past president of the American Medical Association, Dr. Gunner Gundersen, summed up the unique contribution of Dr. Heaton and others like him in a speech he made 2 years ago.

Dr. Gundersen said:

"In recent years the individual physician has had an increasingly difficult time in trying to keep up with the accelerated scientific advances in medicine.

"Now with man probing into outer space, it appears that our scientific future will be further complicated by the development of still another specialty—space medicine.

"Nevertheless, right here on terra firma it is more than ever true that medicine is a lifelong study, one which actually is just beginning when the doctor receives his doctor of medicine degree or completes his graduate training.

"Meanwhile, we are also reemphasizing the emotional, personal, and spiritual factors in medical care.

"The age-old art of medicine—that intangible element made up of compassion and warmth—is regaining its proper place.

"In medicine, as in all other phases of life, we are rediscovering that philosophy is just as important as technology, that the human personality cannot be subordinated to crisp efficiency."

As I conclude my tribute to Dr. Heaton I wish to join the thousands of his fellow citizens and admirers in not only saluting him as a great American and a credit to the medical profession but a humanitarian who by his consideration of his fellow man has enshrined himself in the hearts of those fortunate to have known him.

Happy birthday, Dr. Heaton, and many more of them.

Bounty Held Key to Crisis in Sugar

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of August 28, 1960:

BOUNTY HELD KEY TO CRISIS IN SUGAR—FINANCIAL EXPERTS SAY THAT JUGGLING OF QUOTAS IS AN IMPRACTICAL METHOD

(By Paul Heffernan)

So far as the crisis in Cuba is concerned, Uncle Sam is not playing the role of sugar plum fairy as effectively as he might.

This is the opinion of realists in the field of international financial relationships. The trouble, it is argued, is that Uncle Sam is finagling too much with the sugar quota and not enough with the sugar bounty.

Even though the Cuban sugar quota was cut 700,000 tons as Cuba confiscated more than $800 million of property owned by U.S. nationals, Uncle Sam is still committed to pay to the Castro Government a subsidy of about $96 million a year above the world price for the 2,400,000 tons of sugar remaining in the Cuban quota.

This means that the Castro grab of U.S. property stands to be rewarded, every 10 years, by a handout from Uncle Sam that matches the amount of the expropriation. Alice in Wonderland rides again.

Uncle Sam is now striving to right matters by further juggling of the sugar quota. Only last month, 322,000 tons of the old Cuba sugar quota was switched to the Dominican Republic. Now Washington proposes to backtrack.

"Since total imports of sugar from the Dominican Republic in 1959 amounted only to about 84,000 tons," President Eisenhower reminded Congress last week, "the statutory allocation would give that country a large sugar bonus seriously embarrassing to the United States in the conduct of our foreign relations through the hemisphere."

But what if Uncle Sam and Cuba got on friendly terms again? Would the old Cuban quota be restored at the expense of the nations which, like the Dominican Republic, now stand to enjoy a windfall at Castro's expense? Can such handout, once bestowed, ever be graciously withdrawn? Is it only Generalissimo Rafael Leonidas Trujillo Molino, head of the Domican Republic, for whom the sugar bell is tolling?

REDUCE BOUNTY NOT QUOTA

To the financial mind, the preferable treatment is simple. Let the bounty to Cuba be reduced, not the quota.

Cuba, it is true, would have her world market enlarged by 700,000 tons. But not at Uncle Sam's bounty price of 5 cents a pound; rather, at the world price of about 3 cents a pound.

U.S. taxpayers would be about $96 million a year better off by the move. And Cuba, her sugar market restored to the old size, could hardly make rational complaint about "economic aggression." If Castro can sell 700,000 tons of sugar to friendly Communist nations at 5 cents a pound, more length to his beard.

The $96 million windfall to U.S. taxpayers could be put to most appropriate use just now. Instead of the money being paid to the Castro government to finance the expropriation of U.S. property—as the Cuban dictator has proposed—a good part of the money can be turned over to the Foreign Claims Settlement Commission to indemnify U.S. nationals for their losses.

Under the statutory limits governing the functioning of the Foreign Claims Settlement Commission, approved claims of $1,000 or less would have to be paid in full before larger claims could be indemnified. With more than $800 million of U.S. property already seized by Cuba—most of it plants of large industrial corporations—it would take 10 years or so for the repatriated sugar bounty fund to build up enough money to pay off the big companies.

Such a prospect, however, would be superior to that handed out by the Castro regime. The revolutionary Cuban Government proposes to pay off owners of expropriated U.S. property with 20-year bonds bearing 4½ percent interest, provided Uncle Sam continues the bounty.

Cuba has outstanding comparable 4½ percent bonds, payable in U.S. dollars. Current-

ly, they are valued at 45—that is, $450 for each $1,000 bond. This means that the indemnity bonds that Castro proposes to issue should bear a rate of about 10½ percent interest, instead of the 4½ percent rate proposed.

The recision of the over-the-market-price bounty for all Cuban sugar would, moreover, have a constructive effect in sustaining U.S. private investment abroad. It would serve as a warning to nations to think twice before embarking on a capricious and punitive seizure of the capital savings that U.S. citizens have seen fit to invest in less developed communities.

Radio Free Cuba

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. PUCINSKI. Mr. Speaker, a Chicago newspaper recently asked how much longer the United States can afford to let a tinpot dictator in Cuba get away with wholesale robbery crowned with insults.

The action of the Foreign Ministers of the Organization of American States yesterday in condemning Moscow interference in the Western Hemisphere clearly indicates that people throughout the Americas indeed agree with the question asked by the Chicago newspaper. But the action taken yesterday by the OAS in condemning the Communists will have little meaning unless this information is given to the people of Cuba.

I am proposing today that the American people help organize a privately financed agency to be known as "Free Cuba, Inc.," and whose principal function will be to immediately set up powerful radio transmitters to be known as "Radio Free Cuba" and beam the truth about Castro and his Communist advisors to the people of this island republic.

There is no question in my mind that the Cubans are now being brainwashed with the most bitter hate-America campaign ever staged anywhere in the world by Castro and his Communist conspirators through his tightly controlled press and radio in Cuba.

We must immediately provide a counterforce which will tell our traditional allies and friends in Cuba the truth about Castro.

My suggestion is not without precedent, even though we still maintain flimsy diplomatic relations with the Cuban dictator. The United States maintains diplomatic relations with the Communist regime in Poland and other nations behind the Iron Curtain, but we also maintain our anti-Communist broadcasts into these countries through Radio Free Europe and the Voice of America. I feel that this proposal in no way violates the sovereignty of Cuba or any other nation.

I believe there is a sense of urgency in my proposal. I have been informed by leaders of the anti-Communist underground movement in Cuba that Castro and his Communist advisors are plotting now to carry out the final blow of his anti-America drive, and that is, the seizure of our naval base in Guantanamo. I have it on what I believe reasonable authority that Castro very shortly is going to organize a large group of Cubans to stage a march on the American naval base in Cuba. These will not be Castro's soldiers, but innocent Cuban citizens, while ire will be fanned by Communist agitators. The plot is to make sure that several of these Cuban citizens will be killed during the melée not by Americans, but by the Communists themselves. This incident is designed to give Castro the springboard from which he will brand America as an aggressor in an attempt to drive Americans out of the base.

It is extremely important for us to set up a facility now which will forewarn the Cubans of Castro's plot and will tell them of his true intentions. It is also essential now to tell the Cuban people that some of the outstanding Cubans who helped Castro in his July 26 movement have now turned into counterrevolutionaries who are fighting him because he has sold out lock, stock, and barrel to Kremlin rule.

Mr. Speaker, I am sure the American people will support this program as a voluntary citizens movement. I do not believe it should become an official Government function because then Castro would single out our State Department as his target for intensifying anti-America hate propaganda. Instead, this should be a wireless "people to people" program starting at the American grassroots level in our effort to tell our friends in Cuba the truth about their leader. I am confident American industry, the American labor movement, and the American people will help make this a successful venture.

The powerful radio transmitters could be built on one of the offshore islands between Cuba and Miami. I have been assured by the Cuban anti-Communist underground that the people of Cuba not only can but will listen intensely to these broadcasts. One of the things that puzzles the Cuban people more than anything else today is the complete lack of a possible counteroffensive by the American people. We can cure this lack with the Radio Free Cuba project, which I am proposing today.

Mr. Speaker, I am enclosing an editorial from the Chicago Daily News, which I think quite accurately reflects the temper of the American people regarding Castro and his Communist legions in Cuba:

CUBA CROWNS THEFT WITH INSULTS—PATIENCE MAY BE DANGEROUS, TOO

How much longer can the United States afford to let a tinpot dictator in Cuba get away with wholesale robbery crowned with insults?

Up to now, patience has been the watchword in U.S. dealings with Cuba. With one exception—the cut in the sugar quota—our Government has limited itself to ineffectual protests while Fidel Castro and his Communist cohorts have systematically destroyed the fruits of more than 50 years of economic collaboration.

A weekend decree read by the ailing dictator completes the seizure of American-owned property in Cuba valued at nearly $1 billion. There is almost no hope that any of it will be paid for; it is robbery pure and simple.

The fact that the Castro gang believes it can do its dirty work with impunity may in the long run be more damaging than the financial loss. If the Cubans can get away with it, who is next in line to try? The United States has a good many billions invested around the world, and the lineup of greedy politicians willing to grab the loot could get pretty long.

Castro is confident that the United States will do nothing. He derides us as a "second-rate military power." His pal, Nikita Khrushchev, whose hands are still bloody from the butchery in Hungary, has the gall to threaten a rain of rockets on America if we dare to lay a hand on the Cuban hijackers.

It is not fear of Russia, and much less of Cuba, that has restrained the United States from administering a spanking to the Cuban upstart. The one thing we want to avoid is to give substance to the false charge of Yankee imperialism.

But in this case it seems the facts don't matter anyway. Not only the Cubans, but millions elsewhere in the world, are willing to believe the worst of the United States on any crackpot's say-so. At the same time, they disregard the flagrant imperialist aggression practiced by the Soviet Union and swallow the line about peace-loving Communist states.

In leaning over backward to be fair, we run the risk of becoming a pushover. While we seek to gain respect by forbearance, we lose respect by failing to stand up for our rights.

We would gain no points for good behavior if we adopted a tougher line toward Cuba, but if the reward for good behavior is a punch in the nose for Uncle Sam, maybe it is time Uncle Sam took a different tack.

There was a time when an American symbol was a rattler with the words "Don't tread on me." The world has changed some since then, but it surely cannot have changed so much that we have to offer ourselves as a doormat.

Seymour Paul, Former Director of Personnel for the Panama Canal Zones, Dies

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. ABBITT. Mr. Speaker, on June 30 of this year, Seymour Paul, retired director of personnel for the Panama Canal Zone, died at his home in Harrisonburg, Va. Mr. Paul had a long and distinguished career and his interests in connection with the Panama Canal Zone were varied and active.

The News-Record of Harrisonburg on July 1 carried a very fine obituary which I would like to insert in the RECORD at this point:

SEYMOUR PAUL DIES AT HIS HOME HERE

Seymour Paul, 72, retired director of personnel for the Panama Canal Zone and a native of Harrisonburg, died Thursday morning at his home on South Mason Street. He had been ill for some years.

Mr. Paul and his family returned to his home town in 1950 after 40 years of civil service in the Canal Zone. He went to Panama as a young man and participated in the development of the area. He was an

editorial contributor to the Panama Star and Herald for 25 years and served as correspondent for a U.S. news service.

NEWSPAPER WRITER

Prior to leaving Harrisonburg in 1911, Mr. Paul was a member of the staff of a local newspaper. He never lost his gift for writing and wrote many articles on the Canal Zone. He kept himself well informed on current events and world affairs.

The Panamanian Government honored him with its highest decoration, the Order of Vasco Nunez de Balboa. When Mr. Paul left the Canal Zone, the Panama American paid him this editorial tribute:

"To many persons, Seymour Paul is known as the most polite man in the history of the Canal Zone. He may have lost his temper at times, but no one knew it. Nor did any one ever know of him to speak harshly of another person."

SON OF JUDGE PAUL, SR.

Mr. Paul was a son of Judge John Paul, Sr., and Katherine Green Paul. He was graduated from Virginia Military Institute and received his master's degree from Columbia University. He served in the Army in World War I. His father was also a Member of Congress and a veteran of the War Between the States.

He is survived by his wife, Mrs. Jane Abbott Paul; two sons, Seymour Paul, Jr., and John Abbott Paul; a daughter, Mrs. Theodore Davenport, of Summit, N.J.; a brother, Federal Judge John Paul; and five grandchildren.

A funeral service will be held Saturday at 11 o'clock from Emmanuel Episcopal Church and burial will be in Woodbine. The Reverend Francis B. Rhein will officiate. The body will be taken to the church at 10 a.m. The family requests that flowers be omitted.

Pallbearers will be Dr. Charles Caldwell, D. Wampler Earman, Dr. Claude Morrison, Herbert Simmons, Frank C. Switzer, Frank Whitesel, Capt. George G. Herring, and K. C. Moore.

What's Right About Civil Rights?

EXTENSION OF REMARKS
OF
HON. JAMES G. O'HARA
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. O'HARA of Michigan. Mr. Speaker, if democratic government is to work, it must be based upon an interested and informed electorate.

In the United States today the job of interesting and informing the public is one in which every citizen bears an individual responsibility, but the primary responsibility lies with the press. Their influence is great. With this influence comes great responsibility. The Huron News, published in the small city of Bad Axe in my district, is a publication that recognizes its responsibility in this regard and is for this reason one of the outstanding small city newspapers in Michigan.

Their issue of July 22 of this year contained an excellent editorial on the subject of civil rights which in terse and objective fashion analyzes an issue which has generated much heated controversy. This editorial should be read by all of us.

It is therefore with great pride that I include this editorial from the Huron News of Bad Axe, Mich., at this point in the Appendix of the RECORD:

WHAT'S RIGHT ABOUT CIVIL RIGHTS?

Whatever else the Democratic National Convention may have proved, it certainly demonstrated that the issue of civil rights is a rouser. That single issue provided more heat than any other in the platform. If little light accompanied the heat, this is perhaps part due to convention madness and partly inherent in the issue.

We particularly liked the defense of the CR plank expressed by Michigan's own Senator PHIL HART. If you missed it, HART tried to make it clear that CR is not a North-versus-South matter, that some elements of civil rights abuse may be peculiar to Dixie but that other phases are just as glaringly present in other States and sections. Too bad such a sensible and fair consideration elicited scant response.

Civil Rights.—What do they mean? Basically (and, oversimply, we admit), the terms include all the rights of a citizen of these United States. But the term rights of itself seems to confuse if not confound a lot of people on both sides of the issue.

Perhaps, in place of waxing vehement as to who should be granted or denied these rights; instead of indulging in elaborate forensics about why or why not, it might be profitable to begin with two elementary questions: (1) Who specifically is a U.S. citizen, and; (2) exactly what opportunities, privileges, duties and assurances are inherent in citizenship?

As an example of the specious and utterly asinine thinking at this point it is frequently argued that the right to vote should not be granted to certain types of citizen because they are ignorant. The argument, of course, is sheer subterfuge to camouflage racial, creedal or other intolerance, and proof of it is seen in the fact that ignorance is not restricted to one class, color, creed or section. If that argument justifies deprivation of franchise, then we'd better apply it uniformly. And if we do, then there are quite a few of the socially select and economic elite whose ignorance is both obvious enough and revolting enough to bar them from the voting booth.

No, civil rights dare not be based upon superior intelligence, education, economic bracket, color of skin, religious persuasion, social status or any other arbitrary category. We confess that at times we wish holding public office, or owning restricted property and several other so-called rights could be so regulated, but then they would become not civil rights but social, political, racial, religious or some other kind of rights.

Civil rights are irreducibly those rights which are intrinsic to and inherent in citizenship. To argue for or against their bestowal or denial on any other basis, just as Senator HART'S convention appeal suggested, is to desert both logic and American principle.

Like it or not, when we grant citizenship to any man or woman, civil rights are simultaneously accorded that citizen. If that principle is uncomfortable, then there is but one choice among three possibilities: (1) Change the statutory concepts of American citizenship by orderly processes of law; (2) Change your own inconsistency of concept by orderly processes of reason; (3) Change your address by the orderly process called emigration.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. UTT. Mr. Speaker, a patriotic group in San Diego, Calif., has just concluded a 4-day seminar on the dangers of internal subversion by the international Communist conspiracy. The final speaker was Adm. Richard Arens, former counsel to the House Un-American Activities Committee. I have received many wires from those in attendance saying his address was received by a standing ovation of the 1,200 people in attendance.

This is further indication that the general public is in full support of the House Un-American Activities Committee and the Senate Internal Security Committee, as opposed to the numerous Communist fronts which are constantly trying to destroy the efficacy of these committees.

Amarillo Girl Wins Top National Prize

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. ROGERS of Texas. Mr. Speaker, the journalistic annals of our era will, perhaps, record that this generation of American youth is substantially one of uncontrolled delinquency. Unfortunately, the case for vibrant, progressive, and enlightened young people who make up the majority of today's teenagers, is seldom noted.

The resultant image has been attacked in an admirable and worthwhile statement by Miss Beryl Jean Ward of Amarillo, Tex., whose essay, "What's Right About American Youth," has been recently awarded first prize in a nationwide essay contest sponsored by the Gilbert Youth Research Co. and the Associated Press. It is with considerable pride that I insert herein an article from the August 26 Amarillo Daily News concerning Miss Ward and the contest, as well as her splendid prize-winning essay:

AMARILLO GIRL WINS TOP NATIONAL PRIZE—YOUTH ESSAY WORTH $500 IN CONTEST

The 17-year-old Amarillo charmer who won first prize in the Eugene Gilbert essay contest attributes her success to an uncharacteristic burst of anger.

A good student with a penchant for poetry and charity work, Beryl Jean Ward was just plain fed up with the way many adults seem to judge all teenagers by the crimes of a few.

When she heard that the Gilbert Youth Research Co., and the Associated Press were sponsoring a nationwide essay contest on "What's Right About American Youth," Beryl saw her chance to strike back. Her blast against the inability of the adult world to understand today's teenagers not only won her $500 and first place among thousands of contestants but enabled her to get her pet peeve off her mind and into print.

"It bothers me," she admits, "to have people put all teenagers in the same category."

Her winning essay was not her first venture into print. Last year one of her poems, "Beauty of the Plains," was featured in a national high school anthology and later published by the American Poetry Society.

And yet, Beryl is not bookish. Pretty and cheerful, she packs a lot of poise into a five-foot-five, 105-pound frame, likes bowling, swimming, and dancing as well as creative writing, which is her favorite hobby.

She is the daughter of Mr. and Mrs. F. Ross Ward of 5707 Emil. Her father is district manager of a sewing machine company. A sister, Karen, is Mrs. William A. Smith, a schoolteacher in Oakland, Calif.

Beryl started school at Wichita, Kans., and attended schools in Kansas City, Kans., and Denver, before enrolling in Tascosa High School in Amarillo, where she will begin her senior year in the fall.

She likes all her courses, even math which she admits "I'm terrible in," and takes a special interest in English, history, and dramatics, her best subjects.

"She's an excellent student of literature and English, but not a straight A student," confides Miss Maxine Hurley, her English teacher.

Like many youngsters her age, Beryl Jean regards summer vacations as a time of accomplishment and enrichment. Last summer she worked as an unpaid volunteer at the Veterans' Administration hospital in Amarillo. This summer, with rising college costs in mind, she is clerking in Wolflin Village Pharmacy.

Says Pharmacist D. J. Lindsey of her work at the store, "She spends her spare time trying to learn the stock.

"Not too many youngsters take that kind of interest in their jobs these days."

Beryl entered the contest at the suggestion of a friend, while both were reading Eugene Gilbert's weekly "What Young People Think" survey in the Amarillo Daily News.

International Banditry

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include the editorial entitled "International Banditry," which appears in the September 5, 1960, issue of U.S. News & World Report. This article is a timely one and the suggestion made therein deserves the study and consideration of every Member of the House:

INTERNATIONAL BANDITRY

(By David Lawrence)

Realism today commands us to face up squarely to the fact that there can be no peace in the world, no independence for former colonial countries, and no safety for any free nations as long as international banditry is permitted to rove the earth.

Self-determination of peoples has long been a worthy ideal. America has proclaimed again and again its sympathy with the right of nations, large or small, to choose their own form of government.

But now we see the principle impaired everywhere. Whether it be in Latin America, or in Eastern Europe, or in the Middle East, or in the Far East, and indeed wherever we penetrate the chaos that currently prevails on the African continent, we find one culprit—one enemy of freedom.

The enemy is the Communist dictatorship in Moscow, allied with the Red regime in Peiping.

How long are the nations that are outside the Iron Curtain going to delude themselves with the idea that international rules and customs must be obeyed by only one side—the free world?

How long will the countries now invaded by subversive elements tolerate the presence of agents and provocateurs whose only mission is to stir up friction, thus preventing new nations from becoming democracies and undermining older nations even as they strive to maintain their traditions of tolerance for opposition parties?

The United Nations in its Charter adopted just 15 years ago says:

"All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any member or state, or in any other manner inconsistent with the purposes of the United Nations."

How long, then, shall the Soviet Union and its stooges be permitted to violate the Charter of the United Nations? It would be better to dismantle the present organization and build a new one than to let defiance of the charter go on. For while this document does not specifically provide for expulsion of a government which represents a permanent member of the Security Council, any group of members can always withdraw and form a new organization. This is what must be done if self-respect and the principles of freedom are to be maintained.

Every day that the Soviet Union is permitted to associate in the U.N. organization with the free nations, the world is, in effect, led to believe that the misdemeanors of the Moscow regime are tolerated.

Last year General de Gaulle made a heroic effort to help former French colonies in Africa to achieve their independence. In an address on December 13 at Dakar, capital of the new Mali Federation, the head of the French Republic said:

"The state of Mali is going to assume what some call the position of independence and which I prefer to call that of international sovereignty.

"I have said that I prefer the latter term, without, however, disputing the attractiveness and significance which the word 'independence' can and must have for any people, and especially for this people. Nevertheless, I prefer 'international sovereignty' because it seems to me to correspond better with the necessities that have always existed and especially with the necessities of today. 'Independence' is a word which signifies a desire, an attitude, an intention; but the world being as it is—so small, so cramped, so interfering with itself—real independence, complete independence does not in reality belong to anyone.

"There is no state, however big or however powerful, which can get along without the others. No policy is possible without cooperation."

But in recent weeks, we have seen one of its two members—Senegal—withdrawing from that federation.

What provoked the attempt at dissolution? What indeed is also behind the disintegration of the provinces of the former Belgian Congo and the civil war now raging there? Mainly the agents and saboteurs—native Africans trained in Moscow in recent years—who now stir up passions and prevent the new republics from achieving independence or maintaining any alliance with their former friends.

As a consequence, national economic structures are being ruined, and innocent people are being deprived of job opportunities. A dozen Marshall plans will not rescue these ill-fated natives. It takes more than money. The answer is to rid Africa of the common enemy, the Communists.

What has happened in Africa has happened in Cuba. The Communist penetration of Latin America is also well underway.

How long will the free nations let the international banditry of the Communist regime continue? The time has come to isolate the Soviets—to withhold from them membership in any international organization, and to insist that every free country get rid of Communist agents and subversives as a qualification for membership in a new League of Freedom.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of August 27, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

In Congress, the Democrat leadership is caught in a snare of its own making; namely, the reconvening of Congress after the political conventions. It is a fact that Congress could indeed have finished the year's work earlier. Congress' program of work is solely under the jurisdiltion of the Democrat leaders and their preponderant majorities in both Houses. Little that is constructive can be accomplished now in an atmosphere so politically supercharged that objetcivity of judgment and statesmanship is much less possible. The House virtually marks time while the other body, the Senate, engages in a showy political power struggle before hordes of sightseers. The consensus of feeling here is that the sooner Congress adjourns, the better off the political parties and the country will be.

The suspension of section 315 of the Communications Act of 1934 by amendment passed overwhelmingly and clears the way for political debates by the presidential nominees. Originally, Congress required that political opponents be granted equal time on television. Now the presidential and vice presidential nominees are to be granted time voluntarily by television stations and networks for the 1960 campaign only. Thus the original danger (which the law sought to correct) of favoritism to a particular candidate or party is reinstated, although the intent of the amendment is to entitle each candidate to 1 hour per week for the 8-week period beginning September 1.

Amending the Subversive Activities Control Act of 1950 (passed 395 to 3) brought to our attention the fact that millions of pieces of Communist propaganda are being mailed into our country and circulated through U.S. mails to individuals, schools, legislators, and organizations to influence and warp individuals' minds. The amendment therefore was to close the loopholes in the original act to require the registration of agents disseminating such political propaganda and the labeling of it as such on entrance into this country.

The extension of the Library Services Act for another 5 years (beyond the original 4 years) presented another typical congressional action of making permanent in effect the originally alleged temporary subsidy of rural library facilities. Here's the reasoning: Rural communities need libraries; Congress recognizes this need; the Federal Government extends funds (and Federal terms), available if matched by the States. Then it follows that any acceptance by States of this money and program demonstrates the recognition of need and the States endorsement of the program. This, of course, precludes any argument that States endorse a Federal program in order to get money back. Sometimes I wonder if Federal legislators give the States and localities credit for any self-motivation. And so the Federal bureaucracy grows. Debate forcefully demonstrated that the need is already being met, the States can handle the situation alone, the program can be tapered off, and that men must seek the books, not books the men.

House Joint Resolution 615 requiring the consent of Congress for future amendments to the Port of New York Authority Compact brought a sharp conflict between Federal versus States' rights in a unique way. A majority of the Judiciary Committee, headed by Chairman CELLER, brought contempt of Congress citations against three members of the port authority for refusal to submit all data concerning port operation at the committee's request. So the constitutional question was raised whether Congress had the authority to demand the records. New York and New Jersey had made a bi-State compact. The Constitution clearly permits Congress to grant or repeal a compact between States, but Congress does not have the power to supervise or regulate activities between the States. Yet the House voted to cite the port members of contempt and to force the two States to submit to Federal regulation. The 270 to 124 recorded vote shows how easily the Constitution can be reinterpreted by a majority. It is noteworthy that in the 2-hour debate only 20 minutes was allocated to those holding the States' rights position. Strongly worded communications were received during debate from Governors Harriman, Rockefeller, Meyner, Lehman, and Dewey against this instance of the violation of States' rights and centralization of government at the Federal level. As one Congressman put it, thinking of the past liberal activities of these men, "It is so gratifying to see the chickens come home to roost."

Senate Joint Resolution 170 passed 349 to 39 (ALGER against) and becomes more alarming as I think of it. This resolution, apparently innocuous, is to authorize the designation of a Commission of 20 U.S. citizens to meet with other citizens of the NATO countries "for the purpose of developing paths toward greater political and economic cooperation within the alliance" for "non-military collaboration in the political and economic areas." This sounds great but there are no guidelines or goals set out. If it means economic aid, we have already empowered 72 other countires to think up ways to give away U.S. money. If it's political, then we remember that "One-World do-goodism" ends up with loss of U.S. sovereignty. As one Member said, "I can't be for organizations which end up in the United States alone paying the lion's share of the cost, getting only one vote, and giving up sovereignty." True, my suspicions may be groundless, but the Hoover Commission, to which this was compared, had ground rules and goals. It seems to me that this is too dangerous an area for us to take lightly or without proper direction and specific goals.

Twentieth Anniversary of the Founding of the Ukrainian Congress Committee of America

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. ZELENKO. Mr. Speaker, the past 20 years has witnessed the growth of an organization dedicated to keep alive the fires of Ukrainian independence and freedom. This organization, the Ukrainian Congress Committee of America, has persisted stubbornly despite obstacles, implementing American freedom and the power of the pen to spread truth and understanding about 114 million non-Russians in the Soviet Union, of which 42 million are Ukrainian. The many publications of the organization including the Ukrainian Quarterly and the Ukrainian Bulletin are acknowledged as authoritative literature, read by those who seek greater enlightenment in this area, maintaining the highest standards of integrity in their journalistic campaign of truth. The Ukrainian Congress Committee deserves the congratulations and gratitude of America for their endeavors, keeping our citizens aware of the Soviet rape of captive non-Russian nations in the U.S.S.R. and the struggles of these nations for independence, exposing myths of Soviet unity, and proposing ways and means to defeat imperialist Moscow in the cold war. They have rallied some 2½ million Ukrainian-Americans to the cause of Ukrainian sovereignty. They have refurbished four centuries of hope by the Ukrainian people for the cherished gifts of independence and freedom which were realized in 1918 only to be heartlessly and brutally suppressed by the Soviet, Communist regime. The yoke of tyranny forced upon these people can never be forgotten. The accomplishments of the organization in these 20 years have given the Ukrainian people a new birth of hope that their sacrifices for liberty will not have been made in vain and that the rebirth of one independent Ukrainian state will soon be realized.

It is an honor and privilege for me to join with all Americans in conveying the appreciation of our country for their work. The Ukrainian Congress Committee has not shirked its duty to their brethren across the sea or to the free world. Let us pay for the maintenance of their strength to carry on future endeavors and let me hope for the fulfillment of their dreams for Ukrainian independence.

World War I Pensions

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. RANDALL. Mr. Speaker, I know there has been much said during this session of Congress about veterans' benefits, both compensation and pensions, and in particular, quite a lot about pensions for World War I veterans. Several bills are pending before this House, and a discharge petition for one of these is on file at the Clerk's desk.

I realize we are in the final days of this session and there is no opportunity to have either further hearings or to complete the needed number of signatures upon the discharge petition for World War I legislation.

However, in the August 25, 1960, issue of the National Tribune-Stars and Stripes, there appears on the front page an address by the Honorable Robert Fuoss, a World War I veteran long identified with the department of Pennsylvania of the American Legion. This address first was given on a Pennsylvania radio station and later rebroadcast over 15 stations of the Allegheny network.

In the furtherance of a pension for World War I veterans, Mr. Fuoss made a stirring appeal, and it is difficult for me to see how Members of the Congress can read this address and fail to see that in comparison with benefits heretofore extended veterans of other wars, the Congress has been grossly negligent in its omission and failure to accord to World War I veterans a fair and just pension. It is too late this session to accomplish anything for these aging veterans, but there will always be another Congress, and I recommend this address to the attention of each Member of the House. Here are several important excerpts taken from Mr. Fuoss' address:

Men and women have rather short memories. History is not always the most satisfactory means of keeping memories fresh since, as you know, vast numbers of persons living today do not bother themselves with history and, of course, those of the younger generation are more deeply engrossed in other things. This is especially true of the events of some 42 years ago—the events of the First World War.

An approximate 4,609,000 men served in that war—brave young men. They were resolved to defend the Nation because they were imbued with the idea that German-Prussian tyranny dared not overrun the free world. An approximate 2,900,000 of that war still live and an estimated 1,109,000 are now past 65 years of age. They are now old and gray and the sands in their hour glasses are fast running out.

Statisticians estimate that the surviving of that war are dying at the rate of 112,000 per year and that by 1970 only a few thousand will be living. These are sobering figures and they point to an existing condition that must be remedied now if these surviving veterans of the war of 1917–18 are to receive the same fair treatment shown veterans of earlier wars—even those of the later wars. We sure shall not make flesh of one and fowl of another. What has been given to one dares not rightly be denied another.

There are those who, for one reason or another, feel that those of the First World War, in seeking this pension, are motivated by selfish reasons. There are others who do not know that the veterans of the war of 1917–18 have not been pensioned as were those of earlier wars and there are, strange to relate, those who actually believe there is no valid reason for pensioning veterans; that they are already well cared for by Government. It is time the record be set straight and that is the purpose of this address.

The history of pensions for American veterans is unique in the annals of the military. It was General Washington who, following the Revolution, helped set a precedent when he said, among other things, that those who served the Nation in times of war were, in a sense, a privileged class; that, by reason of this service, they were entitled to a pension since they had risked life and limb in the preservation of the Nation and the institutions that come thereunder. There is no well-informed scholar who will deny this truth.

It is vital in its relationship to this subject of pensions that we consider the kind of war in which brave young men fought and died during that deadly conflict of 42 years ago. It was fought in trenches filled with blood, vermin, filth and disease. It has been alluded to as "the dirtiest of wars."

Mr. Wilson and General Pershing spoke of that was as "monstrous," "criminal," and "barbarous."

In these trenches men existed, fought, bled and died for the paltry sum of $21 per month. As if trench warfare was not bad enough, the Prussians introduced poisonous gases, the most outrageous and despicable form of warfare and, by all considerations, the most wanton and cowardly. Men lost legs and arms; many were blinded; many went insane and, most tragic of all, were those who were gassed. The few remaining of this latter group—the gassed—still lie upon beds of pain and anguish, eager for the day when a gracious God will free them from their anguish and unspeakable suffering. This is not a pretty picture—it is true, however.

Those of that war who did finally get home returned to no jobs. They were, in large part, compelled to shift for themselves as best they could. The Government did not provide them with $20 per week for 52 weeks while they sought work. For them—those of that war—there was no GI bill of rights; no aid in building homes and not 1 cent for the resumption of their education. On discharge they received $60—enough to buy a suit of clothing and a pair of shoes. That's all they got.

These were, let me remind you, in times of great economic stress and strain. Despite this sad state of affairs, these men now grown old and gray did shift for themselves, doing as best they could. Some made jobs for themselves, reared and educated families. Others did less well and still others simply failed to make the grade. In this latter group were those veterans, hungry, distressed, jobless and disillusioned, who participated in the infamous Bonus March, the very remembrance of which, in the thirties, is one of the darkest chapters of American history and the mere mentioning of it still haunts those who remember it only too well. Let us not forget Anacostia. It was Lincoln who said it was the duty of gvoernment to care for those who bore the brunt of battle. We are today caring for the world. Let us not now disown our own veterans.

Today, after all these many years, certain Members of Congress would do something for these men, these men who served with honor and distinction under Woodrow Wilson and John J. Pershing. Yes, certain Members could do something for them but, strangely, others of the Congress would do nothing for them—would, it seems, even penalize many of them who, over the years, managed through thrift and diligence to save a few thousand dollars for their twilight hours. It is difficult to believe that the basic philosophy respecting thrift has changed but, apparently, some Members of the Congress feel the thrifty veteran is neither a credit to himself, his community or the Republic.

Today, as any sensible man knows, men in their late sixties and early seventies cannot get work—not even part-time jobs. Still they are compelled to pay taxes in addition to meeting the continuing rise of living costs, food, clothing, and such. Many are on small fixed incomes and every increase in the cost of things adds to their misery and their desperation. Congress has not neglected its Members—three salary increases since the close of the World War II and Congress has not delayed legislating pensions for those no longer in public service—it required less than 2 minutes time to do this, too.

The new veteran law which became operative July 1 was never intended to do anything for those of the World War I in the sense of this overdue pension. No Member of Congress will contend for one split second that was either the thought or the intent of the new law which, let me point out, is as unfair and unjust as it is unrealistic and discriminatory. One of the most objectionable features of it is that those things men have earned for themselves count as earned income—social security and railroad retirement, to be specific.

Let us go about our task in earnest, honest effort since it is worthy of our combined endeavors. Just keep this one thing in mind—not too much time is left to us since, whether you know it or not, "it is later than you think."

House Resolutions 606, 607, and 608

SPEECH
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under the privilege to revise and extend my remarks I want to say a few words about the procedures under which we are considering House Resolution 606, a contempt citation against Austin J. Tobin, House Resolution 607, a contempt citation against S. Sloan Colt, and House Resolution 608, a contempt citation against Joseph G. Carty.

By unanimous consent these three companion resolutions were agreed to be considered by the House with the time allotted on the first citation be extended for 1 hour and that the time on the other two citations be reduced to one-half hour each, so that there will be only 3 hours of debate in all, which would be the time ordinarily taken; that the time be equally divided and controlled by the gentleman from Ohio [Mr. MCCULLOCH] and the gentleman from New York [Mr. CELLER].

Through an error the Speaker recognized the gentleman from New York for 1 hour and the gentleman from Ohio for 1 hour instead of one hour and a half for each as per the unanimous consent agreement.

The gentleman from New York [Mr. CELLER] of course is the chairman of the Judiciary Committee which is returning the citation for contempt and the contempt complained of was against a subcommittee of the Judiciary Committee. The gentleman from Ohio [Mr. MCCULLOCH] is the ranking minority member of the Judiciary Committee.

Both gentlemen are supporting the contempt citation. Under the rules of the House as they are presently set up time can be allotted according to political parties instead of to those who support the privileged resolutions and to those who oppose the privileged resolutions or there can be no allotment at all depending upon the discretion of the member who originally has the time. In other words an objection to the unanimous-consent request would have done nothing to correct this inequity of having all the time for debate under the control of one side of the question at issue and no time for debate under the control of the other side of the question at issue.

This same rule prevails over other matters which come onto the floor of the House under what is called the hour rule. Apparently, there is no provision under the hour rule as there is under a motion to suspend the rules whereby one who is opposing the matter under consideration can demand half the time available for debate and gain it in competition with a member of the committee or otherwise who is not in opposition.

I am convinced this is a serious flaw in our rules. It cannot possibly be conducive to good debate. I will move to correct it if I am a Member of the next Congress.

The situation in regard to these three contempt citations brings the unwisdom of this procedure to view starkly. Here there is a determined opposition to these three citations for contempt. Minority views have been filed in the committee's reports which preceded the citations. Everyone recognizes that there is an honest and serious difference of opinion on this subject. Everyone realizes that the subject itself is an extremely complicated one. Everyone realizes that the implications of the decision we make on this matter are quite serious. Yet we debate it with the proponents taking over two-thirds of the time and not even granting to the opponents control of what time will be granted to them. They cannot control when they may speak, which ones shall be selected to speak, and how much of the limited time will be granted to each of them to speak. How, indeed, can the opposition effectively present their arguments?

It would be shocking enough if this were done unwittingly, but it passes understanding when we must accept the fact that it has been done deliberately. I personally raised the question of the fairness of this procedure with one of the members who could have corrected it to some degree to no avail. I raised point after I had heard that the proponents had previously raised the question and had asked for fairness in the procedures under which this serious debate was to be conducted.

One of the Members in addressing himself to the substantive merits of the resolutions stated that the dignity of the House was at stake. My colleagues, I am not so certain about that, but I am certain that the dignity of the House suffers when we follow procedures as unfair as these we are following.

On previous occasions I have addressed myself to the point of the propriety and the interests of good action on the part of the House in permitting the committee against which an action of contempt on the part of an individual, has allegedly been committed preparing the report on the alleged contemptuous action upon which the House will consider the matter. The committee involved is bound to be somewhat subjective in its viewpoint. With this in mind I introduced an amendment to the rules which would require the Judiciary Committee or a subcommittee thereof to consider all questions of contempt citations which the House committees might desire to have the House act upon. I think better wisdom dictates that a special committee be set up on a permanent basis to which all matters of contempt citations be referred. Such an independent committee I am certain can make a more objective and meaningful report to the House upon

which the House can act with more assurance that it is doing the right thing than is presently the case. Furthermore, this process I feel would result in some desirable self-discipline on the part of committee members who in their zeal to get at the bottom of an issue sometimes become a bit overbearing in their attitude toward witnesses appearing before them.

I want to make one final comment about the wild charges against lobbying that I have heard uttered. Good lobbying is an essential and good part of representative government. There is, of course, such a thing as bad lobbying techniques. Indeed, it is the bad lobbying techniques that are employed from time to time that bring the entire system of citizens and groups of citizens petitioning the Congress into disrepute. However, it is the bad techniques we should criticize adversely not the system of petitioning the Congress. I heard little about alleged improper techniques on the part of those who were complaining about the actions of the petitioners in this matter. All I heard was the fact that they had vigorously petitioned. I can find no fault in that. Nor can I find any fault in a State agency using tax funds to present the point of view of duly elected or duly appointed State officials on such a vital issue as this which involves the difficult definition of the borderline between State and Federal powers.

I am afraid we have not enhanced the dignity of the House by the procedures we have followed here today or by much of what has been said here today. The dignity of the House and of the Congress is very dear to me, as I am certain it is to all of you. We know that herein rests the living fire of democracy. Changing the Rules of the House as I have suggested will I believe enhance the dignity of the House. However, in the long run it is only understanding and self-discipline of our Members, not rules, which build up respect and dignity for our Congress.

The Robert Taft Memorial

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem entitled "The Robert Taft Memorial," by Miss Marty Hale, of Steubenville, Ohio:

THE ROBERT TAFT MEMORIAL

In majesty its marble segments rise,
Piercing the blueness of the starlit skies;
Matching the splendor of the rosy dawn,
Clearing the bell-tower when the mists have gone;
Reflecting every shaft of noonday sun,
Or crimson glory when the day is done;
It has its beauty—but has so much more—
It opens more than just a classic door;
It marks a legend that all freemen love,
It stands for peace on earth, and God above;
Open and sincere as the man whose heart
Beat for the land of which he was a part.
An open door to all whose loyalty
Match that of him who gave unstintingly
Of soul and body—the best he had to give,
And left a creed by which we all might live.
Blazed a clear path that patriots might tread,
Forsaking greed, and giving self instead.
He followed where our Founding Fathers led,
Sometimes so much alone—he chose to tread
A path so overgrown from day to day,
That careless men seemed to have lost the way—
Ignoring those who rushed to pick a flaw—
We say: "Bob Taft, you were America."
You stood for us, and with each bell-tower's chime,
Forever more we bow at this, your shrine.

Reds in Caribbean and Africa

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. FLOOD. Mr. Speaker, in my remarks to the House in the Appendix of the RECORD on June 20, 1960, I quoted an informative article by Constantine Brown concerning the threats to our national security by the actions of hidden policymakers in the Department of State.

Since that time, almost daily developments have served to emphasize the parts played by these hidden hands, especially for Africa and the Caribbean, where the prestige of the United States has been seriously weakened with wholesale loss of American properties now occurring in prospect. It is only natural that there should be raised by thoughtful persons over the United States this question: What are the influences in the Department of State that have caused such deterioration?

Another perspective article by Mr. Brown in the Evening Star of August 6, 1960, supplies additional information that should be of interest to every Member of the Congress.

The article follows:

REDS IN CARIBBEAN AND AFRICA—UNITED STATES ACCUSED OF PLAYING OSTRICH TO CASTRO'S REAL OBJECTIVES

(By Constantine Brown)

International communism has implanted itself within the last 2 years in two important strategic areas in the world: The Caribbean and parts of Africa.

The Soviet Union and Communist China have firmly established themselves in the Caribbean through the dictatorship of the Castro kids. And, because we frown on dictatorship, we played an ostrich policy as to the real objectives of the Castros in Cuba.

The administration and news media described the Castros at first as idealists but by no means under Communist discipline. If we handled them tactfully, it was contended, they would inevitably recognize the dangers of Communist dictatorship.

Even the influx of thousands of advisers from the Soviet Union, the satellite countries, and particularly from Communist China into Cuba was taken lightly by Washington. It would be against our beliefs, it was said, to interfere in the domestic affairs of another nation even if it affected the Monroe Doctrine. We heard charges that the doctrine was obsolete in these quickly changing times. When we resurrected it a few weeks ago by a strong statement from President Eisenhower it was obviously too late. Stern words these days are meaningless. Only actions count.

The Reds have paralleled the action in Cuba with similar action in the newly created African republics where full independence has been rushed headlong to areas unprepared for self-government. The tribal system is still very much alive in Central Africa. Hence there can be no national unity. International communism does not bother about such trivialities.

The Communists chose their puppets carefully long ago. Thus, while we courted and treated with utmost courtesy the chief executives of some of the new African states in the expectation that they would stay out of the Red orbit, the Russians and the Chinese had already in their pockets the president and prime minister of at least two key republics.

The Reds exploited the African leaders' antagonisms against the Western "imperialist capitalists" and made them their tools, fully convinced that the rest of Central Africa will fall into the Red orbit if communism is established in two key states. The fact that cannibalism is still a custom in the former Belgian Congo (no fewer than 276 individuals were sentenced by the Belgian authorizies for the practice) did not concern Moscow and Peiping.

When the former French Colony of Guinea became independent, Sekou Toure, a man who as late as 1956 was a card carrying Communist, became the chief executive. A photostat was sent from Paris shortly before he visited Washington where he was received with the same honors as President de Gaulle. He was pleased at his reception but did not change his spots.

The Congolese Army with at least the tacit approval (some say at the instigation) of Prime Minister Patrice Lumumba celebrated its independence with an orgy of murders, arson and rapes against the white settlers. The moral character of Lumumba is well established. A few years before becoming the leader of the Congolese nationalists he was in jail for 3 years for embezzlement. He was thus excellent material to further the cause of international communism in the Congo.

We received Lumumba in Washington with a 17-gun salute and accorded him all the honors due his newly assumed rank. Our policy makers believed we could detach him from his bosses in Moscow and Peiping. While in Washington he protested that he was not Moscow's man, just as Castro did last year. But his actions belie his words. He still is threatening the United Nations with direct intervention of Red troops in case he does not get his way.

A Statement of Position on the National Defense Student Loan Program by the Faculty of Goshen College, Indiana

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. BRADEMAS. Mr. Speaker, under unanimous consent I should like to insert in the CONGRESSIONAL RECORD the following statement of position on the

student loan program of the National Defense Education Act drawn up by the faculty of Goshen College, Goshen, Ind., on May 26, 1960:

A STATEMENT OF POSITION ON THE NATIONAL DEFENSE STUDENT LOAN PROGRAM BY THE FACULTY OF GOSHEN COLLEGE

As a participant in the national defense student loan program, Goshen College is grateful for the concern of the Federal Government for the educational welfare of its people, and particularly for the assistance which the loan program is giving to many students who lack adequate financial resources of their own.

Several features of this excellent program, however, are a matter of serious concern to the administration and faculty of Goshen College.

THE LOAN PROGRAM AS A DEFENSE MEASURE

We have no doubt that a major source of strength (in the sense of the highest general welfare) of any nation is an educated, an enlightened, and an intelligent citizenry. It is for the achievement of this end that we are happy to cooperate with the student loan program.

This term, "national defense student loan program," however, as well as the title of the law, National Defense Education Act, is a matter of concern. This terminology would seem to suggest a view of education, primarily dedicated to military achievement, whereas the highest welfare of any nation demands an education which develops and sets free those intellectual and spiritual powers of man which alone can make the Nation great.

Moreover, the extent that the financial assistance provided by the act is directed to education in science and technology, or other subject matter related to defense, in preference to, or at the expense of, the broader concept of education in what is commonly described as the liberal arts, we believe the act tends to promote the narrow view which the title suggests.

We would, therefore, wish that the loan provisions of the act may be rendered equally applicable to other departments of the college curriculum, and that the title of the act may be revised so as to harmonize more nearly with the name of the executive department of the Federal Government under which it is administered, the Department of Health, Education, and Welfare.

THE DISCLAIMER AFFIDAVIT

Goshen College draws on more than four centuries of Anabaptist-Mennonite history in which not only our spiritual forefathers, but many of our contemporaries as well, have frequently been harassed by authoritarian governments demanding many varieties of test oaths and disloyalty disclaimers.

Even though the present disclaimer affidavit may sincerely have been intended as a safeguard against totalitarianism, our own religious tradition tells us clearly that procedures such as this imperil the ways of freedom and democracy; that totalitarianism opposed in this manner will, if pursued to its logical conclusion, but bring a new totalitarianism upon us.

As a means of protection, the affidavit is futile. Convinced Communists or adherents of other totalitarian philosophies would not hesitate to sign the affidavit.

The requirement of the affidavit seems to suggest that the applicant for a loan is suspected of subversion unless he declares himself otherwise. This violates the principle of respect for the individual as embodied in the doctrine of American jurisprudence that a citizen is innocent unless proved guilty.

The requirement of the disclaimer, and of the oath as well, suggest a feeling of insecurity, a spirit of fear and of distrust, unbecoming to a great democracy. A basic principle stressed by the Founding Fathers was the inalienable right to life, liberty, and the pursuit of happiness, including freedom of religion, of speech, and of press. It was to secure these blessings of liberty that the Nation was founded. A major purpose of education is the enlargement of character, the increase of knowledge, and the liberation of the human spirit, without which democracy cannot live.

The requirement of the disclaimer bespeaks a lack of faith in the principles upon which our Nation was founded; a distrust of the very democracy which it is supposed to defend; and lack of confidence in the free and diverse character of education which had made American democracy what it is.

Inasmuch as a similar oath and disclaimer are not required of other recipients of Federal loans, such as farmers, businessmen, and others, the present act is highly discriminatory. Its effect is to single out college students, and by implication, the institutions in which they are enrolled, as particularly untrustworthy. This discriminatory feature renders the lack of confidence in American education all the more serious, and serves to undermine a basic foundation stone of American democracy. Recent legislation removing the disclaimer affidavit as a requirement of labor organizations seeking the services of the National Labor Relations Board tends to make the discrimination all the more evident.

In view of these considerations, we would urge that the requirement of the disclaimer affidavit be rescinded, and that in so doing, the American academic community be restored to the position of dignity and respect which it rightfully deserves.

THE OATH OF ALLEGIANCE

Although it is our belief that a declaration of allegiance as a ceremonial act may have a place in the life of the Nation when used with wisdom, discretion, and moderation, we believe that to be meaningful, it must needs be reserved for "moments of high commitment in the life of the political community, such as the induction of an official into responsible office or the naturalization of a citizen."[1] We would urge that the requirement of the oath of allegiance be rescinded from the act.

Respectfully submitted.

THE ADMINISTRATION AND FACULTY OF GOSHEN COLLEGE.

Twentieth Anniversary of Soviet Aggression Against the Baltic States

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks I should like to submit for the RECORD the manifesto issued by the free Estonians, Latvians, and Lithuanians in connection with the 20th anniversary of the Soviet aggression against the Baltic States.

In view of the Communist aggression today, such as in Africa, in southeast Asia, in Cuba and in other parts of the world, I believe it is highly important to call this manifesto to the attention of the American people as a reminder of what has happened and what we might expect if the present patterns of Soviet aggressions continue.

The manifesto follows:

THE 20TH ANNIVERSARY OF SOVIET AGGRESSION AGAINST THE BALTIC STATES—MANIFESTO OF FREE ESTONIANS, LATVIANS, AND LITHUANIANS

Twenty years ago, the Soviet Union attacked the Baltic States. Some 300,000 Red army troops poured into Lithuania on June 15, 1940, and into Latvia, and Estonia, on June 17, 1940. With the protection of this occupation army, the emissaries of the Kremlin—Dekanozov, Vishinsky, Zhdanov—unseated the legitimate governments of the Baltic nations. The Baltic countries were robbed of their independence and transformed into colonies of the Soviet Union.

The Soviet Union's assault against its Baltic neighbors initiated the Soviet westward march against Europe. Thus, the beginning of today's international tension and threat to peace may be found in the Soviet aggression against the Baltic States in 1940.

By its aggressive acts against Estonia, Latvia, and Lithuania, the U.S.S.R. broke the peace and nonaggression treaties it had signed with those states as well as other international agreements.

Expropriation, exploitation, pauperization, slave labor, suppression of human rights and fundamental freedoms, Russification, terror, murder, mass deportations—these are the marks of the Soviet occupation in the Baltic States. In committing these acts, the Soviets violated the United Nations declaration embodying the Atlantic Charter, the United Nations Charter, the Convention on the Suppression of Crimes of Genocide, and the Universal Declaration of Human Rights—all these documents bearing the signatures of the U.S.S.R.

The Estonian, Latvian, and Lithuanian peoples, historically and traditionally Western in orientation and outlook, placed their hopes in the Western World. Their trust and reliance in the West was strengthened by the declaration of the U.S. Department of State of July 23, 1940; the statement of the President of the United States of October 15, 1941; the Atlantic Charter; the Yalta Declaration on Liberated Europe; the repeated statements by the U.S. Government about nonrecognition of the Soviet annexation of the Baltic States and continued recognition of their diplomatic representatives; and the proclaimed aims and principles of the United Nations.

The Baltic peoples have given active expression to their determination to regain freedom, and have resisted their oppressors, thus contributing greatly to the still continuing struggle for freedom and justice being waged by all captive peoples enslaved by the Soviet Union. Despite heavy setbacks and trials, our peoples maintain their faith in the restoration of their freedom and independence.

This summer the Soviet occupant will unveil a macabre spectacle—a festive celebration of the twentieth anniversary of the enslavement of the Baltic States during which the captive Baltic peoples will be pressed to appear grateful to their conquerors.

We—free Estonians, Latvians, and Lithuanians—are conscious of our responsibility toward our nations and toward history. At this twentieth anniversary of Soviet aggression, we feel dutybound to give voice to the aspirations of our captive peoples:

We accuse the Soviet Union of committing and continuing an international crime against the Baltic States;

We demand that the Soviet Union withdraw its military, police and administrative personnel from the Baltic countries;

We request that the governments of the free world, especially those of the great powers, undertake all peaceful ways and means to restore the exercise of the right of self-determination in the Baltic countries and in the rest of East-Central Europe;

We appeal to the conscience of all mankind to perceive the magnitude of the injustice perpetrated upon the Baltic countries and to support the efforts toward the restoration of the liberty of these countries;

We convey to our people at home our pride in their resolute resistance against the endeavors of the oppressor to destroy their national and personal identity;

We express to our peoples behind the Iron Curtain our deep conviction that the Soviet system—as all tyrannies throughout history—carries within it the seeds of its own destruction; that it cannot and shall not prevail;

We pledge to intensify our joint organized activity in the free world to promote the cause of liberty for the Baltic countries;

We, finally, declare to the free world and the Communist-dominated world, including the U.S.S.R., that, once free again, the Baltic nations will do all in their power to ensure the best possible relations with their neighbors on the basis of mutual respect for national sovereignty and territorial integrity.

Vaclovas Sidzikauskas, chairman (Lithuania); Alfreds Berzins, Deputy Chairman (Latvia); Leonard Vahter, Deputy Chairman, Estonia); Members: Jaan Tiivel (Estonia), Eduard Vallaste (Estonia); Adolfs Blodnieks (Latvia), Vilis Hazners (Latvia), Dr. Vilis Masens (Latvia), Juris Siesers (Latvia), Msgr. Jonas Balkunas (Lithuania), Col. Jonas Slepetys (Lithuania), Dr. Antanas Trimakas (Lithuania).

Social Security Amendments of 1960

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. LANE. Mr. Speaker, the medical care bill for the aged, shot through with weakening compromises, is a bitter disappointment to our 16 million senior citizens.

The United States is scoring breakthroughs in many fields of material research and development. In sharp contrast, that vigorous, pioneering spirit becomes ultraconservative when confronted with the challenge to help our fellow human beings whose working years have come to a close.

When the second session of the 86th Congress convened in January of this year, there were high hopes that a genuine health insurance bill for the aged would become one of its outstanding accomplishments. It would be a self-financing program administered through the social security system.

But those high hopes surrendered to the insistent threat of a Presidential veto. A health insurance bill for the aged was passed, but so drained of real content that it will need substantial transfusions in the next Congress before it can live up to the promise implicit in its title.

Those of us who fought for a "healthy" bill, voted for the anemic version with reluctance. The coalition majority said: "Vote for this 'ghost' bill—or no bill at all. We give you no other choice." At least, a precedent has been established, that we can elaborate upon and strengthen next year.

Health insurance for the aged, prepaid by taxes on employers and employees during the active years when a person is working, is the logical, practical, and inevitable way to solve this problem.

Free Americans should be entitled to this protection in their old age as a matter of right, and should not have to beg for it through a humiliating means test. The conservative coalition, spearheaded by the administration, has temporarily blocked humanitarian progress, but it must know in its mind and heart, that it is fighting the lost cause of the past and its indifference to the needs of human beings.

Now we will carry this issue to the people, confident that they will veto the obstructionists to social and economic progress.

The present health insurance bill is one that pays lipservice to the needs of the aged, but withholds adequate protection from them. It will not, however, deceive the American people.

The voice of public opinion is expressed in the following editorial from the April 6, 1960, edition of the Washington Post:

The one practical way to provide insurance against the health hazards of retirement years is to let people pay the premiums in the form of social security taxes while they are earning wages and are able to do so. This is precisely how they now provide retirement income for themselves under the social security program, and this kind of protection is made compulsory because the lack of it would have a disastrous social impact. Those who denounce this proposal as socialistic without proposing any workable alternative are foolishly doctrinaire.

They might just about as sensibly oppose as socialistic the Nation's public schools, fire departments, and parks because these represent communal efforts financed through taxation. One of the fundamental purposes for which the U.S. Government was established was to promote the general welfare.

Mr. Speaker, the principle of social insurance to protect our people against the health hazards of old age is the future solution that should be in effect today.

The present bill takes us down a narrow, winding side road and away from the direct and open highway that leads to a clear solution of the problem.

With new and confident leadership beginning in 1961, the United States shall find the forward road again and will legislate a program that will achieve security with dignity for all our senior citizens.

World Court Issue

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. LINDSAY. Mr. Speaker, on the occasion of the annual meeting of the American Bar Association, during which there will be considerable discussion about the Connally amendment, I should like to bring to the attention of the readers of the CONGRESSIONAL RECORD two editorials that appeared in this morning's New York Times and New York Herald Tribune:

[From the New York Times, Aug. 29, 1960]

ABA FACES TEST ON WORLD COURT

At the American Bar Association's convention this week, its house of delegates again faces a fight on the question of repeal of the Connally amendment. The ABA has been on record since 1947 as advocating repeal. Now two conflicting committee reports are due to be presented, one calling for continuation of the prorepeal stand, another, which has powerful support, for its reversal.

The bar association itself, more than the World Court, will be on trial.

The Connally amendment makes sense only if the World Court cannot be trusted to abide by its own charter. This charter specifically prohibits it from taking jurisdiction in any matter essentially domestic. But the Connally amendment says we, not the Court, shall decide whether a matter presented to the Court is within the domestic jurisdiction of the United States. It stands as a bald declaration of no faith in the World Court—hardly a fit attitude for the leader of those nations pressing for extension of the rule of law. It is a pernicious, destructive doctrine which has contributed substantially to the tragic weakness of the Court.

It also, in practice, is more likely to work against us than for us. Because we have such a reservation, any other country with which we have a dispute, and which we might wish to hale before the Court, can invoke it reciprocally against us and refuse to accept the Court's jurisdiction. Because the conduct of our own affairs is governed by law, there are few cases in which we should have any reason to fear the Court's judgment. Other nations, such as Cuba, often contemptuously flout the law. But the Connally amendment ties our hands in taking them before the Court.

The World Court represents one of the world's prime hopes in the drive to substitute the rule of law among nations for the rule of force.

As lawyers, the members of the ABA should be the first to proclaim their faith in law. They can hardly do this if they are unwilling to proclaim their faith in the instruments of law, of which the World Court is one of the most distinguished.

[From the New York Times, Aug. 29, 1960]

THE WORLD COURT ISSUE

Under the United Nations Charter the International Court of Justice is designated as "the principal judicial organ of the United Nations." All members of the U.N. are, as the charter says, "ipso facto parties to the statute" creating this agency. Each member undertakes to comply with the decision of the Court in any case to which that member is a party.

Other provisions of the Court statute are intended to insure that the 15 men on the bench be competent and impartial. The judges are nominated by national groups but elected regardless of their nationality from among persons of high moral character. The precautions taken in their selection make it certain that the Court won't run amuck. If justice can be had in any international forum, it is here.

The United States, which held timorously aloof from the League of Nations' Permanent Court of International Justice, could not stay out of the successor Court, but we went in under the so-called Connally amendment, refusing to accept obligatory juris-

diction. This reservation really means that we will accept the Court if we are quite sure we will win our case but will refuse to participate if we suspect we may lose. This is the essence of the word "domestic" as used in the saving clause.

Thirty-odd other nations have been less cautious; they have accepted the Court's jurisdiction as obligatory in legal disputes concerning (1) the interpretation of a treaty; (2) any question of international law; (3) breaches of international obligation; (4) reparations for such breaches.

If we aren't willing to trust the Court with such cases, then the Court, as far as we are concerned, is not a court at all; and no system of effective international law is, for us, possible.

This issue comes up now, not because the Senate is likely to act on it this year, but because the American Bar Association is about to have a wrangle over it at the association's annual get-together in Washington. The ABA has had reports for and against the Connally amendment. The voting may be close.

It does seem strange, however, that men whose business is with the law and who are properly shocked when anybody commits contempt of court should be reluctant to commit their country to an agency, with built-in impartiality, whose only purpose is peace through justice.

Why Profit Sharing Is Booming

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. MULTER. Mr. Speaker, U.S. industry now has at work some 30,000 profit-sharing plans embracing millions of employees. The Internal Revenue Department is approving profit-sharing plans of the deferred kind alone at the rate of 18 plans every day.

In the first quarter of 1960 more deferred profit-sharing plans were approved than were pension plans.

Mill & Factory magazine, a Conover-Mast publication, sees profit sharing as an important answer to the longstanding rift between management and labor. I commend to the attention of our colleagues the following article which appeared in the Mill & Factory magazine of July 1960:

WHY PROFIT SHARING IS BOOMING

(By Ted Metaxas)

(Many more companies adopt profit-sharing plans to end the rift between management and labor and set the climate for efficiency. Successful plans depend on management leadership and other important factors. Deferred profit sharing proves most popular, having multiplied six times in 9 years.)

"We believe profit sharing to be essential to the ultimate maintenance of the capitalistic system. We have found in profit-sharing firms veritable islands of peace, equity, efficiency, contentment, and likewise prosperity, dotting an otherwise relatively turbulent industiral map. This fact is too significant to be ignored or depreciated in our national quest for greater stability and democracy in industry."

This statement was contained in the 1939 subcommittee report by the late Senator Arthur H. Vandenberg. Then, true profit sharing was practiced by probably less than 200 firms, of which only 37 had adopted plans with deferred payments to employees.

Today, industry is beset with economic problems graver than in 1939—and how well it can solve them may determine whether America remains industrially supreme. One of the major problems is the continuing divorcement between management and labor that prevents their mutual striving for the common good.

LET'S TAKE CLOSER LOOK

Can profit sharing help end this rift? Many companies believe so. More and more of them are sharing profits with their employes to create a partnership in production. Because of the stature and success of these firms, it may now be necessary to peer more analytically into the workings of profit sharing.

Conservative Senator Robert A. Taft once said that "profit sharing teaches the workingman not to think of himself as a class apart, but rather as an integral party of industry, with a personal interest in its prosperity."

In the past few years, profit sharing has grown swiftly. As reported by the Bureau of Internal Revenue, 8,793 deferred profit-sharing plans were started by companies in the 3 years ending with December 1959.

Deferred plans accumulate cash benefits earned by employees and distribute them in the future. Cash-type plans pay off in the present and are intended as a more direct stimulus on work effort. Combination plans have features of both deferred and cash plans. Traditionally, the ratio of deferred to cash plans has been running about 2 to 1, but may now be 3 to 1.

As of March 31, 1960, U.S. industry had installed 21,445 deferred profit-sharing plans, covering millions of employees. Estimated conservatively, industry now has about 30,000 deferred, cash, and combination plans at work. In the past 9 years, the number of deferred plans has multiplied six times—and currently, Internal Revenue is approving more than 18 deferred plans each working day. Gaining rapidly, deferred profit sharing now constitutes 37 percent of all retirement plans. In the first quarter of 1960, for the first time in history, more deferred profit-sharing plans were approved than pensions. The score was 1,328 to 1,184.

During a Mill & Factory interview, Rear Adm. A. C. Burrows, U.S. Navy, retired, president of the Council of Profit Sharing Industries, said that "profit sharing seems to have passed the turning point to popular acceptance."

THE LOGIC OF PROFIT SHARING

Why the profit-sharing surge? There are several reasons. Industry is entering a more competitive era, which demands efficiency and lower costs. Sour labor-management relations can be most obstructive to productivity.

The old, impersonal way of dealing with labor has not been a brilliant success. It has not been able to oppose spiraling wages and static productivity. Nor has it tempered labor's opposition to mechanization and better methods—strikes, squabbles, and featherbedding; slowdowns and sloth.

With profit sharing, a company can form a production alliance with labor while encouraging it to earn its own retirement or other benefits. This may be preferable to a union-negotiated retirement plan with fixed payments and smaller tax advantages for employee and company.

As stressed by the Council of Profit Sharing Industries, at 400 West Madison Street, Chicago, a profit-sharing plan is not a giveaway program; and without communication of the economic logic that management and labor must work together to prosper mutually, profit sharing will have marginal results. Nor is it a substitute for good management or a decrepit plant.

DIVIDING THE SPOILS
